### Humanities and Fine Arts
- **Fine Arts: Choose one**
  - ARH 100 ARH SURV:ANCIENT-MEDIEVAL
  - ARH 101 ARH SURV:RENAISSANCE-MODERN
  - ARH 103 ARH SUR:NON-WESTERN TRADITIONS
  - ARS 160 DRAWING: FOUNDATIONS
  - TH 122 THEATRE APPRECIATION
  - MU 100 INTRO TO MUSIC LITERATURE

- **Literature: Choose one**
  - EH 207 READINGS LITERATURE/CULTURE I
  - or EH 242 MYTHOLOGY
  - EH 208 READINGS LITERATURE/CULTURE 2

- **Speech**
  - CM 113 Intro to Rhetorical Communication

- **Humanities, 2nd Fine Art or 2nd Literature: Choose one**
  - PHL 101 INTRODUCTION TO PHILOSOPHY
  - PHL 102 INTRO TO ETHICS
  - PHL 150 TECH, SCIENCE & HUMAN VALUES
  - PHL 201 INTRODUCTION TO LOGIC
  - Any WLC course 100 or 200 level
  - WGS 200 INTRO WOMEN'S & GENDER STUDIES

- **2nd Literature**
- **2nd Fine Art**

### Mathematics and Science
- **Mathematics**
  - MA 171 CALCULUS A

- **Natural Science sequence**
  - PH 111 & PH 114 GEN PHYSICS W/ CALCULUS I and GENERAL PHYSICS LAB I
  - PH 112 & PH 115 GEN PHYSICS W/ CALC II and GENERAL PHYSICS LAB II

### History and Social Behavioral Sciences
- **History: Choose one**
  - HY 103 WORLD HISTORY TO 1500
  - HY 104 WORLD HISTORY SINCE 1500
  - HY 221 UNITED STATES TO 1877
  - HY 222 UNITED STATES SINCE 1877

- **Social and Behavioral Sciences, required for Education program**
  - PY 101 GENERAL PSYCHOLOGY I
  - PY 201 LIFE-SPAN DEVELOPMENT

- **2nd History or 3rd Social and Behavioral Science: Choose one**

### Pre Professional
- **Computer Science**
  - CS 102 INTRO TO C PROGRAMMING
  - CS 121 COMPUTER SCIENCE I

### Total Semester Hours

131

---

1. Students must take one literature and one history course. Students must also take either a second literature or history course to complete a sequence. (EH 207 + EH 208, EH 209 + EH 210, EH 242 + EH 208, EH 242 + EH 210, HY 103 + HY 104, or HY 221 + HY 222)

2. Based on Math placement, ([http://www.uah.edu/science.departments/math/undergraduate-students/placement](http://www.uah.edu/science.departments/math/undergraduate-students/placement)) prerequisite MA 112 and/or MA 113 Mathematics courses may be required.

3. No more than 6 credit hours can be taken in a single discipline.

### Mathematical Sciences, Double Major in Science or Dual Degree in Engineering, BS - Concentration III

#### Mathematical Sciences, Double Major or Dual Degree, Concentration III, BS Requirements:

- Mathematical Sciences, Double Major or Dual Degree, Concentration III, BS degree requires a minimum of 128 credit hours depending upon the second major or dual degree chosen.
- 39 of 128 credit hours must be taken at 300 level or higher (39 credits includes courses taken at the 300+ level in major, minor (if chosen), Pre-professional area and electives).
- 12 credit hours of 300 level and above must be taken in the major or 6 credit hours in the major and 6 credit hours in the minor (if chosen).
- 12 of the last 18 credit hours must be taken at UAH, with an overall 25% of coursework taken at UAH.
- Unless otherwise noted a C- or better is required for all College of Science prerequisite courses.
- No more than 64 credit hours from a two-year college can be applied toward a UAH degree.
- For graduation application instructions, see here

---

1. Students must take one literature and one history course. Students must also take either a second literature or history course to complete a sequence. (EH 207 + EH 208, EH 209 + EH 210, EH 242 + EH 208, EH 242 + EH 210, HY 103 + HY 104, or HY 221 + HY 222)

2. Based on Math placement, ([http://www.uah.edu/science/departments/math/undergraduate-students/placement](http://www.uah.edu/science/departments/math/undergraduate-students/placement)) prerequisite MA 112 and/or MA 113 Mathematics courses may be required.

3. No more than 6 credit hours can be taken in a single discipline.
For choices see the World Languages and Cultures (http://catalog.uah.edu/undergrad/colleges-departments/arts-humanities-social-sciences/foreign-languages-literatures) department.

If neither MA 442 or 452 is taken, choose an additional MA 300+ level or higher course.

Sample four year plan for Mathematical Sciences, Double major with Computer Science, Curriculum III, BS degree:

Note: This is only an example and variations are possible.

Mathematics Minor

A minor in Mathematical Sciences consists of:

- MA 171 CALCULUS A 4
- MA 172 CALCULUS B 4
- MA 201 CALCULUS C 4
- MA 244 INTRO TO LINEAR ALGEBRA 3

Select two MA or ST 300+ or 400+ level courses.

Total Semester Hours 21

Physics

Room 201B Optics Building (OPB)
The Physics department offers the following undergraduate degrees:

- Physics, BS (p. 625)
- Physics, BS - Applied and Theoretical Physics Concentration (p. 629)
- Physics, BS - Optics Concentration (p. 642)
- Physics, BS - Astronomy and Astrophysics Concentration (p. 633)
- Physics, BS - Engineering Physics Concentration (p. 637)
- Physics, BS - Secondary Education Concentration (p. 646)

Program Objectives

Our primary objective is to educate and train the next generation of physicists, perform cutting-edge and internationally-recognized research, and support the education of students in allied areas such as engineering, chemistry, atmospheric science, and the biological sciences. Our second objective is to prepare physics majors for employment in industrial research or for further graduate studies in physics or related fields, including astrophysics, optics, biophysics, engineering, or medicine.

Learning Outcomes

Physics students and majors will:

- Demonstrate an understanding of the basic principles and modern tools (viz., numerical methods) of physics
- Engage in service-based learning and public outreach related to physics and science
- Have a rigorous research experience prior to graduation

Majors in Physics

- Physics, BS (p. 625)
- Physics, BS - Applied and Theoretical Physics Concentration (p. 629)
- Physics, BS - Optics Concentration (p. 642)
- Physics, BS - Astronomy and Astrophysics Concentration (p. 633)
- Physics, BS - Engineering Physics Concentration (p. 637)
- Physics, BS - Secondary Education Concentration (p. 646)

Students majoring in other academic areas may minor in physics. The Department of Physics offers three minors: Physics, Optics, and Astronomy & Astrophysics. An overall average of C or better is required for the courses in the minor.

Minors in Physics

- Physics (p. 651)
- Optics (p. 651)
- Astronomy and Astrophysics (p. 650)

UAH's Joint Undergraduate Master's Program (JUMP) allows undergraduate students to study at the graduate level. By taking graduate courses in your senior year you could reduce the time taken to get a graduate (MS) degree. Please visit JUMP (p. 20) page for general information.

Requirements For Admissions

1. Cumulative overall 3.5 GPA
2. Major GPA of 3.5
3. Student shall complete PH 110, PH 111, PH 112, PH 113, PH 114, PH 115, PH 116, PH 251, PH 301, PH 305, PH 351, PH 431, PH 432, MA 171, MA 172, MA 201, MA 238, MA 244 by Junior year

Additional Information

- Maximum of 12 credit hours count toward both degrees

Designated Faculty Contact/Advisor

Dr. James Miller james.miller@uah.edu 256.824.6156
PH 100 - CONCEPTUAL PHYSICS
Semester Hours: 4

Classical and modern physics survey course. Approach physical laws conceptually and intuitively, with minimal mathematics. Motion, gravitation, energy, electricity and magnetism, quantum mechanics, physics of everyday phenomena, philosophical and historical implications. Offered Spring.

PH 100L - CONCEPTUAL PHYSICS LAB
Semester Hours: 0

PH 101 - GENERAL PHYSICS I
Semester Hours: 4

Introductory non-calculus based course. The basic laws of physics and their application to specific problems: Newtonian mechanics, energy, conservation laws, and thermodynamics. Laboratory included. PH 101 and 102 satisfy the laboratory science requirement. Offered Fall.

PH 101L - GENERAL PHYSICS I LAB
Semester Hours: 0

PH 101R - RECITATION
Semester Hours: 0

PH 102 - GENERAL PHYSICS II
Semester Hours: 4

Continuation of PH 101. Electrostatics, currents, magnetic phenomena, relativity, waves, quantum nature of matter. Laboratory included. Offered Spring. Prerequisite: PH 101.

PH 102L - GENERAL PHYSICS II LAB
Semester Hours: 0

PH 102R - RECITATION
Semester Hours: 0

PH 103 - GENERAL PHYSICS I/A&M
Semester Hours: 4

PH 110 - FRONTIERS IN SCIENCE
Semester Hours: 3

Introduces frontiers and problems of modern physical science. Physicist present the role of physics in diverse careers and physics fields. Introduction to physics applications and future employment opportunities motivates students to master skills required in undergraduate studies. Offered Fall. Prerequisite with concurrency: MA 171.

PH 111 - GEN PHYSICS W/CALCULUS I
Semester Hours: 3

PH 111R - RECITATION
Semester Hours: 0

PH 112 - GEN PHYSICS W/CALC II
Semester Hours: 3-4

Continuation of PH 111. Heat and thermodynamics, basic electricity, electric and magnetic fields. Offered all terms. Prerequisite: MA 172, PH 111, PH 114. Corequisite: PH 115.

PH 112R - RECITATION
Semester Hours: 0

PH 113 - GEN PHYSICS W/CALC III
Semester Hours: 3

Continuation of PH 111 and 112. Wave motion, optics, relativity, quantum effects, atomic and nuclear structure, and elementary particles. Offered all terms. Prerequisite: MA 201 (or higher), PH 112, and PH 115. Corequisite: PH 116.

PH 113R - RECITATION
Semester Hours: 0
PH 114 - GENERAL PHYSICS LAB I  
Semester Hour: 1  
Laboratory instruction in support of material covered in PH 111. Offered all terms. Corequisite: PH 111.

PH 115 - GENERAL PHYSICS LAB II  
Semester Hour: 1  
Laboratory instruction in support of material covered in PH 112. Offered all terms. Corequisite: PH 112.

PH 116 - GENERAL PHYSICS LAB III  
Semester Hour: 1  
Laboratory instruction in support of material covered in PH 113. Offered all terms. Corequisite: PH 113.

PH 201 - GENERAL PHYSICS I/CALHOUN  
Semester Hours: 4

PH 213 - GEN PHYSICS W/CALC A/CALHOUN  
Semester Hours: 4

PH 216 - GEN PHYSICS LAB I/CALHOUN  
Semester Hour: 1

PH 218 - MODERN PHYSICS/CALHOUN  
Semester Hours: 4

PH 251 - SPECIAL RELATIVITY  
Semester Hour: 1  
Einstein's theory of special relativity. Invariance, geometry of Minkowski spacetime, non-Euclidean geometry; Principle of Relativity; clock synchronization; Lorentz transformations; counter-intuitive effects measured in relative motion; casualty and the speed of light; relativistic dynamics. Prerequisite: PH 112 and MA 172. Prerequisite with concurrency: PH 113.

PH 301 - INTERMEDIATE MECHANICS  
Semester Hours: 3  
Reviews Newtonian mechanics, natural and driven oscillations, variational calculus and Lagrange's equations, application to central force motion, rigid body rotation and coupled oscillators. Offered Spring. Prerequisite: PH 111 and either PH 305 or MA 238.

PH 305 - MATH METHODS IN PHYSICS  
Semester Hours: 3  
Applied analytical techniques to solve problems in physics. Complex analysis, Fourier series, linear algebra, differential equations and vector calculus. Applications to mechanics, electricity and magnetism, optics, and thermodynamics. Offered Spring. Prerequisite: PH 112.

PH 306 - APPLIED PHYSICS  
Semester Hours: 3  
Computational and numerical techniques for problem solving. Applications to classical mechanics, electrodynamics, quantum mechanics, optics, astrophysics. Offered Fall. Prerequisite: PH 305, (CS 102 or CPE 112 or CS 121) and (MA 238 or MA 244 or MA 324).

PH 310 - INTERMEDIATE LAB I  
Semester Hours: 2  
Experiments in classical physics. Introduction to statistical methods. Offered Fall. Prerequisites: PH 113 or 116.

PH 311 - INTERMEDIATE LAB II  
Semester Hours: 2  
Experiments in modern physics. Offered Spring. Prerequisite: PH 251 and PH 310.

PH 337 - ELECTRONICS  
Semester Hours: 4  
Introductory course for all science students. Basic AC and DC circuits, operational amplifier circuits, transistor circuits, power supplies, digital logic and their use in laboratory instruments. Laboratory included. Offered Fall, odd years. Prerequisite: PH 112.
PH 351 - INTRODUCTION TO MODERN PHYSICS
Semester Hours: 3

Kinetic theory, Blackbody radiation, Quantum physics: wave packets, the uncertainty principle, Schrodinger's equation and solutions for simple systems, application to atomic, nuclear, and solid-state physics. Offered Fall. Prerequisite: PH 113, and either MA 238 or 244. Prerequisite with concurrency: PH 251.

PH 416 - SENIOR LABORATORY
Semester Hours: 2

Advanced experimental techniques in various sub-fields of physics. Offered Fall, Spring. Prerequisite: PH 311.

PH 420 - SENIOR THESIS
Semester Hours: 3

Research performed under direction of a faculty member. Final research report required. Offered all terms.

PH 421 - THERMAL & STATISTICAL PHYSICS
Semester Hours: 3

States of model system, entropy and temperature, Boltzmann distribution, thermal radiation and Planck distribution, chemical potential and Gibbs distribution, ideal gas, Fermi and Bose gases, heat and work, semiconductor statistics, kinetic theory. Offered Spring, even years. Prerequisite: PH 351. Prerequisite with concurrency: PH 301 and PH 306.

PH 431 - INTERM ELECTRIC & MAGNETISM I
Semester Hours: 3

PH 432 - INTERM ELECTRIC & MAGNETISM II
Semester Hours: 3

PH 451 - INTRO QUANTUM MECHANICS I
Semester Hours: 3

Waves and particles: deBroglie waves, wave-packets, and the uncertainty principle. Postulates of quantum mechanics. Schrodinger's equation: simple systems in one, two and three dimensions, the hydrogen atom. Angular momentum and spin. Offered Fall. Prerequisite: PH 305, PH 351, and (MA 244 or MA 238) and PH 306 with concurrency.

PH 452 - INTRO QUANTUM MECHANICS II
Semester Hours: 3

PH 453 - INTRO TO PARTICLE PHYSICS
Semester Hours: 3

PH 474 - INTRO TO GENERAL RELATIVITY
Semester Hours: 3

Introduces general relativity and gravitational physics as inferred from the behavior of particles and light rays for a selection of spacetimes. Major properties of black holes, wormholes, gravitational waves. Physics First approach, and introduces new math as required for discussion of physics. Prerequisite: PH 251 and PH 301.

PH 480 - SELECTED TOPICS
Semester Hours: 1-3

Offered upon demand. Topics include physics, optics, astrophysics, and space physics. Offered all terms. Prerequisite: PH 113 and MA 201.
PH 489 - SELECTED TOPICS  
Semester Hours: 1-3  
Offered upon demand. Topics include physics, optics, astrophysics, astronomy, computational physics, and space physics. Offered all terms.  
Prerequisites: PH 113 or 116 and MA 201.  

PH 499 - PHYSICS PRACTICUM  
Semester Hours: 3  
"Capstone" course designed to provide real-world research experience for graduation seniors. Students work individually with faculty members on projects. Requires oral presentation and final research report. Offered all terms. Required courses on the POS must be taken prior to, or concurrently with, this course.  

**Physics, BS**  

**Physics, BS Requirements:**  
- Physics, BS degree requires 128 credit hours.  
- 39 of 128 credit hours must be taken at 300 level or higher (39 credits includes courses taken at the 300+ level in major, minor (if chosen), Preprofessional area and electives).  
- 12 credit hours of 300 level and above must be taken in the major or 6 credit hours in the major and 6 credit hours in the minor (if chosen).  
- 12 of the last 18 credit hours must be taken at UAH, with an overall 25% of coursework taken at UAH.  
- Unless otherwise noted a C- or better is required for all College of Science prerequisite courses.  
- No more than 64 credit hours from a two-year college can be applied toward a UAH degree.  
- For graduation application instructions, see here (p. 806).

1. Students must take one literature and one history course. Students must also take either a second literature or history course to complete a sequence. (EH 207 + EH 208, EH 209 + EH 210, EH 242 + EH 208, EH 242 + EH 210, HY 103 + HY 104, or HY 221 + HY 222)

2. Based on Math placement, (http://www.uah.edu/science/departments/math/undergraduate-students/placement) prerequisite MA 112 and/or MA 113 Mathematics courses may be required.

3. No more than 6 credit hours can be taken in a single discipline.

4. For choices see the World Languages and Cultures (http://catalog.uah.edu/undergrad/courses-departments/arts-humanities-social-sciences/foreign-languages-literatures) department.

Physics, BS - Applied & Theoretical Physics Concentration

Physics, Applied & Theoretical Physics Concentration, BS Requirements:
- Physics, Applied & Theoretical Physics Concentration, BS degree requires 128 credit hours.
- 39 of 128 credit hours must be taken at 300 level or higher (39 credits includes courses taken at the 300+ level in major, minor (if chosen), Pre professional area and electives).
- 12 credit hours of 300 level and above must be taken in the major or 6 credit hours in the major and 6 credit hours in the minor (if chosen).
- 12 of the last 18 credit hours must be taken at UAH, with an overall 25% of coursework taken at UAH.
- Unless otherwise noted a C- or better is required for all College of Science prerequisite courses.
- No more than 64 credit hours from a two-year college can be applied toward a UAH degree.
- For graduation application instructions, see here (p. 806).

Physics, BS - Astronomy & Astrophysics Concentration

The Astronomy & Astrophysics concentration covers basic astronomy and astrophysics, stellar and galactic structure, high-energy astrophysics, general relativity and cosmology. Graduates who complete this concentration find work in all aspects of astrophysics from low-level atmospheric physics, to solar physics and the Sun-Earth system, to the mysteries of dark matter and cosmology. With laboratory experience and exposure to electronics, students may also find work supporting astronomical guidance and control systems on terrestrial and space-borne platforms.

Physics, Astronomy & Astrophysics Concentration, BS Requirements:

- Physics, Astronomy & Astrophysics Concentration, BS degree requires 128 credit hours.
- 39 of 128 credit hours must be taken at 300 level or higher (39 credits includes courses taken at the 300+ level in major, minor (if chosen), Pre-professional area and electives).
- 12 credit hours of 300 level and above must be taken in the major or 6 credit hours in the major and 6 credit hours in the minor (if chosen).
- 12 of the last 18 credit hours must be taken at UAH, with an overall 25% of coursework taken at UAH.
- Unless otherwise noted a C- or better is required for all College of Science prerequisite courses.
- No more than 64 credit hours from a two-year college can be applied toward a UAH degree.
- For graduation application instructions, see here (p. 806).

**ELECTIVE COURSES**

| PH/OPT/AST 300+ level or higher course | 17-18 |

Elective courses. 15 credits of the 17-18 elective credits must be taken at the 300+ level or higher.

Additional Elective courses 100+ level to reach 128 credit hours. Electives can be taken from any department and do not have to be taken in your major or minor. No more than 4 credit hours of 100 level HPE courses can count toward degree requirements.

**TOTAL SEMESTER HOURS**

| 128 |

1. Students must take one literature and one history course. Students must also take either a second literature or history course to complete a sequence. (EH 207 + EH 208, EH 209 + EH 210, EH 242 + EH 208, EH 242 + EH 210, HY 103 + HY 104, or HY 221 + HY 222)

2. Based on Math placement, (http://www.uah.edu/science/departments/math/undergraduate-students/placement) prerequisite MA 112 and/or MA 113 Mathematics courses may be required.

3. No more than 6 credit hours can be taken in a single discipline.

4. For choices see the World Languages and Cultures (http://catalog.uah.edu/undergrad/colleges-departments/arts-humanities-social-sciences/foreign-languages-literatures) department.

### Electives

Electives can be taken from any department and do not have to be taken in your major or minor. No more than 4 credit hours of 100 level HPE courses can count toward degree requirements.

### Total Semester Hours:

128
Physics, Engineering Physics Concentration, BS degree requires 128 credit hours.

- 39 of 128 credit hours must be taken at 300 level or higher (39 credits includes courses taken at the 300+ level in major, minor (if chosen), Pre-professional area and electives).
- 12 credit hours of 300 level and above must be taken in the major or 6 credit hours in the major and 6 credit hours in the minor (if chosen).
- 12 of the last 18 credit hours must be taken at UAH, with an overall 25% of coursework taken at UAH.
- Unless otherwise noted a C- or better is required for all College of Science prerequisite courses.
- No more than 64 credit hours from a two-year college can be applied toward a UAH degree.
- For graduation application instructions, see here (p. 806).

**Engineering Physics Concentration Requirements**

15 semester hours of Engineering Courses 300+ level or higher

**Elective Courses**

Elective courses. 6 credits of the 16-17 elective credits must be taken at the 300+ level or higher.

Additional Elective courses 100+ level to reach 128 credit hours. Electives can be taken from any department and do not have to be taken in your major or minor. No more than 4 credit hours of 100 level HPE courses can count toward degree requirements.

**Total Semester Hours**

128 semester hours

1. Students must take one literature and one history course. Students must also take either a second literature or history course to complete a sequence. (EH 207 + EH 208, EH 209 + EH 210, EH 242 + EH 208, EH 242 + EH 210, HY 103 + HY 104, or HY 221 + HY 222)

2. Based on Math placement, (http://www.uah.edu/science/departments/math/undergraduate-students/placement) prerequisite MA 112 and/or MA 113 Mathematics courses may be required.

3. No more than 6 credit hours can be taken in a single discipline.

4. For choices see the World Languages and Cultures (http://catalog.uah.edu/undergrad/colleges-departments/arts-humanities-social-sciences/foreign-languages-literatures) department.

**Physics, BS - Optics Concentration**

Optics is a multidisciplinary field. Students completing the optics concentration receive exposure to geometrical optics, physical optics, optical instruments, interference and diffraction, polarimetry, optoelectronics, lasers, optical sources and detectors, and radiometry along with laboratory experience using state-of-the-art equipment and modern optical techniques.

**Physics, Optics Concentration, BS Requirements:**

- Physics, Optics Concentration, BS degree requires 128 credit hours.
- 39 of 128 credit hours must be taken at 300 level or higher (39 credits includes courses taken at the 300+ level in major, minor (if chosen), Pre-professional area and electives).
- 12 credit hours of 300 level and above must be taken in the major or 6 credit hours in the major and 6 credit hours in the minor (if chosen).
- 12 of the last 18 credit hours must be taken at UAH, with an overall 25% of coursework taken at UAH.
- Unless otherwise noted a C- or better is required for all College of Science prerequisite courses.
- No more than 64 credit hours from a two-year college can be applied toward a UAH degree.
- For graduation application instructions, see here (p. 806).

**Total Semester Hours:** 17

**Physics, BS - Secondary Education Certification**

**Physics, Secondary Education Concentration, BS Requirements:**

- Physics, Secondary Education Concentration, BS degree requires 142-143 credit hours.
- 39 credit hours must be taken at 300 level or higher (39 credits includes courses taken at the 300+ level in major, minor (if chosen), Pre professional area and electives).
- 12 credit hours of 300 level and above must be taken in the major or 6 credit hours in the major and 6 credit hours in the minor (if chosen).
- 12 of the last 18 credit hours must be taken at UAH, with an overall 25% of coursework taken at UAH.
- Unless otherwise noted a C- or better is required for all College of Science prerequisite courses.
- No more than 64 credit hours from a two-year college can be applied toward a UAH degree.
- For graduation application instructions, see here (p. 806).

This concentration leads to a B.S. degree with a major in Physics, and meets the requirements for an Alabama Class B Middle/Junior High School Teacher's Certificate or an Alabama Class B High School Teacher's Certificate.

• Sociology (SOC) (p. 776)
• Statistics (ST) (p. 779)
• Theatre (TH) (p. 779)
• Womens and Gender Studies (WGS) (p. 781)
• World Languages and Cultures (WLC) (p. 781)
ACC 210 - ACCOUNTING FOR BUSINESS
Semester Hours: 4
An introduction to the role accounting information plays in business. Topics include both external and internal uses of accounting information with a particular focus on the accounting cycle, the preparation and interpretation of financial statements, and the role of accounting information in management decision making.

ACC 211 - PRINC OF FINANCIAL ACCOUNTING
Semester Hours: 3
Introduction to basic concepts that underlie accounting information. Topics include the statement of financial position, the income statement, the accounting cycle, internal control, and ethical and behavioral issues in financial reporting. Emphasis is placed on proper use of financial statement information.

ACC 212 - MANAGEMENT ACCOUNTING
Semester Hours: 3
An introduction to the use of accounting information for internal planning and control. Topics include cost behavior, cost-volume-profit analysis, cost measurement, relevant costs for decision-making, budgeting, and performance evaluation. Prerequisite: ACC 211.

ACC 307 - ACCOUNTING INFORMATION SYS
Semester Hours: 3
A detailed review and analysis of procedures required to capture, classify, summarize and report financial information. Topics include elements of accounting systems, business documents, consideration in systems design, flowcharting, and procedures to protect property and information. Extensive use is made of the personal computer and the SAP software to illustrate the concepts covered in the course. Prerequisite: ACC 210.

ACC 310 - INTERM FINANCIAL ACCT I
Semester Hours: 3
First in a two-course sequence to examine the measurement and reporting of income, cash flows, assets, liabilities, and owner's equity in financial statements. Topics include financial statements, current assets and liabilities, investments, revenue recognition, and error analysis. Prerequisite: ACC 210 (with a grade of B- or better).

ACC 310L - LABORATORY
Semester Hours: 0
Intermediate Accounting I Lab provides extra opportunities for students to practice and to develop their problem-solving skills.

ACC 311 - INTERM FINANCIAL ACCT II
Semester Hours: 3
Second in a two-course sequence to examine the measurement and reporting of income, cash flows, assets, liabilities, and owner's equity in financial statements. Topics include long-term assets and liabilities, leases, income taxes, pensions, and owner's equity. Prerequisite: ACC 310.

ACC 311L - LABORATORY
Semester Hours: 0
Intermediate Accounting II lab provides extra opportunities for students to practice and to develop their problem-solving skills.

ACC 313 - INDIVIDUAL/SMALL BUS INCOME TA
Semester Hours: 3
Determination of taxable income, business and non-business deductions, and selected aspects of tax accounting for individuals and sole proprietorships. Prerequisite: ACC 210.

ACC 413 - CORP/PARTNERSHIP/ESTATE TAXES
Semester Hours: 3
Tax accounting for partnerships, corporations, S corporations, estates, and trusts. Tax administration and research are emphasized. Prerequisite: ACC 313.

ACC 414 - COST ACCOUNTING
Semester Hours: 3
Development and use of cost data for external reporting and internal planning and control. Topics include cost modeling, job and process costing, standard costing, activity-based costing, and budgeting. Development of relevant cost information for special purposes is also considered. Prerequisite: ACC 212.
ACC 415 - ADV FINANCIAL ACCOUNTING
Semester Hours: 3
Analysis of financial accounting issues and alternatives concerning business combinations, intercorporate investments, international business, and partnerships. Prerequisite: ACC 311.

ACC 417 - ACC ST/LOCAL GOV & NON-PROFITS
Semester Hours: 3
Fund accounting at federal, state, and local governments, hospitals, and universities. Special accounting principles, budgeting, accounting for various funds and account groups are emphasized. Prerequisite: ACC 212.

ACC 420 - STATE AND LOCAL TAXATION
Semester Hours: 3
Principles of state income tax, sales and other excise taxes and property tax. Taxation of interstate commerce will be examined along with US constitutional restrictions on the ability of states to tax interstate commerce.

ACC 431 - PRINCIPLES OF AUDITING
Semester Hours: 3
Conceptual foundations of auditing practice. Basic auditing concepts including professional ethics, legal ability, independence, and competence. Auditing of computer-oriented systems, audit sampling, and standards of reporting. Role of the internal and independent auditor. Prerequisite: ACC 307 & ACC 310.

ACC 432 - ADVANCED AUDITING
Semester Hours: 3
Practical applications of auditing concepts and standards. An understanding of auditing principles is reinforced and expanded by exposure to problems and cases. Prerequisite: ACC 431.

ACC 433 - FORENSIC ACCOUNTING
Semester Hours: 3
Study of the nature and types of fraud. The course covers the tools and techniques used to prevent, investigate, and detect fraud. Prerequisite: ACC 431.

ACC 440 - BASIC GOVERNMENTAL CONTRACT AC
Semester Hours: 3
Basic coverage and principles of government contract accounting with an emphasis on the Federal Acquisition Regulation (FAR). Prerequisite: ACC 314 or ACC 414.

ACC 441 - ADVANCED GOV CONTRACT ACCTG
Semester Hours: 3
Advanced issues in government contract cost accounting with an emphasis on the Federal Acquisition Regulation (FAR) and Cost Accounting Standards (CAS) cost allocation guidelines. Prerequisite: ACC 440.

ACC 470 - SEMINAR/CONT ACCTG ISSUE
Semester Hours: 3
Current topics in professional accounting. Prerequisite: ACC 311.

ACC 480 - PROFESSIONAL CERTIFICATION
Semester Hours: 3

ACC 490 - SPECIAL PROJECTS
Semester Hours: 1-3
Independent study in an area of interest to the student in the fields of accounting. Department chair permission required.

ACC 495 - INTERNSHIP IN ACCOUNTING
Semester Hours: 1-3
Active involvement in a project in a business enterprise, professional organization, or government agency that has particular interest and relevance to the student. Subject to College's guidelines on internships. Course grade will be given on a satisfactory (S)/unsatisfactory (U) basis.
Ancient and Medieval Studies

AMS 199 - SPECIAL TOPICS
Semester Hours: 3
Special topics. Selected special topics course offered in ancient languages, History, Art History, Philosophy.

AMS 229 - ANCIENT & MEDIEVAL WORLDS
Semester Hours: 3
A survey of ancient and medieval culture in the Mediterranean world with attention to the ancient cultures of the Near East, Egypt, Greece, and Rome as well as the development of medieval Christian and Muslim civilizations.

Art History (ARH)

ARH 100 - ARH SURV:ANCIENT-MEDIEVAL
Semester Hours: 3
Survey of Pre-historic to Medieval art. Course emphasizes study of cultural contexts that fostered art and introduces students to basic analytic tools and history of art history. Very little in art is completely new. Learn about the visual traditions that shaped the culture we live with today.

ARH 101 - ARH SURV:RENAISSANCE-MODERN
Semester Hours: 3
Survey of the Major Western works of art produced since the Renaissance. Relates stylistic change to changes in historical and cultural contexts. Introduces students to basic analytic tools and theories of art history.

ARH 103 - ARH SURV:NON-WESTERN TRADITIONS
Semester Hours: 3
Survey of visual culture in India, the Far East, the Americas, the Pacific, and Africa. Focuses on relationships among art, religious beliefs, politics, and cultural practices. Studying the visual traditions of other cultures fosters greater understanding as our world becomes more global. Use the analytical tools and theories of art history to foster understandings of global cultures.

ARH 120 - ARH SURV: SPECIAL TOPICS
Semester Hours: 3
Course allows for survey-style exploration of special topics in art history and related fields such as achaeology.

ARH 301 - ANCIENT GREEK ART
Semester Hours: 3
Art of ancient Greece from the Homeric period to the death of Cleopatra. Focuses on relationships of art to philosophy, politics, religion, literature, and drama. Greek art and culture heavily influenced our education system as well as the appearance of cities from Washington, DC to Huntsville, AL. Prerequisites: ARH 100 and ARH 101.

ARH 302 - MEDIEVAL ART
Semester Hours: 3
Examines architecture, sculpture, manuscripts, metalwork, textiles, and stained glass from the fall of Rome to the Gothic era. In addition to a chronological study of the period, engage in case studies on courtship, warefare, religion, and cultural interactions that influenced practices today. Prerequisites: ARH 100 and ARH 101.

ARH 303 - RENAISSANCE ART
Semester Hours: 3
The Renaissance supposedly ushered in advances in arts, humanities, and sciences. Rather than focusing on great masters, this course looks at regional trends in Italy as well as the rest of Europe to see what is innovative about this era considered a high point in Western culture. Prerequisites: ARH 100 and ARH 101.

ARH 304 - TWENTIETH CENTURY ART
Semester Hours: 3
Developments in European and American art from 1890 to World War II will be examined through historical, literary, philosophical, political, and social contexts and theories.. This course guides the student in critical reading of selected art historical and interdisciplinary scholarship. Prerequisites: ARH 100 and ARH 101.
ARH 305 - ANCIENT ROMAN ART
Semester Hours: 3

Roman visual culture from the foundation of the city to its fall. Explore case studies such as the age of Augustus, Pompeii, Roman engineering, the Provinces, games and spectacle. Learn about the Roman legacy and consider its impact on modern Western Culture. Prerequisites: ARH 100 and ARH 101.

ARH 306 - COLLAPSE OF CIVILIZATIONS
Semester Hours: 3

Course investigates why some cultures succeed and others fail. Examine factors that lead to collapse to address a question relevant to the contemporary world: How severe do internal stresses have to become before relatively minor climate shifts can trigger a widespread cultural collapse? Prerequisites: ARH 103.

ARH 307 - IMPRESSIONISM & POST-IMP
Semester Hours: 3

European and American art from 1860 to 1900 examined through historical, political, social, philosophical, theoretical and literary perspective. This course guides the students in critical reading of selected art historical and interdisciplinary scholarship. Prerequisites: ARH 100 and ARH 101.

ARH 309 - CONTEMPORARY ART & ISSUES
Semester Hours: 3

Major movements since World War II examined through historical, political, social, philosophical, and literary perspectives. Contemporary art theories will also be explored. Course guides students in critical reading of selected art historical and interdisciplinary scholarship. Prerequisites: ARH 100 and ARH 101.

ARH 310 - NINETEENTH CENTURY ART
Semester Hours: 3

European and American art from 1780 to 1860 examined through historical, political, social, philosophical, theoretical and literary perspectives. Course guides students in critical reading of selected art historical and interdisciplinary scholarship. Prerequisites: ARH 100 and ARH 101.

ARH 311 - PHILOSOPHY OF ART
Semester Hours: 3

What is Art? This course explores and interrogates a wide range of contrasting aesthetic theories within the western tradition, with particular emphasis on the relation between artistic expression and philosophical frameworks. Prerequisites: ARH 100 and ARH 101. OR ARH 100 and ARH 103. OR ARH 101 and ARH 103.

ARH 320 - SPECIAL TOPICS IN ART HY
Semester Hours: 3

Developed based on student and faculty interest, special topics courses explore content and issues not currently emphasized in the curriculum. Courses may focus on a particular issue like Women in Antiquity or a particular genre such as Modern Architecture. Prerequisites: ARH 100, ARH 101, and ARH 309.

ARH 395 - INDEPENDENT STUDY
Semester Hours: 3

Directed, independent study on a topic pre-arranged with instructor, normally as an outgrowth of a 300-level art history course. Weekly mentoring meetings with instructor help student develop a workable thesis, conduct research, and manage a project that results in a well-argued paper.

ARH 400 - SENIOR THESIS
Semester Hours: 3

Culminating experience for students with an Art History concentration. With the help of a faculty mentor, student will choose a topic, conduct research, and construct a well-argued paper. Student will present this research to the faculty, displaying skills valuable in most careers.

Art Studio (ARS)

ARS 123 - TWO-DIMENSIONAL DES/COLOR TH
Semester Hours: 3

Introduction to the principles and elements of design and color theory. Assignments explore design concepts and an understanding of color. Course stresses the development of visual and manual skills, problem solving, critical thinking, and the tools and materials used in the making of art.
ARS 140 - THREE-DIMENSIONAL DESIGN
Semester Hours: 3
Course introduces students to fundamental principles pertaining to the creation of three-dimensional art and prepares them for more advanced processes. Processes include, but are not limited to, drawing for sculpture, model making, woodworking, and sewing.

ARS 160 - DRAWING: FOUNDATIONS
Semester Hours: 3
Introduction to principles, materials, and techniques of drawing. Observational drawing and exercises teach students visual skills and introduce aesthetics and artistic expression. Class covers visual and manual skills, problem solving, critical thinking, and the tools and materials artists use.

ARS 220 - ANIMATION: INTRODUCTION
Semester Hours: 3
Course is an introduction to the principles of 3D computer generated imaging including modeling, texturing, rigging, animating, lighting, and rendering, as well as production processes such as storyboarding, sound design, and editing that together provide a basic working knowledge of 3D CGI. Prerequisites: ARS 160 and ARS 123.

ARS 230 - GRAPHIC DESIGN: INTRODUCTION
Semester Hours: 3
Introduction to graphic design theories, principles, and software. Instruction in the basics of graphic design through practical understanding of visual communication and logistics of advertising, conceptual thinking, and creative exploration. Course is a primer for the Macintosh platform. Prerequisites: ARS 123 and ARS 160.

ARS 240 - SCULPTURE: INTRODUCTION
Semester Hours: 3
Students will develop and explore their ideas using a variety of traditional and non-traditional tools, materials and processes. Assemblage, subtraction, modeling, 3D modeling/printing and casting processes will be addressed, preparing students for entrance into advanced coursework. Prerequisite: ARS 140.

ARS 250 - PHOTOGRAPHY: INTRODUCTION
Semester Hours: 3
Fundamentals and techniques of the digital camera, image capture, digital scanning, and image manipulation with Adobe PhotoShop software. Basic printing and image preparation for the web and other media will also be explored. Basic Mac OS and/or Windows skills, and digital camera required. Prerequisites: ARS 123 and ARS 160.

ARS 260 - DRAWING: INTRODUCTION
Semester Hours: 3
Course further develops drawing skills through study and practice. Materials, design, and creative ideas are explored. Critical thinking and visual analysis are used in critique. Students continue to develop visual and manual skills, problem solving abilities, and the use of tools and materials. Prerequisites: ARS 123 and ARS 160.

ARS 270 - PAINTING: INTRODUCTION
Semester Hours: 3
Students learn basic painting techniques, materials, and mediums. Problem solving assignments use two-dimensional design and color theory concepts and practices. Students are required to observe and think critically for critique and discussion. Prerequisites: ARS 123 and ARS 160.

ARS 280 - PRINTMAKING: INTRODUCTION
Semester Hours: 3
Introduction to basic areas of printmaking, including planographic, intaglio, and relief processes. Expands 2-D design concepts, color theory, and drawing skills. Develops proficiency with printmaking tools and materials as well as critical thinking and problem solving skills. Prerequisites: ARS 123 and ARS 160.

ARS 320 - ANIMATION: TEAM GAME DESIGN I
Semester Hours: 3
This course in collaborative game design and development will be co-taught by Computer Science and Art faculty. Students will work together in teams to conceptualize and completely build a working video game in a single semester. Prerequisites: ARS 220; for non-art majors, approval of instructor.
ARS 321 - ANIMATION: MODELING I
Semester Hours: 3

Course focuses on mesh design and creation as well as surface and lighting properties for creating production quality models. Digital sculpting, 3D painting, and other workflows will be covered in this class to help students gain experience and better understand the role of CGI modelers. Prerequisite: ARS 220.

ARS 322 - ANIMATION: CHARACTER ANIMTN I
Semester Hours: 3

Course explores fundamental animation principles (timing/spacing, overlap, squash/stretch, anticipation, etc) along with digital animation tools (rigging, inverse kinematics, keyframing, etc) to help students gain experience and a better understanding of the role of CG animators. Prerequisite: ARS 220.

ARS 323 - ANIMATION: SHORT FILM I
Semester Hours: 3

In this course students will conceptualize and fully produce 3D animated short films. The story, characters, and world will be built from the ground up, and the production pipeline will mirror common industry practices. Experience with 3D is essential, but expertise in a particular discipline is not as critical as being driven to learn and create. Prerequisites: ARS 220; for non-art majors, approval of instructor.

ARS 324 - ANIMATION: TECHNICAL ARTS I
Semester Hours: 3

Course will concentrate on areas of production that require both technical and art skill, often called technical art. Topics include in-depth rigging, automating workflows, simulations, writing custom tools, writing shaders, etc. Students will gain experience in a sought-after production role. Prerequisite: ARS 220.

ARS 330 - GRAPHIC DESIGN: PRINT MEDIA I
Semester Hours: 3

Course emphasizes creative exploration in design and layout. Students will learn intermediate methods of graphic design. Focus for this course is additional study in design, creative thinking, and industry software.

ARS 332 - GRAPHIC DESIGN: WEB DESIGN
Semester Hours: 3

Beginning course in web design using HTML and CSS to build effective and creative websites with strong user-centric design. Understanding HTML and current best web design practices is essential to web design and development. Prerequisite: ARS 230.

ARS 333 - GRAPH DES: WATERCOLOR & DIG I
Semester Hours: 3

Graphic design from an illustration and fine arts perspective. Course explores different creative directions using current software in combination with traditional watercolor media. Students will learn how to handle watercolor, develop creative concepts, and use software to support their design. Prerequisite: ARS 230.

ARS 334 - GRAPH DES: WEB USER EXPER I
Semester Hours: 3

Course places emphasis on user experience, web animation, and application for the purpose of media development. This course focuses on the understanding of user experience and user interface design through the study of how consumers interact with media. Prerequisite: ARS 230.

ARS 335 - GRAPHIC DESIGN: TYPOGRAPHY I
Semester Hours: 3

Course studies type design and the usage of basic letterforms, typographic contrast, and hierarchy of information, major type families and characteristics, the history of typography design, creativity, and grid layout. Prerequisite: ARS 230.

ARS 340 - SCULP: FABRICATION I
Semester Hours: 3

Exploration of a variety of assemblage processes including wood, metal, and fabric construction. Emphasis is placed on idea development and investigating a wide range of forms and materials. Course instruction includes welding, CNC plasma cutting, advanced wood joinery, and wood bending. Prerequisite: ARS 240.

ARS 341 - SCULP: CARVING I
Semester Hours: 3

Carving stone, wood, and other materials is investigated with emphasis placed on developing the ability to see and release forms and on the unique relationship evolving between maker and material. Instruction also includes CNC routing, wood turning, and sharpening techniques. Prerequisite: ARS 240.
ARS 342 - SCULP: CASTING I  
Semester Hours: 3  
Course instruction focuses on mold-making processes and materials involved in casting objects using both traditional and non-traditional methods. Metal casting is the principle focus of this course with investigation surrounding how digital practices continue to affect this age-old practice. Prerequisite: ARS 240.

ARS 346 - SCULP: FIGURE MODELING I  
Semester Hours: 3  
Study of the human form through direct clay modeling from life, including anatomical studies, armature construction, mold making, and casting. Nude models will be used. Prerequisite: ARS 240.

ARS 347 - SCULP: SPACE AND PLACE I  
Semester Hours: 3  
Investigation of installation and environmental art practices including site-specific work, public art and interactive environments. Students will explore works that relate to the experience of place and develop the potential to use sculptural objects to transform space. Prerequisite: ARS 240.

ARS 350 - PHOTO: DIGITAL I  
Semester Hours: 3  
Digital image creation and editing techniques using postproduction software, digital printing, and image presentation. Course addresses contemporary fine art issues and an introduction to studio lighting. Students are required to provide their own digital camera with RAW settings. Prerequisite: ARS 250.

ARS 352 - PHOTO: DARKROOM I  
Semester Hours: 3  
Black and white film and darkroom techniques explored as a means of expression. Course discusses artistic styles and the history of twentieth-century black and white photography. Students will produce a final fine art portfolio. 35mm camera required (available through department if necessary). Prerequisite: ARS 250.

ARS 353 - PHOTO: EXPER & HIST I  
Semester Hours: 3  
Introduction to alternative ways of working in the darkroom with an emphasis on historical photographic techniques. Experimentation with analog and digital materials are encouraged to produce a final portfolio. Students need a film camera (available through the department if necessary). Prerequisite: ARS 352.

ARS 355 - PHOTO: DOCUMENTARY I  
Semester Hours: 3  
Students study “truth” in the image using the documentary style of photography. Emphasis on the history of the genre and how to work in the field with attention to ethical issues. Students are required to provide their own digital camera with RAW settings. Prerequisite: ARS 350.

ARS 360 - DRAWING: FIGURE  
Semester Hours: 3  
Drawing with an emphasis on life drawing utilizing both traditional and contemporary methods and materials. Figure drawing is the traditional cornerstone of art training, and includes anatomy, observation, and advanced technical skills. Nude models will be used. Prerequisite: ARS 260.

ARS 375 - PAINTING: TRADITIONAL I  
Semester Hours: 3  
Investigation of figure painting, focusing on technical and philosophical approaches to using the human form as subject matter. Nude models will be used. Students are guided in the development of artistic facility and vocabulary. Prerequisite: ARS 270.

ARS 376 - PAINTING: CONTEMPORARY I  
Semester Hours: 3  
Contemporary approaches toward painting are explored through technical and conceptual exercises based on contemporary painting practices. Students are guided in the development of artistic facility and personal expression. Prerequisite: ARS 270.

ARS 377 - PAINTING: MIXED MEDIA I  
Semester Hours: 3  
Exploration of painting with mixed and non-traditional media, including the use of assemblage and collage processes, shaped or contoured canvases, and related media. Students are guided in the development of artistic facility and a vocabulary of visual symbols for personal expression. Prerequisite: ARS 270.
ARS 381 - PRINT: ETCHING & RELIEF I
Semester Hours: 3
Etching and relief print processes are explored through woodblock, linoleum cut, aquatint and line etching. Through demonstrations, critical analysis, and making prints, students develop skills with tools, techniques and concepts associated with etching and relief printmaking. Prerequisite: ARS 280.

ARS 383 - PRINT: SCREENPRINT I
Semester Hours: 3
Studio practices in screenprint methods are used to synthesize technical skills and develop sophisticated aesthetic modes of printmaking. Through demonstrations, critical analysis, and making prints, students will consider complex ways in which printmaking becomes a tool for artistic expression. Prerequisite: ARS 280.

ARS 385 - PRINT: BOOK ARTS I
Semester Hours: 3
Students develop skills and aesthetic modes of narrative work through book arts. Emphasis on gaining skills in cutting, folding, measuring, gluing, sewing, printing, and binding. Students develop form and content through the exploration of structural mock ups and personal work. Prerequisite: ARS 280.

ARS 387 - PRINT: MONOPRINT & LITHOGRAPHY I
Semester Hours: 3
Monoprint and lithography are explored through planographic print processes. Through demonstrations, critical analysis, and making prints, students develop skills with tools, techniques and concepts associated with monoprint and lithography printmaking. Prerequisite: ARS 280.

ARS 390 - CROSS DISCIPLINARY STUDIO I
Semester Hours: 3
This portfolio development course allows students to work with and gain feedback from studio professors and students from different studio disciplines. Students will investigate a variety of conceptual approaches as well as exploring the possibility of combined and/or non-traditional media. Prerequisites: ARS 123, ARS 140, ARS 160, ARS 260, plus a minimum of two 300-level studio courses.

ARS 393 - MULTIMEDIA I
Semester Hours: 3
Study and practice of time-based and other artistic approaches that combine elements of various art forms, usually developed along strong conceptual or thematic lines. Readings, written assignments, and presentations foster an understanding of the wide varieties of contemporary art practice. Prerequisites: ARS 123, ARS 140, ARS 160 and ARS 260.

ARS 395 - SP TOPICS IN STUDIO ART
Semester Hours: 3
Special topics on particular media or conceptual approaches to art. This course allows the student to explore new media and/or critical theoretical approaches to contemporary art. Prerequisite: Instructor Approval.

ARS 410 - PRINCIPLES FOR TEACHING ART
Semester Hours: 3
Focus on methods, materials and processes suitable for comprehensive art education content implementation. The course is a hands-on methods course in which students are required to design and implement art lessons to be taught to students in educational settings. Prerequisites: ED 410 and at least 4 300-level ARS courses, minimum GPA 2.75 or higher.

ARS 420 - ANIMATION: TEAM GAME DESIGN II
Semester Hours: 3
In this advanced collaborative game design and development course, students take on leadership production roles on their game teams and help mentor junior members. Students will gain experience as team leads and learn to coordinate multidisciplinary projects. Prerequisite: ARS 320, approval of instructor for non-art majors.

ARS 421 - ANIMATION: MODELING II
Semester Hours: 3
This advanced 3D modeling course will expand on tools and techniques taught in ARS 321 and continue to focus on creating production/portfolio quality 3D models. Students will explore additional tools and techniques for creating real-time and pre-rendered assets, and will have the ability to focus on modeling areas of personal interest. Prerequisite: ARS 321.
ARS 422 - ANIMATION: CHARACTER ANIMTN II  
Semester Hours: 3  
This advanced character animation course will expand on tools and techniques taught in ARS 322 and focus on creating production/portfolio quality, full character animations. Students will explore animation tools and methods for real-time and prerendered applications, and will have the ability to focus on animation areas of personal interest. Prerequisite: ARS 322.

ARS 423 - ANIMATION: SHORT FILM II  
Semester Hours: 3  
In this advanced short film production course students will take on leadership roles within their discipline and help guide the conceptualization and production of 3D animated short films. Advanced understanding of an aspect of production and short film pipelines is expected. Prerequisite: ARS 323.

ARS 424 - ANIMATION: TECHNICAL ARTS II  
Semester Hours: 3  
In this advanced technical arts course, students will select areas of production interest to research, identify need for improvement, and create solutions for the identified needs. Students may create everything from production quality/speed shaders, to production/pipeline tools, to advanced character rigs. Prerequisite: ARS 324.

ARS 430 - GRAPHIC DESIGN: PRINT MEDIA II  
Semester Hours: 3  
Course emphasizes print production, special applications of print design, environmental graphics, and advertising campaigns. Focus is on mastering print media methods and creating portfolio enhancement projects. Prerequisite: ARS 332.

ARS 432 - GRAPH DES: SENIOR PROJ MGMT  
Semester Hours: 3  
Students develop and/or manage one or more major web projects for clients as well as a professional site for students themselves. Course is the practical application of current best web design practices including user-centric design, HTML, CSS, and current web standards.

ARS 433 - GRAPH DES: WATERCOLOR & DIG II  
Semester Hours: 3  
Course extends a student's knowledge of digital and traditional watercolor media. The purpose of this course is to further explore creative techniques, develop a direction, and apply new techniques combining media. Prerequisite: ARS 333.

ARS 434 - GRAPH DES: WEB USER EXPER II  
Semester Hours: 3  
Course focuses on advanced methods of user experience and user interface design. With faculty mentoring, students learn how to develop complex designs using these methods in user experience for the purpose of advanced media usage. Prerequisite: ARS 334.

ARS 435 - GRAPHIC DESIGN: TYPOGRAPHY II  
Semester Hours: 3  
Course explores professional methods in type design and type application. Course teaches students how to develop advertising series and text design using illustrative approaches to hand lettering. Curriculum includes expressive methods in developing type for the purpose of environmental graphics. Prerequisite: ARS 335.

ARS 440 - SCULP: FABRICATION II  
Semester Hours: 3  
Course continues investigation of fabrication processes exploring the specific nature of each area of specialization with emphasis on integrating multiple processes into singular sculptural works. Emphasis is placed on ideation, discussion, and presentation of personal artistic interests. Prerequisite: ARS 340.

ARS 441 - SCULP: CARVING II  
Semester Hours: 3  
Continued exploration of subtractive processes with a focus on specific material, process, or context. Discussion of ideation, historical/contemporary contexts, and presentation specific to personal artistic interests. Prerequisite: ARS 341.

ARS 442 - SCULP: CASTING II  
Semester Hours: 3  
Continued exploration of mold-making, patination, casting, and foundry processes as well as investigation of contemporary methods and materials. Students develop further technical knowledge and conceptual motivation related to casting with an emphasis on individual exploration. Prerequisite: ARS 342.
ARS 447 - SCULP: SPACE AND PLACE II  
Semester Hours: 3  
Exploration of installation and environmental art practices with an emphasis on creating work at off-campus sites. Students will engage in rigorous ideation through site research and public presentation. Students will have the opportunity to create public artworks on campus and in the City of Huntsville. Prerequisite: ARS 347.

ARS 450 - PHOTO: DIGITAL II  
Semester Hours: 3  
Advanced digital image creation and image presentation. Class is open to experimentation with analog materials to produce digital media. There is an emphasis on personal style to produce a cohesive final project. Students are required to provide their own digital camera with RAW settings. Prerequisite: ARS 350.

ARS 452 - PHOTO: DARKROOM II  
Semester Hours: 3  
Advanced class in black and white darkroom photography. Students will explore the techniques of medium and large format photography to produce a final fine art print portfolio. 120 and/or 4x5 view camera required (available through department if necessary). Prerequisite: ARS 352.

ARS 453 - PHOTO: EXPER & HIST II  
Semester Hours: 3  
Advanced alternative and historical techniques in photography with an emphasis on personal style. Individual projects will be assigned to produce a cohesive portfolio. Prerequisite: ARS 353.

ARS 455 - PHOTO: DOCUMENTARY II  
Semester Hours: 3  
Advanced study of the documentary genre of photography throughout the history of the medium from the first portraits and travel photographs to the photojournalism and ethical issues of the modern world. Students are required to present a final portfolio of photographs. Prerequisite: ARS 355.

ARS 460 - DRAWING: CONCEPTUAL  
Semester Hours: 3  
Practice and theory focusing on drawing as a major medium, utilizing both traditional and contemporary methods and materials. Assignments are concept based. Nude models may be used. Prerequisite: ARS 360.

ARS 475 - PAINTING: TRADITIONAL II  
Semester Hours: 3  
Continued exploration of figurative painting processes with an emphasis on portfolio development and professional practices. Students are guided in the development of artistic facility and personal expression using paint as a medium. Prerequisite: ARS 375.

ARS 476 - PAINTING: CONTEMPORARY II  
Semester Hours: 3  
Continued exploration of contemporary painting approaches with an emphasis on portfolio development and professional practices. Students are guided in their development of artistic facility and a vocabulary of visual symbols for personal expression. Prerequisite: ARS 376.

ARS 477 - PAINTING: MIXED MEDIA II  
Semester Hours: 3  
Continued exploration of mixed and non-traditional media with an emphasis on portfolio development and professional practices. Students are guided in the development of artistic facility and a vocabulary of visual symbols for personal expression through the use of a variety of media. Prerequisite: ARS 377.

ARS 481 - PRINT: ETCHING & RELIEF II  
Semester Hours: 3  
This is an advanced course, where etching and relief are used to make an independent body of work. Students demonstrate how printmaking is a tool for conceptual exploration and expression. Through visual and written research students consider the hand-printed image within our culture. Prerequisite: ARS 381.

ARS 483 - PRINT: SCREENPRINT II  
Semester Hours: 3  
Studio practices in advanced screenprint methods are used to create an independent body of work. Students investigate how screenprinting is a tool for developing prints in an expanded way and explore the multiple through the concerns of analogue and digital possibilities. Prerequisite: ARS 383.
ARS 485 - PRINT: BOOK ARTS II  
Semester Hours: 3  
Students develop an advanced body of work in the book arts, by exploring structure and content. Content is developed through the student's independent investigation of text and image. Structure developed through the making of mockups. Honing technical skills in printing and binding is emphasized. Prerequisite: ARS 385.  
ARS 487 - PRINT: MONOPRINT & LITHOGRAPHY II  
Semester Hours: 3  
Monoprint and lithography print processes are used to create an independent body of work in this advanced course. Students demonstrate how unique and multiple prints are tools for conceptual exploration and expression. Through research students consider the roll printed image within visual culture. Prerequisite: ARS 387.  
ARS 490 - CROSS DISCIPLINARY STUDIO II  
Semester Hours: 3  
This advanced portfolio development course allows students to work with and gain feedback from studio professors and students from different studio disciplines. Students will create a fully developed body of work that is aesthetically and/or conceptually linked. Prerequisite: ARS 390.  
ARS 492 - ART INTERNSHIP  
Semester Hours: 3  
Student applies principles, theories, and skills learned in Art Studio and/or Art History courses to on-the-job experience in a professional environment. Internship host may be suggested by the student or assigned by advisor. 150 work hours required to complete 15-week internship. Prerequisite: Instructor Approval.  
ARS 493 - MULTIMEDIA II  
Semester Hours: 3  
Continued exploration of multi-media art works with emphasis on increasing sophistication and portfolio development. Readings, written assignments, and presentations foster an understanding of the wide varieties of contemporary art practice. Prerequisite: ARS 393.  
ARS 494 - PROFESSIONAL PRACTICES  
Semester Hours: 3  
Course is a requirement for students in the BFA program, and is open to BA students. Includes preparation for the senior exit show or design portfolio, developing written materials for careers in the visual arts, and learning how to install and manage an art exhibition. Prerequisites: ARS 123, ARS 140, ARS 160 ARS 260, plus a minimum of four 300- or 400- level studio courses.  
ARS 495 - INDEPENDENT PROJECTS  
Semester Hours: 3  
Available for an advanced major when an appropriate course is not offered to facilitate progress to graduation. May be taken only one time. Prerequisite: Instructor Approval.  

Astronomy (AST)  

AST 100 - SURVEY OF ASTRONOMY  
Semester Hours: 4  
One semester survey of astronomy from visible phenomena in the sky to the latest astronomical discoveries. Topics include properties of solar system bodies, origin of the solar system, life cycles of stars and galaxies, exoplanets, cosmology, life in the universe. Includes laboratory.  
AST 100L - SURVEY OF ASTRONOMY LAB  
Semester Hours: 0  
Laboratory instruction in support of material covered in AST 100.  
AST 106 - EXPLORING THE COSMOS I  
Semester Hours: 4  
Introduces astronomy emphasizing quantitative aspects of physical phenomena in the universe. Motions of celestial bodies, development of astronomy, gravity and motion, light and telescopes, properties of gases and radiation, earth and moon, eclipses, survey of the solar system. Laboratory included.  
AST 106L - ASTRONOMY LABORATORY  
Semester Hours: 0
AST 107 - EXPLORING THE COSMOS II
Semester Hours: 4
Continuation of AST 106. The sun, stars and stellar evolution, white dwarfs, neutron stars, black holes, binary stars, the Milky Way galaxy, galaxies, quasars and other active galaxies, cosmology, life in the universe. Laboratory included. Offered Spring. Prerequisites: AST 106.

AST 107L - GEN ASTRONOMY II LAB
Semester Hours: 0

AST 210 - INTRO TO ASTROBIOLOGY
Semester Hours: 3
Studies the origin and search for life in the universe, including topics in astronomy, physics, biology, chemistry, and atmospheric science. Introduces research in astrobiology; known requirements for life, the origin and evolution of life of Earth, and the search for extraterrestrial life. Prerequisites: MA 171 and either PH 111, CH 121, or BYS 119.

AST 220 - INTRO TO ASTRONOMY/CALHOUN
Semester Hours: 4

AST 371 - INTRO TO ASTROPHYSICS
Semester Hours: 3

AST 471 - ASTROPHYSICS
Semester Hours: 3
Structure and physical processes of stars from the interior to the atmosphere: energy production and transfer, atmospheric properties, and observed spectral features. Models for stellar structure. Star formation and evolution, including the effects of a companion. Offered Fall. Prerequisites: AST 371 and PH 351.

Atmospheric Science (ATS)

Note: The Atmospheric Science Department administers the Earth System Science degree programs for Undergraduate students. All major courses for these degrees use the ESS prefix.

ESS 100 - INTRODUCTION TO SPACE SCIENCE
Semester Hour: 1
Covers physiology in space, computer systems, materials, in space, robotics, thermodynamics, astrophysics, and solar physics. Laboratory experiments and simulated missions. Offered in cooperation with the Alabama Space and Rocket Center. Open only to students enrolled in Space Academy II.

ESS 101 - EXPLORING SPACE SC & ENGR
Semester Hour: 1
Exploring Space Science and Engineering courses 1-9. Each course examines an aspect of space exploration including but not limited to space science, human factors, medicine and engineering. Each course focuses on a single aspect. No more than three of the courses in the ESS 101 group may be taken for credit. The courses are offered through distance learning.

ESS 103 - ENVIRONMENTAL EARTH SCIENCE
Semester Hours: 4
Principles and foundations of Earth and environmental science with lectures and labs on concepts in Earth system science. Applied science labs use applications and real-world examples from ecosystems, geology, soil science, water, pollution, agriculture, population, natural disasters and energy.

ESS 103L - LABORATORY
Semester Hours: 0

ESS 110 - PHYSICAL SCIENCE/CALHOUN
Semester Hours: 4

ESS 111 - CLIMATE AND GLOBAL CHANGE
Semester Hours: 4
Intro to climate system including natural and human-induced changes in this system. Includes greenhouse effect, ozone depletion, pollution, urban heat island processes, continental drift effects, glacial melting and sea level changes, atmospheric and ocean circulations, solar activity variability.
ESS 111L - LABORATORY  
Semester Hours: 0

ESS 210 - COLLAPSE OF CIVILIZATIONS  
Semester Hours: 3

This course will investigate why some cultures succeed and others fail. From archeological and historical records of past civilizations we will examine the factors which lead to collapse in an attempt to determine the future of current societies.

ESS 212 - SEVERE WEATHER ANALYSIS  
Semester Hours: 4

Meteorological analysis and beginning forecasting of weather systems, severe weather, snowstorms, hurricanes, and tornadoes through the interpretation of surface, upper air, satellite, and radar weather observations. Strong emphasis placed on unique observations of severe weather from UAH radar and profiling systems. Prerequisites: ESS 111.

ESS 212L - LABORATORY  
Semester Hours: 0

Laboratory. Prerequisite: ESS 111.

ESS 301 - INTRO TO EARTH & ATMOSPHERIC PHYSICS  
Semester Hours: 3

This course will provide a survey of earth and atmospheric science for undergraduate students. Topics that will be covered will focus on how the earth-atmosphere system works in an integrated fashion. Prerequisites: ESS 103, ESS 111, (PH 101 or PH 111), and (MA 120 or MA 171).

ESS 302 - PEOPLE, PLANTS, & ENVIRONMENT  
Semester Hours: 3

This course is designed to introduce students from multiple departments to the vital roles that plants have in our ecosystems through the study of basic plant and soil science. Special attention is placed on the impact plants have on our technology-based society. Sophomore standing or above.

ESS 303 - CLASSICAL & PHYSICAL CAUSES OF CLIMATE CHANGE  
Semester Hours: 3

Basic atmospheric structure and physical processes, surface processes, climate history and climate change, land use and land change, microclimates, topoclimates. Ecoclimatology. Prerequisites: ESS 103, ESS 111, MA 120 or MA 171, and PH 101 or PH 111.

ESS 305 - HYDROLOGY  
Semester Hours: 3

Introduction to hydrologic cycles and concepts of how water interacts with the environment. Covers water properties, precipitation, groundwater and runoff, currents, waves, sediment processes, and conservation strategies. Prerequisites: ESS 103, ESS 111, MA 120 or MA 171, and PH 101 or PH 111.

ESS 307 - ENVIRONMENTAL ARCHEOLOGY  
Semester Hours: 3

Archeologists today need a wide range of scientific approaches in order to delineate and interpret the ecology of their sites. This approach is revolutionizing archeology making it relevant to the modern-day world. Investigated in this course includes climate modeling, remote sensing, and GIS. Prerequisite: ESS 103.

ESS 312 - PRINCIPLES OF ECOLOGY  
Semester Hours: 4

Lecture/Lab One 3 hour lab a week. Ecological principles controlling plant and animal populations. Development of ecosystems, communities and habitats. Field trips required. Strongly recommend CH 101 or 121. Prerequisite: BYS 120.

ESS 313 - GEOGRAPHIC INFORMATION SYSTEMS  
Semester Hours: 3

Introduction to scientific spatial analysis concepts and spatial data processing with focus on ESRI ArcGIS software. Basic concepts in GIS data management and creation, with topics including raster and vector data, projections, data query, data acquisition, and cartography. Prerequisites: ESS 103 and either CS 102 or CS 103.

ESS 321 - POLLUTION PROBLEMS  
Semester Hours: 3

Quantitative study of environmental conditions, processes, and problem-solving techniques related to specific pollution problems in air, water, and land. Prerequisites: ESS 111, ESS 103 and (MA 120 or MA 171) and (CH 101 or CH 121) and (PH 101 or PH 111).
ESS 351 - DYNAMIC METEOROLOGY  
Semester Hours: 3  
Dynamics and kinematics of atmospheric flow. Meteorological coordinate systems. Fundamental governing equations of atmospheric motion, circulation, and vorticity. Prerequisites: PH 111, ESS 301, CS 102 or CS 103, and MA 201 (with concurrency).

ESS 352 - SYNOPTIC METEOROLOGY  
Semester Hours: 3  
Analysis, interpretation and forecasting synoptic-scale and mesoscale phenomena, including air masses, frontal systems, cyclones, anti-cyclones, tropical cyclones, and associated mesoscale phenomena. Emphasis is placed on the use of remote sensing data from satellites, radars, and profilers using state-of-the-art workstations. Prerequisite: ESS 212 and ESS 351.

ESS 370 - INTRODUCTION TO REMOTE SENSING  
Semester Hours: 3  
This course introduces the fundamental physics of remote sensing systems and incorporates hands-on exercises of image processing, information extraction and interpretation, and basic applications of airborne and satellite data in Earth System Science and Atmospheric Science. Prerequisites: ESS 103, ESS 111, (MA 120 or MA 171), (PH 101 or PH 111), and CS 102.

ESS 402 - SCI & SOC ASPTS NATRL DISASTER  
Semester Hours: 3  
Students will understand causes of major natural events and evaluate effects of disasters on populations and possible mitigation measures. GIS software will be used to show progression of events and/or their impacts, with course case studies. Prerequisites: ESS 103 and ESS 111.

ESS 407 - ENV THRTS, PUB POLY, & DEC MKG  
Semester Hours: 3  
Researchers, policymakers and environmental campaigners have identified 25 potential future threats to the global environment. This course examines the nature and consequences of these threats and their potential impacts for the survival of the human race. Prerequisite: ESS 103.

ESS 408 - PYTHON FOR GIS  
Semester Hours: 3  
Introduction to GIS model building, Python programming, and automation of scripts for ArcGIS. Techniques in Model Builder, Python, and the methods for automation will be taught using data from numerous available data sources across the internet with heavy emphasis on the Earth Sciences. Prerequisites: ESS 313.

ESS 409 - SCI PROGRMNG FOR EARTH & ATMOS  
Semester Hours: 3  
Survey of data types and languages commonly used in the meteorological community along with practical applications to meteorology. Course is designed to prepare students for graduate work and research in atmospheric science. Prerequisite: CS 102 or 103; ESS 301; MA 172; PH 112 and PH 115. Or consent of instructor.

ESS 410 - OPERATIONAL WEATHER FORECAST'G  
Semester Hours: 3  
Subjective and objective methods of atmospheric prognosis. Techniques for forecasting critical weather elements. Interpretation, use and systematic errors of computer-generated products, human factors with forecasting, and application of meteorological theory in an operational setting. Prerequisites: ESS 111, ESS 212, ESS 352, MA 172, PH 112 and PH 115.

ESS 414 - GEOSPATIAL APPLICATIONS  
Semester Hours: 3  
An introductory look at the ways in which GIS can be put to use in different fields of study, drawing examples from Demography, Sociology, Archaeology, History, and Ecology. Focus on cartography and map creation principles and public geospatial data acquisition. Prerequisite: ESS 313.

ESS 415 - ADVANCED TOPICS IN GIS  
Semester Hours: 3  
Advanced continuation of concepts applied in Geospatial Applications. Students will learn through modules of real world scientific research how to use further tools in ArcGIS including: 3D Analyst, Spatial Analyst, Network Analyst. Topics include web data dissemination, spatiotemporal analysis and some basic spatial statistics measures. Prerequisite: ESS 414.
ESS 420 - INTRO ATMOSP CHEM & AIR POLLU  
Semester Hours: 3

This self-contained introductory course in atmospheric chemistry and air pollution is designed to provide students the basics of atmospheric chemistry and air pollution concepts. Topics include air pollutants, air-pollution meteorology, atmospheric gases and aerosols, and atmospheric processes. Prerequisites: PH 112, PH 115, CH 121, ESS 301 and ESS 321.

ESS 441 - ATMOSP THERMODY & CLOUD PHYSIC  
Semester Hours: 3

General aspects of thermodynamics and cloud physical processes occurring within the atmosphere; atmospheric statics and stability, saturation point analysis, aerosols, nucleation, and the behavior/growth of cloud particles and hydrometeors. Prerequisites: ESS 301, MA 238, PH 112 and PH 115.

ESS 451 - ATMOSPHERIC FLUID DYNAMICS I  
Semester Hours: 3

Fluid dynamics in the atmosphere. Coriolis acceleration, scale analysis and appropriate approximations of the complete governing equations. Numerical analysis and interpretation of weather phenomena. Same as ATS 451. Prerequisites: ESS 351, MA 238, PH 112 and PH 115.

ESS 454 - FORECASTING MESOSCALE PROC  
Semester Hours: 3

Detection and forecasting of atmospheric mesoscale phenomena including the structure and evolution of clouds, precipitation (including floods) thunderstorms and severe weather. Includes basics of instruments used to detect mesoscale phenomena, most notably satellite and radar. Prerequisite: ESS 352.

ESS 461 - ATMOSPHERIC RADIATION I  
Semester Hours: 3

Fundamentals of terrestrial atmospheric radiation. Topics include: basic concepts, radiative transfer equation, gaseous absorption, scattering by molecules and particles, band models, transmittance along an inhomogeneous path. Prerequisite: ESS 301, MA 238, PH 112 and PH 115.

ESS 471 - INTRO TO RADAR METEOROLOGY  
Semester Hours: 3

Introduction to principles of radar meteorology, including radar operations, hardware, interpretation and analysis. Doppler, dual-polarization and dual-wavelength radar theory, methods and applications are covered. Prerequisite: ESS 301 and ESS 441.

ESS 490 - SELECTED TOPICS IN ENVIRON SCI  
Semester Hours: 1-3

Special offerings to students in areas of interest not covered in the present curriculum. Prerequisite: permission of instructor.

ESS 495 - DIRECTED STUDY  
Semester Hours: 2-4

Specialized research for undergraduates often is offered to undergraduates who have senior standing.

ESS 498 - RESEARCH & PROF DEV CAPSTONE  
Semester Hour: 1

Applied concepts for professional and research development. Includes evaluation and discussion of published literature and department seminars, with focus on research synthesis and critique. Also includes development of professional and career skills focused on the Earth and Atmospheric Sciences. Senior Standing required.

ESS 499 - UNDERGRADUATE RESEARCH  
Semester Hours: 2-4

For advanced Earth System Science students. Individual investigations into Earth systems science problems under direct supervision of a research mentor. Research is conducted and thesis-style paper is written and orally presented. Students identify and obtain consent from a faculty research mentor.

**Biological Sciences (BYS)**

BYS 202 - STATISTICS MICROBIOLOGY  
Semester Hours: 4
BYS 100 - INTRO HEALTH PROFESSIONS
Semester Hour: 1
Career options for undergraduate students interested in health professions. Basics of health-care delivery systems and terminology of health care. No BYS major or minor credit. Primarily for freshman and sophomores.

BYS 103 - PRINCIPLES OF BIOLOGY/CALHOUN
Semester Hours: 4

BYS 111 - ANATOMY & PHYSIOLOGY I/OAKWOOD
Semester Hours: 3

BYS 112 - ANATOMY & PHYSIOLOGY II/OAKWOOD
Semester Hours: 4

BYS 112A - HUMAN ANATOMY-PHYS II/OAKWOOD
Semester Hours: 3

BYS 112L - ANATOMY & PHYSIOLOGY II/OAKWOO
Semester Hours: 0

BYS 119 - PRINCIPLES OF BIOLOGY
Semester Hours: 4
Lecture/Lab/Recitation. Introduction to biological principles of cell structure, function, metabolism and reproduction. One two hour lab and a one hour recitation per week.

BYS 119L - LABORATORY
Semester Hours: 0
Laboratory exercised to introduce students to accurate measurement techniques, observation, and the development of relevant hypotheses. Several formal lab reports are required as an introduction to scientific writing.

BYS 119R - BYS 119 RECITATION
Semester Hours: 0
Homework turned in and discussed; exams discussed and further assistance with course material available.

BYS 120 - ORGANISMAL BIOLOGY
Semester Hours: 4
Lecture/Lab/Recitation. Discussion of biological function with special emphasis on contrasting strategies employed by organisms in meeting similar biological needs. One two-hour lab and a one hour recitation per week. Prerequisite: BYS 119.

BYS 120L - ORGANISMAL BIOLOGY LAB
Semester Hours: 0
Introduction to the basic concepts of natural selection, population biology, and the biodiversity of animals and plants. Several formal lab reports are required as a further introduction to scientific writing, along with a lab practical on the biodiversity of animals and plants.

BYS 120R - BYS 120 RECITATION
Semester Hours: 0
Homework turned in and discussed; exams discussed and further assistance with course material available.

BYS 202 - HUMAN ANAT & PHYS II/CALHOUN
Semester Hours: 4

BYS 214 - INFECTION & IMMUNITY
Semester Hours: 4
Lecture/Lab. Two 2-hour labs a week. Principles of microbiology with emphasis on infectious disease of humans; epidemiological and immunological aspects. No credit for students who have credit for BYS 321 or advanced microbiology courses. Recommended for students in the College of Nursing. Prerequisites: BYS 119 and either CH 101 or 121.

BYS 214L - LABORATORY
Semester Hours: 0
BYS 215 - HUMAN ANATOMY & PHYSIOLOGY I
Semester Hours: 4

Structure and function of the human body with emphasis on their relationship to disease. Part 1 of a two course sequence. Anatomy and physiology of major organs and organ systems and their relationship to each other. Emphasizes relationships of human systems to applications and simulations. Prerequisites: BYS 119, CH 101 and CH 105.

BYS 215L - HA&P I LABORATORY
Semester Hours: 0

An introduction to anatomical terminology; basic histology of normal tissues versus common pathologies. Focus on the human skeletal and muscular systems. Students are engaged in recognition of individual bones, surface markings and major muscles through dissection and use of muscular models.

BYS 216 - HUMAN ANATOMY & PHYSIOLOGY II
Semester Hours: 4

Structure and function of the human body with emphasis on their relationship to disease. Part II of a two course sequence. Anatomy and Physiology of major organs and organ systems and their relationship to each other. Emphasizes relationships of human systems to applications and simulations. Prerequisite: BYS 215.

BYS 216L - HA&P II LABORATORY
Semester Hours: 0

Study of the anatomy of the nervous, cardiovascular, respiratory, renal and digestive systems. Dissections of eye, brain, heart, lung and kidney. Basic EKG/ECG reading and a study of factors affecting blood pressure. Enzymatic action of the digestive system; basic urinalysis determinations.

BYS 219 - GENETICS AND EVOLUTION
Semester Hours: 4

Lecture/Lab/Recitation. Two labs and one recitation per week. Hereditary basis of organisms; genes as the discrete units of inheritance and genes in organisms and populations. Medelian principles and evolutionary processes. Replication, transcription and translation of DNA, RNA, and proteins. Prerequisites: BYS 120 and (CH 101 or CH 121) and (MA 107 or 112).

BYS 219L - LABORATORY
Semester Hours: 0

Laboratory activities include experiments to further students understanding in Mendelian genetics, molecular biology and Human genetic diseases. Counted as part of the overall grade fro BYS 219.

BYS 219R - BYS 219 RECITATION
Semester Hours: 0

Homework turned in and discussed; exams discussed and further assistance with course material available.

BYS 220 - GENERAL MICROBIOLOGY/CALHOUN
Semester Hours: 4

BYS 221 - HUMAN ANATOMY & PHYSIOLOGY/A&M
Semester Hours: 3

BYS 221L - A & P I LAB/A&M
Semester Hour: 1

BYS 241 - GENERAL MICROBIOLOGY/OAKWOOD
Semester Hours: 4

BYS 281 - INTRO TO FORESTRY/A&M
Semester Hours: 3

BYS 292 - INTRO TO BIOLOGICAL RESEARCH
Semester Hours: 3

Introduction to the principles and practices of biological research. Covers experimental design, statistical analysis, critical review of journal articles, responsible conduct of research, and writing for the biological sciences. Recommended for students planning to do undergraduate research. Prerequisites: BYS 119, MA 112, EH 101.

<td>Introduction to a molecular understanding of genes, gene expression and genetic engineering in selected procaryotic and eucaryotic systems. Includes examples of biotechnology applications. Prerequisites: CH 331.</td>
<td></td>
</tr>
<tr>
<td>BYS 312</td>
<td>PRINCIPLES OF ECOLOGY</td>
<td>4</td>
</tr>
<tr>
<td></td>
<td>Lecture/Lab. One lab a week. Population structure and growth, competition, predation, symbiosis, biogeochemical cycling and energy flow, disturbance and community dynamics, biodiversity and conservation. Field trips required. Prerequisites: BYS 120, and BYS 219.</td>
<td></td>
</tr>
<tr>
<td>BYS 313</td>
<td>ANATOMY &amp; PHYSIOLOGY I</td>
<td>4</td>
</tr>
<tr>
<td></td>
<td>Lecture/Lab. One lab a week. Structure and function of the human body. Anatomy of the skeletal and muscular systems, physiology of membranes, cellular and epithelial transport and nervous system function. Appropriate preparation for professional schools/graduate study in biological sciences. Prerequisites: BYS 119. Prerequisites with concurrency: BYS 300, and either CH 201 or 331.</td>
<td></td>
</tr>
<tr>
<td>BYS 313L</td>
<td>LABORATORY</td>
<td>0</td>
</tr>
<tr>
<td></td>
<td>Laboratory activities on the basic concept of system physiology including a rat dissection. Focuses on membrane transport and histology, and include gross anatomy and a study of the muscles and bones of the human body. Capstone student research project on electromyography of muscles.</td>
<td></td>
</tr>
<tr>
<td>BYS 314</td>
<td>ANATOMY &amp; PHYSIOLOGY II</td>
<td>4</td>
</tr>
<tr>
<td></td>
<td>Lecture and one lab a week. Continuation of BYS 313 stressing structural and functional relationships of major organ systems, focusing on heart, brain, lungs, kidney and the gastrointestinal tract. Appropriate for students preparing for professional schools or graduate study in biological sciences. Prerequisites: BYS 313.</td>
<td></td>
</tr>
<tr>
<td>BYS 314L</td>
<td>ANATOMY/PHYSIOLOGY II LAB</td>
<td>0</td>
</tr>
<tr>
<td></td>
<td>Research-intensive system based laboratory course. Includes brain dissection and student EEG project and a heart dissection and a cardiovascular physiology project. This is followed by a pulmonary function lab and a renal function lab where students calculate their own glomerular filtration rate.</td>
<td></td>
</tr>
<tr>
<td>BYS 315</td>
<td>ICHTHYOLOGY</td>
<td>4</td>
</tr>
<tr>
<td></td>
<td>Classification, anatomy, physiology, and ecology of freshwater and marine fishes. Emphasis fishes of north Alabama. Laboratory and field trips required. Prerequisites: BYS 120 and BYS 219. Prerequisite with concurrency: BYS 300.</td>
<td></td>
</tr>
<tr>
<td>BYS 317</td>
<td>VERTEBRATE ZOOLOGY</td>
<td>5</td>
</tr>
<tr>
<td></td>
<td>Lecture/Lab. Two three-hour labs a week. Morphology of vertebrate animals. Relationship of organs and systems and their phylogenetic significance. Prerequisites: BYS 120 and BYS 219. Prerequisite with concurrency: BYS 300.</td>
<td></td>
</tr>
</tbody>
</table>
BYS 318 - VERTEBRATE REPRODUCTION  
Semester Hours: 3  
General treatment of the major concepts and controversial areas of comparative vertebrate reproduction: ecological and evolutionary aspects, development of reproductive functions and sexual behavior, seasonal breeding and other topics of current interest. Prerequisites: BYS 120 and BYS 219. Prerequisite with concurrency: BYS 300.  

BYS 320 - MEDICAL TERMINOLOGY  
Semester Hours: 3  
The meaning, spelling, etymology and pronunciation of major medical terms related to anatomy, pathology, medical professions, procedures and pharmaceuticals; body systems, their associated diseases and disorders. Correct usage of terms and interpretation of documents containing these terms. Hybrid course with online and in-class portions. Prerequisites: BYS 300 or BYS 215 & 216.  

BYS 321 - GENERAL MICROBIOLOGY I  
Semester Hours: 4  
Structure, biochemistry, and genetics of microorganisms, control of microbial growth, and microorganisms as pathogens. Lab covers basic and diagnostic methods in microbiology, environmental factors controlling microbial growth and survival, and characteristics of medically important microorganisms. Prerequisites: BYS 120, BYS 219. Prerequisite with concurrency: BYS 300.  

BYS 321L - LABORATORY  
Semester Hours: 0  

BYS 322 - GENERAL MICROBIOLOGY II  
Semester Hours: 4  
Emphasizes diversity of microorganisms with respect to ecology, physiology, and phylogeny. Prerequisites: BYS 321.  

BYS 322L - GENERAL MICROBIOLOGY II LAB  
Semester Hours: 0  

BYS 325 - KINESIOLOGY/ATHENS  
Semester Hours: 3  

BYS 347 - BIOPHYSICAL CHEMISTRY I  
Semester Hours: 3  

BYS 348 - BIOPHYSICAL CHEMISTRY II  
Semester Hours: 3  

BYS 351 - NUTRITION & METABOLISM/ A&M  
Semester Hours: 3  

BYS 361 - GENERAL BIOCHEMISTRY  
Semester Hours: 3  
Biochemical structure and function of amino acids, proteins, carbohydrates, lipids, and nucleic acids; Enzyme catalysis and kinetics; major catabolic pathways, their integration and control mechanisms: Glycolysis, Citric Acid Cycle, Fatty Acid Oxidation and Oxidative Phosphorylation. Same as CH 361. Prerequisites: BYS 120, CH 332 and CH 335 or BYS 311, CH 332 and CH 335.  

BYS 362 - GENERAL BIOCHEMISTRY LAB  
Semester Hour: 1  
One 3-hour lab a week. Practical experience in isolation, qualitative identification, and quantitative estimation of biomolecules. Same as CH 362. Prerequisites: CH 335 and CH 336. Prerequisite with concurrency: CH 361.  

BYS 363 - GEN BIOCHEMISTRY II  
Semester Hours: 3  
A continuation of BYS 361 to include amino acid oxidation, biosynthesis of biomolecules, integration of metabolism, DNA and RNA metabolism, protein biosynthesis, and gene structure. Same as CH 363. Prerequisites: BYS 361.
BYS 364 - BIOGEOGRAPHY
Semester Hours: 3

BYS 365 - GEN BIOCHEMISTRY LAB II
Semester Hour: 1

Experimental course illustrating the topics in BYS 363. Prerequisites: BYS 361 and BYS 362. Prerequisite with concurrency: BYS 363.

BYS 401 - EXERCISE PHYSIOLOGY
Semester Hours: 4

Lecture/Lab. One lab per week. Basic human physiology as differentiated by the effects of exercise. Physiology of major systems of the body that may act as a limiting factor or enhance the performance, of human movement. Strongly recommended: BYS 301 or CH 301. Prerequisites: BYS 215 & BYS 216 OR BYS 313 & BYS 314.

BYS 401L - LABORATORY
Semester Hours: 0

BYS 402 - KINESIOLOGY & BIOMECHANICS
Semester Hours: 4

Lecture/Lab. One lab per week. A study of the structural and functional relationships of the human skeletal, muscular and neural systems as they relate to movement of the human body. Prerequisites: BYS 215 & BYS 216 OR BYS 313 & BYS 314.

BYS 402L - LABORATORY
Semester Hours: 0

BYS 403 - ADV EXERCISE PHYSIOLOGY
Semester Hours: 4

Lecture/Lab. One lab per week. Human physiology, addressing the effects of environmental variables such as altitude, thermal stress and terrain on the major physiological systems of the body; in-depth analysis of resistance training, aerobic and anaerobic training; integration of multiple systems. Prerequisites: BYS 401, and BYS/CH 301 or 361.

BYS 405 - PSYCHOPHARMACOLOGY
Semester Hours: 3

Introduction to drug classification and action with emphasis on physiological and psychological interactions.

BYS 408 - BIOCHEMISTRY II /A&M
Semester Hours: 3

BYS 411 - CELL BIOLOGY/A&M
Semester Hours: 4

BYS 419 - MICROBIAL GENETICS
Semester Hours: 3

Transmission, expression, and evolution of genes in microorganisms. Studies of chromosomes, plasmids, transporons, bacteriophages, and other genetic elements. Prerequisites: BYS 219, BYS 300 and BYS 321.

BYS 430 - IMMUNOLOGY
Semester Hours: 4

Lecture/Lab. One 3-hour lab per week. Innate, humoral and cell-mediated immunity. Immune deficiencies and hypersensitivities. Autoimmunity, transplantation, and tumor immunology. Prerequisites: BYS 219, BYS 300 and BYS 321. Prerequisite with concurrency: CH 361.

BYS 431 - PRINCIPLES OF IMMUNOLOGY/A&M
Semester Hours: 4

BYS 436 - BIOLOGICAL PSYCHOLOGY
Semester Hours: 3

Functional analysis of neural and endocrine systems underlying behavior. Same as PY 436. Prerequisites: (either a or b): (a) 15 hours of PY or approval of instructor; (b) BYS 120 or BYS 313, and 6 hours of PY.
BYS 437 - PSYCHOBIOLOGY STRESS & ILLNESS
Semester Hours: 3
Overview of psychological stress responses and their influence on health, behavior and illness. Same as PY 437. Prerequisites: approval of instructor.

BYS 464 - EVOLUTION
Semester Hours: 3

BYS 465 - MOLECULAR MTHDS ECLGY & EVOLU
Semester Hours: 4
This lecture and laboratory course is intended as an intense introduction to modern molecular methods in biological research. Topics include: genetic variation, evolutionary genetics, ecological genetics, genomics, gene expression, phylogenetics, and bioinformatics. Prerequisites: BYS 464.

BYS 490 - SENIOR CAPSTONE
Semester Hours: 2
Discussions, readings, and presentations of topical biological subjects using scientific literature. Capstone course emphasizing refinement of oral and written communication skills and critical thinking. All students will take ETS Major Field Test in Biology as part of the course grade. Prerequisites: BYS 119, 120, 219, and 300. Senior standing.

BYS 491 - SP TOPICS BIOLOGICAL SCI
Semester Hours: 1-4
Directed readings and/or written reports on topics of interest to individual students carried out under supervision of an instructor. Prerequisites: Permission of instructor required before registration.

BYS 492 - UNDERGRADUATE RESEARCH
Semester Hours: 2-4
For advanced-level biological sciences students with biological sciences GPA of 3.5 or above. Individual investigations into biological problems under direct supervision of instructor. May also be taken at the Marine Environmental Sciences Consortium, Dauphin Island, Alabama. Prerequisites: Permission of instructor required before registration.

BYS 499 - UNGRAD HONORS RES & THESIS
Semester Hours: 2-4
Individual investigations into biological problems under direct supervision of instructor. For honors students majoring in the biological sciences. Prerequisites: Approval of instructor, chair, and director of honors program; Senior Standing.

Business Legal Studies (BLS)

BLS 211 - LEGAL ENVIRON/BUSINESS
Semester Hours: 3
Legal environment of business including ethical, political and technological aspects of that environment.

BLS 400 - LAW, ETHICS & BUSINESS
Semester Hours: 3
An analytical review of corporate ethics addressed from a legal and business standpoint. Focus on codes of ethics, integration of integrity into corporate cultures, top management commitment to ethics, civics involvement, employer-employee relations, consumer protection, and international business.

BLS 406 - GOVMT CONTRACT LAW
Semester Hours: 3
Application of the legal principles governing government contracts as developed from common law, statutes, regulations, and court decisions. Includes requests for proposals, negotiation, inspection, acceptance, delivery, warranties, modification of contracts, equitable adjustment, and disputes. Prerequisite: BLS 211 and either MGT 401 or ACC 440.

BLS 411 - BUS LAW FOR ACCOUNTANTS
Semester Hours: 3
In-depth study of legal principles and problems encountered in practice by professional accountants. This course covers legal topics in a Uniform Commercial Code perspective. Prerequisite: BLS 211.
Chemical Engineering (CHE)

CHE 201 - INTRO CHEMICAL ENGR PROCESS
Semester Hours: 2
Introduction to industrial processes used in the production of commodity chemicals important to chemical engineers. Computer programming, spreadsheets, symbolic math, and drawing packages to model fundamental stages of these processes will be presented. Prerequisites: ENG 101 and CH 123.

CHE 244 - INTRO TO CHEM ENGRG SYSTEMS
Semester Hours: 3
Introduction to basic analysis of chemical engineering systems, emphasizing material balances on physical and chemical process systems. Analysis includes single-component and multi-component systems, single-phase and multi-phase systems, single unit operations and complete flow sheet systems. Prerequisites: PH 111, CH 123, and CHE 198.

CHE 294 - NATURE & PROPERTIES OF MATLS
Semester Hours: 3
Introduction to the fundamental nature and properties of materials including bonding, composition, and phase diagrams. Composite materials and aspects of materials processing, including diffusion, nucleation, and transformation diagrams, will be presented. Prerequisites: CH 121 and PH 111.

CHE 295 - NATURE & PROPERTIES MATLS LAB
Semester Hour: 1
Experiments include characterizing material structures, testing mechanical properties and mapping phase diagram boundaries. Emphasis on numerical and statistical analysis of the data. Written reports are required, and elements of materials design are presented.

CHE 342 - TRANSPORT PHENOMENA
Semester Hours: 3
Fundamental aspects of heat and mass transfer and the use of these basic principles in solving problems in transport operations. Heat transfer with phase change. Diffusive and convective mass transfer with applications. Prerequisites: CH 341 and CHE 244 and MAE 310 w/concurrency.

CHE 344 - CHEM ENGR THERMODYNAMICS
Semester Hours: 3
Thermodynamics of phase equilibria, chemical reactions and thermodynamic analysis of chemical processes, with emphasis on topics of special interest to chemical engineers. Prerequisites: CHE 244 and CH 341.

CHE 347 - QUANTITATIVE MODELING FOR CHE
Semester Hours: 3
Modeling and analysis of physical phenomena that arise in chemical engineering and an introduction to computer-aided design. Prerequisites: CHE 244, and MA 238.

CHE 359 - INDEPENDENT STUDIES IN CHE
Semester Hours: 1-3
Independent studies or research on a topic that requires the application of basic principles in chemical engineering. A written report, analytical or experimental analysis, and oral presentation will be required. Prerequisites: CHE 244 and CHE 294.

CHE 439 - UNIT OPERATIONS I
Semester Hours: 2
Experimental studies cover fluid mechanics and heat transfer in unit operations. Theoretical classes provide an introduction to engineering economy as well as standard laboratory practice, probability and statistical data analysis. Emphasis placed on written and oral laboratory report presentation techniques. Prerequisites: CHE 295, CHE 441, and CHE 446.

CHE 440 - UNIT OPERATIONS II
Semester Hours: 2
Experimental studies covering reaction kinetics, mass separation, biotechnology, and special material properties. Applications of laboratory practices, probability and statistical data analysis, and ethics in professional practice. Emphasis placed on technical communications. Prerequisites: CHE 439, CHE 441, and CHE 443.
CHE 441 - CHEM KINETICS & REACTOR DESIGN  
Semester Hours: 3  
Fundamental principles of chemical kinetics and chemical reactor engineering along with the design of both thermal and catalytic reactors. (Same as CHE 541) Prerequisites: CHE 344 and CHE 347.

CHE 442L - LABORATORY  
Semester Hours: 0

CHE 443 - MASS TRANSFER OPERATIONS  
Semester Hours: 3  
Theory of mass transfer phenomena, with applications to both stage-wise and diffusion controlled distillation, gas absorption/desorption, humidification, and extraction processes. Prerequisites: CHE 342, CHE 344, and MAE 310.

CHE 445 - CHEMICAL PROCESS CONTROL  
Semester Hours: 3  
Fundamental principles of chemical process control; control system design for chemical processes. Prerequisite: CHE 441 and CHE 446.

CHE 446 - ANAL & DESIGN TRANSPORT EQUIP  
Semester Hours: 3  
Theory of transport phenomena from a unified approach to momentum, heat and mass transfer. Application of theory to the design of various transport equipment. Prerequisites: CHE 342 and CHE 443.

CHE 448 - CHEMICAL ENGINEERING DESIGN  
Semester Hours: 3  
Capstone design course. Design of chemical engineering components, concluding with an overall team design effort using modern CAD techniques includes preliminary design, simulation, and economic evaluation of a chemical production flow sheet, and a study of ethical issues. Prerequisites: CHE 441, CHE 443, CHE 445 and CHE 446.

CHE 459 - ADVD INDEPENDENT STUD CHE  
Semester Hours: 1-3  
Independent studies or research on a topic that requires a solid background in the foundations of chemical engineering. A written report, analytical or experimental analysis, and oral presentation will be required. Prerequisites: CHE 347 and either CH 363 or CH 440.

CHE 460 - INTRO TO BIOPROCESS ENGRG  
Semester Hours: 3  
Application of engineering principles to analysis of and development and design of processes using biological catalysts including enzymes, plant and animal cells, and genetically engineered cells. Other topics include fermentation and biological mass transport processes. (Same as CHE 560). Prerequisite: CH 361.

CHE 461 - BIOSEPARATIONS  
Semester Hours: 3  
Characteristics of separation processes used in biotechnology industries including removal of insolubles, isolation and purification of thermally sensitive products, and preparation for customer use. Applications for biological separations, recombinant DNA techniques, and protein engineering. (Same as CHE 561). Prerequisite: CHE 460.

CHE 485 - PROCESS SAFETY & TOXICOLOGY  
Semester Hours: 3  
Fundamentals of process safety and aspects of toxicology. Requires the application of chemical engineering concepts to review and analyze case studies to learn from industrial accidents. Introduces regulatory and design concepts. Prerequisites: CHE 448.

CHE 494 - APPLIED MATERIALS ENGINEERING  
Semester Hours: 3  
Synthesis and processing methods of materials. Selection and use of materials performance factors for design of structural and functional components. Use of computational methods in solving open-ended design problems using nature and properties of materials will be emphasized. (Same as CHE 594) Prerequisites: CHE 294 and CHE 344.

CHE 495 - POLYMER ENGINEERING  
Semester Hours: 3  
Engineering principles of polymers and their role in manufacturing processes. Aspects of polymer phenomena and their relationship to processing of structural and functional components. (Same as CHE 595) Prerequisites: CH 341 and CH 440.
Chemistry (CH)

CH 101 - INTRO TO CHEMISTRY
Semester Hours: 3

Properties of solids, liquids, gases, and solutions, atomic theory and bonding, concentration concepts, and physical and chemical properties of the more common elements and their compounds. No placement examination is required. Prerequisite: MA 110 or prerequisite with concurrency MA 112 or higher and CH 105.

CH 101R - RECITATION
Semester Hours: 0

CH 105 - INTRO CHEMISTRY LAB
Semester Hour: 1

Complements the lecture material for CH 101. Laboratory fundamentals and basic chemical principles. Prerequisite with concurrency: CH 101.

CH 121 - GENERAL CHEMISTRY I
Semester Hours: 3

For science and engineering majors. Chemical properties of elements, their periodic groups, and their compounds. Reactions and stoichiometry. Nature of the chemical bond, molecular structure, thermochemistry. Properties of gases, liquids, and solids. Prerequisite: CH 101 or placement test. Prerequisite with concurrency: MA 113 or higher, and CH 125.

CH 121R - RECITATION
Semester Hours: 0

CH 122 - GENERAL CHEMISTRY ENGINEERS
Semester Hours: 3

This course is designed as a one semester presentation of key aspects in general chemistry and is recommended for all engineering majors except chemical engineers. Covers topic on atoms and molecules: reactions and stoichiometry; gases; the periodic table; atomic structure, chemical bonding and molecular structure; materials; energy, entropy, and free energy; kinetics and equilibrium; and electrochemistry. Substitutes for CH 121 when transferred to any other curriculum.

CH 123 - GENERAL CHEMISTRY II
Semester Hours: 3

Continuation of CH 121 with in-depth study of topics listed. To be taken concurrently with CH 126. Prerequisite: CH 121.

CH 123R - RECITATION
Semester Hours: 0

CH 125 - GENERAL CHEMISTRY LAB I
Semester Hour: 1

Complements the lecture material for CH 121. Includes the determination of chemical and physical properties of materials, synthesis and characterization, and introduction to spectroscopy. Prerequisite with concurrency: CH 121.

CH 126 - GENERAL CHEMISTRY LAB II
Semester Hour: 1

Complements the lecture material of CH 123. Includes an introduction to qualitative and quantitative analytical techniques. Prerequisite with concurrency: CH 123.

CH 191 - FUNDAMENTALS OF CHEMICAL RES
Semester Hour: 1

Personalized programs to introduce beginning students to undergraduate research. Introduction to laboratory research techniques. Approval of supervising faculty member and chemistry chair required. Registration utilizes last digit of course number to designate semester-hour credit.

CH 192 - FUNDAMENTALS OF CHEMICAL RES
Semester Hours: 2

Personalized programs to introduce beginning students to undergraduate research. Introduction to laboratory research techniques. Approval of supervising faculty member and chemistry chair required. Registration utilizes last digit of course number to designate semester-hour credit.
CH 193 - FUNDAMENTALS OF CHEMICAL RES
Semester Hours: 3

Personalized programs to introduce beginning students to undergraduate research. Introduction to laboratory research techniques. Approval of supervising faculty member and chemistry chair required. Registration utilizes last digit of course number to designate semester-hour credit.

CH 201 - ELEM ORGANIC CHEMISTRY
Semester Hours: 3

Survey of nomenclature, structure, functional groups, properties and reactions of organic compounds. Prerequisites: CH 101 and 105 OR CH 121 and 125. Prerequisite with concurrency: CH 205.

CH 205 - ELEM ORGANIC CHEMISTRY LAB
Semester Hours: 1

Laboratory component of CH 201. Includes reactions of organic compounds and functional group modifications. Prerequisite with concurrency: CH 201. Prerequisites: CH 101/105 or CH 201/205.

CH 211 - ANALYTICAL CHEMISTRY/OAKWOOD
Semester Hours: 3

Introduction to quantitative analytical chemistry including instrumentation. Data treatment, ionic equilibria, elementary electrochemical, spectrochemical, gravimetric, and volumetric techniques. Prerequisite: CH 126. Prerequisite with concurrency: CH 224.

CH 224 - QUANTITATIVE ANALYSIS LAB
Semester Hours: 1

Introduction to quantitative analytical chemistry laboratory. Experiments include pH measurements, spectrochemical, gravimetric, and volumetric titrations. Prerequisite: CH 126. Prerequisite with concurrency: CH 223.

CH 301 - ELEMENTARY BIOCHEMISTRY
Semester Hours: 3

Survey of structure and function of carbohydrates, lipids, proteins and nucleic acids. Enzyme properties and functions. Major metabolic pathways, interactions, and regulation. No credit given to chemistry majors of minors. Credit in CH 361 precludes credit in CH 301. Same as BYS 301. Prerequisites: BYS 120 and either CH 201 or 331.

CH 331 - ORGANIC CHEMISTRY I/OAKWOOD
Semester Hours: 3,4

CH 311L - ORGANIC CHEM I LAB/OAKWOOD
Semester Hour: 1

CH 312 - ORGANIC CHEMISTRY/OAKWOOD
Semester Hours: 3

CH 315 - CHEMISTRY TEACHING METHODS
Semester Hours: 3

Designed for students pursuing a Class B High School Teacher's Certificate. The course explores methods of presentation of chemical principles, including chemical demonstrations. Prerequisites: CH 201 or 223. Permission of instructor.

CH 331 - ORGANIC CHEMISTRY I
Semester Hours: 3

Lecture/Lab includes one two-hour recitation per week. Chemistry of organic compounds. Synthetic methods, theory, and reaction mechanisms. Prerequisites: CH 123.

CH 331R - ORGANIC CHEM I RECITATION
Semester Hours: 0

To be taken as a co-requisite with CH 331. Organic chemistry problem solving, including nomenclature, reactions, mechanisms, spectroscopy, and test-taking strategy.

CH 332 - ORGANIC CHEMISTRY II
Semester Hours: 3

Lecture/Lab Includes one two-hour recitation per week. Continuation of CH 331. Prerequisites: CH 331.
CH 332R - ORGANIC CHEM II RECITATION
Semester Hours: 0

To be taken as a co-requisite with CH 332. Organic chemistry problem solving, including nomenclature, reactions, mechanisms, spectroscopy, and test-taking strategy.

CH 335 - ORGANIC CHEMISTRY LAB I
Semester Hour: 1

Techniques of organic chemistry including synthesis, separation, and identification of organic compounds with use of chemical and spectroscopic methods. Prerequisite with concurrency: CH 331. Prerequisites: CH 126.

CH 336 - ORGANIC CHEMISTRY LAB II
Semester Hour: 1

Continuation of CH 335. Prerequisite: CH 335. Prerequisite with concurrency: CH 332.

CH 337 - ORGANIC CHEMISTRY LAB III
Semester Hours: 2

Advanced organic chemistry laboratory treating reactions and techniques not covered in CH 335 and 336. Pursuit of a special open-ended problem by each student. Prerequisites: CH 336 and approval of instructor.

CH 341 - PHYSICAL CHEMISTRY I
Semester Hours: 3

An introduction to physical chemistry encompassing: the kinetic theory of gases, the laws of thermodynamics, chemical equilibrium, phase equilibria, electrolyte solutions, electrochemistry and elementary theories of statistical thermodynamics. Credit in CH 341 precludes credit in CH 347. Prerequisites: CH 123, PH 112, MA 201, PH 115.

CH 342 - PHYSICAL CHEMISTRY II
Semester Hours: 3

A survey of additional fundamental concepts of physical chemistry including: chemical kinetics, quantum chemistry, atomic structure, group theory, spectroscopy (i.e. IR, Raman, NMR, EMR, etc.), and surface and colloid chemistry. Credit in 342 precludes credit in CH 348. Prerequisite: CH 341.

CH 343 - INTRO TO QUANTUM CHEM
Semester Hours: 3

Quantum mechanical treatment of atoms, molecules, and spectroscopy. Prerequisites: CH 341 and MA 238.

CH 345 - EXPERIMENTAL PHYSICAL CHEM I
Semester Hour: 1

Laboratory and computer investigation into topics covered in physical chemistry CH 341. Includes thermodynamics, chemical equilibria and electrochemistry. The lab involves report writing, data and error analysis, error propagation and linear and nonlinear regression using appropriate software. Prerequisites: CH 223 and 224. Prerequisite with concurrency: CH 341 or 347.

CH 346 - EXPERIMENTAL PHYSICAL CHEM II
Semester Hour: 1

Laboratory and computer investigations into topics covered in physical chemistry CH 342. Includes kinetics, quantum mechanics and spectroscopy. The lab involves report writing, data and error analysis, error propagation and linear and nonlinear regression using appropriate software. Prerequisite: CH 345. Prerequisite with concurrency: CH 342 or 348.

CH 347 - BIOPHYSICAL CHEMISTRY I
Semester Hours: 3

CH 348 - BIOPHYSICAL CHEMISTRY II
Semester Hours: 3

CH 361 - GENERAL BIOCHEMISTRY
Semester Hours: 3

Nomenclature, structure, function, properties, and metabolism of amino acids, carbohydrates, lipids, and nucleic acids. Enzyme function, major catabolic pathways, their interrelations and control mechanisms. Glycolysis, Citric Acid Cycle, and oxidative phosphorylation. Same as BYS 361. Prerequisites: BYS 120, CH 223, CH 224, CH 332, CH 335 OR BYS 311, CH 332, CH 335.

CH 362 - GENERAL BIOCHEMISTRY LAB
Semester Hour: 1

Lecture/Lab One 3-hour lab a week. Practical experience in isolation, qualitative identification, and quantitative estimation of biomolecules. Same as BYS 362. Prerequisites: CH 335 and 336. Prerequisite with concurrency: CH 361.

CH 363 - GEN BIOCHEMISTRY II
Semester Hours: 3

A continuation of CH 361 to include fatty acid and amino acid oxidation, enzymatic synthesis of biomolecules, integration of metabolic processes, DNA and RNA metabolism including replication and transcription, translation and protein synthesis, and regulation of gene expression. Same as BYS 363. Prerequisites: CH 361.

CH 364 - GEN BIOCHEMISTRY LAB II
Semester Hour: 1

Experimental course illustrating the topics in CH 363. Prerequisites: CH 361 and 362. Prerequisite with concurrency: CH 363.

CH 401 - INORGANIC CHEMISTRY
Semester Hours: 3

Fundamental topics in inorganic chemistry. Atomic structure, chemical bonding, symmetry, acid-base theories, non-aqueous solvents, coordination chemistry, crystal field and ligand field theory, main group and transition metal chemistry, organometallics, catalysis, and bioinorganic chemistry. Prerequisites: CH 332.

CH 402 - INORGANIC CHEMISTRY LAB
Semester Hour: 1

Laboratory techniques of inorganic chemistry including synthesis, purification, isolation, and identification of inorganic compounds. Prerequisite with concurrency: CH 401.

CH 407 - BIOCHEMISTRY I/A&M
Semester Hours: 3

CH 421 - INSTRUMENTAL ANALYSIS
Semester Hours: 4

Introduction to modern analytical instrumentation including IR, UV and atomic absorption spectrophotometers, nuclear magnetic resonance, electroanalytical equipment, and gas and liquid chromatographs. Lecture and laboratory. Prerequisite with concurrency: CH 347, or BYS 341, or CH 341.

CH 435 - CHEMICAL TOXICOLOGY
Semester Hours: 3

An introduction to the principles of chemical toxicology, including the effects of drugs, environmental pollutants, natural toxins and venoms, and other potentially hazardous chemicals, at the physiological, cellular, and molecular level. Prerequisites: CH 332 and CH 361.

CH 440 - POLYMER SYNTHESIS & CHARACTERI
Semester Hours: 3

Synthesis of commercially relevant and novel polymers. Polymer characteristics and a discussion of the structural dependence of polymer properties. Course completion and/or grade requirements for undergraduate credit will differ from those for graduate credit. Prerequisites: CH 331 and CH 332.

CH 480 - SELECTED TOPICS IN CHEM
Semester Hours: 1-3

Special offerings to students in areas of interest not covered in present curriculum. Prerequisites: senior standing and approval of instructor.

CH 491 - INTRO TO CHEMICAL RESEARCH
Semester Hour: 1

Personalized programs to round out the undergraduate curriculum of students with various goals. Registration utilizes last digit of course number to designate semester hour credit. Student normally may elect only up to 6 hours. Prerequisites: Senior standing. Approval of supervising faculty member and chemistry chair required.
CH 492 - INTRO TO CHEMICAL RESEARCH  
Semester Hours: 2  
Personalized programs to round out the undergraduate curriculum of students with various goals. Registration utilizes last digit of course number to designate semester hour credit. Student normally may elect only up to 6 hours. Prerequisites: Senior standing. Approval of supervising faculty member and chemistry chair required.

CH 493 - INTRO TO CHEMICAL RESEARCH  
Semester Hours: 3  
Personalized programs to round out the undergraduate curriculum of students with various goals. Registration utilizes last digit of course number to designate semester hour credit. Student normally may elect only up to 6 hours. Prerequisites: Senior standing. Approval of supervising faculty member and chemistry chair required.

Civil Engineering (CE)

CE 211 - CIVIL ENGINEERING GRAPHICS  
Semester Hours: 2  
Fundamental concepts in computer-aided graphics as they apply to civil engineering. Topics include lettering, sketching, manipulation of elements, rotation of views and input of data. Students will gain engineering practice through AutoCad laboratory exercises. Prerequisite: ENG 101 with minimum grade of C-.

CE 271 - STATICS  
Semester Hours: 3  
Topics include: forces, resultant forces, moments, couples, equivalent forces systems, equilibrium, distributed loads, two force members, trusses, centroids, moments of inertia, shear and bending moment diagrams, static and kinematic friction. (Same as MAE 271). Prerequisite: ENG 101, PH 111 and MA 201 w/concurrency.

CE 272 - DYNAMICS  
Semester Hours: 3  
Kinematics and kinetics of a particle and systems of particles with applications to central force motion, impact, relative motion, vibrations, and variable mass systems. Dynamics of rigid body in plane motion, relative motion in rotating coordinates, and gyroscopic motion. Same as MAE 272 Prerequisites: MA 201 and (CE 271 or MAE 271).

CE 284 - SURVEYING  
Semester Hours: 2  
Basic theory and practical field methods for engineering applications. Measurements and errors in surveying. Leveling, traversing, stadia, topographic surveys, mapping, and circular curves. 1.5 hour lecture and 2 hour lab. Consent of instructor/advisor. Prerequisite: CE 111.

CE 284L - SURVEYING LAB  
Semester Hours: 0

CE 321 - INTRO TO TRANSPORTATION ENG  
Semester Hours: 3  
Theory, design, and operation of various modes of transportation with emphasis on traffic flow. Prerequisites: CE 284 and MA 171.

CE 370 - MECHANICS OF MATERIALS  
Semester Hours: 4  
Stress and strain, Hooke's law, stresses and deformations in bodies loaded by single and combined loads, and analysis of statically indeterminate systems. Laboratory includes experimental verification of lecture concepts, test procedures, instrumentation, and interpretation of results. Same as MAE 370. Prerequisites: (CPE 211 or MAE 211) and (MAE 271 or CE 271) and MA 244, corequisite CE 370L.

CE 370L - LABORATORY  
Semester Hours: 0

CE 372 - SOIL MECHANICS & FOUNDATION  
Semester Hours: 3  
Index properties and characteristics of soils. Compaction shear, compressibility and permeability. Application to analysis and design of foundation elements. Laboratory included. Prerequisites: (CE 370 or MAE 370) and MAE 310.
CE 373 - SOIL MECHANICS LAB  
Semester Hour: 1  
Laboratory classification of soils. Determinations of soil properties.

CE 380 - CIVIL ENGINEERING MATERIALS  
Semester Hours: 3  
Performance properties and selection criteria of various materials used in the practice of civil engineering including aggregates, Portland cement, concrete, bituminous materials, and timber. Emphasis will be placed on standard methods of testing and characterization. Includes a weekly lab.  
Prerequisites: CE 370 or MAE 370.

CE 380L - CE MATERIALS LAB  
Semester Hours: 0  
Standard methods of testing and characterization of various materials used in the practice of civil engineering. Determination of civil engineering materials properties.

CE 381 - STRUCTURAL ANALYSIS I  
Semester Hours: 3  
Reactions, shears, moments in determinate structures. Influence lines, energy methods in computing deformations. Introduction to interdeterminate structures. Prerequisites: (CE 272 or MAE 272) and (CE 370 or MAE 370).

CE 411 - INTRO GEOGRAHPICAL INFO SYS  
Semester Hours: 3  
Introduces vector, raster, and tabular concepts. Topics include spatial relationships, map features, attributes, relational database, layers of data, data ingesting, digitizing from maps, projections, output, and availability of public data sets. Same as CE 511, ESS 411/411, and ATS 411/511.

CE 412 - ADVANCED CE GRAPHICS  
Semester Hours: 3  
Trending geospatial and graphics technologies including 3-D land development workflows, GPS data acquisition and processing of aerial, lidar, and topographical surveys, terrain modeling, earthwork, sanitary, drainage, and transportation design methodologies within the graphical CAD movement. Prerequisite: CE 111.

CE 420 - URBAN TRANSPORTATION PLANNING  
Semester Hours: 3  
Planning of highways systems and terminals as part of a complete planning approach; public transportation system planning; transportation planning studies, projection analysis, plan formulation, and programming. Same as CE 520. Prerequisite: CE 321.

CE 422 - TRAFFIC ENGINEERING DESIGN  
Semester Hours: 3  
Driver, pedestrian and vehicle characteristics. Principles of traffic flow for improved highway traffic service and safety. Design freeways, rural roads, urban streets, traffic signals, signs, channelization, and other traffic control measures. (Same as CE 522). Prerequisite: CE 321.

CE 441 - HYDRAULIC ENGINEERING DESIGN  
Semester Hours: 3  
Water-hammer analysis, open channel flow, hydraulic structures such as dams, spillways, stilling basins, flood control devices, locks, pipe-flow systems and water-supply facilities, computational methods. Prerequisite: MAE 310.

CE 449 - INTRO ENVIRONMENTAL ENGR  
Semester Hours: 3  
Engineering aspects of air, water, and thermal pollution. Hydrologic cycle, water sources and uses; industrial and other sources of primary and secondary pollutants. Transport process in environmental problems and their control. (Same as CE 549 and CHE 449/549) Prerequisites: MAE 310 and MAE 341.

CE 452 - CREDIT EXPERIENTAL LEARNING  
Semester Hours: 1-3  
Students are engaged in research and creative projects as meaningful experiential learning opportunities. The course fosters cooperation between students and faculty in a research or creative endeavor, and enhances the students’ education via active participation in a research, creative or scholarly project.
CE 456 - WATER QUALITY CONTROL PROC  
Semester Hours: 3

Principles of public water-supply design. Source selection, collection, purification, and distribution for municipal use. Collection of waste waters, their treatment and disposal. (Same as CE 556). Prerequisite: CE 449.

CE 457 - HYDROLOGY  
Semester Hours: 3

Occurrence and movements of water over the earth's surface for engineering planning and design. Relationship of precipitation to stream-flow with frequency analysis, flood routing, and unit hydrograph theory. (Same as CE 557) Prerequisite: MAE 310.

CE 458 - ENVIRONMENTAL ENGR DESIGN  
Semester Hours: 3

Engineering design and project management of environmental quality/restoration systems. Design project focusing on: sanitary landfill, municipal incinerator, or groundwater/site remediation. Develops skills for technical communications, process design and decision making. (Same as CE 558) Prerequisite: CE 449.

CE 459 - SEL TOP IN CIVIL ENGR  
Semester Hours: 1-6

Special topics in Civil Engineering.

CE 471 - ADVANCED SOIL MECHANICS  
Semester Hours: 3

Continuum mechanics applied to soil behavior. Theoretical approaches to consolidation, shear strength, slope stability and soil stabilization. Prerequisites: CE 372.

CE 472 - SOIL DYNAMICS  
Semester Hours: 3

CE 473 - EARTH STRUCTURES ENGR  
Semester Hours: 3

Earth structure design. Theories of earth pressures and the design of retaining wall systems including gravity, cantilever, mechanically stabilized earth, flexible-sheet pile, and anchored wall systems. Stability analyses for retaining walls, earth slopes, and embankment designs. (Same as CE 573) Prerequisites: CE 372 and CE 373.

CE 474 - APP MECHANICS OF SOLIDS  
Semester Hours: 3

Stresses and strains at a point, theories of failures, stress concentration factors, thick-walled cylinders, torsion of noncircular members, curved beams, unsymmetrical bending and shear center. (Same as CE 574 and MAE 474/574) Prerequisites: CE 370 or MAE 370.

CE 481 - STRUCTURAL ANALYSIS II  
Semester Hours: 3

Reactions, shears, moments and deformations in complex structural systems. Statically indeterminate systems, advanced geometric and energy methods. Prerequisites: CE 381.

CE 483 - REINFORCED CONCRETE DESIGN  
Semester Hours: 3

Theory and practice of reinforced concrete design. Theory and design of high strength concrete mixtures. Design of reinforced concrete beams, slabs, and columns using the ultimate strength design code of the American Concrete Institute. Same as CE 583. Prerequisites: CE 380 and CE 381.

CE 484 - STEEL DESIGN  
Semester Hours: 3

Principles of design of steel structures using ASD methods. Analysis and design of structural elements using beams, columns, connection details. (Same as CE 584). Prerequisites: CE 381 and MA 244.

CE 485 - FOUNDATION ENGINEERING  
Semester Hours: 3

Design of foundations with emphasis on reinforced concrete, footings, caissons, piles retaining walls, and mat foundations. Effect of bearing pressure on foundations. (Same as CE 585) Prerequisites: CE 372 and CE 483.
CE 487 - BRIDGE DESIGN  
Semester Hours: 3  
Bridge loads, load distribution, composite beam bridges, bridge bearings, reinforced and prestressed concrete slab and T-beam bridges, bridge evaluations and ratings, and upgrade methodology. (Same as CE 583) Prerequisite: CE 483.

CE 498 - CIVIL ENGINEERING DESIGN I  
Semester Hour: 1  
Planning and analysis for a preliminary civil engineering design project. Topics include fundamentals of management, public policy, cost estimation, environmental impacts, soils analysis, and ethical considerations. Part 1 of a 2-part course. Prerequisites: CE 321, CE 372, and CE 483.

CE 499 - CIVIL ENGINEERING DESIGN II  
Semester Hours: 2  
Analysis and design of a complete civil engineering project including establishment of design criteria, cost estimates, specifications, and plans. Topics include ethical considerations in engineering design and practice. Emphasis on developing written and oral communication skills. Prerequisites: CE 483 and CE 498.

CE 499L - DESIGN II LABORATORY  
Semester Hours: 0

Communication Arts (CM)

CM 110 - VOICE AND DICTION  
Semester Hours: 3  
Examines and practices methods of adjusting vocal articulation, tone, pitch, pace, volume, resonance, and pronunciation for improving or changing voice quality and accents. Understanding the vocal instrument prepares students for acting and for positive self-presentation in the real world.

CM 113 - Intro to Rhetorical Communication  
Semester Hours: 3  
Develops public speaking skills through an examination of rhetorical theory, training, and practice. Includes informative, persuasive, and other forms of speeches to prepare students for oral presentations in college and post-college ("real world") settings.

CM 131 - ACTING TECHNIQUES I/CALHOUN  
Semester Hours: 3

CM 205 - INTRO TO JOURNALISM  
Semester Hours: 3  
Focuses on basic news writing skills specific to print journalism. Students will learn to identify news based on news values, develop leads, organize information, write stories in the inverted pyramid style, revise drafts, and copy-edit articles, all while working under simulated deadline pressure.

CM 210 - WRITING FOR VISUAL MEDIA  
Semester Hours: 3  
This course offers an introduction to scriptwriting for a variety of media: commercials, PSAs, fiction films, documentaries, and the web. The art of "visual writing" is emphasized. Students produce scripts on their own while contributing to and critiquing the work of their fellow classmates. Communication medium. Prerequisites: EH 101, EH 102.

CM 220 - INTRO PUBLIC RELATIONS  
Semester Hours: 3  
This course is designed to introduce students to the public relations profession. Through study of rhetorical and communication strategies, individual and group projects, as well as speaking and writing experiences, students gain the knowledge necessary to actively participate as effective public relation professionals.

CM 231 - FOUNDATIONS OF HUMAN COMMUNICATION  
Semester Hours: 3  
Examines how human communication shapes and adapts to a variety of practical settings public, interpersonal, organizational, mass, and technical. It prepares students for effective work in various communication contexts.

CM 251 - DECISION-MAKING IN SMALL GROUP  
Semester Hours: 3  
Provides working knowledge of how small groups communicate in the decision-making process. Students put theory into practice by functioning as group participants, observers, and consultants. Emphasis is placed on leadership, theoretical application, group participation, and oral presentation.
CM 260 - VIDEO PRODUCTION
Semester Hours: 3

This course provides students with an opportunity to experience the process of video production through creative projects designed to stimulate the visual artist, summon the storyteller and create the video editor.

CM 303 - PRAC & RES TECHNICAL COMMUNICATION
Semester Hours: 3

Provides an overview of technical communications as a career field and as a research field. Introduces students to best practices and career options in technical communications and to the research methods used by technical communication practitioners and researchers. Prerequisite: CM 301.

CM 310 - PERSUASION
Semester Hours: 3

Provides foundation in the theories, principles, and strategies of social influence through theory and application. Students explore persuasive communication, social influence, and compliance-gaining from a social-scientific level and examine the production and consumption of persuasive messages.

CM 313 - BUSINESS & PROFESSIONAL COMMUNICATION
Semester Hours: 3

Examines communication theories and practices relevant to the business context with a focus on oral presentations, interviewing, group leadership, and face-to-face communication. Develops knowledge and skills necessary for effective communication within business environments. (Prepare business administration students to meet the oral communication requirement in upper division and graduate business courses).

CM 320 - PRACTICUM IN WRITING
Semester Hours: 1-3

Writing and editing under the supervision of professionals. May be repeated up to 3 times for no more than 3 hours total credit. Enrollment requires advance planning. Prerequisites: CM 301, CM 302, enrollment in the Technical Writing Track, and a successful interview with the participating technical supervisor.

CM 330 - NONVERBAL COMMUNICATION
Semester Hours: 3

Examines the diversity of human nonverbal behavior and its influences on everyday communication experiences. Same as PY 330.

CM 331 - COMMUNICATION THEORY
Semester Hours: 3

Examines significant theoretical frameworks for the study of human communication and mass communication. Develops knowledge of communication processes and social influence. Provides preparation for senior seminar in communication theory and research. Prerequisite: CM 231.

CM 333 - INTERPERSONAL COMMUNICATION
Semester Hours: 3

Examines the process of communication between individuals. Prerequisite: CM 231 or permission of instructor.

CM 334 - HIST OF AMERICAN CINEMA
Semester Hours: 3

Investigates the American cinema as a cultural artifact by studying cultural and historical context of representations, audiences, aesthetics and industry practices in American cinema from its beginning (1895) to present.

CM 335 - SOCIAL MEDIA
Semester Hours: 3

This course focuses on uses and effects of social media in interpersonal, organizational, mass mediated, health, and political settings. Social media technologies take on many different forms including social networking sites, micro-blogging, wikis, online videos, and blogs. Following questions are discussed in class: Who uses social media? How do people use social media to develop relationships, get social support, and evoke political change? Is privacy dead? How do employers use social media to check on employees?.

CM 340 - SPEC TOPICS IN COMM ARTS
Semester Hours: 3

Topics announced in advance. Representative topics include rhetoric and war, technical theatre, and culture and communication. May be repeated twice for credit.
CM 360 - ADVANCED VIDEO PRODUCTION  
Semester Hours: 3  
Advanced Video Production is an intensive video production course designed to integrate film theory and practice. Students will learn the technical and artistic necessities of the film and video medium. Through immersive lectures, workshops, projects, and exercises, students will gain valuable experience and know-how in this exciting, fast-paced, communication medium. Prerequisite: CM 260.

CM 370 - COMM RESEARCH METHODS  
Semester Hours: 3  
Examines social scientific concepts, theories and designs commonly used interpersonal communication research. Develops knowledge and skills necessary for employment in fields involving the study of communication behavior and perception. Provides preparation for senior seminar in communication theory and research. Prerequisite: CM 231.

CM 375 - RHETORICAL CRITICISM  
Semester Hours: 3  
This course is an introduction to the critical analysis of public discourse. Specifically, it focuses on understanding how the variables of situation, audience, and rhetoric influence the production and reception of public messages. Teaching students to understand the persuasive potential of messages prepares them as critical consumers, analysts, and potential creators of such messages. Prerequisite: CM 113 or approval of instructor.

CM 400 - INTERNSHIP  
Semester Hours: 1-6  
Practical experience in the workplace allows the student to apply principles, theories, and skills learned in communication arts courses. Arranged by the student with consent of the chair, the student meets regularly with a faculty advisor, keeps a log of activities, and submits a report on the internship. Prerequisite: Senior Standing with CM major, and permission of instructor.

CM 405 - ADVANCED MEDIA WRITING  
Semester Hours: 3  
An upper level course that offers an overview of various media writing genres, including Broadcast, Advertising and Public Relations. Students complete a mix of timed assignments within each context to acquire a more complete survey of media writing and prepare for a career within the mass media. Prerequisite: CM 205.

CM 408 - CLASSICAL RHET THEORY  
Semester Hours: 3  
This course surveys the early development of rhetorical theory in the Western world, from its sophistic origins in the 5th century BCE, through the Greek philosophers and educators, to the Romans and early Christians. Prerequisites: CM 113.

CM 409 - CONTEMPORARY RHETORICAL THEORY  
Semester Hours: 3  
This course surveys contemporary rhetorical thought, including modern and postmodern theories. The course requires rigorous academic analysis and critique as students explore historical and current rhetorical concepts. Prerequisite: CM 113.

CM 414 - CREATIVE NONFICTION WRITING  
Semester Hours: 3  
This course introduces students to the genre of creative non-fiction. Undergraduate students (CM414) will write five essays and revise toward a final writing portfolio.

CM 416 - WOMEN ORATORS  
Semester Hours: 3  
Critical examination of women's public address as it has developed through women's participation in movements for abolition, temperance, women's suffrage, and equal rights.

CM 418 - LEGAL ARGUMENT  
Semester Hours: 3  
Examines argumentation in legal communities, that is, the way lawyers and judges provide reasoned support for the positions they defend concerning what the law requires in a given case. It considers common forms of legal argument, sources and forms of evidence, and legal values that underlie legal argument. It provides students with a critical perspective from which to judge legal arguments and a basic set of tools for developing legal arguments.

CM 426 - BURKEIAN THEORY & CRITICISM  
Semester Hours: 3  
This course surveys key concepts in the theory of Kenneth Burke and their discussion and application by rhetorical scholars. Through readings, lectures, and class discussions students will gain insight into this, the most important rhetorical theorist of the 20th century. Prerequisite: Junior standing.
CM 430 - MASS MEDIA IN AMERICA
Semester Hours: 3

This course provides an overview of major forms of mass media communication. It focuses on both print and electronic media, its history and structure as well as on theories of mass communication. Students will become familiar with the current role and influence of media in society.

CM 431 - SR SEM COMM THEORY/RESEARCH
Semester Hours: 3

Senior capstone course involving either a scholarly project or an approved communication-intensive internship combined with a comprehensive examination. Prerequisites: CM 370 and CM 375, and senior standing.

CM 433 - DARK SIDE INTERPERSONAL COMM
Semester Hours: 3

Traditional Interpersonal Communication pedagogy focuses on more of the positive aspects of relationship formation and maintenance. This course offers a more complete view of human relationships by exploring a variety of topics related to the “darker” side of relationships situated in the contexts of friendships, family members, and intimates. By exploring issues such as deception, fatal attraction, jealousy and envy, conflict, stalking, abuse, and many others, students acquire a more complete view of human relationships. Prerequisite: CM 231.

CM 444 - ADVERTISING
Semester Hours: 3

This course will examine the emergence of advertising as a form of communication, its influence upon other forms of mediated communications and its impact upon culture and society. Students will learn how to develop and present an advertising strategy for an actual brand. Prerequisite: Junior standing.

CM 451 - ORGANIZATIONAL TRNG & DEVELOP
Semester Hours: 3

Provides upper-level undergraduates with the opportunity to learn how to design organizational training programs beginning with the needs assessment and continuing through the evaluation and implementation phases. Prerequisite: Junior standing.

CM 454 - NEW MEDIA WRITING & RHETORIC
Semester Hours: 3

This course teaches students to apply rhetorical principles across a variety of media and includes an examination of communication strategies used widely in academic and industry settings. The course focuses on new media through an exploration of digital technologies and the way digital culture and new media have dramatically impacted reading, writing, and research practices. Prerequisites: EH 101 and EH 102.

CM 455 - COMMUNICATION & CULTURE
Semester Hours: 3

This course focuses on the application of theory and research to intercultural communication. Topics and activities assist the students in developing communication skills that improve their competence in intercultural situations. By addressing the different world views that shape our perceptions, values, attitudes, and beliefs of different people, the Culture and Communication course challenges students to become aware of cultural differences, avoid ethnocentrism, and work toward effective communication with unalike others. Prerequisite: Junior standing.

Computer Engineering (CPE)

CPE 211 - INTRO COMPUTER PROG FOR ENGR
Semester Hours: 3

Advanced programming in a high level language such as C++ with an emphasis on practice in solving engineering problems using top-down design and algorithms. Prerequisites: ENG 101 and MA 171 with concurrency.

CPE 211L - LABORATORY
Semester Hours: 0

This lab is the 0-credit lab component of the 3 credit course.

CPE 212 - FUNDAMENTALS SOFTWARE ENGRG
Semester Hours: 3

Introduction to structured programming using C++. Search and sort algorithms. Introduction to data structures. Applications to engineering related problems. Prerequisite: CPE 211.
CPE 221 - COMPUTER ORGANIZATION  
Semester Hours: 3  
Functional organization of stored-program digital computers including number representation, assembly language programming, computer hardware, micro-operations, and control logic; microprocessor architecture. Prerequisite: CPE 211 and EE 202 w/concurrency.

CPE 322 - DIGITAL HDWR DESIGN FUNDAMENTALS  
Semester Hours: 3  
Advanced concepts in Boolean algebra, use of hardware description languages as a practical means to implement hybrid sequential and combinational designs, digital logic simulation, rapid prototyping techniques, and design for testability concepts. Focuses on the actual design and implementation of sizeable digital design problems using representative Computer Aided Design (CAD) tools. Laboratory required. Prerequisite: CPE 221.

CPE 323 - INTRO TO EMBEDDED COMPUTER SYSTEMS  
Semester Hours: 3  
Hardware and software aspects in building embedded computer systems. Includes methods to evaluate design tradeoffs of different technology choices and technology capabilities and limitations of system components necessary to design and implement an embedded system and interface it to the outside world. Laboratory required. Prerequisite: CPE 221.

CPE 324 - ADV LOGIC DESIGN LABORATORY  
Semester Hour: 1  
Laboratory component of CPE 322 includes experimentation of fundamental concepts in digital logic design. Use of hardware description languages as a practical means to implement hybrid sequential and combinational digital designs, digital logic simulation, and rapid prototyping techniques. Prerequisite: CPE 322.

CPE 325 - EMBEDDED SYSTEMS LAB  
Semester Hour: 1  
Laboratory component of CPE 323 includes experience working with modern integrated software development environments and hardware platforms to solve practical problems.

CPE 353 - SOFTWARE DESIGN & ENGINEERING  
Semester Hours: 3  
Hands-on experience developing a substantial software project using software design tools such as SQL database system and the Qt graphical interface development environment. Introduction to a software process including requirements elicitation and testing techniques. Prerequisites CPE 212 and CS 317 (with concurrency).

CPE 381 - FUND SIGNALS & SYS FOR COMP ENG  
Semester Hours: 3  
Introduction to the fundamental concepts in continuous and discrete signals and systems, and methods of signal and system analysis for computer engineers. No credit for EE or OPE students. Prerequisites: EE 213 and MA 238.

CPE 412 - INTRO TO PARALLEL PROGRAMMING  
Semester Hours: 3  
Introduction to processing in parallel and distributed computing environments. Design and analysis of parallel algorithms. Parallel programming environments: Pthreads for shared memory multiprocessor systems and PVM/MPI for distributed networked computers. (Same as CPE 512) Prerequisites: CPE 212 and CS 317.

CPE 423 - HARDWARE/SOFTWARE CO-DESIGN  
Semester Hours: 3  
Study and design of Systems On A Chip (SOC). Emphasis on Field Programmable realizations of SOC systems. (Same as CPE 523) Prerequisites: CPE 322 and CPE 426.

CPE 426 - VLSI HARDWARE DESC LANG/MODEL/S  
Semester Hours: 3  
Modern VLSI design techniques and tools, such as silicon compilers, (V)HDL modeling languages, placement and routing tools, synthesis tools, and simulators. Students will design, simulate, and layout using both programmable logic families and ASIC libraries. (Same as CPE 526) Prerequisites: EE 202 and EE 315.
CPE 427 - VLSI DESIGN I  
Semester Hours: 3  
Introduction to VLSI design using CAD tools, CMOS logic, switch level modeling, circuit characterization, logic design in CMOS, systems design methods, test subsystem design, design examples, student design project. Laboratory required. (Same as EE 427 and CPE 527) Prerequisites: EE 202 and EE 315.

CPE 427L - LABORATORY  
Semester Hours: 0  
Students enrolling in CPE 427L must enroll concurrently in CPE 427.

CPE 431 - INTRO COMPUTER ARCHITECTURE  
Semester Hours: 3  
Study of existing computer structures. Computer organization with emphasis on busing systems, storage systems, and instruction sets. Performance models and measures, pipelining, cache and virtual memory, introduction to parallel processing. (Same as CPE 531) Prerequisites: CPE 322 and CPE 323.

CPE 434 - OPERATING SYSTEMS  
Semester Hours: 3  
Study of the fundamentals of operating systems. Emphasis on processes, file management, interprocess communication, input-output, virtual memory, networking and security. Course must be taken concurrently with CPE 435. Prerequisites: CPE 221 and CPE 353.

CPE 435 - OPERATING SYSTEMS LABORATORY  
Semester Hour: 1  
Laboratory component of Operating Systems course. Experiments include implementation of device drivers, process and thread management, virtual memory management, dynamic memory management, file-systems. Students must take this course concurrently with CPE 434.

CPE 436 - INTERNALS OF MODERN OPER SYS  
Semester Hours: 3  
In-depth study of the design of modern operating systems such as Unix, NT and Linux. Emphasis on the internals and implementation details of interrupt processing, real-time clocks, device independent I/O, process management, memory management, file management. (Same as CPE 536) Prerequisite: CPE 434.

CPE 448 - INTRO TO COMPUTER NETWORKS  
Semester Hours: 3  
Introduction to the concepts and architecture of computer networks. Review of communication protocols using the Internet and the TCP/IP model as major examples. High-speed networking, congestion control, data compression, security and distributed processing. (Same as EE 468, CPE 548, EE 548) Prerequisites: CPE 211 and CPE 221.

CPE 449 - INTRO TO CYBERSECURITY ENGINRG  
Semester Hours: 3  
Introduction to cryptography and computer security through hardware and physical security to a knowledge of audit methods, security management, and public law. Includes skills such as business process analysis, software security, IAE evaluation, and IAE testing. (Same as CPE 549) Prerequisite: CPE 448.

CPE 449L - INTRO CYBERSECURITY ENG LAB  
Semester Hours: 0  
Students enrolling in CPE 449 must enroll concurrently in CPE 449L.

CPE 453 - SENIOR SOFTWARE STUDIO  
Semester Hours: 3  
Basic concepts of software engineering. Software project management including specifications, design, implementation, testing and documentation. Software design and management tools. Includes a multi-student software project. Prerequisites: CPE 353 and CS 317.

CPE 455 - SECURE SOFTWARE DEVELOPMENT  
Semester Hours: 3  
Overview of methodologies for development of high-assurance software. Major topics include analysis of security and safety risks, software certification criteria, the software development lifecycle, risk mitigation, design and coding best practices, verification techniques, and auditing of software for insecure and unsafe coding constructs. Prerequisites: CPE 353 or CS 307.
CPE 457 - SOFTWARE REVERSE ENGINEERING  
Semester Hours: 3  
This course provides fundamental knowledge of software reverse engineering. The course provides the ability (a) to understand software of unknown origin or software for which source code is unavailable, (b) to determine how something works, (c) to discover data used by software, and (d) to aid in the analysis of software. The course introduces tools for reverse engineering, including disassemblers, debuggers, monitors, virtual machines and modern tools for software analysis. Prerequisites: CPE 353 and CS 307.

CPE 459 - SYSTEMS SECURITY  
Semester Hours: 3  
This course (1) introduces cyber physical, industrial control, embedded, and Supervisory Control and Data Acquisition (SCADA) control systems, (2) examines common vulnerabilities and threats associated with these systems, and (3) examine techniques to defend these systems from cyber-attacks. Prerequisites: CPE 448.

CPE 490 - SPECIAL TOPICS IN COMP ENGR  
Semester Hours: 1-3  
Topics will vary. The course may be repeated when topics vary. Consent of advisor.

CPE 490L - SPECIAL TOPICS LABORATORY  
Semester Hours: 0

CPE 495 - COMPUTER ENGINEERING DESIGN I  
Semester Hours: 3  
First course in the senior capstone design sequence. Application of techniques to the design of electronic systems that have digital hardware and software components. Application of engineering courses to solve real-world design problems. Must be taken in the same academic year as CPE 496. Prerequisites: CPE 323, CPE 353 and EE 315.

CPE 496 - COMPUTER ENGINEERING DESIGN II  
Semester Hours: 3  
Second course in the senior capstone design sequence. Must be taken in the same academic year as CPE 495. Prerequisite: CPE 495.

CPE 497 - COMPUTER ENGR INTERNSHIP  
Semester Hours: 1-3  
Active involvement in an engineering project in an engineering enterprise, professional organization, or government agency that has particular interest and relevance to the student. Junior/senior standing and approval from Engineering Faculty advisor.

CPE 499 - PROJECT IN COMPUTER ENGRG  
Semester Hours: 3  
Individual design project under the direction of an ECE faculty member. Senior standing and permission of instructor required.

Computer Science (CS)

CS 100 - INTRO COMPUTERS & PROGRAM  
Semester Hours: 3  
Introduction to program design and implementation in the Visual Basic programming language, using hands-on programming assignments, class demonstrations and lectures. Problem analysis and some testing techniques. Basic program structure, data types, control structures, and file organization.

CS 102 - INTRO TO C PROGRAMMING  
Semester Hours: 3  
Introduction to program design and implementation in the C programming language, using hands-on programming assignments, class demonstrations and lectures. Problem analysis and some testing techniques. Basic program structure, and file organization.

CS 103 - INTRO PROGRAMMING USING JAVA  
Semester Hours: 3  
Introduction to program design and implementation in the Java programming language, using hands-on programming assignments, class demonstrations and lectures. Problem analysis and some testing techniques. Basic program structure, data types, control structures, methods and file organization.
CS 105 - COMP SCI SEM:ETH/PROFESS
Semester Hour: 1

Issues associated with the ethical use of computers in the information age. Ethics, professionalism, software piracy, copyrighting software, ethical standards and the impact of computers on society will be covered. Familiarization with the local computing environment will also be covered.

CS 109 - INTRO TO PROGRAMMING II/A&M UN
Semester Hours: 3

CS 121 - COMPUTER SCIENCE I
Semester Hours: 3

Review of problem solving techniques, algorithm development, and fundamental language features; e.g., loops, decisions. In depth coverage of functions, arrays, I/O. Principles of software design, implementation, and testing. Introduction to object oriented design and the C++ programming language. Prerequisites: CS 102 or 103, and either MA 113, 115, 120, 171, 172, 201, 238, or 244.

CS 143 - INTRO TECH MULTIMEDIA & GAMING
Semester Hours: 3

Introduction to terminology, technologies and tools for multimedia and gaming. Elements such as text, sound, images, animation, video, and how they are represented, captured, edited, stored, and published. Overview of multimedia and gaming technologies, multimedia authoring, publishing on the web.

CS 214 - INTRO DISCRETE STRUCTURE
Semester Hours: 3

Review of set algebra including mappings and relations. Algebraic structures including semigroups and groups. Elements of theory of directed and undirected graphs; Boolean algebra and propositional logic and applications of these structures to various areas of computer science. Prerequisites: MA 171 and either CS 121 or CPE 112 or CPE 211.

CS 217 - ANALYTIC TECH GAMING
Semester Hours: 3

Mathematics for understanding & implementing 3-dimensional graphics & interactive physical modeling in computer games. Topics: coordinate systems, vectors, matrices, transformations, kinematics, dynamics, automata, and probability. Focused on practical mathematics rather than theoretical derivations. Prerequisites: MA 120 or MA 171.

CS 221 - COMP SCI II: DATA STRUCTURES
Semester Hours: 3

Advanced features of the C++ programming language, including pointers, recursion, classes, and inheritance. Fundamental data structures including linked lists, stacks, queues, binary search trees. Basic sort and search algorithms. Design, development, and documentation of object-oriented programs. Prerequisites: CS 121. Either MA 113, or 115. Prerequisites with concurrency: MA 171 or CS 217.

CS 251 - C++ PROGRAMMING/CALHOUN
Semester Hours: 3

CS 261 - COBOL PROGRAMMING/CALHOUN
Semester Hours: 3.3

CS 307 - OBJECT ORIENT/PROG C++
Semester Hours: 3

Emphasis on principles of software engineering and object-oriented design. Practical experience using the standard C++ library, the standard template library, and design patterns. Introduction to and experience with graphical user interface applications. Prerequisites: CS 221.

CS 308 - ASSEMBLY LANGUAGE PROGRAMMING
Semester Hours: 3

Programming in a representative assembly language, including floating point programming. Overview of software systems: loaders, assemblers, compiler, interpreters, operating systems.

CS 309 - COMPUTER ORG & SWTCHNG THRY
Semester Hours: 3

Boolean algebra, Boolean function minimization techniques, design and analysis of combinational circuits, design and analysis of sequential circuits. Computer hardware organization, including CPU, instruction representation and executive. Programming in a representative assembly language, including floating point programming. Overview of software systems: loaders, assembler, compiler, interpreters, operating systems. A lab section must be scheduled for this course. Prerequisites: CS 214.
CS 309L - LABORATORY
Semester Hours: 0
Lecture/Lab 3. Students enrolling in CS 309L must enroll concurrently in CS 309.

CS 317 - INTRO DESIGN/ANALYSIS OF ALG
Semester Hours: 3
Introduction to complexity analysis of algorithms; emphasis on searching, sorting, finding spanning trees and shortest paths in graphs. Design techniques such as divide & conquer, dynamic programming, and backtracking. Introduction to problem classification; i.e. NP, intractable, and unsolvable. Prerequisites: MA 244 and CS 214, and either CS 221 or CPE 212.

CS 321 - INTRO OBJECT-ORIENTED PROG JAV
Semester Hours: 3
Writing substantial object-oriented programs in Java, including design, documentation and testing. Advanced data structures (e.g., balanced trees, hash tables). Graphical interface programming using the Java abstract windowing toolkit. Comparison with other object-oriented languages, notably C++. Prerequisites: CS 221.

CS 325 - PROFESSIONAL & COMPUTG ETHICS
Semester Hours: 3
The course focuses on two major aspects of professionalism and computer ethics. The first concerns the rule of values and normative principles in the practice of computing or more specifically software development. The second concerns the impacts of computer technologies on society. Prerequisite with concurrency: CS 321.

CS 330 - ARTFCL INTEL & GAME DEV
Semester Hours: 3
Techniques and concepts of artificial intelligence applied game development and production. Topics: path planning, decision making, tactics, and non-rational behaviors. Prerequisite: CS 221.

CS 347 - INTRO VIDEO GAME DESGN & PROGM
Semester Hours: 3
Provides students with an overview of the video game production process. Covers both theory and practice of game design and programming. Students produce 2D and 3D games from beginning to end using existing game engines. Hands-on focus and project-oriented. CS 143 is highly recommended. Prerequisites: CS 221.

CS 365 - DATA BASE PROGRAMMING/ATHENS
Semester Hours: 3.3

CS 371 - MOBILE COMPUTING APP INCT & D
Semester Hours: 3
Considers application design for the mobile space with emphasis on mobile computer interfaces, including GUI for mobile environments, entertainment computing, and cross-platform development. This course is also a component of the Entertainment Computing Track. Prerequisites: CS 221 or CPE 212.

CS 384 - OPERATING SYSTEMS/A&M
Semester Hours: 3

CS 390 - UNIX PROGRAMMING
Semester Hours: 3
Design and development of systems and programs in the UNIX environment. File and terminal I/O, processes, inter-process communication, signals. Pattern searching, filters, pipes. Shell programming. Program and system development tools such as awk, C, make, sed, and yacc. Prerequisites: CS 221.

CS 391 - INT NETWORK ADMIN PRINC WINDOW
Semester Hours: 3
Network administration principles for installing and administrating Windows networks. OS installation, general network topologies and protocols, and Windows client-server architecture. User management, network file and security systems, and disaster-recovery are also covered. Prerequisites: CS 221.
CS 392 - INT NETWORK ADMIN PRINC FOR UN
Semester Hours: 3

Linux OS installation, network topologies and protocols, and UNIX client-server architecture. User management, network file and security systems, kernel configuration, print servers, domain name service, mail servers, Web and ftp servers are included. Design and implementation of a UNIX domain. Prerequisites: CS 390.

CS 396 - SPECIAL TOPICS
Semester Hours: 3

Course offered by an instructor in a specialized area of computer science. Must have approval of instructor.

CS 397 - SPECIAL TOPICS
Semester Hours: 3

Course offered by an instructor in a specialized area of computer science. Must have approval of instructor.

CS 398 - SPECIAL TOPICS
Semester Hours: 3

Course offered by an instructor in a specialized area of computer science. Must have approval of instructor.

CS 403 - INT FORML LANG AUTO THRY
Semester Hours: 3

Introduction to concepts and formalisms of formal languages and automata theory. Includes fundamental mathematical concepts, grammars and corresponding automata, and deterministic parsing of programming languages. Prerequisites: CS 317.

CS 409 - COMPUTER ORG & ARCHITEC/ATHENS
Semester Hours: 3

CS 413 - INTRO DIGITAL COMP ARCHITECTUR
Semester Hours: 3

Design of computer systems and subsystems, including register transfer, bus structure, timing and control. Pipelining, memory systems including cache and cache coherence, arithmetic, and I/O units. Interrupt handling. A lab section must be scheduled for this course. Prerequisites: CS 308 and CS 309.

CS 413L - LABORATORY
Semester Hours: 0

Lecture/Lab 3. Students enrolling in CS 413L must enroll concurrently in CS 413.

CS 420 - ADV COBAL PROGRAMMING/ATHENS
Semester Hours: 3

CS 424 - PROGRAMMING LANGUAGES
Semester Hours: 3

CS 440 - DATA SYSTEMS/ATHENS
Semester Hours: 3

CS 443 - INTRO TO MULTIMEDIA SYSTEMS
Semester Hours: 3

Multimedia authoring, color models for image and video, introduction to image and video compression, digital audio, multimedia networks, multimedia synchronization, multimedia retrieval. Taught as CS 443/543. Prerequisites: CS 317.

CS 445 - INTRO COMPUTER GRAPHICS
Semester Hours: 3

Introduces underlying theory and mechanics of interactive computer graphics. Basic modeling, rasterization, 2D/3D transformations, and viewing. 3D graphics rudiments. Some hardware and historical perspectives. Many programs. Same as CS 545; take only one! Prerequisites: CS 221 and MA 244 or CS 217.
CS 446 - ADVANCED COMPUTER GRAPHICS
Semester Hours: 3
High resolution 3D graphics. Advanced topics in viewing, vertex & fragment processing, illumination & shading, 3D modeling (curve & surface representation, texture mapping. Some coverage of solid modeling and color theory. Game production pipeline. Many programming projects. Taught as CS 446/546. Prerequisites: CS 445 and at least junior standing.

CS 447 - GAME ENGINES & LEVEL DEVELOPMENT
Semester Hours: 3
Students produce fully functional games from beginning to end with team members. Focused on engineering development and asset generation and management. Examines the design, development, and distribution of computer games using game engines for cross-platform implementation. Taught as CS 447/547. Prerequisites: CS 330 and CS 445.

CS 451 - SOFTWARE ENGINEERING ATHENS
Semester Hours: 3
Aspects of client/server distributed computing, a paradigm that includes technologies addressing web services (such as AJAX using JavaScript/PHP, ASP.NET) as well as distributed objects (such as .NET remoting, CORBA). Students will apply the concepts in practical distributed programs. Prerequisites: CS 307 or CS 321. CS 420 is recommended.

CS 454 - INTRO TO CLOUD COMPUTING
Semester Hours: 3

CS 465 - NETWORK SECURITY
Semester Hours: 3
Introduction to Network Security: Fundamentals of network security and cryptography. Examines security at different network layers. Wireless security. Firewalls. Intrusion detection and penetration analysis. Prerequisites: CS 121 or CPE 112 AND CS 221 or CPE 221.

CS 470 - INTRO TO COMPUTER NETWORKS
Semester Hours: 3
Introduction to the organization and operation of computer networks. Physical, Data Link, Network, Transport, and Application-layer protocols and algorithms; LAN and WAN systems; TCP/IP; wired and wireless organizations; security approaches. Prerequisites: CS 413.

CS 480 - MOBILE DIGITAL FORENSICS
Semester Hours: 3
This course examines digital forensics of mobile devices such as smart phones and tablets in a law enforcement context. Mobile device characteristics that make forensics examinations difficult are discussed. Various forensic tools are critically examined with an eye toward improved tool development.

CS 483 - COMPILERS/A&M
Semester Hours: 3
This course examines the issues related to security policies, models and mechanisms applicable to providing security for computer-based systems including operating systems, database management systems, and networks. Corequisite: CS 490.

CS 487 - DATABASE SYSTEMS
Semester Hours: 3
Basic concepts of database management systems with a focus on relational and object-oriented systems. Database design including semantic models and normalization. Design issues including query languages, internal storage, recovery, concurrency, security, integrity, and query optimization. Senior standing required.

CS 490 - INTRO TO OPERATING SYSTEMS
Semester Hours: 3
Principles of operating systems. Process management, memory management, I/O management, and file systems. Specific topics include process states, threads, CPU scheduling, concurrent processing, virtual memory. Contemporary operating systems will be used as examples. Prerequisites: CS 413.
CS 495 - SEL TOPICS: UNDERGRAD CS  
Semester Hours: 3  
Individual directed study under the supervision of an instructor. Instructor approval required.

CS 496 - SPECIAL TOPICS  
Semester Hours: 3  
Course offered by an instructor in a specialized area of computer science. Instructor approval required.

CS 497 - SPECIAL TOPICS  
Semester Hours: 3  
Course offered by an instructor in a specialized area of computer science. Instructor approval required.

CS 498 - SPECIAL TOPICS  
Semester Hours: 3  
Course offered by an instructor in a specialized area of computer science. Instructor approval required.

CS 499 - SR PROJ: TEAM SOFTWARE DESIGN  
Semester Hours: 3  
A combination of lectures on proven software engineering approaches, and team working sessions. Each student will participate in a sizable, complex, software development project based on a team approach. Each team will be required to provide oral and written documentation of their work. Prerequisites: CS 317.

Earth System Science (ESS)

ESS 100 - INTRODUCTION TO SPACE SCIENCE  
Semester Hour: 1  
Covers physiology in space, computer systems, materials, in space, robotics, thermodynamics, astrophysics, and solar physics. Laboratory experiments and simulated missions. Offered in cooperation with the Alabama Space and Rocket Center. Open only to students enrolled in Space Academy II.

ESS 101 - EXPLORING SPACE SC & ENGR  
Semester Hour: 1  
Exploring Space Science and Engineering courses 1-9. Each course examines an aspect of space exploration including but not limited to space science, human factors, medicine and engineering. Each course focuses on a single aspect. No more than three of the courses in the ESS 101 group may be taken for credit. The courses are offered through distance learning.

ESS 103 - ENVIRONMENTAL EARTH SCIENCE  
Semester Hours: 4  
Principles and foundations of Earth and environmental science with lectures and labs on concepts in Earth system science. Applied science labs use applications and real-world examples from ecosystems, geology, soil science, water, pollution, agriculture, population, natural disasters and energy.

ESS 103L - LABORATORY  
Semester Hours: 0

ESS 110 - PHYSICAL SCIENCE/CALHOUN  
Semester Hours: 4

ESS 111 - CLIMATE AND GLOBAL CHANGE  
Semester Hours: 4  
Intro to climate system including natural and human-induced changes in this system. Includes greenhouse effect, ozone depletion, pollution, urban heat island processes, continental drift effects, glacial melting and sea level changes, atmospheric and ocean circulations, solar activity variability.

ESS 111L - LABORATORY  
Semester Hours: 0

ESS 210 - COLLAPSE OF CIVILIZATIONS  
Semester Hours: 3  
This course will investigate why some cultures succeed and others fail. From archeological and historical records of past civilizations we will examine the factors which lead to collapse in an attempt to determine the future of current societies.
ESS 212 - SEVERE WEATHER ANALYSIS
Semester Hours: 4

Meteorological analysis and beginning forecasting of weather systems, severe weather, snowstorms, hurricanes, and tornadoes through the interpretation of surface, upper air, satellite, and radar weather observations. Strong emphasis placed on unique observations of severe weather from UAH radar and profiling systems. Prerequisites: ESS 111.

ESS 212L - LABORATORY
Semester Hours: 0

Laboratory. Prerequisite: ESS 111.

ESS 301 - INTRO TO EARTH & ATMOSPHERIC PHYS
Semester Hours: 3

This course will provide a survey of earth and atmospheric science for undergraduate students. Topics that will be covered will focus on how the earth-atmosphere system works in an integrated fashion. Prerequisites: ESS 103, ESS 111, (PH 101 or PH 111), and (MA 120 or MA 171).

ESS 302 - PEOPLE, PLANTS, & ENVIRONMENT
Semester Hours: 3

This course is designed to introduce students from multiple departments to the vital roles that plants have in our ecosystems through the study of basic plan and soil science. Special attention is placed on the impact plants have on our technology-based society. Sophomore standing or above.

ESS 303 - CLASSICAL & PHYSICAL CAUSES CLIM
Semester Hours: 3

Basic atmospheric structure and physical processes, surface processes, climate history and climate change, land use and land change, microclimates, topoclimates, Ecoclimatology. Prerequisites: ESS 103, ESS 111, MA 120 or MA 171, and PH 101 or PH 111.

ESS 305 - HYDROLOGY
Semester Hours: 3

Introduction to hydrologic cycles and concepts of how water interacts with the environment. Covers water properties, precipitation, groundwater and runoff, currents, waves, sediment processes, and conservation strategies. Prerequisites: ESS 103, ESS 111, MA 120 or MA 171, and PH 101 or PH 111.

ESS 307 - ENVIRONMENTAL ARCHEOLOGY
Semester Hours: 3

Archeologists today need a wide range of scientific approaches in order to delineate and interpret the ecology of their sites. This approach is revolutionizing archeology making it relevant to the modern-day world. Investigated in this course includes climate modeling, remote sensing, and GIS. Prerequisite: ESS 103.

ESS 312 - PRINCIPLES OF ECOLOGY
Semester Hours: 4

Lecture/Lab One 3 hour lab a week. Ecological principles controlling plant and animal populations. Development of ecosystems, communities and habitats. Field trips required. Strongly recommend CH 101 or 121. Prerequisite: BYS 120.

ESS 313 - GEOGRAPHIC INFORMATION SYSTEMS
Semester Hours: 3

Introduction to scientific spatial analysis concepts and spatial data processing with focus on ESRI ArcGIS software. Basic concepts in GIS data management and creation, with topics including raster and vector data, projections, data query, data acquisition, and cartography. Prerequisites: ESS 103 and either CS 102 or CS 103.

ESS 321 - POLLUTION PROBLEMS
Semester Hours: 3

Quantitative study of environmental conditions, processes, and problem-solving techniques related to specific pollution problems in air, water, and land. Prerequisites: ESS 111, ESS 103 and (MA 120 or MA 171) and (CH 101 or CH 121) and (PH 101 or PH 111).

ESS 351 - DYNAMIC METEOROLOGY
Semester Hours: 3

Dynamics and kinematics of atmospheric flow. Meteorological coordinate systems. Fundamental governing equations of atmospheric motion, circulation, and vorticity. Prerequisites: PH 111, ESS 301, CS 102 or CS 103, and MA 201 (with concurrency).
ESS 352 - SYNOPTIC METEOROLOGY
Semester Hours: 3

Analysis, interpretation and forecasting synoptic-scale and mesoscale phenomena, including air masses, frontal systems, cyclones, anti-cyclones, tropical cyclones, and associated mesoscale phenomena. Emphasis is placed on the use of remote sensing data from satellites, radars, and profilers using state-of-the-art workstations. Prerequisite: ESS 212 and ESS 351.

ESS 370 - INTRODUCTION TO REMOTE SENSING
Semester Hours: 3

This course introduces the fundamental physics of remote sensing systems and incorporates hands-on exercises of image processing, information extraction and interpretation, and basic applications of airborne and satellite data in Earth System Science and Atmospheric Science. Prerequisites: ESS 103, ESS 111, (MA 120 or MA 171), (PH 101 or PH 111), and CS 102.

ESS 402 - SCI & SOC ASPTS NATRL DISASTER
Semester Hours: 3

Students will understand causes of major natural events and evaluate effects of disasters on populations and possible mitigation measures. GIS software will be used to show progression of events and/or their impacts, with course case studies. Prerequisites: ESS 103 and ESS 111.

ESS 407 - ENV THRTS, PUB POLY, & DEC MKG
Semester Hours: 3

Researchers, policymakers and environmental campaigners have identified 25 potential future threats to the global environment. This course examines the nature and consequences of these threats and their potential impacts for the survival of the human race. Prerequisite: ESS 103.

ESS 408 - PYTHON FOR GIS
Semester Hours: 3

Introduction to GIS model building, Python programming, and automation of scripts for ArcGIS. Techniques in Model Builder, Python, and the methods for automation will be taught using data from numerous available data sources across the internet with heavy emphasis on the Earth Sciences. Prerequisites: ESS 313.

ESS 409 - SCI PROGRMNG FOR EARTH & ATMOS
Semester Hours: 3

Survey of data types and languages commonly used in the meteorological community along with practical applications to meteorology. Course is designed to prepare students for graduate work and research in atmospheric science. Prerequisite: CS 102 or 103; ESS 301; MA 172; PH 112 and PH 115. Or consent of instructor.

ESS 410 - OPERATIONAL WEATHER FORECAST’G
Semester Hours: 3

Subjective and objective methods of atmospheric prognosis. Techniques for forecasting critical weather elements. Interpretation, use and systematic errors of computer-generated products, human factors with forecasting, and application of meteorological theory in an operational setting. Prerequisites: ESS 111, ESS 212, ESS 352, MA 172, PH 112 and PH 115.

ESS 414 - GEOSPATIAL APPLICATIONS
Semester Hours: 3

An introductory look at the ways in which GIS can be put to use in different fields of study, drawing examples from Demography, Sociology, Archaeology, History, and Ecology. Focus on cartography and map creation principles and public geospatial data acquisition. Prerequisite: ESS 313.

ESS 415 - ADVANCED TOPICS IN GIS
Semester Hours: 3

Advanced continuation of concepts applied in Geospatial Applications. Students will learn through modules of real world scientific research how to use further tools in ArcGIS including: 3D Analyst, Spatial Analyst, Network Analyst. Topics include web data dissemination, spatiotemporal analysis and some basic spatial statistics measures. Prerequisite: ESS 414.

ESS 420 - INTRO ATMOSP CHEM & AIR POLLU
Semester Hours: 3

This self-contained introductory course in atmospheric chemistry and air pollution is designed to provide students the basics of atmospheric chemistry and air pollution concepts. Topics include air pollutants, air-pollution meteorology, atmospheric gases and aerosols, and atmospheric processes. Prerequisites: PH 112, PH 115, CH 121, ESS 301 and ESS 321.
ESS 441 - ATMOSPHERIC THERMODYNAMICS & CLOUD PHYSICS
Semester Hours: 3

General aspects of thermodynamics and cloud physical processes occurring within the atmosphere; atmospheric statics and stability, saturation point analysis, aerosols, nucleation, and the behavior/growth of cloud particles and hydrometeors. Prerequisites: ESS 301, MA 238, PH 112 and PH 115.

ESS 451 - ATMOSPHERIC FLUID DYNAMICS I
Semester Hours: 3

Fluid dynamics in the atmosphere. Coriolis acceleration, scale analysis and appropriate approximations of the complete governing equations. Numerical analysis and interpretation of weather phenomena. Same as ATS 451. Prerequisites: ESS 351, MA 238, PH 112 and PH 115.

ESS 454 - FORECASTING MESOSCALE PROCESSES
Semester Hours: 3

Detection and forecasting of atmospheric mesoscale phenomena including the structure and evolution of clouds, precipitation (including floods) thunderstorms and severe weather. Includes basics of instruments used to detect mesoscale phenomena, most notably satellite and radar. Prerequisite: ESS 352.

ESS 461 - ATMOSPHERIC RADIATION I
Semester Hours: 3

Fundamentals of terrestrial atmospheric radiation. Topics include: basic concepts, radiative transfer equation, gaseous absorption, scattering by molecules and particles, band models, transmittance along an inhomogeneous path. Prerequisite: ESS 301, MA 238, PH 112 and PH 115.

ESS 471 - INTRODUCTION TO RADAR METEOROLOGY
Semester Hours: 3

Introduction to principles of radar meteorology, including radar operations, hardware, interpretation and analysis. Doppler, dual-polarization and dual-wavelength radar theory, methods and applications are covered. Prerequisite: ESS 301 and ESS 441.

ESS 490 - SELECTED TOPICS IN ENVIRONMENTAL SCIENCE
Semester Hours: 1-3

Special offerings to students in areas of interest not covered in the present curriculum. Prerequisite: permission of instructor.

ESS 495 - DIRECTED STUDY
Semester Hours: 2-4

Specialized research for undergraduates often is offered to undergraduates who have senior standing.

ESS 498 - RESEARCH & PROFESSIONAL DEVELOPMENT CAPSTONE
Semester Hour: 1

Applied concepts for professional and research development. Includes evaluation and discussion of published literature and department seminars, with focus on research synthesis and critique. Also includes development of professional and career skills focused on the Earth and Atmospheric Sciences. Senior Standing required.

ESS 499 - UNDERGRADUATE RESEARCH
Semester Hours: 2-4

For advanced Earth System Science students. Individual investigations into Earth systems science problems under direct supervision of a research mentor. Research is conducted and thesis-style paper is written and orally presented. Students identify and obtain consent from a faculty research mentor.

Economics (ECN)

ECN 142 - PRINCIPLES OF MACROECONOMICS
Semester Hours: 3

How does our economy function? Why do we have periods of unemployment and inflation and what can we do about it? Economics is a way of thinking about the world, how to identify and focus on fundamental issues so we can understand our economy and how monetary and fiscal policy affects our lives. Prerequisite: any 100 level or 200 level MA course.

ECN 143 - PRINCIPLES OF MICROECONOMICS
Semester Hours: 3

How do markets coordinate our unlimited wants with our limited capacity to produce? We study producer and consumer choice in a variety of market structures, the social welfare implications inherent in market systems and policies designed to correct those market failures. Prerequisite: Any 100 level or 200 level MA course.
ECN 340 - MACRO ECONOMIC ANALYSIS
Semester Hours: 3

A comprehensive study of the nation's economic system. How interdependent market systems determine income, consumption, saving, investment, interest, employment, and the aggregate price level. Determinants of economic growth and the effects of monetary and fiscal policy are central issues. Prerequisite: ECN 142 and ECN 143.

ECN 345 - MICRO ECONOMIC ANALYSIS
Semester Hours: 3

This course provides an informed perspective of, and ability to use, microeconomic theory. We develop the analytical tools needed to solve problems and focus on the logical foundations of these tools. Core topics include consumer behavior, production, exchange, markets, and game theory. Prerequisite: ECN 142 and ECN 143.

ECN 352 - MONEY AND BANKING
Semester Hours: 3

Organization, operation, and economic significance of monetary and banking systems. Fractional reserve banking systems, money creation, the Federal Reserve System, U.S. financial intermediaries. Introduction to monetary theory and international finance. Prerequisites: ECN 142 and ECN 143.

ECN 406 - SPORTS ECONOMICS
Semester Hours: 3

The course uses economic tools to study market outcomes in sports: the market for talent, labor relations, and the role of government. Specific topics include the demand for sports, sports franchises, and the theory of the firm, compensation of player talent, economics of stadiums, and sports media. Prerequisite: ECN 143.

ECN 411 - ECONOMICS INFORMATION TECH
Semester Hours: 3

Explores economic theories of consumer and firm behavior and strategy in the information technology industry with emphasis on applying formal tools of analysis in real-world contexts. Core topics include cost structures, non-competitive markets, network effects, and game theory. Prerequisites: ECN 143 and MA 120.

ECN 445 - GAMES AND NETWORKS
Semester Hours: 3

An introduction to game theory and economic and social network analysis. Student will explore the use of simple games to understand serious games strategic interactions -- especially in social network settings. Prerequisite: ECN 143.

ECN 450 - INTERNATIONAL BUSINESS
Semester Hours: 3

Cross-discipline course combining theoretical and practical aspects of doing business in the global market. Three modules consisting of international management, marketing and economic/finance cover topics including the legal, socio-political environment, negotiations/diplomacy, import/export mechanics, international distribution, balance of payments, hedging, trade agreements (GATT), and international business strategy.

ECN 454 - INTERNATIONAL ECONOMICS
Semester Hours: 3

Behavior of foreign exchange rates under different monetary standards, methods of financing international trade, historical development of international financial institutions, current and proposed methods for fostering international trade, and problems of international liquidity. Prerequisite: FIN 301.

ECN 470 - SEMINAR IN ECONOMICS
Semester Hours: 3

Extensive readings and reports reflecting current developments and trends in economic theory and its application to the decision-making process in business and government.

ECN 475 - LABOR ECONOMICS
Semester Hours: 3

Economic analysis of labor markets; labor demand and labor supply at the market and individual level. Topics include individual decisions to supply labor, compensating wage differentials, human capital investment, discrimination in labor markets, pay and productivity, and the role of labor unions. Prerequisite: ECN 143.

ECN 480 - INTRO ECONOMETRICS
Semester Hours: 3

An introduction to the quantitative measurement and analysis of actual economic and business phenomena. Prerequisites: MSC 288.
ECN 481 - RESEARCH PRACTICUM
Semester Hours: 3

The economics research practicum is designed to give students research experience. With the approval of one of the economics' professors, a student teams up with a professor who mentors them through a research project. Prerequisites: ECN 340 and ECN 345.

ECN 490 - SPECIAL PROJECTS
Semester Hours: 3

Faculty guided Independent Study in an area of interest to the student and faculty member. Approval of department chair is required.

ECN 499 - AGENT-BASED COMPUTATIONAL ECON
Semester Hours: 3

Computational Economics introduces students to complex dynamic economic systems. Agent-based computational economics builds systems piece by piece - individual economic agents are constructed and placed in a virtual environment. This creates a virtual laboratory for economic experimentation. Prerequisites: ECN 340 and ECN 345.

Education (ED)

ED 115 - EFFECTIVE RDG & STUDY SKILLS
Semester Hours: 3

Developmental course focusing on acquisition of strategies to expand an individual's ability to read and study materials encountered in higher education. Effective reading and study strategies which incorporate reading, writing, and listening skills are taught and applied, using college texts and related readings.

ED 250 - FUND OF CHRISTIAN ED- OAKWOOD
Semester Hours: 2

ED 300 - FOUNDATIONS OF EDUCATION/ATHEN
Semester Hours: 3

ED 301 - INTRO TO EDUCATION PRACTICUM
Semester Hour: 1

Initial practicum experience designed to provide the opportunity to explore the role of the classroom teacher in today's diverse school settings. The five-day observation will be integral to the content and objectives of ED 305 and 308, and will provide a foundation for the coursework and activities. Prerequisites: ED 305 & ED 308 (taken concurrently). This experience is a prerequisite for admission to the Teacher Education Program.

ED 305 - FOUNDATIONS OF EDUCATION
Semester Hours: 3

Survey of social, cultural, historical, and philosophical foundations of education; interrelationships of society and education, effects of social change and influences of social-cultural values upon education; educational ideas and processes as they attempt to shape curricula. The perennial search for the meaning of education, perceived not merely as schooling, but as a process of enculturation and socialization. Prerequisites with concurrency: ED 301 and ED 308.

ED 307 - MULTICULTURAL FND EDUCATION
Semester Hours: 3

This course will provide students with an understanding of selected philosophical, historical, social, cultural, political, and economic questions and influences on the development of educational policies and practices. Through an examination of constructs such as race, ethnicity, social class, gender, sexual orientation, and religious affiliation, students will develop an understanding of the connections between identity, difference, power and privilege and the role(s) schools play in perpetuating or ending discriminatory practices.

ED 308 - EDUCATIONAL PSYCHOLOGY
Semester Hours: 3

Psychological principles basic to an understanding of the learner, the learning process, and the learning situation. Intensive field experience required. Prerequisites with concurrency: ED 301 and 305.

ED 309 - CLASSROOM & BEHAVIOR MGMT
Semester Hours: 3

This course focuses on instructional options that learners need in order to be successful. It takes a broad approach to classroom and behavior management that is grounded in both theory and reflective practice. Content will emphasize the study and implementation of a variety of classroom and behavior management strategies that are necessary for working with diverse populations. Intensive field experience in an assigned public school required. Prerequisites: Admission to the Teacher Education Program.
ED 310 - TCHG ART IN ELEM SCHOOL  
Semester Hours: 3

ED 315 - EDUC EVALUATION & MEASUREMENT  
Semester Hours: 3

This course is designed to help prospective teachers use and construct a range of assessments that will help them plan and teach more effectively, improve learning and meet state and national standards. The class will focus on more traditional assessment issues such as validity and reliability, as well as the alternative assessments that are likely used in today’s classrooms. Furthermore contextual issues such as educational accountability testing, the No Child Left Behind Act, and teacher testing and evaluation (PEPE) will be explored. Intensive field experience required. Taken concurrently with ED 373, 374, 405. Admission to the Teacher Education Program or permission of the chair.

ED 350 - TECHNOLOGY IN CLASSROOM  
Semester Hours: 3

Introduces prospective teachers to current state of the art in educational technology. Designed as a laboratory course providing extensive hands-on experiences with microcomputers and other emerging technology. Emphasis is on enabling the student to effectively integrate technology into instructional settings. May be taken prior to entering Education Program.

ED 360 - EARLY CHILDHOOD EDUC PRACTICUM  
Semester Hours: 3

A three-hour credit course in a state-approved or NAEYC-accredited pre-kindergarten or kindergarten placement. It includes a weekly one-hour seminar with a faculty member. Admission to Teacher Education required.

ED 371 - TCHG ELEM LANGUAGE ARTS  
Semester Hours: 3

Introduction to current practices in language arts instruction with emphasis on the development of an integrated curriculum using children's literature as a foundation. Includes appropriate techniques for the teaching of grammar, spelling, and handwriting. Intensive field experience required. Prerequisites: Admission to the Teacher Education Program.

ED 372 - TCHG ELEM SOCIAL STUDIES  
Semester Hours: 3

Teaching social studies in grades k-6. Helping beginning teachers acquire background skills in organizing and teaching units of work. Intensive field experience required. Prerequisites: Admission to the Teacher Education Program.

ED 373 - TCHG NATURL/HLTH SCIENCE  
Semester Hours: 3

Integrates concepts from reflective practice with elementary science teaching. Opportunity to refine teaching skills in the planning, implementation, and evaluation of science lessons and units of instruction. Intensive field experience required. Prerequisites: Admission to the Teacher Education Program.

ED 374 - TCHG ELEM MATHEMATICS  
Semester Hours: 3

Overview of the mathematics concepts and skills taught in grades K-6 with an emphasis on the principles, methods, and materials used in the teaching and evaluation of elementary school mathematics. Focuses on the attitudes and behaviors of students and teachers in the actual planning and implementation of mathematics instruction for an elementary school classroom. Intensive field experience required. Prerequisites: Admission to the Teacher Education Program.

ED 375 - TCHG READING IN PRIMARY GRADES  
Semester Hours: 3

An introduction to the basic principles of literacy instruction in culturally and linguistically diverse primary grade classrooms, including theoretical bases for instruction, methods of instruction and organization, developmentally appropriate strategies and materials, and assessment of children's literacy needs. Class activities will include mini-lessons, discussions, group activities, and presentations. An intensive school-based practicum in grades pre K-2 is required.

ED 400 - SPECIAL TOPICS-INTERNSHIP  
Semester Hours: 3

Innovative internship focused on working with students with disabilities. Observations, participation, and direct instruction and teaching in a middle or high school setting for a prescribed time.
ED 401 - FNDS OF REFLECTIVE TEACHING  
Semester Hours: 3  
This diversity elective is designed to develop reflective practitioners, who study teaching and student learning in an effort to improve teaching practices and also meet certification requirements. The course will use various lenses of professional teacher noticing to select and discuss evidence of effective teaching. Course topics include edTPA rubrics, lesson planning, video teaching episode analysis, student assessments and feedback, academic language for describing teaching, and professional writing about teaching.

ED 402 - SPECIAL TOPICS IN EDUCATION  
Semester Hours: 3  
Introduces students to current issues and trends within educational practice, policy and theory through a specific lens. Provides opportunities for students to investigate issues of teaching and learning within the broader social/cultural vantage basic exploration of current research and debate within education. Topic may vary with each offering.

ED 405 - RDG STRATEGIES INTERMED GRADES  
Semester Hours: 3  
This course provides an in-depth study in and application of the process of reading and reading instruction, theoretical approaches, instructional strategies, classroom organization, and the formal/informal assessment of reading in intermediate grades. This course is required of all elementary education majors and secondary education candidates who are pursuing a middle school endorsement. Intensive field experience required. Prerequisites: Admission to the Teacher Education Program.

ED 408 - TCHG READING/CONTENT AREA  
Semester Hours: 3  
Provides knowledge of certain basic developmental and remedial reading skills, practices, and concepts. Extends those learned in previous, more fundamental, reading courses and shows how to apply fundamental skill and knowledge to the classroom. This will include adapting fundamentals of reading instruction to the various subject matter areas (i.e., the sciences, social studies, English, etc.). Survey of special reading programs such as remedial reading and reading instruction as practiced in special education. Intensive field experience required. Prerequisites: Admission to the Teacher Education Program.

ED 410 - FOUNDATIONS EDUC EVALUAT  
Semester Hours: 3  
Measurement process with emphasis on its relationship to problems of educational evaluation. Evaluation as an integral part of overall educational planning in addition to its use in measurement and evaluation of academic achievement. Prerequisites: Admission to the Teacher Education Program.

ED 413 - CHILDREN'S & ADOLESCENT LIT  
Semester Hours: 3  
Course content includes the study of various genres of children's and adolescent literature and their relationship to beginning reading, enhancement of reading comprehension, and intervention instruction in the various content areas. Intensive field experience required. Same as EH 413. Prerequisites: Admission to the Teacher Education Program.

ED 421 - TEACH ENGL MID & SEC SCHOOL  
Semester Hours: 3  
This course is designed to provide undergraduate level English Education majors with the theory, tools and techniques for teaching middle and secondary students. The focus of the course is primarily, though not exclusively, on designing lessons that allow for maximum student participation and control while remaining aligned to Alabama Content Standards. Students will study, discuss, and implement a variety of instructional methods for helping all students succeed. Given the technologically rich environments middle and secondary students reside in, special attention will be given to the use of various technologies as a means of content exploration and student evaluation. Prerequisite: Admission to the Teacher Education Program.

ED 422 - TEACH MATH MID & SEC SCHOOLS  
Semester Hours: 3  
The methods course provides background for middle school and secondary teaching from the perspective of theory, research, and practice. It is designed to provide an introduction to and practice in ways in which to engage students in learning in mathematics in middle and secondary classrooms. Topics include specific educational philosophies of mathematics education, lesson and unit planning, instructional strategies, use of mathematics manipulatives and technology and student assessment within the content area. Applications will include microteaching and intensive school-based experiences in area schools. Prerequisite: Admission to the Teacher Education Program.
ED 423 - TCHG SC MID & SEC SCHOOLS
Semester Hours: 3

This course is designed for students who are pursuing teaching certification in middle and/or secondary science. The course will first focus on how middle and secondary students learn science, and then from this knowledge base, the class context will focus on how to plan, design, and implement inquiry-based science instruction. Assessment development in science, the interpretation, and the use of assessment results to guide student understanding will also be incorporated in teaching methodology. Intensive field experience required. Must be admitted to Teacher Education Program.

ED 424 - TCHG SOC ST MID & SEC SCHOOLS
Semester Hours: 3

This course is designed to study effective techniques and strategies employed by social science teachers at the middle and secondary levels. As well as learning theoretical foundations in social studies education, students will learn pedagogic skills, instructional strategies, and modes of reasoning unique to the social studies classroom. Intensive field experience required. Students are required to observe, participate, and teach a lesson in a secondary social studies classroom. Must be admitted to Teacher Education Program.

ED 425 - METHODS TCHNG FGN LNG MID & HS
Semester Hours: 3

This course is designed to provide undergraduate level Foreign Language majors with the theory, tools, and techniques for teaching middle and secondary students. The focus of the course is primarily, thought not exclusively, on designing lessons that allow for maximum student participation and control while remaining aligned to Common Core and Alabama Content Standards. Students will study, discuss and implement a variety of instructional methods for helping all students succeed. Given the technologically rich environments middle and secondary students reside in special attention will be given to the use of various technologies as a means of content exploration and student evaluation. Applications will include microteaching and school-based experience in area schools.

ED 493 - ELEMENTARY SCHOOL INTERNSHIP
Semester Hours: 12

Observation, participation and teaching in elementary school (full time, 15 week semesters). Students will also attend campus-based seminars designed to meet specific needs of the interns.

ED 497 - HIGH SCHOOL INTERNSHIP
Semester Hours: 12

Observation, participation and teaching in middle/high school (full time, 15 week semester). Students will also attend campus-based seminars designed to meet specific needs of the interns.

ED 499 - P-12 INTERNSHIP
Semester Hours: 12

Observation, participation and teaching in elementary and middle/high school (full time, 15 week semester). Students will also attend campus-based seminars designed to meet specific needs of the interns.

Education Collaborative (EDC)

EDC 301 - TCHG THE EXCEPTIONAL CHILD
Semester Hours: 3

Examines special education laws and methodology used in teaching special education students. Focus is primarily on those students with mild learning disabilities. Also examines requirements needed in the regular classroom for special teachers. Intensive field experience required. To be taken concurrently with ED 301, ED 307, ED 308 and EDC 311. Prerequisites: Completion of all general education classes.

EDC 302 - INTRO LOW INCIDENCE POPULATION
Semester Hours: 3

Students will learn about low incidence disabilities through reading, research, discussion, and the integration of specific learning strategies during class activities. Students are expected to complete a case study/practicum with a disabled student in addition to 15 hours of observation in classrooms for low incidence exceptional students. Intensive field experience required.

EDC 311 - INSTR STRATEGIES INCLUSIVE CLR
Semester Hours: 3

Students learn about low incidence disabilities through reading, research, discussion, and the integration of specific learning strategies during class activities. Students are expected to complete a case study/practicum with a disabled student in addition to 15 hours of observation in classrooms for low incidence exceptional students. Intensive field experience required.
EDC 321 - COLLAB CONSU(PARENT-TCHR-TEAM)
Semester Hours: 3

This class focuses on the description and rational for collaboration, including communication skills, group work, problem solving, and co-teaching. Each student will participate as a member of a collaborative team during the practicum. This course will also provide an examination of selected school district issues involving collaboration within traditional K-12 educational settings. Intensive field experience required. Prerequisites: Admission to the Teacher Education Program.

EDC 331 - CRITICAL ISSUES IN SPEC EDUC
Semester Hours: 3

Provides an in-depth discussion and evaluation of current issues in special education such as litigation, legislation, personnel preparation, and research. School-based practicum required. Intensive field experience required. Prerequisites: Admission to the Teacher Education Program.

EDC 341 - ASSESS/PLN TRANSITION K-12 STU
Semester Hours: 3

Teacher candidates will develop the skills necessary for transitional planning, including administering cognitive, social, and functional assessments. Results of assessments will be interpreted and utilized to plan transitions from one placement to another, to inform instruction in regular, inclusive and self-contained classrooms, and to develop Individualized Education Plans (IEPs) for eligible students. Field work is required. Prerequisites: Admission to the Teacher Education Program.

EDC 351 - BEHAVIOR ANAL & INTERVENTION
Semester Hours: 3

This course focuses on the concepts of applied behavior analysis and how to implement those concepts in classrooms and other settings. Students learn how to conduct a functional behavior assessment and design, implement, and evaluate a behavioral-change project with an appropriate subject in a public school setting. Intensive field work required. Prerequisites: Admission to the Teacher Education Program.

Electrical Engineering (EE)

EE 202 - INTRO DIGITAL LOGIC DSGN
Semester Hours: 3

Engineering approaches to design and analysis of digital logic circuits. Boolean algebra, Karnaugh maps, design using Hardware Description Languages, digital computer building blocks, standard logic (SSI MSI) vs. programmable logic (PLD, PGA0, finite state machine design. Prerequisites: CPE 112 and EE 100.

EE 203 - DIGITAL LOGIC DESIGN LAB
Semester Hour: 1

Experiments in applying Boolean logic concepts to digital design. The course introduces students to small-scale prototyping and simulation techniques that are used to implement and evaluate digital combinational and sequential logic designs. Prerequisite: EE 202.

EE 213 - ELECTRICAL CIRCUIT ANALYSIS I
Semester Hours: 3

Basic concepts of DC and AC circuit theory and analysis. Includes both DC and AC power. Prerequisites: MA 201 and PH 112 w/concurrency.

EE 223 - DES & MOD ELEC CIR & SYS
Semester Hours: 3

Electrical circuit and systems design and modeling. Includes using modern tools (i.e. Matlab and simulink) to design and model circuits. Introduces and reinforces engineering design principles. Prerequisites: EE 202 & EE 213.

EE 305A - SEMICONDUCTOR ENGINEERING/A&M
Semester Hours: 3

EE 307 - ELECTRICITY & MAGNETISM
Semester Hours: 3

Basic concepts of electrostatics, electric potential theory, electric fields and currents, fields of moving charge, magnetic fields, time varying electromagnetic fields, Maxwell's equations. Prerequisites: EE 213, MA 238 and MA 244.

EE 308 - ELECTROMAGNETIC ENGR
Semester Hours: 3

Review of Maxwell's equations, uniform plane waves in different types of media, reflection, and transmission of uniform plan waves, transmission lines, waveguides, and antennas. Prerequisites: EE 307.
EE 310 - SOLID STATE FUNDAMENTALS  
Semester Hours: 3  
Introduction to semiconductors including crystalline structure, energy bands and charge carriers, excess carriers, and thermal properties. Introduction to semiconductor junctions, the bipolar junction transistor, the MOSFET. Prerequisites: PH 113 and MA 238.

EE 315 - INTRO ELECTRONIC ANAL & DESIGN  
Semester Hours: 3  
Properties of diode, bipolar transistors, FET and operational amplifiers, analysis of DC and AC small-signal operation and circuit models for the design and analysis of electronic circuits. Prerequisite: EE 213.

EE 316 - ELE CIRCUITS & ELTRNC DSGN LAB  
Semester Hour: 1  
Electric circuit experiments including first and second order DC circuits, maximum power transfer, impedance measurements, transformers, measurement of electronic device characteristics and design and testing of operational amplifier circuits and single-stage amplifiers using MOSFETs and BJTs. Prerequisite: EE 315.

EE 382 - ANALY METH CONTINUOUS TIME SYS  
Semester Hours: 3  
Fourier Series, Fourier and Laplace transforms with emphasis on their physical interpretation. System representation by transfer functions and impulse response functions. Convolution integral. Transient response. Modeling and simulation. Prerequisites: EE 213, MA 238 and MA 244.

EE 383 - ANALY METH MULTIVARIABLE  
Semester Hours: 3  
Discrete time signals and systems, sampling techniques, Z and discrete Fourier transforms, multivariable systems. Introduction to digital signal processing. Prerequisite: EE 382.

EE 384 - DIG SIGNAL PROCESS LAB  
Semester Hour: 1  
Design and programming of digital processing algorithms such as DFT, FFT, IIR, and FIR filtering. Prerequisites: EE 383 or CPE 381.

EE 385 - RANDOM SIGNALS & NOISE  
Semester Hours: 3  
Random variables and probabilities description of signals. Introduction to random processes; autocorrelations, cross correlation, power spectral density. Noise analysis, thermal, shot, white, and colored. Response of electrical systems to random inputs. Prerequisites: EE 382 or CPE 381.

EE 386 - INTRO CONTROL/ROBOTIC SYS  
Semester Hours: 3  
Theory and analytical techniques for modeling, analysis and control of dynamical systems. Transfer functions, block-diagrams, frequency response, stability criteria, series and feedback controller design, and digital control. Introduction to the dynamic analysis and control of robotic systems. Prerequisites: EE 382 or CPE 381.

EE 401 - REAL-TIME DIGITAL SIGNAL PROCE  
Semester Hours: 3  
Introduction to digital signal processor architectures, applications, assembly language programming, and development tools for designing and implementing DSP systems. Prerequisites: EE 383 or CPE 381.

EE 410 - SELECTED TOPICS/ECE  
Semester Hours: 1-6  
Special topics in Electrical Engineering.

EE 410L - SELECTED TOPIC LABORATORY  
Semester Hours: 0  

EE 411 - ELECTRIC POWER SYSTEM  
Semester Hours: 3  
Power generation, transmission and distribution. Three-phase circuits and per unit analysis, loadflow studies, symmetrical components, and power systems stability. Prerequisite: EE 313.
EE 412 - SR DSGN PROJ ELECT ENGR
Semester Hours: 1-6

Individual design project under the direction of an ECE faculty member. Senior standing and permission of instructor.

EE 414 - ANALOG & DIGITAL FILTER DESIGN
Semester Hours: 3

Analog filter design via Butterworth, Chebyshev, and elliptical approximation. Active filter design using operational amplifiers. Digital filter design methods. Prerequisites: EE 315 and EE 383.

EE 416 - ELECTRONICS II
Semester Hours: 3

Integrated circuits and micro-devices related to multistage amplifiers, oscillators, design specifications, operational amplifiers, and microunits. Computer simulation. Prerequisites: EE 313 and EE 315.

EE 423 - COMM SYS & SIMULATION W/ LAB
Semester Hours: 3

Modern test equipment and computer-based simulation methods are used to conduct experiments in the area of communication systems. Includes experiments to investigate signal modulation and demodulation, and filters. (Same as EE 523) Prerequisite: EE 426.

EE 424 - INTRO DATA COMMUN NETWORKS
Semester Hours: 3

Overview of historic development of modern telephone and data communication system, system architecture, standards, broadband switching systems, modems, protocols, personal and mobile communications, digital modulation techniques. (Same as EE 504) Prerequisites: EE 383 and EE 385.

EE 426 - COMMUNICATION THEORY
Semester Hours: 3

Signals and systems including the Hilbert transform, cross and auto correlation, power density spectrum, and the Wiener-Khintchine theorem. Filter design. Linear and nonlinear modulation and demodulation methods and circuits. Phase lock and frequency feedback techniques. (Same as EE 506). Prerequisites: EE 382 or CPE 381.

EE 436 - DIGITAL ELECTRONICS
Semester Hours: 3

Introduction to digital electronics. The Metal-Oxide-Semiconductor (MOS) transistor. MOS inverters and gate circuits. Bipolar junction transistors, ECL inverters, and bipolar digital gates. Semiconductor Memories. (Same as EE 516) Prerequisites: EE 202 and EE 315.

EE 451 - OPTOELECTRONICS
Semester Hours: 3

Basic concepts for understanding electro-optic devices and systems. Blackbody radiation; light sources; quantum and thermal detectors, noise in detectors; optical heterodyning; acousto-optic, magneto-optic, and electro-optic modulation. (Same as OPE 451) Prerequisites: EE 307 and EE 315.

EE 453 - LASER SYSTEMS
Semester Hours: 3

Spontaneous and stimulated emission, population inversion, optical resonators, three- and four-level systems, Q-switching and mode-locking, semiconductor lasers, integrated optic waveguides and couplers, scanning systems, high-power industrial application. Prerequisite: EE 307.

EE 454 - OPTICAL FIBER COMMUNICA
Semester Hours: 3

Introduction to optical fibers and their transmission characteristics, optical fiber measurements, sources and detectors, noise considerations for digital and analog communication, optical fiber systems. (Same as OPE 454) Prerequisites: (EE 307 or PH 432) and (EE 382 or CPE 381).
EE 486 - INTRO MODERN CONTROL SYSTEMS
Semester Hours: 3

Modern control theory including techniques for modeling, analysis and control of MIMO dynamic systems, state-variable feedback control design and state observers. Kalman-filtering. Fundamentals of nonlinear systems analysis and discrete-time system modeling, analysis and control. Prerequisites: EE 386.

EE 494 - EE DESIGN PROJECTS
Semester Hours: 3

Senior Capstone Course. Design, simulation, and construction of technical projects. Review of legal, economic, and ethical issues. Students work as individuals or teams to design, implement, test, and evaluate their projects. Oral presentation and written reports are required. Senior Standing. Prerequisites: ISE 321, EE 308, EE 310, EE 313, EE 315, CPE 323, EE 383, and EE 386.

EE 497 - ELEC ENGR INTERNSHIP
Semester Hours: 1-3

Active involvement in an engineering project in an engineering enterprise, professional organization, or government agency that has particular interest and relevance in the student. Junior/senior standing and Approval of Engineering Faculty Advisor.

Engineering (ENG)

ENG 100 - EXPLORING ENGINEERING
Semester Hour: 1

Exploring engineering fundamentals and disciplines via the design and development of a payload for a UAH designed spacecraft. Included are lectures and design laboratories that introduce the engineering design process, application of math and science, and presentation skills.

ENG 101 - INTRO COMPUTING ENGINEERS
Semester Hours: 3

Introduces students to the fundamental principles of programming for solving engineering problems. It familiarizes students with the process of computational thinking and the translation of real-life engineering to computational problems. Languages may include Matlab, Python, and others as appropriate. Prerequisites: MA 171.

ENG 105 - INTRODUCTION TO AERONAUTICS
Semester Hour: 1

Introduction to a variety of aviation subjects, including flight physiology, computer systems, aerodynamics, aeronautics, jet propulsion, thermodynamics, navigation, and survival skills. Lectures and simulated missions. Offered in cooperation with U.S. Space and Rocket Center. Open only to high-school students enrolled in Aviation Challenge Mach III.

English (EH)

EH 101 - COLLEGE WRITING I
Semester Hours: 3

Introduction to academic writing, critical reading, and rhetorical knowledge.

EH 101L - STUDIO FOR COLLEGE WRITING I
Semester Hours: 0

A writing workshop/lab to be taken concurrently with EH 101S The course provides supplementary instruction and practice in written English language skills, editing techniques, writing strategies (brainstorming, drafting, revising editing) as well as critical reading skimming, scanning, inferring) for students needing additional support. Students must pass EH 101L to pass EH 101S.

EH 101S - COLLEGE WRITING I W/STUDIO
Semester Hours: 3

Introduction to academic writing, critical reading, and rhetorical knowledge. For students whose preparation suggests a need for intensive support as they progress through the composition sequence. Requires concurrent registration in studio section 100L.

EH 102 - COLLEGE WRITING II
Semester Hours: 3

Intermediate academic writing. Focuses on research questions and techniques, as well as critical engagement with published and student texts. Prerequisite: EH 101 or 101S.
EH 103 - ACCELERATED COLLEGE WRITING  
Semester Hours: 3  
Accelerated introduction to academic writing, critical reading, and research questions. Focuses on research questions and techniques, as well as critical engagement with published and student texts. Prerequisites: minimum highschool GPA 3.5; minimum 26 on ACT or mimimum 1170 on SAT.

EH 105 - HONORS ENGLISH SEMINAR  
Semester Hours: 3  
Interpretive and comparative readings in texts of enduring intellectual, esthetic, and ethical importance; critical and analytic writing and research projects. Grading Scale: A, B, C, D, F. Minimum grade of C- required to advance to 200-level English classes. Prerequisites: Formal admission to the University Honors Program.

EH 207 - READINGS LITERATURE/CULTURE I  
Semester Hours: 3  
Critical analysis of texts from ancient times through the Age of Discovery. The course introduces students to the methods of literary study through an examination of works in their social, historical, and philosophical contexts. Prerequisite: EH 102 or EH 105.

EH 208 - READINGS LITERATURE/CULTURE 2  
Semester Hours: 3  
Critical analysis of texts from the Age of Discovery through the present. The course introduces students to the methods of literary study through an examination of works in their social, historical, and philosophical contexts. Prerequisite: EH 102 or EH 105.

EH 209 - HONORS SEM READINGS LIT/CUL I  
Semester Hours: 3  
Critical analysis of texts from ancient times through the Age of Discovery. The course offers an in-depth examination of important works and their cultural contexts in a seminar format. Prerequisite: EH 101/101S and EH 102 OR EH 105.

EH 210 - HONORS SEM READINGS LIT/CUL 2  
Semester Hours: 3  
Critical analysis of texts from the Age of Discovery through the present. The course offers an in-depth examination of important works and their cultural contexts in a seminar format. Prerequisite: EH 101/101S and EH 102 OR EH 105.

EH 211 - INTRO CREATIVE WRITING  
Semester Hours: 3  
Students will discuss contemporary stories/poems and will participate in workshops, where their own poetry and fiction is examined and critiqued by the class and instructor. The class culminates in two revision portfolios (one fiction and one poetry). Prerequisite: EH 102 or EH 105.

EH 242 - MYTHOLOGY  
Semester Hours: 3  
Archetypal, metaphorical, and historical significance of deities and myths. Prerequisite: EH 102 or EH 105.

EH 260 - INTRO TO WRITING MAJOR  
Semester Hour: 1  
An introduction to the Writing B.A., this course will overview the field of Writing Studies, its methods of inquiry and the interdisciplinary nature of its rhetoric, composition and language/literacy influences. Prerequisites: EH 101 and 102.

EH 300 - STRATEGIES FOR BUSINESS WRIT'G  
Semester Hours: 3  
Practical business writing with emphasis on rhetoric, organization, and research. Open to all students in the College of Business or by permission of the Department of English. Qualifies as elective in the English major. Does not count toward English minor. Junior standing required. Prerequisite: EH 102 or EH 105.

EH 301 - TECHNICAL WRITING  
Semester Hours: 3  
Practical writing, especially technical or scientific reports and proposals, with emphasis on organization, research, and presentation. Qualifies as elective in English major. Does not count toward English minor except Cognate Studies in Technical Writing. Junior Standing. Prerequisite: EH 102 or EH 105.
EH 302 - TECHNICAL EDITING  
Semester Hours: 4

Clarifying, expanding, reducing, and rewriting technical reports and other documents created by others. Emphasis on elements of style and usage, revision, proofreading, and application of rhetorical techniques to the work of engineers, scientists, and technicians. Qualifies as elective in English major, but for English minor (except for Cognate Studies in Technical Writing) or certification in secondary education.

EH 303 - PRAC & RSRCH IN TECH COMM  
Semester Hours: 3

Provides an overview of technical communication as a career field and as a research field. Introduces students to best practices and career options in technical communication and to the research methods used by technical communication practitioners and researchers. Prerequisite: EH 301.

EH 305 - INTRO TO ENGLISH MAJOR & MINOR  
Semester Hours: 3

Designed as an introduction to the discipline of English studies, this course will address the history of textual interpretation, the theoretical debates central to the field, and the basic research skills required for academic writing. Prerequisite: EH 207 and 208 OR EH 209 and 210.

EH 320 - PRACTICUM IN WRITING  
Semester Hours: 3

Writing and editing under the supervision of professionals. Enrollment requires advance planning. Does not count toward English minor except for Cognate Studies in Technical Writing. Prerequisite: EH 301 and EH 302.

EH 335 - SURVEY BRITISH LITERATURE  
Semester Hours: 3

Writers, genres, and periods from Beowulf through the present. Prerequisite: EH 207 and 208 OR EH 209 and 210.

EH 336 - SURVEY AMERICAN LITERATURE  
Semester Hours: 3

Writers, genres, and periods from the Age of Discovery through the present. Prerequisite: EH 207 and 208 OR EH 209 and 210.

EH 340 - ACADEMIC WRITING  
Semester Hours: 3

Advanced academic writing designed to prepare students for the writing, research, and publishing requirements of their field of study. Prerequisites: EH 101 and 102.

EH 400 - COMPOSITION STUDIES FOR TCHERS  
Semester Hours: 3

Introduction to effective strategies for the teaching of writing. Students will report on their own writing pedagogy as a result of reading and analyzing a range of writing research related to strategies of assigning, responding and assessing writing. Prerequisite: EH 207 and 208 OR EH 209 and 210.

EH 401 - THEORY & PRACTICE IN TECH COMM  
Semester Hours: 3

Explores the relationships between common practices in technical communication and the theories that legitimize those practices. Introduces students to research and theories about fundamental issues in technical communication which may then become the basis for further graduate study in technical communication. Prerequisite: EH 301 or CM 301.

EH 403 - LITERARY CRITICISM & THEORY  
Semester Hours: 3

Major texts and approaches from Plato to the present. Prerequisite: EH 207 and 208 OR EH 209 and 210.

EH 406 - FEMINISM AND COMPOSITION  
Semester Hours: 3

EH 408 - HISTORY OF ENGLISH LANGUAGE  
Semester Hours: 3

History of the emergence and development of English from the pre-Anglo-Saxon period to the present. Emphasis on cultural contexts. Prerequisite: EH 207 and 208 OR EH 209 and 210.
EH 410 - FICTION WRITING
Semester Hours: 3

Practice in writing fiction from conception to revision. Students will read and write contemporary literary fiction. Student work will be commented on and critiqued in regular class workshops. The class culminates in a revision portfolio. Prerequisite: EH 207 and 208 OR EH 209 and 210.

EH 411 - POETRY WRITING
Semester Hours: 3

Practice in writing poetry from conception to revision. Students will read and write contemporary poetry. Student work will be commented on and critiqued in regular class workshops. The class culminates in a revision portfolio. Prerequisite: EH 207 and 208 OR EH 209 and 210.

EH 412 - SPEC STUDIES CREATIVE WRITING
Semester Hours: 3

Topics in creative writing, professional writing, or other advanced writing announced in advance. Prerequisite: EH 207 and 208 OR EH 209 and 210.

EH 413 - CHILDREN'S & ADOLESCENT LIT
Semester Hours: 3

Course content will include the study of various genres of children's and adolescent literature and their relationship to beginning reading, enhancement of reading comprehension, and intervention instruction in the various content areas. Prerequisite: EH 207 and 208 OR EH 209 and 210.

EH 414 - CREATIVE NONFICTION WRITING
Semester Hours: 3

This composition class introduces students to the genre of creative non-fiction via revising, peer responding, prose modeling, and conferencing; and developing expertise in rhetorical writing concepts. Prerequisite: EH 207 and 208 OR EH 209 and 210.

EH 415 - ANGLOPHONE/POSTCOLONIAL LIT
Semester Hours: 3

An introduction to major concepts, figures, and works with emphasis upon historical and cultural context. Specific focus will vary. Prerequisite: EH 207 and 208 OR EH 209 and 210.

EH 418 - REP TEXTS-WOMEN WRITERS
Semester Hours: 3

Focus on women's contribution to the literary tradition. Prerequisite: EH 207 and 208 OR EH 209 and 210.

EH 422 - STUDIES IN THE NOVEL
Semester Hours: 3

Focuses on varying topics in the novel with special attention to form. Texts may be drawn from diverse national and cultural origins. Prerequisite: EH 207 and 208 OR EH 209 and 210.

EH 423 - CONTEMPORARY BRITISH LITERATUR
Semester Hours: 3

Major works after 1945 with emphasis on historical and cultural contexts. Specific focus will vary. Prerequisite: EH 207 and 208 OR EH 209 and 210.

EH 424 - POETRY AND POETICS
Semester Hours: 3

An attempt to answer (at least provisionally) the questions "What is a poem?" and "What is poetry?". How to read a poem closely and carefully, with attention to theory, history of genres, and especially the technical aspects of poetry. Prerequisite: EH 207 and 208 OR EH 209 and 210.

EH 425 - LITERATURE, SCIENCE & TECH
Semester Hours: 3

Considers the relationships among literature, scientific theories, and technological practices through a study of texts from ancient times to the present. Prerequisite: EH 207 and 208 OR EH 209 and 210.

EH 429 - STUDIES IN AMERICAN CINEMA
Semester Hours: 3

Focuses on select topics in American cinema with an emphasis on film history, technique, aesthetics, and cultural context. Prerequisite: EH 207 and 208 OR EH 209 and 210.
EH 430 - THE AMERICAN NOVEL
Semester Hours: 3
The American novel. In alternate years the course may focus on 19th or 20th century American novels. Prerequisite: EH 207 and 208 OR EH 209 and 210.

EH 432 - AMERICAN LITERARY MODERNISM
Semester Hours: 3
Major writers and cultural/historical events surrounding American Modernism, with a focus on long texts and shorter forays into the major poets. Prerequisite: EH 207 and 208 OR EH 209 and 210.

EH 433 - WILLIAM FAULKNER
Semester Hours: 3
Critical study of the major novels. Prerequisite: EH 207 and 208 OR EH 209 and 210.

EH 434 - SCIENCE FICTION
Semester Hours: 3
Selected short stories and novels, exploring the thematic and narrative concerns of both classic and contemporary science fiction. In alternate years, the course may focus on a specific problem or concern in science fiction. Prerequisite: EH 207 and 208 OR EH 209 and 210.

EH 435 - SPECIAL STUDIES AMERICAN LIT
Semester Hours: 3
Topics announced in advance. Prerequisite: EH 207 and 208 OR EH 209 and 210.

EH 436 - READING THE EARLY REPUBLIC
Semester Hours: 3
This class will investigate cultural expression and literary critical traditions associated with the founding period of the American nation (1776-1828). Writers might include Franklin, Jefferson, Equiano, Sargent, Rowson, Brockden Brown, and Irving. Prerequisite: EH 207 and 208 OR EH 209 and 210.

EH 437 - THE AMERICAN NINETEENTH CNTRY
Semester Hours: 3
This class will investigate Anglophone cultural expression and literary critical traditions associated with long nineteenth century (1789-1919). Specific thematic concern or period of focus is left to the discretion of the instructor. Prerequisite: EH 207 and 208 OR EH 209 and 210.

EH 438 - AFRICAN AMERICAN LITERATURE
Semester Hours: 3

EH 439 - ETHNIC AMERICAN NOVEL
Semester Hours: 3

EH 440 - SPECIAL STUDIES IN ENGLISH LIT
Semester Hours: 3
Topics announced in advance. Prerequisite: EH 207 and 208 OR EH 209 and 210.

EH 441 - THE CIVIL WAR IN AMRCN IMGNTN
Semester Hours: 3
Cultural representations of the Civil War (1861-5) past and present in diaries, poetry, photography, novels, oratory, history writing, and film. Prerequisite: EH 207 and 208 OR EH 209 and 210.

EH 442 - USABILITY STUDIES
Semester Hours: 3
Introduces students to theory and practice of usability, which involves designing useful, easy-to-use websites, software, and products. The course involves group projects conducting real-world usability testing. Junior Standing required.

EH 448 - THE BIBLE AS LITERATURE
Semester Hours: 3
An introduction to the major literary forms of the Bible. Material will be approached analytically, involving both socio-historical and literary-critical perspectives. Prerequisite: EH 207 and 208 OR EH 209 and 210.
EH 450 - CHAUCER  
Semester Hours: 3  

A study of Geoffrey Chaucer's Middle English works including the early drama visions, Troilus and Criseyde, and the Canterbury Tales. Prerequisite: EH 207 and 208 OR EH 209 and 210.

EH 451 - ARTHURIAN ROMANCE  
Semester Hours: 3  

A study of Arthurian Literature focused on medieval Welsh, Scottish, English, and French poetry and prose, as well as early-modern and modern adaptations of Arthurian stories in poetry, prose, drama, and film. Prerequisite: EH 207 and 208 OR EH 209 and 210.

EH 454 - NEW MEDIA WRITING & RHETORIC  
Semester Hours: 3  

This course teaches students to apply rhetorical principles across a variety of media and includes an examination of communication strategies used widely in academic and industry settings. The course focuses on new media through an exploration of digital technologies and the way digital culture and new media have dramatically impacted reading, writing, and research practices. Prerequisites: EH 101 and EH 102.

EH 460 - 16TH CENTURY LITERATURE  
Semester Hours: 3  

Selected works from the reigns of Henry VIII and Elizabeth I Close readins of texts in their historical, intellectual, and social contexts. Prerequisite: EH 207 and 208 OR EH 209 and 210.

EH 461 - SHAKESPEARE I  
Semester Hours: 3  

Introduction to Shakespeare's canon, selected from tragedies, comedies, histories, romances; the course may include a variety of critical approaches (historical, political, feminist, queer, performative, linguistic, and cultural). Prerequisite: EH 207 and 208 OR EH 209 and 210.

EH 462 - SHAKESPEARE II  
Semester Hours: 3  

Specialized study of Shakespeare's works, with particular attention to a given genre, time period, theme, cultural context, and/or critical/theoretical approach. Prerequisite: EH 207 and 208 OR EH 209 and 210.

EH 463 - CAPSTONE IN WRITING  
Semester Hours: 2  

A senior capstone course for the Writing BA for which students will complete a portfolio of their writing. Portfolios will include reflection on and revision to selected samples of course-participants' writing and a scholarly project completed for the capstone course. Prerequisites: EH 260.

EH 465 - DRAMATIC LITERATURE  
Semester Hours: 3  

Studies in Drama and interpretive strategies for reading plays. May be organized nationally, by genre, or by theme/topic. Prerequisite: EH 207 and 208 OR EH 209 and 210.

EH 470 - MILTON  
Semester Hours: 3  

A study of the development of Milton's thought and art as it appears in his early poems, selected prose, and later poetry, with particular attention given to Paradise Lost. Prerequisite: EH 207 and 208 OR EH 209 and 210.

EH 473 - EARLY MODERN LITERATURE  
Semester Hours: 3  

This course will examine a particular theme, issue and/or debate within the early modern period, roughly 1500-1700: constructions of subjectivity and community, the exploration of the New World, the rediscovery of the natural world through scientific investigation. The course will likely introduce modern scholarship. Prerequisite: EH 207 and 208 OR EH 209 and 210.

EH 475 - RHETORIC AND WRITING  
Semester Hours: 3  

Provides a focused look at specific issues of rhetoric in society, with an emphasis on academic analysis and rhetorical strategy.
EH 480 - THE LONG EIGHTEENTH CENTURY
Semester Hours: 3

Introduction to major works from the Restoration through the American and French Revolutions, 1680-1800, with an emphasis on Britain and the colonies. Topics may include: the rise of the novel, the rise of the lyric, consciousness of modernity, satire, book history, working-class writers, female authorship, empire. Prerequisite: EH 207 and 208 OR EH 209 and 210.

EH 485 - THE ENLIGHTENMENT
Semester Hours: 3

The European Enlightenment emphasized the importance of reasoned, open-eyed investigations into nature and human society. Its legacies include the scientific method, the valuation of universal human rights, and the American and French Revolutions. Authors may include: Bacon, Behn, Hume, Swift, Voltaire, Montagu, Franklin, Jefferson, Equiano, and Wollstonecraft. Prerequisite: EH 207 and 208 OR EH 209 and 210.

EH 496 - ROMANTIC LITERATURE
Semester Hours: 3

Poetry and prose, 1780-1832, with a focus on English language traditions. Emphasis may vary with instructor. Prerequisite: EH 207 and 208 OR EH 209 and 210.

EH 497 - VICTORIAN LITERATURE
Semester Hours: 3

Representative writing of the Victorian Age (1837-1901), selected from prose, poetry, or fiction, with emphasis on social and cultural changes that inform the literature. Prerequisite: EH 207 and 208 OR EH 209 and 210.

EH 498 - INDEPENDENT STUDY
Semester Hours: 3

Individual investigation into significant issues in linguistics, literature, technical communication, or composition studies under direct supervision of instructor. Prerequisites: Written approval by the instructor and the department chair of a project prospectus. Junior or Senior standing.

EH 499 - SENIOR RESEARCH PROJECT
Semester Hours: 3

Required: special approval from chair and instructor.

English Linguistics (EHL)

EHL 405 - SUR GEN LINGUISTICS:APP ENG I
Semester Hours: 3

Come to see the strange in familiar as you engage in the study of the system of language through focused analysis of the components of English. Language is usually the lens through which we observe and report on the world. In this course, it becomes the object of observations and discussion.

EHL 406 - CRITICAL ISSUES
Semester Hours: 3

Come to an understanding of the complex of policies, legislation, and practice that impact the progress of English Learners in elementary and secondary schools across the U.S. Understand the impact of federal, state, and local policies on classroom settings and teacher-student interactions.

Semester Hours: 3

Through an in-depth analysis of the structure of sentences and discourse in contemporary English, you will understand more clearly the impact of the choices we make in the language we use in day-to-day conversations, instructional settings, political discourse, and beyond.

EHL 409 - SPEC STUDIES: APPL LINGUISTICS
Semester Hours: 3

Special topics in linguistics. Focus and emphasis of topics announced in advance.

Finance (FIN)

FIN 100 - PERSONAL FINANCIAL PLANNING
Semester Hours: 3

An introduction to the study of personal money management. Topics include budgeting, home ownership, insurance, investing, and retirement planning. Cannot be used by finance majors as an elective in the major.
FIN 301 - PRINCIPLES OF FINANCE
Semester Hours: 3

A study of the basic principles of modern finance: financial statement analysis, time value of money, security valuation, risk and return, capital investment, cost of capital, and international finance. Prerequisites: ECN 143, MSC 287, and ACC 212.

FIN 352 - MONEY & BANKING
Semester Hours: 3

Organization, operation, and economic significance of monetary and banking systems. Fractional reserve banking systems, money creation, the Federal Reserve System, U.S. financial intermediaries, introduction to monetary theory and international finance. Prerequisites: ECN 143.

FIN 370 - COMMERCIAL BANK MANAGEMENT
Semester Hours: 3

A study of the financial management of commercial banks emphasizing both current events and principles of sound management. Topics range from measuring bank performance, asset and liability management, risk management, and international banking.

FIN 375 - FINANCIAL INSTITUTIONS
Semester Hours: 3

Role and activities of financial intermediaries as they affect flow of funds and capital formation money markets, in which these institutions operate.

FIN 378 - INTERMEDIATE CORPORATE FINANCE
Semester Hours: 3

Financial theory as it relates to long-term and short-term financial planning, capital investment decisions, and capital structure policy decisions. Prerequisites: FIN 301.

FIN 400 - INVESTMENT PRACTICUM
Semester Hours: 4

Small number of students work closely with finance faculty in the UAH Capital Management Group (CMG) to manage actual investment portfolios. Emphasis is placed on individual stock selection and management of the portfolio to meet objectives. Prerequisites: FIN 460 or permission of instructor.

FIN 431 - ADVANCED CORPORATE FINANCE
Semester Hours: 3

Financial principles applied to financial management problems such as cash management; payables and receivables management; cost of short-term credit; and forecasting and financial planning. Prerequisites: FIN 378.

FIN 454 - INTERNATIONAL FINANCE
Semester Hours: 3

An introduction to international finance for tomorrow's global business leaders, with a focus on the financial management dimensions of leading a multinational enterprise. Prerequisites: FIN 301.

FIN 460 - INVESTMENTS
Semester Hours: 3

A study of standard investment securities, as well as an overall view of the investment process. Securities covered include equities, fixed income, options, futures and mutual funds. Associated topics include financial markets, valuation models, and fundamental portfolio theory. Prerequisites: FIN 301.

Semester Hours: 3

A continuation of FIN 460 with an emphasis on the application of investment portfolio management. An understanding of the functional areas of portfolio management is stressed, including investment policy, investment strategy, portfolio construction, performance evaluation, and portfolio protection. Prerequisites: FIN 460.

FIN 490 - SPECIAL PROJECTS
Semester Hours: 3

Independent study in an area of interest to the student in the field of finance. Approval of department chair is required.

FIN 495 - INTERNSHIP IN FINANCE
Semester Hours: 1-3

Active involvement in a business enterprise, professional organization, or government agency that has particular interest and relevance to the student. Course grade will be given on a satisfactory (S)/unsatisfactory (U) basis. Subject to College's guidelines on internships.
Geography (GY)

GY 105 - WORLD REGIONAL GEOGRAPHY
Semester Hours: 3

This course introduces the study of not only the location of places, but more importantly the physical and cultural features, economies, and population of the world's geographic regions. By exploring the interactions between people and their environment.

GY 110 - PRINCIPLES OF HUMAN GEOGRAPHY
Semester Hours: 3

This course serves as an introduction to geography as the science of location, emphasis on spatial patterns of human activities. Location of economic activities, location of cities as market and production centers, movement networks, and images and perceptions of landscapes form the core of the course.

Health & Physical Education (HPE)

HPE 100 - AEROBICS
Semester Hours: 2

Improve cardiovascular fitness, flexibility, muscular strength and endurance, balance, and postural alignment. This class will focus on aerobic activity, specifically in the form of low- and high- impact aerobics. A wide variety of exercises will be included to provide a total-body workout.

HPE 109 - SPEED & PLYOMETRIC TRAINING
Semester Hours: 2

HPE 110 - WALK/JOG/RUN
Semester Hour: 1

A beginner and intermediate level course with emphasis placed on giving a positive introduction to walking, jogging, and running as a way to enhance fitness and promote weight control, and to provide a viable option for a lifetime fitness activity.

HPE 111 - BUTTS & GUTS WORKOUT
Semester Hours: 2

HPE 117 - WEIGHT TRAINING
Semester Hours: 2

Learn to safely and efficiently use strength training techniques to reach your fitness goals. Develop the skills needed to create a personalized weight training program.

HPE 120 - SWIMMING
Semester Hour: 1

Learn the basic or progress in your swimming by learning the common swim strokes and techniques. Introduction to conditioning and training and work toward improving skills and endurance bringing higher efficiency in the water.

HPE 127 - LADIES SELF-DEFENSE
Semester Hour: 1

Explore the concepts, strategies, and methods of self defense. Topics and skills include wrist spaces, falling skills, various strikes and kicks, groundwork, weaponry, and escape tactics. Further, an emphasis will be placed on developing and improving situational awareness.

HPE 129 - KUNG FU
Semester Hours: 2

Kung Fu has become one of the most popular forms of martial arts. Students will be introduced to Sil Lum Tao, the first in the three forms of Wing Chun Kung Fu. The name means “little imagination” and refers to the need of the student to use their imagination in the practice and application of techniques.

HPE 130 - KARATE
Semester Hours: 2

Learn karate techniques and acquire skills required to perform these techniques. The objective of Karate is to teach the student defensive skills through various stances and self-defense techniques.

HPE 133 - AIKIDO
Semester Hour: 1
HPE 134 - T'AI CHI  
Semester Hours: 2

Learn an ancient Chinese exercise and martial art which is used to develop one's internal energy, health and well-being. The 37 postures of the short form in the Yang style will be executed.

HPE 135 - INTERMEDIATE T'AI CHI  
Semester Hours: 2

HPE 136 - YOGA  
Semester Hour: 1

HPE 137 - JUDO/JUJITSU  
Semester Hours: 2

Judo/Jujitsu provides students with an introduction to the Japanese martial arts of Judo and Jujitsu. Focus will be on both the competition aspect of Judo and the self-defense aspects of each art including throws, take-downs, joint manipulation and chokes.

HPE 140 - BALLROOM DANCE  
Semester Hours: 2

An introduction to the most popular smooth and rhythm ballroom patterns danced in America including the Waltz, Fox Trot, Tango, Cha-Cha, Rumba, Samba, Merengue, Bolero, Polka, Swing, and Mambo. Learn the appropriate skills necessary to become a social dancer, including leading, following etiquette and partner dancing.

HPE 142 - SWING DANCE  
Semester Hours: 2

HPE 144 - COUNTRY WESTERN DANCE  
Semester Hour: 1

HPE 150 - RACQUETBALL  
Semester Hours: 2

Learn the basic of racquetball, including rules, equipment and skills. Singles (2 players), Cut throat (3 players) and Doubles (4 players) versions of racquetball will be taught. Double games during class times will be played when both safety and skill level of the players are acceptable to the instructor.

HPE 153 - TENNIS  
Semester Hour: 1

Students will learn the fundamentals of tennis including forehand, backhand, serve, volley, footwork, and ground strokes. There will be both singles and doubles play and a class tournament. Highlights include understanding the rules, regulations and strategies of the game.

HPE 156 - GOLF  
Semester Hour: 1

Students will understand and learn the basic skills of golf, including rules, proper stance, grip and swing for all clubs. Clubs are available if needed.

HPE 167 - ROCK CLIMBING  
Semester Hours: 2

$100 fee to be paid directly to Rock Climbing facility.

HPE 169 - BASKETBALL  
Semester Hour: 1

HPE 170 - VOLLEYBALL  
Semester Hour: 1

Learn the fundamentals skills of volleyball including passing, setting, hitting, blocking, and serving with advanced skills in spikes and positioning also being covered. Scrimmage games will be played to practice learned skills. This course will cover the rules of volleyball and its advantage as a lifetime sport, with a focus on skill development.

HPE 174 - BILLIARDS  
Semester Hour: 1

HPE 199 - SP TOP: HLTH & PHYS ED  
Semester Hours: 1-3
HPE 221 - ADVANCED SCUBA  
Semester Hour: 1  

Presents skills and knowledge for deep diving (80 + feet). Limited visibility diving, and advanced navigation techniques. Earn YMCA advanced open water certification. Students must provide mask, fins, and snorkel. Cost of open water dives not included in lab fee.

HPE 223 - LIFEGUARD TRAINING  
Semester Hours: 2  

Certification as a Red Cross approved lifeguard upon successful completion of classroom and in-water instruction and testing.

HPE 224 - WATER SAFETY INSTRUCTOR  
Semester Hours: 3  

Techniques for teaching infant and pre-school aquatics. The American Red Cross Learn to Swim Program, and Basic Water and Emergency Water Safety courses. Includes pre-test and instructor candidate training course.

HPE 230 - PRIVATE PILOT GROUND SCHOOL  
Semester Hours: 3  

Prepares student for FAA Private Pilot written examination. Provides student with necessary knowledge to progress into primary pilot flight training. A kit for approximately $150 must be purchased.

HPE 231 - INSTR AIRPLANE(IFR)RATING GR S  
Semester Hours: 3  

Provides student with knowledge needed for instrument flight instruction air training. Prepares student for FAA Instrument Flying Examination.

HPE 400 - SPECIAL TOPICS - INTERNSHIP  
Semester Hours: 3  

Innovative internship focused on working with students with disabilities. Observations, participation, and direct instruction and teaching in a middle or high school setting for a prescribed time.

History (HY)  

HY 103 - WORLD HISTORY TO 1500  
Semester Hours: 3  

Explore the historical development of peoples and cultures from their beginnings to 1500. Trace cross-cultural interactions among societies, states, and economies of Asia, Europe, Africa, the Americas and Oceania.

HY 104 - WORLD HISTORY SINCE 1500  
Semester Hours: 3  

Explore global interdependence from the period of transoceanic exploration to the present. Trace cross-cultural interactions among societies, states, and economies of Asia, Europe, Africa, the Americas, and Oceania.

HY 221 - UNITED STATES TO 1877  
Semester Hours: 3  

Discovery of America through the Civil War and Reconstruction. Open to all students other than beginning freshmen, with exceptions as indicated.

HY 222 - UNITED STATES SINCE 1877  
Semester Hours: 3  

United States from the end of the Civil War era to the present. Open to all students other than beginning freshmen, with exceptions as indicated.

HY 290 - CRAFT OF HISTORY  
Semester Hours: 3  

Introduction to historical methods and thought, designed to prepare history majors for upper-level coursework. Required of all history majors, including transfer students. Open to non-history majors. Prerequisites: HY 103 and HY 104.

HY 306 - COLLAPSE OF CIVILIZATIONS  
Semester Hours: 3  

This course will investigate why some cultures succeed and others fail.
HY 310 - INTRODUCTION TO PUBLIC HISTORY  
Semester Hours: 3  
Introduces the interdisciplinary field of public history, including historic preservation, cultural resource management, local and state history, methodology, historical archaeology, museum studies, oral history, and archival management through academic training and practical experience.

HY 311 - HISTORIC ARCHAEOLOGY  
Semester Hours: 3  
Introduces intellectual and practical concepts using elements of research, fieldwork, analysis, and interpretation to explore and recreate the documented and undocumented past.

HY 312 - CULTURAL RESOURCE MANAGEMENT  
Semester Hours: 3  
Cultural resource management encompasses recognition description, maintenance, security, and overall management of historical items, places, and ideas through preservation and protection.

HY 315 - MILITARY HISTORY/A&M  
Semester Hours: 3

HY 318 - CONSTITUTIONAL HY OF THE U.S.  
Semester Hours: 3  
Growth and development of the American constitutional system with emphasis on those aspects, which relate to the fundamental structure of American government and social order.

HY 325 - HISTORY OF ALABAMA  
Semester Hours: 3  
The state's past from colonial times to the present with emphasis on its place in United States history.

HY 329 - IMPERIAL ROME  
Semester Hours: 3  
Roman Empire from the Principate to the barbarian invasions.

HY 330 - HISTORY OF CHRISTIAN CHURCH  
Semester Hours: 3  
A study of the Church from Biblical times through the Protestant Reformation.

HY 331 - WORLD OF MIDDLE AGES  
Semester Hours: 3  
Survey of the origins and development of medieval society in Europe from the fall of Rome to the Age of Discovery, including the Latin West, Byzantium, and Islamic world.

HY 347 - EARLY MODERN ENGLAND  
Semester Hours: 3  
Course surveys the political and religious history of England under the Tudors and Stuarts to the Civil Wars and revolutions of the seventeenth century.

HY 360 - AMERICAN HISTORY THROUGH FILM  
Semester Hours: 3  
This course will explore how motion pictures have shaped our views on American history and how the past has shaped movie making.

HY 363 - INDIGENOUS PEOPLES OF AMERICAS  
Semester Hours: 3  
Surveys the history of Indigenous peoples of the Americas from the fifteenth century to the present.

HY 367 - WOMEN IN U.S. HISTORY  
Semester Hours: 3  
Women in the United States from the colonial period to the present.

HY 368 - AMERICAN ENVIRONMENTAL HISTORY  
Semester Hours: 3  
Explores the interrelationship of people and the environment in American history from 1500 to the present.
HY 370 - TECHNOLOGY IN AMERICAN HISTORY  
Semester Hours: 3  
Explores the history of the interrelationship of people and technology in American history from 1600 to the present.

HY 371 - US MILITARY HY FRM INDP TO PRS  
Semester Hours: 3  
Explores the evolution of the U.S. military from the War of Independence to the present.

HY 373 - FOREIGN REL US TO 1920  
Semester Hours: 3  
American foreign relations from the Revolutionary era through World War I. American territorial and commercial expansion, imperialism, and emergence as a world power.

HY 376 - SOVIET RUSSIA  
Semester Hours: 3  
Russia from the collapse of autocracy to the collapse of communism with special emphasis on the revolutions of 1917, the evolution of the Soviet state, ethnicity, and the successes and failures of the post-1945 era.

HY 381 - COLONIAL LATIN AMERICA  
Semester Hours: 3  
This course surveys the history of Colonial Latin America from the hispanic period to the wars of independence in the nineteenth century.

HY 382 - MODERN LATIN AMERICAN  
Semester Hours: 3  
This course surveys the history of Latin America from the nineteenth century to the present.

HY 383 - FOOD AND WORLD HISTORY  
Semester Hours: 3  
Examines the role of food and drink in various historical settings.

HY 384 - ISLAMIC WORLD TO 1800  
Semester Hours: 3  
This course explores how Islam emerged as a civilization and connected geographic areas across the globe. Topics include: the prophet Muhammad; early Arab conquests; the Sunni-Shie split; the expansion of the Islamic world into Europe, Africa, and Asia; and the challenge of European imperialism.

HY 385 - MODERN MIDDLE EAST  
Semester Hours: 3  
This course seeks to establish a historical basis for understanding the current events of the modern Middle East (1800-present). Topics include: the making of the modern Middle East both before and after WWI; the Arab-Israeli conflict; and the relationship between the U.S. and the Middle East.

HY 390 - WOMEN IN MODERN EUROPEAN HIS  
Semester Hours: 3  
Explores European women's history from the Enlightenment to the present. Focus on gender and women's roles in different historical contexts.

HY 391 - EUROPE, 1500-1815  
Semester Hours: 3  
Examination of the economic, scientific, social, political, and cultural developments in Europe from the Renaissance to the French Revolution.

HY 392 - EUROPE SINCE 1815  
Semester Hours: 3  
Europe from the French Revolution to the present.

HY 393 - HISTORY OF SCIENCE TO 1700  
Semester Hours: 3  
This course surveys the history of science from ancient Babylon and Greece up through the Scientific Revolution.

HY 394 - HISTORY OF MODERN SCIENCE  
Semester Hours: 3  
This course surveys the history of science from the Scientific Revolution to present-day developments.
HY 395 - HY MED ANTIQTY ENLITNMENT
Semester Hours: 3
Examines the history of medicine in Europe from Ancient and Islamic origins to the changes wrought by the Scientific Revolution and Enlightenment. The course also explores anatomy and dissection, learned vs. popular medicine, sex, and madness.

HY 399 - SPECIAL TOPIC IN HISTORY
Semester Hours: 3
Intensive examination of particular problems, periods, or topics in history.

HY 401 - DAILY LIFE IN ANCIENT ROME
Semester Hours: 3
This course will re-create the daily lives of the ancient Romans using secondary readings, ancient literature, archaeology, and film. It focuses on the lives of ordinary people, with an eye to their struggles, everyday practices, beliefs, values, and mentalities.

HY 409 - SPECIAL TOPICS IN PUBLIC HISTORY
Semester Hours: 3
Intensive examination of a particular problem, aspect, or methodology in public history.

HY 413 - THE OLD SOUTH
Semester Hours: 3
Southern society, economics, politics and culture concentrating on the nineteenth century South through Reconstruction.

HY 414 - THE NEW SOUTH
Semester Hours: 3
Post-Reconstruction South emphasizing the economic, social, and political readjustments made during the twentieth century. Open to students who have completed 12 semester hours in history of have senior standing or have permission of instructor.

HY 424 - THE ATLANTIC WORLD
Semester Hours: 3
Examines interactions across the Atlantic Ocean among Africans, Americans, and Europeans. This course meets the requirements for either American or non-American credit in the history major.

HY 426 - COLONIAL AMERICA
Semester Hours: 3
Explores the founding of New World colonies, including political, social, economic, and religious developments during the colonial period.

HY 427 - AGE OF AMERICAN REVOLUTION
Semester Hours: 3
Explores the multinational connections and conflicts that lead some English colonists to revolt. Considers the political, social, and economic aspects of the time period.

HY 428 - EARLY AMERICAN REPUBLIC
Semester Hours: 3
Political, social, and economic changes between the American Revolution and the nineteenth century that laid the foundation for the United States.

HY 429 - CIVIL WAR & RECONSTRUCTION
Semester Hours: 3
An examination of the major political, economic, and social developments in the United States during the Civil War and Reconstruction eras.

HY 437 - THE RISE OF MODERN AMERICA
Semester Hours: 3
Economic and social changes, imperialism, and the growth in government in the United States from 1877 to the 1920s.

HY 438 - MODERN AMERICA
Semester Hours: 3
American society, politics, economics, and foreign affairs from the end of World War I to the origins of the Cold War.
HY 439 - RECENT AMERICAN HISTORY
Semester Hours: 3
Contemporary America from the 1950s to the present, analyzing both domestic and foreign affairs.

HY 440 - FOREIGN REL U.S. SINCE 1920
Semester Hours: 3
United States as a world power. American involvement in World War II, Vietnam, and the Cold War, and the growth of American presence in Asia, Latin America, and the Middle East.

HY 445 - COMPTVE MILITARY PLCY & STRAT
Semester Hours: 3
A comparative analysis of the military policy and strategy of states and empires in World History.

HY 451 - SCIENCE & RELIGION IN HISTORY
Semester Hours: 3
Integrated survey of the history of science and religion in mostly Western contexts from Greek Antiquity to present debates. Prerequisites: HY 290.

HY 472 - US MILITARY HISTORY SINCE 1920
Semester Hours: 3
The evolution United States armed forces from 1920 to the present. The class will enhance understanding of the development and evolution of American strategy, doctrine, and operational issues.

HY 473 - U.S.-LATIN AMERICAN RELATIONS
Semester Hours: 3
This class focuses on the history of political, economic, and cultural interactions between Latin America and the United States from 1800 to the present. Topics include military intervention, trade, cultural exchanges, the Cold War, the drug war, and immigration.

HY 474 - RENAISSANCE & REFORMATION
Semester Hours: 3
Selected topics in the Italian Renaissance and European Reformation.

Semester Hours: 3
This course focuses on sectarianism, the practice and rhetoric surrounding marginalization of certain social-religious groups in the Islamic world. It explores the historical foundations of sectarianism (from early 7th century to today) both within the Islamic world and across the globe.

HY 476 - BEING YOUNG MODERN MIDDLE EAST
Semester Hours: 3
This course focuses on the lives of young men and women of the Modern Middle East. It explores how children and youth experienced historical phenomena in the region, the ways in which these experiences affected the foundations of their adulthood, and how their actions shaped historical events.

HY 480 - ROMANS & BARBARIANS LATE ANTIQTY
Semester Hours: 3
This course explores the dynamic world of Late Antiquity including political developments, social and religious transformation, and exchange patterns in the Mediterranean. It is a history of cultural interaction, continuity, and change during a formative period in western civilization.

HY 481 - EMPIRES AND NATIONS
Semester Hours: 3
Thematic focus on empires and nations as political and cultural constructs in European and world history. Students may take HY 481 more than once for credit ONLY IF 1) a different instructor teaches each offering, and 2) the temporal and/or geographic focus is distinct each time.

HY 482 - COMPTV SLAVERY & ABOLITION
Semester Hours: 3
Explore what slavery has meant in the ancient world, Indian Ocean, Africa, the United States, and/or other locations over time.

HY 483 - WOMEN & GENDER LATIN AMERICA
Semester Hours: 3
This course studies the history of women and gender relations in Latin America from the colonial period to the present.
HY 484 - LATIN AMERICAN HIST THRU FILM  
Semester Hours: 3
Latin American history through the perspective of fictional films.

HY 485 - NAZI GERMANY AND THE HOLOCAUST  
Semester Hours: 3
Seminar course on the historiography of Nazi Germany and the Holocaust.

HY 486 - COMMUNISM LEGCY RUSSIA EAST EU  
Semester Hours: 3
Overview and analysis of communist states and post-communist legacies in Russia and Eastern Europe.

HY 490 - RESEARCH SEMINAR IN HY  
Semester Hours: 3
Research and writing with primary sources and historiography. Required of all history majors. Prerequisites: HY 290. Offered once annually.

HY 492 - PUB MEMORY & INTERP  
Semester Hours: 3
Examines how public memory is created by looking at the social, political, and economic forces that shape public history and considers how historical knowledge is conveyed to the public. Prerequisites: 6 hours in History or Instructor's Permission.

HY 493 - FUNDAMENTALS OF ARCHIVES  
Semester Hours: 3
Survey of basic archival theory and practice, with emphasis on the role of the archivist in contemporary society.

HY 494 - DEVELOPING DIGITAL ARCHIVES  
Semester Hours: 3
Survey of the theory and practice of developing digital access tools in archives, libraries, and museums.

HY 495 - PUBLIC HISTORY INTERNSHIP  
Semester Hours: 3
A semester-long public history internship for completing a significant project using historical skills as a professional usually in an off-campus setting. Students must complete 125 hours of work during their internship. Permission of instructor or chair is required.

HY 498 - STUDIES IN HISTORY  
Semester Hours: 1-3
A readings or research class on a particular problem, period or topic in history. This course may be repeated for credit.

HY 499 - INDEPENDENT STUDY  
Semester Hours: 3
In exceptional circumstances, a student and professor may work together on a specialized topic.

**Industrial & Systems Engineering (ISE)**

ISE 224 - INTRO INDUSTRIAL & SYSTEMS  
Semester Hours: 3
Overview of industrial engineering concepts. Includes history and development of classical industrial engineering; documentation and computational methods; basic work methods and measurement; manufacturing systems; and economic decision analysis. Prerequisites: ENG 101.

ISE 321 - ENGINEERING ECONOMY  
Semester Hours: 3

ISE 324 - WORK DESIGN  
Semester Hours: 3
Principles of methods analysis and ergonomics to fit a task and workstation to the human operator including work measurement and tools, work sampling, job analysis, anthropometric data, and workplace design. Laboratory exercises focus on the implementation of lean principles. (Same as PY 324) Prerequisites: ISE 390 or PY 300.
ISE 327 - MANAGEMENT SYSTEMS ANALYSIS
Semester Hours: 3

Formal organization structures and functions. Analysis of organization planning leading toward the accomplishment of goals. Techniques for making decisions within formal organizations, together with ethical constraints. Emphasis on technical writing. Prerequisite: ISE 390.

ISE 340 - OPERATIONS RESEARCH
Semester Hours: 3

Fundamental methods, models and computational techniques of operations research. Linear programming including transportation, assignment of simplex algorithms. Queuing theory. Prerequisite: ISE 390.

ISE 390 - PROB & ENGR STATISTICS I
Semester Hours: 3

Engineering uses of probability, discrete and continuous probability distributions including the binomial, Poisson, hypergeometric, normal, uniform, lognormal, and exponential distributions. Statistical sampling, distributions of means, variances, and proportions. Hypothesis testing and confidence intervals. Prerequisite: MA 201.

ISE 391 - PROB/ENGR STAT II
Semester Hours: 3

Continuation of ISE 390 with regression analysis, analytics of variance, and nonparametric statistics. Introduction to design of engineering experiments, and computer-based solution of large-scale problems. Prerequisite: ISE 390.

ISE 402 - INDUSTRIAL & ORGANIZA PSY
Semester Hours: 3

Application of basic principles of learning, motivation, and perception to typical industrial and organizational problems. Senior standing. (Same as PY 402/502).

ISE 403 - HUMAN FACTORS PSYCHOLOGY
Semester Hours: 3

ISE 423 - INTR STATISTICAL QUALITY CONTR
Semester Hours: 3

Introduces statistical theory and techniques to control quality of manufacturing products. Provides a solid foundation in Statistical Quality Control. The Six Sigma methodology is also introduced in this course. Students can take the certification exam to earn Green Belt in Six Sigma. Prerequisite: ISE 391.

ISE 426 - DSGN & ANALY OF EXPERIM
Semester Hours: 3

Advanced topics in statistical experiments with emphasis on the design aspect. Factorial designs, including fractional replication and confounding. Includes computer laboratory exercises. (Same as ISE 526). Prerequisite: ISE 391.

ISE 428 - SYSTEMS ANALYSIS & DESIGN I
Semester Hours: 3

Philosophy and methods of industrial and non-industrial systems analysis and design. Methods of systems definition, analysis, simplification, evaluation, and optimization. Design project required. Ethics and technical writing are emphasized. Senior Standing. Prerequisites: ISE 124, ISE 321, ISE 340, and ISE 391.

ISE 429 - SYS ANALYSIS/DESIGN II
Semester Hours: 3

Continuation of design project begun in ISE 428. Prerequisite: ISE 428.

ISE 430 - MANUF SYS & FACILITIES DESIGN
Semester Hours: 3

Modern manufacturing systems design with emphasis on facility location and plant layout. Includes classical systems, just-in-time systems, principles of integrated manufacturing systems design, and an analysis of process flow and productivity, and available space to determine facility layout. (Same as ISE 530).
**ISE 433 - PROD & INVENTORY CONTROL SYS**
Semester Hours: 3

Inventory models including classical optimal economic order quantity models, manufacturing resource planning systems, production scheduling, material requirements, and purchase order control. Emphasis on manufacturing system revisions, continuous process improvement, and implementation of lean principles. Prerequisite: ISE 390.

**ISE 437 - ELECTRONICS MANUF PROCESSES**
Semester Hours: 3

Concepts, facilities, and technology utilized in the manufacture of electronic components and products. Includes printed wiring board fabrication and component mounting methods, automation, quality and reliability, product testing, and economic issues. Senior Standing. (Same as ISE 537).

**ISE 439 - SELECTED TOPICS/ISE**
Semester Hours: 1-3

**ISE 447 - INTRO TO SYSTEMS SIMULATION**
Semester Hours: 3

Philosophy and elements of digital, discrete-event simulation. Emphasis on modeling and analysis of stochastic systems, including probabilistic models, output analysis, and the use of simulation software. (Same as ISE 547) Prerequisites: CPE 112 and ISE 391.

**Information Systems (IS)**

**IS 146 - COMPUTER APPL IN BUSINESS**
Semester Hours: 3

Study of computer solutions to business problems. Overview of hardware/software systems and of data and information processing in organizations. Extensive use of Microsoft Office and other software for word processing, spreadsheet, presentation, and database applications related to business.

**IS 210 - INTRO COMP PROG IN BUS**
Semester Hours: 3

Fundamentals of business programming using languages such as Python, PHP, JavaScript, JQuery and HTML5. Prerequisite: IS 146.

**IS 301 - INFO SYSTEMS IN ORGANIZATIONS**
Semester Hours: 3

Understanding the role of information systems in organizations and how they relate to organizational objectives and organizational structure. Introduce information system applications and the SAP software to illustrate the concepts covered in this course. Prerequisite: IS 146.

**IS 310 - ADV COMP PROGRAMMING IN BUS**
Semester Hours: 3

Advanced business language features, control language and file handling, object oriented programming, software quality and maintenance. Workflow programming is also covered. Prerequisite: IS 210.

**IS 340 - DATA BASES FOR MANAGEMENT**
Semester Hours: 3

The management of data resources to effectively support the information systems of organizations. The course focuses on relational database model and Oracle SQL. It provides students with extensive experiences in formulating and executing SQL queries to retrieve and manipulate information from a relational database management system. Prerequisite: IS 310.

**IS 351 - ENTERPRISE SYSTEMS**
Semester Hours: 3

This course examines the concepts and uses of enterprise systems to integrate all aspects of an organization into one information system. Specific attention is given to how ERP systems facilitate the flow of information supporting core business processes and the organization's supply chain. The course will emphasize the adaptation of ERP systems to support the organizational structures and business processes of the particular company to efficiently and effectively manage a firm's business. Prerequisites: IS 301.

**IS 401 - SURV OF INFORMATION ASSURANCE**
Semester Hours: 3

Provides a managerial and technical overview of cybersecurity and introduces students to the complexity of the security issues facing organizations. Presents practices and standards for assessing security risks and managerial and technical approaches to minimize such risks. Prerequisite: IS 301.
IS 412 - MODERN SYSTEM ANALYSIS & DESGN
Semester Hours: 3
Identifying, analyzing, developing and acquiring information systems are central to the information systems discipline. The course covers identifying, conceptualizing and analyzing business opportunities where information systems applications can add value followed by design, development, and implementation of such applications. Planning for and management of this core IS activity is a critical organizational competence. Prerequisites: IS 301, IS 310, and IS 340.

IS 422 - SUPPLY CHAIN MANAGEMENT SYSTEM
Semester Hours: 3
This course presents the main concepts of supply chain management systems and software including ERP, CRM and SCM systems as well as the underlying technologies and managerial implications. It provides hands-on familiarity with SAP supply chain modules. Prerequisite: IS 301.

IS 460 - TELECOMMUNICATIONS & NETWORKING
Semester Hours: 3
An overview of the IT infrastructure in modern organizations. The course starts from basic telecommunications networking concepts to digital platforms and ecosystems in the market. Prerequisite: IS 301.

IS 463 - COMPUTER FORENSICS
Semester Hours: 3
Provides an introduction to the area of computer forensics. Examines the problems and concerns related to computer investigations. Blends traditional investigation methods with classic systems-analysis problem-solving techniques and applies them to computing investigations. This course is lab intensive and students are expected to gain hands-on experience through learning to use various forensic software. Several information security topics nonspecific to forensics will also be covered. Prerequisite: IS 301.

IS 471 - BUSINESS INTELLIGENCE & ANALYTICS
Semester Hours: 3
Fosters data-analytical thinking. Uses real-world examples and cases to explore the use of big data for business decision-making and how Business Intelligence and Analytics (BIA) enhances business competitiveness. Provides hands-on experience mining data using many BIA tools. Prerequisite: IS 301.

IS 477 - NETWORK DEFENSE/OPERATING SYSTEMS
Semester Hours: 3
Introduction to network security issues and practical applications. Addresses translation, packet filtering, proxy servers, and firewalls, and Virtual Private Networks. This course assumes familiarity with Internet and basic networking concepts such as TCP/IP, gateways, routers, and Ethernet. Prerequisites: IS 301 and IS 460.

IS 480 - CURRENT TOPICS IN MGT INFO SYSTEMS
Semester Hours: 3
Prerequisite: IS 301.

IS 490 - SPECIAL PROJECTS
Semester Hours: 3

IS 491 - IS MANAGEMENT & STRATEGY
Semester Hours: 3
This course emphasizes the integration of various principles, theories, and techniques for implementing, deploying and managing enterprise information systems in organizations to gain strategic and operational advantages. Includes lectures, tours, readings, cases, and the completion of a major project. Normally taken during a student's last semester of studies. Prerequisites: IS 340 and either IS 351 or 460. Prerequisite with concurrency: IS 412.

IS 495 - INTERN IN INFO SYSTEMS
Semester Hours: 1-3

Kinesiology (KIN)

KIN 109 - SPEED & PLYOMETRIC TRAINING
Semester Hours: 2

KIN 117 - WEIGHT TRAINING I
Semester Hours: 2
KIN 118 - WEIGHT TRAINING II
Semester Hours: 2

KIN 119 - WEIGHT TRAINING III
Semester Hours: 2

KIN 200 - CONTEMPORARY NUTRITION
Semester Hours: 2

Introduction to the principles of nutrition as they relate to the growth, development, and maintenance of the human body throughout the lifespan. Emphasis is placed on the classes of nutrients, weight management, and nutritional planning.

KIN 205 - FIRST AID & CPR
Semester Hour: 1

Students will focus on recognizing emergency situations. First Aid and CPR also provides skills and knowledge necessary in caring for injuries or sudden illness.

KIN 210 - ATHLC INJURY PREVENTION & CARE
Semester Hours: 3

Presents the knowledge and techniques necessary to prevent and/or care for common athletic injuries. For coaches, athletes, and those working in recreation, physical education, or athletics.

KIN 215 - FIRST RESPONDER/PROFESSN'L CPR
Semester Hours: 2

Learn the concepts and skills needed to function as a First Responder and Professional Rescuer. Emphasis is placed on preparing for, recognizing, and providing emergency care in various situations where needed. Additionally, this course fully addresses the objectives in the U.S. Department of Transportation's National Standards Curriculum.

KIN 240 - HEALTH & WELLNESS CONCEPTS
Semester Hours: 3

This course provides students with an overview of individual and societal health and wellness and the impact of lifestyle choices. Laboratory experiences provide opportunity for assessment of individual health and fitness behaviors. Topics covered include: wellness, physical fitness, behavior modification, weight management, stress management, disease prevention, addictive behavior and sexual health.

KIN 250 - ESSENTIALS OF PERSONAL TRAIN'G
Semester Hours: 2

This course is designed to provide theoretical knowledge and practical skills in preparation for a national certification exam in personal training. Topics include guidelines for instructing safe, effective, and purposeful exercise, essentials of the client-trainer relationship, conducting health and fitness assessments, and designing and implementing appropriate exercise programming.

KIN 260 - FOUNDATIONS OF KINESIOLOGY
Semester Hours: 3

An introductory course for students in the Kinesiology major. The course will provide an overview of the Kinesiology field, including all subdisciplines and an in-depth discussion of teacher v non-teacher career choices. The history and development of physical education, exercise science, and sport studies will be covered, as well as issues and trends in physical education, exercise science, and sport studies.

KIN 290 - EX TECHNIQUES & LEADERSHIP
Semester Hours: 3

This course provides a practical guide in leadership for group and individual exercise settings. Critical evaluation of a safe fitness environment, adult physical activity programs to promote health, and exercise techniques according to the American College of Sports Medicine and National Strength and Conditioning Association are included.

KIN 300 - NUTRITION FOR FITNESS & SPORT
Semester Hours: 3

Explores the theoretical and applied nutritional sciences as they relate to fitness and sport. Students will develop practical skills applicable to solving nutritional problems in exercising populations. Nutritional requirements and practices related to general fitness, athletic performance, and special needs individuals will also be covered. Prerequisite with concurrency: KIN 260.
KIN 315 - STRENGTH TRNG & CONDITION  
Semester Hours: 3

This course provides a comprehensive overview of strength and athletic conditioning. Emphasis is placed on the exercise sciences (including anatomy, exercise physiology, and biomechanics) and exercise technique, program design, organization and administration, and testing and evaluation. Additionally, this course is designed to prepare students for the nationally accredited Certified Strength and Conditioning Specialist (CSCS) certification exam. Prerequisites: BYS 215 and BYS 216.

KIN 327 - INTRO TO EXERCISE PHYSIOLOGY  
Semester Hours: 3

An introduction to the response and adaptations of the body systems to exercise and physical activity. Prerequisites: KIN 260, BYS 215 and BYS 216 with a grade of C- or better. Co-requisite: KIN 328.

KIN 328 - INTRO EX PHYSIOLOGY LAB  
Semester Hour: 1

Exercise physiology lab experience to accompany the introduction to exercise physiology course lectures. The course meets two hours weekly for one credit hour. Co-requisite: KIN 327.

KIN 340 - SCHOOL AND COMMUNITY HEALTH  
Semester Hours: 3

Obtain information and skills related to school and community health programs with an emphasis on health instruction, strategies, and resources. Survey the components of a school health program: school health services, healthful school environment, principles of physical and movement education, nutrition services, counseling and social services, parent/community involvement, health promotion for staff. Examine the core functions of public health, prevention of diseases and injuries, health needs of special populations, and functions of various organizations.

KIN 351 - EXER TEST & PRECR HEALTHY POP  
Semester Hours: 3

Provides students with techniques that evaluate aerobic capacity, muscular strength and endurance, flexibility, and body composition. The development of exercise prescriptions based on evaluation results will be emphasized. Prerequisite with concurrency: KIN 327 and KIN 328.

KIN 352 - EXER TEST & PRECR SPECIAL POP  
Semester Hours: 3

This advanced-level course integrates both lecture and laboratory to prepare students with the knowledge and skills necessary to conduct fitness evaluations, exercise prescriptions, and risk stratification of at-risk individuals. Specific emphasis will be placed on the administration of safe fitness testing using protocols published by ACSM for the health related components of physical fitness. Prerequisites: KIN 351.

KIN 361 - TEACHING TEAM SPORTS  
Semester Hours: 3

Teaching methods and strategies of sports that require more than one participant. While knowledge of how to play the sport will be taught, emphasis will be placed on the organization, management, and assessment of skills in activities such as, but not limited to soccer, handball, and basketball.

KIN 362 - TEACHING INDIVIDUAL ACTIVITIES  
Semester Hours: 3

Teaching methods and strategies for games involving individuals rather than a team. Emphasis will be placed on the organization, management, and assessment of skills in activities including, but not limited to, aerobic dance, cross country/trail running, and tumbling/gymnastics.

KIN 363 - TEACHING FITNESS & WELLNESS  
Semester Hours: 3

Learn to perform and instruct a variety of fitness activities. Emphasis will be placed on performing fitness skills and on the methods and techniques for instructing and teaching specific fitness activities. Techniques for evaluating the knowledge and skills of the activities will also be stressed.

KIN 370 - ADAPTED PHYSICAL EDUCATION  
Semester Hours: 3

Develop knowledge of current concepts and trends in adapted physical education as well as the ability to plan and implement a physical education program designed to meet the unique needs of individuals.

KIN 371 - ADAPTED FITNESS  
Semester Hours: 3

Develop knowledge of current concepts and trends in adapted physical fitness as well as the ability to plan and implement fitness and wellness programs designed to meet the unique needs of individuals, particularly those with disabilities and special needs. Prerequisite: KIN 260.
KIN 381 - FACILITIES AND EQUIPMENT MGT  
Semester Hours: 3

This course will provide theories for the design, development, operation, maintenance, and management of sport and fitness facilities. Prerequisite: KIN 260.

KIN 382 - SPORT LEADERSHIP  
Semester Hours: 3

This course focuses on the role of leadership in general, with a specific application to a sport setting. We will focus on the numerous approaches to leadership that have been used, and emphasize illustrating and applying them to different aspects of sports. Prerequisites: KIN 260.

KIN 420 - WELLNESS COACHING  
Semester Hours: 3

Gain knowledge of the principles and practices of wellness coaching, including theory, research, facilitating behavior change, and developing and implementing programs for various populations and health needs. Students will develop instructional strategies to help clients, evaluate program effectiveness, and implement appropriate adjustments and progressions. Prerequisites: KIN 240, PY 101, PY 201.

KIN 421 - INST APP TO SPORT PEDAGOGY  
Semester Hours: 3

This class is designed to expand and enrich the teaching repertoire. Special emphasis will be given to how selected models of teaching can be used to achieve multiple outcomes of teaching in physical education and other contexts (e.g., physical activity programs & youth sport). Additionally, the course will increase awareness in other instructional areas related to the profession (teaching underserved youth, youth sports programs, etc.). Prerequisites: KIN 361 or KIN 362 or KIN 363.

KIN 440 - MGT SPORT & PHYSICAL EDUCATION  
Semester Hours: 3

This course provides the student with knowledge of sport management and administration in both athletic and leisure-based sports. Topics include management concepts, roles and responsibilities, fiscal management, fund-raising, legal issues, event scheduling, and decision making.

KIN 442 - INTRO TO SPORT LAW  
Semester Hours: 3

This course is designed to introduce students to the legal doctrines, major statutes, standards, and case law that establish legal responsibilities, rights, privileges and controls related to the field of exercise and sport sciences. Prerequisite: KIN 260.

KIN 443 - SP TOPICS IN SPORT ADMIN  
Semester Hours: 3

This course will address a variety of topics based on emerging trends in Sport Administration. Potential course offerings will include coach education, advanced legal issues, sport sociology, sport finance and accounting and globalization of sport. Course content will be offered in rotation as needed. Prerequisite: KIN 260.

KIN 444 - SPORT ADMINISTRATION INTERNSHIP  
 Semester Hour: 1

Sport Administration Internship will introduce and promote professionalism through a hands-on experience with a local company. The student will be guided by a faculty member and company representative to achieve a strong overall work experience pertaining to the student's interests. Prerequisites: KIN 260.

KIN 445 - PRINCIPLES OF COACHING  
Semester Hours: 3

Gain knowledge and skills specific to coaching; developing a coaching philosophy and objectives, motivating athletes, managing a team. Emphasis is placed on sport at the high school and club level with consideration given to coaching youth, recreational, and intercollegiate. Coursework provides preparation for the American Sport Education Program (ASEP) Coaching Principles exam which is required by the Alabama High School Athletic Association (AHSAA).

KIN 450 - EXERCISE PHYSIOLOGY INTERNSHIP  
Semester Hour: 1

Designed to provide on-site practical experience in a wellness/fitness program, physical therapy clinic, and/or a cardiac rehabilitation facility for Kinesiology-Exercise Science majors. Prerequisites: KIN 351.
KIN 451 - RESEARCH EXERCISE SCIENCE I  
Semester Hours: 3 

Initial capstone course (part of a two-course sequence) providing a broad and balanced background in various types of research methods and the development of a research proposal. Development of a research question, hypothesis, and research methodology. Application of computers will be used to search databases for relevant literature. Completion of an Institutional Review Board application is required. Prerequisites: KIN 351.

KIN 452 - RESEARCH EXERCISE SCIENCE II  
Semester Hours: 3 

Final capstone course (part of a two-course sequence) in which students must integrate and apply skills acquired throughout the program to complete a comprehensive research project. The student will complete the research project proposed in KIN 451 by recruiting research participants to collect data, writing the results and conclusions for a manuscript. Results will be prepared for publication and presented in a professional setting. Prerequisites: KIN 451 and PY 300 (with concurrency).

KIN 455 - MOTOR LEARNING  
Semester Hours: 3 

Study the principles and practices that affect the learning and development of motor skills; theories of motor learning, motor control, and development; lifespan motor development perspective related to performing motor and sport skills; and professional applications of motor learning and development in exercise science, athletic training, and physical education.

KIN 457 - MEASUREMNT & EVAL IN PHYS ACTV  
Semester Hours: 3 

Measure and evaluate learning or skill improvement based on accepted standards. Gain an understanding of the logic behind measurement instruments in order to better interpret and implement results and to achieve improved learning or physical fitness improvement. These methods of measurement and evaluation are important skills in health, physical education, and exercise science fields.

KIN 460 - SP TOPICS EXERCISE SCIENCE I  
Semester Hours: 3 

This course is intended to cover a variety of topics based on emerging topics in Exercise Science. Potential course offerings will include environmental exercise physiology, cardiovascular exercise physiology, childhood and adolescent exercise physiology, psychology of injury, illness, and disability, and resources for the personal trainer. Course content will be offered in rotation. Prerequisites: KIN 327.

KIN 461 - SP TOPICS EXERCISE SCIENCE II  
Semester Hours: 3 

This course is developed to cover a variety of topics based on emerging topics in Exercise Science. Potential course offerings will include environmental exercise physiology, cardiovascular exercise physiology, childhood and adolescent exercise physiology, psychology of injury, illness and disability and resources for the personal trainer. Course content will be offered in rotation. Prerequisites: KIN 327.

KIN 462 - TEACHING PHYS ED IN ELEM SCH  
Semester Hours: 3 

Physical education teacher candidates will acquire the ability to understand, recognize, analyze, and demonstrate the range of teaching skills employed by successful physical educators in the preschool and elementary setting. Emphasis is placed on understanding the theoretical implications of different teaching skills and the contexts in which they are effective. Teacher candidates will design lessons that allow for maximum student participation while remaining aligned with Alabama Consent Standards. Field experience is required. Candidates will observe, participate in, and teach lessons in physical education classrooms. Prerequisite: Admission to the Teacher Education Program. Prerequisite: KIN 370.

KIN 463 - PSYCHOLOGICAL ASPECTS SPORT  
Semester Hours: 3 

Provides students with an introductory experience in sport, exercise, and fitness psychology based on the latest research and practice. Practical examples and case studies for individual and group sports are provided. The aim is to bridge science and practice to teach students the role of a sport and fitness psychologist. Prerequisites: KIN 327.

KIN 465 - TEACHING SECONDARY PE  
Semester Hours: 3 

Physical education teacher candidates will acquire the ability to understand, recognize, analyze, and demonstrate the range of teaching skills employed by successful educators in the secondary setting.

Management (MGT)
MGT 100 - INTRO TO BUSINESS
Semester Hours: 1-3

Career options for students interested in business are stressed. Fundamentals of business organizations, effective management and the functions of business are explored.

MGT 101 - INTRO ENTREPRENEURSHIP
Semester Hours: 3

Introduction to the startup of a new business and the entrepreneurial career. Focuses on elementary concepts of planning, financing, developing, and managing a new business.

MGT 301 - MANAGING ORGANIZATIONS
Semester Hours: 3

Introduces management theories, roles, functions, and processes that facilitate the successful operation of organizations. Provides overviews of the following topics: managerial roles and functions, the strategic management process, organizational structure, organizational theory and behavior, and the human resource management function.

MGT 320 - CAREER DEVELOPMENT
Semester Hours: 3

Concepts drawn from theories on career development, human capital, social networks, labor markets, and strategic management will provide a theoretical foundation for students to formulate short- and long-term career goals and a strategic plan for achieving those goals.

MGT 361 - ORGANIZATIONAL BEHAVIOR
Semester Hours: 3

Behavioral science approach to the study of individual performance. Performance evaluation, job design, employee turnover, organizational culture, communication process, work motivation, leadership, group dynamics, and organizational development. Prerequisite: MGT 301.

MGT 363 - HUMAN RESOURCE & LABOR REL MGT
Semester Hours: 3

Theories and practices related to human resource management functions, including strategic planning, internal and external staffing, training and development, compensation management, employee and labor relations, and international human resource management. Prerequisite with concurrency: MGT 301.

MGT 401 - INTRO TO CONTRACT MANAGEMENT
Semester Hours: 3

General survey in contracting basics, covering procedures as described by Federal Acquisition Regulations, statutes, ethics, policies, and other pertinent authorities.

MGT 402 - CONTRACT EVALUATION & AWARD
Semester Hours: 3

Study of the evaluation, award, and post-award aspects of the contracting process, focusing on federal government contracting. Covers acquisition and past performance evaluation; the proposal receipt process; and post-award contract administration, closeout, modifications, and dispute resolution. Prerequisite: MGT 401.

MGT 403 - CONTRACT PRICING & COST ANALYS
Semester Hours: 3

Study of methods of price analysis and cost estimation and analysis. Covers data sources, legal requirements, rates, definitions, projection methods, factors affecting profits/fees, the weighted guidelines technique, statistical analysis methods, and learning curve theory.

MGT 405 - NEW VENTURE STRATEGIES
Semester Hours: 3

Theory and application of strategies for start-up, operation, and control of new ventures. Roles of entrepreneurship in the economy. Case studies of corporate and independent new ventures. Prerequisite: MGT 301 and MKT 301.

MGT 408 - TEAMWORK & TEAM PROCESSES
Semester Hours: 3

This course provides an introduction to teams and teamwork processes. The foundation of the course is research-based; topics will be approached from the context of empirical research. The types of research designs that are typically used in team research are addressed. Junior standing required.
MGT 410 - LEADERSHIP, PERSONAL DEV & ORG  
Semester Hours: 3  
The focus of this course is on the in-depth self-examination of skills, ability, personality, attitudes, values and behavior to increase self-awareness of leadership competencies. Students will also examine theories of leadership to develop insights for their personalized leadership development. Prerequisite: MGT 301.

MGT 411 - SUPPLY CHAIN MANAGEMENT  
Semester Hours: 3  
A study of problems and practices of operations and materials management. Topics include: materials acquisitions, inventory systems, demand management, aggregate planning, materials, logistics systems and current topics. Prerequisite: MSC 287.

MGT 450 - INTERNATIONAL BUSINESS  
Semester Hours: 3  
Explores the economic, social, political, cultural, and legal environment of global business operations and considers how environmental effects on business programs and strategies. Relies on a variety of conceptual, methodological and application perspectives. Prerequisite: MGT 301, MKT 301, and FIN 301.

MGT 460 - EMPLOYEE STAFFING & DEVELOP  
Semester Hours: 3  
The study of employee staffing and development concepts, issues and tools. Topics include forecasting staffing needs, recruitment strategies, development and validation of selection procedures, placement, socialization and development of employees, and the utilization of contingent workers. Prerequisite: MGT 301 and MGT 363, and either IS 301, MKT 301, or FIN 301.

MGT 461 - STRATEGIC COMPENSATION MGMT  
Semester Hours: 3  
Introduction to management of employees' compensation. Overview of compensation practices, behavioral and economic theories of compensation, and research on compensation programs. Prerequisites: MSC 287 and MGT 363.

MGT 462 - EMPLOYMENT LAW FOR MANAGERS  
Semester Hours: 3  
The study of government regulation of the management of human resources. Examines employer responsibilities and employee rights under federal state law pertaining to separations, discrimination, compensation and other terms of employment, worker safety and health, privacy, and unions.

MGT 470 - SPEC TOPICS SEMINAR IN MGMT  
Semester Hours: 3  
In-depth study of a selected topic relevant to contemporary management. Different sections of this course may address different topics.

MGT 490 - SPECIAL PROJECTS  
Semester Hours: 1-3  
Active involvement in an on-going project in a business enterprise that has particular interest and relevance to the student, or an in-depth investigation of contemporary management problems. Approval of department chair is required.

MGT 494 - PRACTICUM IN MANAGEMENT  
Semester Hours: 3  
Student teams will apply management concepts and skills in a semester-long business simulation or management project conducted for a client firm or non-profit. The teams will be closely supervised by a faculty member with expertise related to the simulation or project. Prerequisite: MGT 301, MSC 287, and MSC 288.

MGT 495 - INTERNSHIP IN MANAGEMENT  
Semester Hours: 1-3  
Under the direction of a faculty advisor, experience is gained with an entrepreneur in a small business firm or a manager in a large firm. Subject to College's guidelines on internships.

MGT 499 - COMPETITIVE STRATEGY  
Semester Hours: 3  
Addresses formulation & implementation of business/corporate level strategies: defining the mission, setting goals and objectives, analyzing current operating conditions and the organization's environment, and setting a unified strategic direction. Recommended taking during final semester of degree. Upper division standing required. Student must obtain a grade of C or higher. Prerequisite: MGT 301, MKT 301, FIN 301, EH 300, IS 301, and MSC 385.
Management Science (MSC)

MSC 287 - BUSINESS STATISTICS I  
Semester Hours: 3

Introduction to probability & business statistics. Covers: tabular, graphical, and numerical methods for descriptive statistics; measures of central tendency, dispersion, & association; probability distributions; sampling & sampling distributions; and confidence intervals. Uses spreadsheets to solve problems. Prerequisite: Any 100 level MA course.

MSC 288 - BUSINESS STATISTICS II  
Semester Hours: 3

Inferential statistics for business decisions. Topics include: review of sampling distributions and estimation; inferences about means, proportions, and variances with one and two populations; good of fit tests; analysis of variance and experimental design; simple linear regression; multiple linear regression; non parametric methods. Prerequisite: MSC 287.

MSC 385 - OPERATIONS ANALYSIS  
Semester Hours: 3

Survey of the firm's production function and quantitative tools for solving production problems, quality management, learning curves, assembly and waiting lines, linear programming, inventory, and other selected topics (e.g., scheduling, location, supply chain management). Uses the SAP software. Prerequisite: MSC 288.

MSC 410 - TRANSPORTATION & LOGISTICS  
Semester Hours: 3

An analysis of transportation and logistical services to include customer service, distribution operations, purchasing, order processing, facility design and operations, carrier selection, transportation costing, and negotiation. Prerequisite: MKT 301.

MSC 470 - SPECIAL TOPICS IN MGMT SCI  
Semester Hours: 3

In depth study of a selected topic relevant to contemporary management science. Different sections of this course may address different topics.

MSC 490 - SPECIAL PROJECTS  
Semester Hours: 3

Independent study in an area of interest to the student in the field of management science. Approval of department chair is required.

MSC 494 - PRACTICUM IN MANAGEMENT SCIENCE  
Semester Hours: 3

Student teams will apply management science concepts and skills in a semester-long simulation or management science project conducted for a client firm or non-profit. The teams will be closely supervised by a faculty member with expertise related to the simulation or project. Prerequisite: MSC 287, MSC 288 and MSC 385.

MSC 495 - INTERNSHIP IN MGMT SCIENCE  
Semester Hours: 3

Active involvement in a project in a business enterprise, professional organization or in a government agency that has particular interest and relevance to the student. Subject to College's guidelines on internships.

Marine Science (MS)

MS 202 - MARINE BIOLOGY  
Semester Hours: 4

Survey of invertebrates, vertebrates, and marine plants as communities with local examples. Examination of marshland, estuarine, beach, dune, inlet and neritic habitats, and niches. Lecture/Lab/field work. Offered only at the Marine Environmental Sciences Consortium Sea Lab at Dauphin Island, AL. Prerequisites: BYS 119 and BYS 120.

MS 204 - COM MARINE FISHERIES/ALA  
Semester Hours: 2

Biology, harvesting technology, and processing of commercially valuable fish and shellfish species of Alabama. Offered only at the Marine Environmental Sciences Consortium Sea Lab at Dauphin Island, Alabama. No credit for biological sciences major or minor; can be used for marine science minor.
MS 301 - MARINE TECH METHODS I  
Semester Hours: 2  
Marine science research equipment, methods, and techniques. Operation and field maintenance of major sampling gear. Only at the Marine Environmental Sciences Consortium Sea Lab at Dauphin Island, Alabama. No credit for biological sciences major or minor; can be used for a marine science minor. Prerequisites: BYS 119 and BYS 120.

MS 303 - COASTAL CLIMATOLOGY  
Semester Hours: 2  
Physical factors resulting in climactic conditions in and near coastal region. Emphasis on northern Gulf of Mexico. Only at the Marine Environmental Sciences Consortium Sea Lab at Dauphin Island, Alabama. No credit toward a biological sciences major or minor; can be used for a marine science minor.

MS 304 - COASTAL ZONE MANAGEMENT  
Semester Hours: 2  
Examination of ecological features and physical management policies design for coastal communities and a review of the federal and state programs that impinge upon coastal ecological communities. Only at the Marine Environmental Sciences Consortium Sea Lab at Dauphin Island, Alabama.

MS 491 - SPECIAL TOPICS IN MARINE SCIEN  
Semester Hours: 1-4

Marketing (MKT)

MKT 301 - PRINCIPLES OF MARKETING  
Semester Hours: 3  
Integration of professional selling techniques and concepts with sales management problems. Addresses objectives and policies for managing a sales force; market analysis methods used for sales forecasts and budgeting; and problems faced by sales management in competition, pricing, and promotions.

MKT 315 - SALES MGT/PROF SELLING  
Semester Hours: 3  
Integration of techniques and concepts of professional selling with problems of sales management. Objectives and policies for sales managers concerning managing sales force and methods of marketing analysis in terms of sales forecasts and budgeting. Problems faced by sales anagement in competition, pricing, and promotion. Prerequisite: MKT 301.

MKT 316 - RETAILING POLICY/MGT  
Semester Hours: 3  
Policies, practices, and problem solutions in efficient operation of chain and independent retail stores. Store location, organizational layout, merchandise planning and control, buying, pricing, and promotion.

MKT 332 - BUYER BEHAVIOR  
Semester Hours: 3  
Interdisciplinary and organizational approach to analyze and interpret consumer buying habits and motives and the resultant purchases of goods and services. Purchaser's psychological, economic, and sociocultural actions and reactions as they relate to better understading of consumption. Prerequisite: MKT 301.

MKT 342 - PROMOTIONAL STRATEGY  
Semester Hours: 3  
Promotional techniques available to marketing management. Consumer behavior and communication process by which products can be effectively promoted. Specific tools of personal selling, advertising, sales promotion, and publicity as components of overall promotional strategy. Prerequisite: MKT 301.

MKT 343 - MARKET RESEARCH DESIGN  
Semester Hours: 3  
Introduction to the principles and purposes of marketing research; relationship to other marketing functions and marketing information systems, data sources, review of research methodologies and ethical considerations. Prerequisite: MKT 301 and either MSC 287&288 or CM 370 or PY 300 or SOC 303.
MKT 344 - MKT RESEARCH APPLICATION
Semester Hours: 3
Application of the principles and purposes of marketing research; laboratory, field and historical research methodologies, experimental design, sampling procedures, questionnaire design, and data analysis.

MKT 345 - MARKET CHAN STRU & STRAT
Semester Hours: 3
Marketing channels as a functional area and the alternative choices available to marketing management in developing overall marketing strategy. Institutional structures and dynamic interrelationships in distribution logistics.

MKT 405 - NEW VENTURE STRATEGIES
Semester Hours: 3
Theory and application of both marketing and management strategies for start up, operation and control of new ventures. The course also discusses the role of entrepreneurship in the economy. Prerequisite: MKT 301 and MGT 301.

MKT 414 - MARKETING EMERGING TECH
Semester Hours: 3
Comprehensive review of the new product development and marketing process. Emphasizes actual case examples showing how companies develop and market radically new products. Prerequisite: MKT 301.

MKT 415 - INTERNATIONAL MARKETING
Semester Hours: 3
Procedures and problems associated with establishing and carrying out marketing operations in or with foreign companies. Institutions, principles, and methods involved in solving these business problems. Effect of national differences in business practices and regulation. Prerequisite: MKT 301.

MKT 420 - SERVICES MARKETING
Semester Hours: 3
Addresses the challenge of delivering quality service to customers. Focuses on organizations whose core products are services (e.g., banks, hospitals, non-profit organizations) or which depend on service excellence for competitive advantage. Prerequisite: MKT 301.

MKT 465 - NEW VENTURES CHALLENGE
Semester Hours: 3
Students will develop a plan for starting a new business. Relevant business concepts from finance, accounting, marketing, and management useful for business start-ups will be covered in a manner accessible to both non-business and business majors. Prerequisite: MKT 414, MGT 405, and FIN 301.

MKT 470 - MKTG IN AN ELECTRONIC ENVIRON
Semester Hours: 3
Investigation of advanced marketing topics to include marketing in a high technology environment, relationship marketing, channel design and strategy, retailing, transportation, and logistics. Prerequisite: MKT 301 and EH 300.

MKT 475 - ADVANCED MARKETING SEMINAR
Semester Hours: 3
Investigation of advanced marketing topics that are relevant to contemporary marketing practices. The course will focus on current issues related to marketing in a high technology environment, relationship marketing, channel design and strategy, transportation, and logistics. Prerequisite: MKT 301.

MKT 480 - MARKETING MANAGEMENT
Semester Hours: 3
Study of management of marketing function. Addresses setting objectives, organization and control of marketing resources in coordination with other functional areas, identification and selection of market opportunities, competitive strategies, and development of marketing policies and programs. Prerequisite: MKT 301, MKT 332, MKT 343, and MSC 287. And either MGT 301, IS 301 or FIN 301.

MKT 490 - SPECIAL PROJECTS
Semester Hours: 1-3
Independent study in an area of interest to the student in the field of marketing. Approval of Dept. Chair required.

MKT 494 - PRACTICUM IN MARKETING
Semester Hours: 3
MKT 495 - INTERN IN MARKETING
Semester Hours: 1-3

Active involvement in an project in a business enterprise, professional organization or in a government agency that has particular interest and relevance to the student. Course grade will be given on a satisfactory (S)/unsatisfactory (U) basis. Subject to College's guidelines on internships.

Mathematics (MA)

MA 107 - ALGEBRA WITH APPLICATIONS
Semester Hours: 3

Algebra review, functions and graphs, linear models, exponential logarithmic functions, mathematics of finance, sets and probability. Prerequisites: Level 1 placement for MA 107 and Level 0 placement for MA 107L. No credit given to students who have received credit for another MA course.

MA 110 - FINITE MATHEMATICS
Semester Hours: 3

Algebra review, elementary functions, matrices, logic, sets, counting, and an introduction to probability and statistics. MA 110 is an AGSC core course. Prerequisites: Level 1 placement for MA 110 and Level 0 placement for MA 110L.

MA 112 - PRECALCULUS ALGEBRA
Semester Hours: 3

Real number systems, exponents, radicals, factoring, absolute value, inequalities, function notation, functions, inverse functions, graphing techniques, polynomial and rational functions, operations with complex numbers, conic sections, and theory of equations. Prerequisites: Level 1 placement for MA 112 and Level 0 placement for MA 112L.

MA 113 - PRECALCULUS TRIGONOMETRY
Semester Hours: 3

Exponential and logarithmic functions, trigonometric functions of angles and real numbers, graphing trigonometric functions, inverse trigonometric functions, solving trigonometric equations, verifying identities, laws of sines and cosines, vectors, trigonometric form of complex numbers, DeMoivre's theorem, summation notation, arithmetic and geometric sequences and series. Prerequisites: Level 2 placement or MA 112 with a grade of C or better. No credit given to students who have completed a MA course numbered above MA 113. MA 113 is an AGSC core course.

MA 115 - PRECALCULUS ALGEBRA & TRIG
Semester Hours: 4

The algebra of functions, including polynomial, rational, exponential, and logarithmic functions; systems of equations and inequalities; trigonometric and inverse trigonometric functions; trigonometric identities and equations; a brief introduction to DeMoivre's Theorem, vectors, polar coordinates, and the binomial theorem. This course is intended for students who plan to take at least MA 171 (Calculus A) but who do not need the full two-semester sequence in precalculus (MA 112, 113). MA 115 is an AGSC core course.

MA 120 - MATH PROFESSIONAL APPLICATIONS
Semester Hours: 3

Limits, continuity, differentiation, applications of the derivative, integration, the fundamental theorem of calculus, applications of the integral. Prerequisites: MA 107, MA 110, or MA 112 with a grade of C or better, or Level 2 placement. No credit given to students who have already received credit for a calculus course. MA 120 is an AGSC core course.

MA 171 - CALCULUS A
Semester Hours: 4

Limits, derivatives, applications of the derivative, definite and indefinite integrals, exponential and logarithmic functions, and inverse functions. Prerequisites: MA 113 or MA 115 with a grade of C or better, or Level 3 placement.

MA 171R - CALCULUS A RECITATION
Semester Hours: 0

MA 172 - CALCULUS B
Semester Hours: 4

Techniques of integration, applications of the integral, polar coordinates, sequences, series, and conic sections. Prerequisites: MA 171 with a grade of C or better.
MA 201 - CALCULUS C  
Semester Hours: 4  
Vectors, vector-valued functions, partial derivatives, multiple integrals, vector fields, line and surface integrals. Prerequisites: MA 172 with a grade of C or better.

MA 230 - MATH FOR ELEMENTARY TEACHERS  
Semester Hours: 3  
The course emphasizes the use of logical thinking in mathematics and the development of students' understandings of algorithm design. Directed at providing the elementary education student the mathematical background necessary for an understanding of the mathematical principles that are introduced to children in the elementary grades. Emphasis on sets, logic, an understanding of the number systems (integers, fractions, decimals, percents) and number theory. Prerequisites: Two MA courses at the 100 level or above, each with a grade of C or better. Open only to students majoring in elementary education.

MA 231 - MATH FOR ELEM SCH TCHERS II  
Semester Hours: 3  
Rational numbers, real numbers, algebra, statistics, probability, geometric shapes, measurement, and geometry (using triangle congruence and similarity, coordinates, and transformations). Prerequisites: MA 230 with a grade of C or better.

MA 238 - APPL DIFFERENTIAL EQUATIONS  
Semester Hours: 3  
This course provides an elementary introduction to the techniques and necessary theory for solving the basic differential equations usually encountered by beginning science and engineering students. General topics include analytical and graphical methods for solving and analyzing first order differential equations; Euler's numerical method; the basic theory of higher-order, linear differential equations, with major emphasis on equations with constant coefficients; variation of parameters; the Laplace transform as a tool for solving differential equations. MA 238 is an AGSC core course. Prerequisites: MA 172 & MA 201 with concurrency.

MA 244 - INTRO TO LINEAR ALGEBRA  
Semester Hours: 3  
Systems of linear equations, matrices, matrix operations, determinants, vector spaces, bases, dimension of a vector space, inner product, Gram-Schmidt process, linear transformations, change of basis, similar matrices, eigenvalues and eigenvectors, diagonalization, symmetric matrices, and applications. Prerequisites: MA 120 or MA 172.

MA 281 - ELEMENTS OF STATISTICAL ANALYS  
Semester Hours: 3  
Descriptive statistics, fundamentals of probability theory, fundamentals of statistical inference, including estimation and hypothesis testing, and use of a typical statistical package such as MINITAB. Prerequisites: MA 113, or MA 115, or Level 2 Placement.

MA 299 - MATHEMATICS PROJECT  
Semester Hour: 1  
Individualized special projects in mathematics and its applications for inquisitive and well prepared sophomore-level undergraduate students. No credit allowed toward major or minor in mathematics. S/U grading. Approval of department chair and instructor required.

MA 301 - INTRO ELEMENTARY NUMBER THEORY  
Semester Hours: 3  
Fundamental properties of integers, divisibility, linear Diophantine equations, congruency, Euler function, Chinese Remainder Theorem, Fermat Theorems, Wilson Theorem, and applications to Cryptography. Prerequisite: MA 244.

MA 330 - FOUNDATIONS OF MATH  
Semester Hours: 3  
Symbolic logic and methods of proof, set theory, combinations and permutations, equivalence relations and functions, mathematical induction and recurrence relations, cardinality (finite, countably infinite, and uncountable sets), and decimal representation of the rational and real numbers. Prerequisites: MA 172 and (MA 201 or MA 244).

MA 385 - INTRO TO PROBABILITY & STATIST  
Semester Hours: 3  
This course is a calculus-based introduction to probability with special emphasis on the interplay between probability and statistics. Topics include descriptive statistics; probability spaces; discrete distributions (including the binomial, geometric, hypergeometric, and Poisson); continuous distributions (including the uniform, exponential, and normal); joint distributions; mean, variance, and general expected value; independence and correlation; the law of large numbers; and the central limit theorem. Prerequisites: MA 120 or MA 172 with a grade of C or better and 1 MA course at 200 level or above.
MA 399 - MATHEMATICS PROJECT
Semester Hour: 1

Individualized special projects in mathematics and its applications for inquisitive and well prepared junior-level undergraduate students. No credit allowed toward a major or minor in mathematics. S/U grading. Approval of department chair and instructor required.

MA 415 - INTRO NUMERICAL METHODS
Semester Hours: 3

Derivation and analysis of approximate methods for the solution of nonlinear equations, interpolation and integration of functions, and techniques for the solution of systems of linear equations and for approximating solutions of elementary differential equations. Emphasis is placed on obtaining an intuitive understanding of both the problem at hand and the numerical method used to solve it. Prerequisites: MA 201, MA 244, and CS 121.

MA 420 - INTERM DIFFERENTIAL EQUATIONS
Semester Hours: 3

This is a second course in differential equations. Course topics include series solutions for second order differential equations and the method of Frobenious; eigenvalue and eigenvector methods for solving systems of linear first order equations; the qualitative theory of nonlinear equations; boundary value problems and the Sturm-Liouville theory. Prerequisites: MA 201, MA 244 and MA 238.

MA 433 - INTRODUCTION TO GEOMETRY
Semester Hours: 3

Axiomatic development of geometry, introduction to non-Euclidean geometries with emphasis in elliptic and hyperbolic geometries, selected topics in Euclidean geometry. Prerequisites: MA 244 and MA 330.

MA 442 - ALGEBRAIC STRUCTURES W/APPLIC
Semester Hours: 3

Mappings, binary operations, equivalence relations, groups and subgroups, Lagrange's theorem, homomorphisms and isomorphisms, normal subgroups and quotient groups, rings, fields, ordered integral domains, fields of quotients, error correcting codes, linear codes, and decoding. Prerequisites: MA 244 and either MA 330 or 385.

MA 450 - COMBINATORIAL ENUMERATION
Semester Hours: 3

Counting, pigeonhole principle, permutations and combinations, generating functions, principle of inclusion and exclusion, Polya's theory of counting. Prerequisite: MA 385 or MA 442 (with concurrency).

MA 452 - INTRO TO REAL ANALYSIS
Semester Hours: 3

Sequences, limits, continuity, differentiation of functions of one real variable, Riemann integration, uniform convergence, sequences and series of functions, power series, and Taylor series. Prerequisites: MA 330.

MA 453 - INTRO TO COMPLEX ANALYSIS
Semester Hours: 3

Complex algebra, analytic functions, Cauchy-Riemann equations, exponential, trigonometric, and logarithmic functions, integration, Cauchy integral theorem, Morera's theorem, Liouville's theorem, maximum modulus theorem, residue theory, Taylor and Laurent series, and applications. Prerequisites: MA 201 and one MA course at 300 level or above.

MA 456 - METHODS OF PARTIAL DIFF EQUA
Semester Hours: 3

Survey of theory and methods for solving elementary partial differential equations. Topics include first-order equations and the method of characteristics, second-order equations, reduction to canonical form, the wave equation, the heat equation, Laplace's equation, separation of variables, and Fourier series. Prerequisites: MA 238 and MA 244.

MA 458 - APPLIED LINEAR ALGEBRA
Semester Hours: 3

Fundamental concepts of linear algebra are developed with emphasis on real and complex vector spaces, linear transformations, and matrices. Systems of equations, inverses of matrices, determinants, vector spaces, linear transformations, eigenvalues and eigenvectors, normal matrices, canonical forms of matrices, applications of systems of linear differential equations, and use of computer software such as MATLAB. Prerequisites: MA 238 and MA 244.
MA 460 - INTRO FOURIER ANALYSIS
Semester Hours: 3
Brief development of trigonometric and exponential Fourier series, derivation of the classical Fourier transform from series, classical properties of Fourier transforms, transforms of functions, convolution, elementary development of the delta function, transforms of periodic functions, use of transforms to solve systems, introduction to the discrete transform and/or multidimensional transforms, as time permits. Prerequisites: MA 238 and MA 244.

MA 465 - INTRO TO MATH MODELING
Semester Hours: 3
Applying mathematics by formulating, analyzing, and criticizing mathematical models of various phenomena. Examples will be chosen from the physical, biological, and social sciences. Emphasizes development and use of simple mathematical models by having student study general modeling principles and case studies (some open-ended) drawn from various sources. Prerequisites: MA 201, MA 238, and MA 244.

MA 487 - INTRO TO MATH STATISTICS
Semester Hours: 3
This is an introductory, calculus-based course in mathematical statistics. Topics include a review of basic probability, including probability spaces, independence, distributions and expected value; the fundamental theorems of probability, including the law of large numbers and the central limit theorem; estimation, including point estimation and interval estimates for means, variances, and proportions; hypothesis testing, including tests for means, variance, and goodness of fit; an introduction to correlation and regression; theory of inference, including sufficiency and power. Prerequisites: MA 201 and either MA 385 or ISE 390.

MA 490 - SEL TOP UNDERGRAD MATH
Semester Hours: 1-3
Requested undergraduate topics. Approval of instructor required.

MA 499 - MATHEMATICS PROJECT
Semester Hour: 1
Individualized special projects in mathematics and its applications for superior undergraduate students. No credit is allowed toward a major or minor in mathematics. S/U grading. Approval of department chair and instructor required.

Mechanical & Aerospace Engineering (MAE)

MAE 115 - INTRODUCTION TO MACHINING
Semester Hour: 1
Safety and familiarity with the machine shop environment, equipment, tools, and practices. Correlate student design with consequences of design choice. Basic turning, milling, welding, and sheet metal operations. Programming and operation of numerically controlled machines. Prerequisites: MAE 310 and MAE 198.

MAE 200 - PRINC AERONAUTICS & ASTRONAUTI
Semester Hours: 3
Fundamental concepts of aerospace engineering including the history of flight, standard atmosphere, fluid and flow properties, lift and drag, propulsion, and structures; elementary aircraft performance, stability and control; basic aeronautics and space environment; and aerospace vehicle design. Prerequisites: PH 111, ENG 101, MA 172 and MAE 211.

MAE 211 - INTRO COMPUTATIONAL TOOLS
Semester Hours: 2
Computer-aided design and solid modeling concepts including: model definition through constraints and dimensioning, and development of subassemblies and assemblies. Prerequisites: ENG 101 and MA 171.

MAE 271 - STATICS
Semester Hours: 3
Topics include: forces, resultant forces, moments, couples equivalent force systems, equilibrium, distributed loads, two force members, trusses, centroids, moments of inertia, shear and bending moment diagrams, static and kinematic friction. (Same as CE 271) Prerequisites: PH 111, MA 201 and ENG 101.

MAE 272 - DYNAMICS
Semester Hours: 3
Kinematics and kinetics of a particle and of systems of particles with applications to central force motion, impact, relative motion, vibrations, and variable mass systems. Dynamics of rigid body in plan motion, relative motion in rotating coordinates, and gyroscopic motion. (Same as CS 362) Prerequisites: (CE 271 or MAE 271) and MA 201.
MAE 284 - NUMERICAL METHODS
Semester Hours: 3

Use computational tools to solve mathematical problems of engineering interest. Discussion and application of root finding and optimization techniques. Other topics include curve fitting, Gauss Elimination, LA decomposition, and Cholesky decomposition, numerical integration and numerical differentiation. Solving initial and boundary value problems. Course includes a lab experience using modern computational tools. Prerequisites: MA 244, ENG 101, MA 211 and MA 238.

MAE 284L - NUMERICAL METHODS LAB
Semester Hours: 0

MAE 310 - FLUID MECHANICS I
Semester Hours: 3

Fluid properties and fundamental principles governing fluid behavior. Fluid statics, basic equations in integral form and differential form, potential flow, dimensional analysis, and internal incompressible viscous flows. Prerequisites: (CE 271 or MAE 271) and MA 238.

MAE 311 - PRINC MEASUREMENT & INSTRUMENTATION
Semester Hours: 3

Instrumentation and techniques for measurement of mechanical phenomena. Calibration, standards, computerized data acquisition, error analysis, signal conditioning, dynamic response, and experimental design. Laboratory included. Prerequisites: EE 213 and MAE 284.

MAE 311L - PRINC MEASUREMENT & INSTR LAB
Semester Hours: 0

MAE 330 - FUNDAMENTALS AERODYNAMICS
Semester Hours: 4

Fundamentals of incompressible flow, conservation laws, potential flow, similarity, airfoil and finite wing lift and drag, thin airfoil and panel methods, introduction to viscous flows and boundary layers, and modern airfoil and wing design. Integrated lab sessions allow students to investigate aerodynamic principles through wind tunnel experiments. Prerequisites: MAE 200, MAE 272 and MA 238 (all with minimum grade of C-).

MAE 330L - LABORATORY
Semester Hours: 0

This lab is a 0 credit lab component of the 4 credit MAE 330 course.

MAE 341 - THERMODYNAMICS I
Semester Hours: 3

Basic laws of energy that apply in all branches of engineering and science. Properties of matter, state variables, reversible processes, first and second laws of thermodynamics with applications to closed and open systems. Availability of energy and irreversibility. Prerequisites: CH 121, PH 112, and MA 201.

MAE 342 - THERMODYNAMICS II
Semester Hours: 3

Continuation of MAE 341. Thermodynamic cycles, thermodynamic relations among properties, chemical reactions, and phase and chemical equilibrium. Prerequisites: MAE 341 and MA 238.

MAE 343 - COMPRESSIBLE AERODYNAMICS
Semester Hours: 3

Compressible flow including area change, friction, and heat transfer. Fundamentals of acoustic waves, 1- and 2-D shock and expansion waves, shock-expansion theory, and linearized flow with applications to inlets, nozzles, wind tunnels, and supersonic flow over aerodynamic bodies and wings. Prerequisites: MAE 200, MAE 341 and MA 238 (all with minimum grade of C-).

MAE 364 - KINEMATICS/DYNAMICS MACHINE
Semester Hours: 4

Kinematics and dynamics of planar machinery including principles of mechanisms, cam design, gears and epicyclic gear trains, determination of velocity and acceleration in mechanisms. Inertia forces in machines, balancing of rotating masses and reciprocating masses, and vibration analysis. Prerequisites: MA 211 and (MAE 272 or CE 272).

MAE 364L - KINEMATICS/DYN MACHINE LAB
Semester Hours: 0
MAE 370 - MECHANICS OF MATERIALS
Semester Hours: 4

Stress and strain, Hooke's law, stresses and deformations in bodies loaded by single and combined loads, and analysis of statically indeterminate systems. Laboratory includes experimental verification of lecture concepts, test procedures, instrumentation, and interpretation of results. (Same as CE 370). Prerequisites: (MAE 211 or CE 211) and (CE 271 or MAE 271), and MA 244.

MAE 370L - LABORATORY
Semester Hours: 0

MAE 371 - AEROSPACE STRUCTURES
Semester Hours: 3

Analysis and design of lightweight aerospace structures including sandwich structures, stiffened panels, and tubing stress and deflection analysis. Design of members in tension, torsion, and bending. Space structures. Prerequisites: MAE 200 and (MAE 370 or CE 370).

MAE 378 - MATERIALS & MFG PROCESS
Semester Hours: 3

Engineering properties of materials, sources of information for properties of materials, cost considerations for material selection, manufacturing processes, casting, forming, machining, cost considerations for machining operations. One or more field trips included. (Same as ISE 378). Prerequisites: MAE 370 or CE 370.

MAE 395 - SEL TOPICS:MECH & AEROSPACE EG
Semester Hours: 1-3

Special topics in Mechanical or Aerospace Engineering.

MAE 425 - DESIGN OF MACHINE ELEMENTS/A&M
Semester Hours: 3

MAE 440 - ROCKET PROPULSION I
Semester Hours: 3

Introduction to the operation, analysis, and design of liquid and solid rockets. Incorporates design and realization of a thermal system, in which students work in teams to design a rocket motor or component. Prerequisite: MAE 343.

MAE 441 - AIRBREATHING PROPULSION
Semester Hours: 3

Air breathing propulsion systems with emphasis on gas turbine engines for air-and rotor-craft. Includes thermodynamic power cycles, components design, and engine performance analysis. Incorporates a turbine engine design and realization team project. Prerequisite: MAE 343.

MAE 444 - INTRO TO ELECTRIC PROPULSION
Semester Hours: 3

Elements of electrically-driven rocket propulsion for applications from low earth orbit to the outer planets will be discussed. The physics of ionizing and heating gases and plasmas for electrothermal, electrostatic and electromagnetic acceleration will be studied. Characteristics of Resistojet, Arcjet, Magnetoplasmadynamic thrusters, Electrothermal, Pulsed plasma, Electrostatic, and Hall thrusters will be covered. Review thruster system performance, power requirements and selection for space missions. Overview of current research efforts, including thruster systems, physics, and performance. Prerequisite: MAE 420.

MAE 449 - AEROSPACE LABORATORY
Semester Hours: 2

Experimental investigation of aerospace structures, airfoils and bodies in subsonic flow, and performance of various aerospace propulsion systems. An experiment design project is included. Concurrent registration in MAE 449L is required.

MAE 450 - INTRO TO HEAT & MASS TRANSFER
Semester Hours: 4

Principles of heat and mass transfer; application of principles to problems in conductive, convective, and radioactive heat transfer and mass transfer; laminar and turbulent flow processes; boiling and condensation; heat exchangers. One credit hour laboratory included. Prerequisites: MAE 283, MAE 311, MAE 341 and (MAE 310 or MAE 330).

MAE 450L - INTRO HEAT & MASS TRANSFER LAB
Semester Hours: 0
MAE 455 - DESIGN OF THERMAL SYSTEMS
Semester Hours: 3
Heat transfer, thermodynamics, and fluid mechanics applied to analysis and design of systems for storage and transport, and exchange of thermal energy. Modeling of thermal equipment, simulation of system performance, optimization of system design, and comprehensive design of thermal systems. Prerequisites: MAE 342 and MAE 450.

MAE 461 - VIBRATIONS ELASTIC SYS
Semester Hours: 3
Formulation of the equations of motion of discrete and continuous systems, analytical and numerical methods of solution, eigenvalue problems and dynamic response. Prerequisite: MAE 488.

MAE 463 - INTERMEDIATE DYNAMICS
Semester Hours: 3
Kinematics and dynamics of particles, system of particles, and rigid-bodies. Variational principles and Langrangian mechanics. Prerequisites: MAE 272 and MAE 488.

MAE 466 - MECH & DSGN MACH ELEMENT
Semester Hours: 3
Detailed design and selection of machine elements such as gears, shafts, and bearings. Analysis of stresses and deformations under combined static and dynamic loads, stress concentrations, and fatigue. Prerequisites: MAE 364 and (MAE 370 or CE 370).

MAE 468 - ELEMENTS OF SPACECRAFT DESIGN
Semester Hours: 3
Fundamentals of spacecraft engineering and design. Topics include: orbital mechanics, space environment, attitude determination and control, communications, space structures, thermal control, propulsion and power, and systems and mission design. Prerequisites: MAE 371 and (MAE 272 or CE 272).

MAE 471 - ADV AEROSPACE STR & MTRLs
Semester Hours: 3
Composite materials and applications in aerospace structures including: material types and properties and fabrication techniques, micromechanics, constitutive behavior, and classical laminated plate theory. Introduction to failure concepts, sandwich panels and finite element modeling of 1-and 2-D aerospace structures. Prerequisites: MAE 311 and MAE 371.

MAE 474 - APP MECHANICS OF SOLIDS
Semester Hours: 3
Stresses and strains at a point, theories of failures, stress concentration factors, thick-walled cylinders, torsion of noncircular members, curved beams, unsymmetrical bending, and shear center. Prerequisites: MAE 370 or CE 370.

MAE 477 - EXP TECH SOLID MECHANICS
Semester Hours: 3
Experimental methods to determine stress, strain, displacement, velocity, and acceleration in various media. Theory and laboratory applications of electrical resistance strain gages, brittle coatings, and photo elasticity. Application of transducers and experimental analysis of engineering systems. Prerequisites: MAE 370 or CE 370.

MAE 480 - AIRCRAFT STABILITY & CONTROL
Semester Hours: 3
The stability and control of aerodynamic vehicles. The design of aircraft to obtain good flying characteristics. The complete governing equations and analog solutions of linearized equations. Prerequisites: MAE 430 and MAE 488.

MAE 488 - ANALY ENGINEERING SYSTEM
Semester Hours: 3
Development of mathematical engineering models of physical systems including: mechanical, electrical, and fluid systems and combined systems. Determination of the dynamic response of physical systems. Prerequisites: EE 213, MAE 284 and (MAE 272 or CE 272).

MAE 489 - COMPUTER AIDED ENGR
Semester Hours: 3
Analysis of design of structural, thermal, and dynamical systems using finite element and finite difference computer programs. Practical guidelines for discrete modeling; analysis of modeling errors. Comparison of exact and approximate solutions to boundary value problems. Prerequisites: MAE 370 or CE 370 and MAE 284 w/concurrency.
MAE 490 - INTRO TO ENGINEERING DESIGN  
Semester Hours: 3  
Application of basic design principles and concepts. Design methodology, decision making, creativity, product liability, human factors, patents, ethics, technical writing, and others. Team design projects. Prerequisites: ISE 321, MAE 310, MAE 311, MAE 341, MAE 370, (MAE 364 & MAE 378 OR MAE 200 & MAE 371).

MAE 491 - PRODUCT REALIZATION  
Semester Hours: 3  
Senior Capstone Course Option. Students work on a team design project with a focus on the fabrication, assembly, testing, refinement, and delivery of a product developed according to customer requirements. Oral presentation and written detailed documentation of the product will also be completed. Prerequisites: MAE 490.

MAE 492 - MISSION DESIGN & DEVELOPMENT  
Semester Hours: 3  
Senior Capstone Course Option. Students work on design teams to develop missions of interest to NASA, DoD and industry. Includes defining the mission architecture and associated vehicles and components required to meet the customer requirements. Prerequisites: MAE 490.

MAE 493 - ROCKET DESIGN  
Semester Hours: 3  
Senior Capstone Course Option. Design, build, test and fly a high-powered rocket with a payload to a specified altitude. Students work on multi-disciplinary teams to design payloads, avionics, recovery systems, structures and other sub-systems and then integrate them into the final vehicle. Prerequisites: MAE 490.

MAE 494 - AIRCRAFT DESIGN  
Semester Hours: 3  
Senior Capstone Course Option. Design, build, and test an unmanned aircraft to meet specified requirements. Students work on multi-disciplinary teams. Systems engineering aspects including simulation, fabrication, integration, scheduling and cost estimation are also emphasized.

MAE 495 - SEL TOPICS: MECH & AEROSPACE EG  
Semester Hours: 1-4

MAE 496 - IND STUDY: MECH & AEROSPACE EG  
Semester Hours: 1-4

MAE 499 - UNDERGRADUATE THESIS  
Semester Hours: 3  
Required for students completing an Honors Program Bachelors Thesis. Senior standing and permission of thesis advisor required.

**Mechanical Engineering (ME)**

ME 425 - DESIGN OF MACHINE ELEMENTS/A&M  
Semester Hours: 3

ME 497 - Mechanical Engr Internship  
Semester Hours: 1-3

Active involvement in an engineering project in an engineering enterprise, professional organization or government agency that has particular interest and relevance to the student. Junior/senior standing and approval of Engineering Faculty Advisor.

**Military Science (MIL)**

MIL 101 - MILITARY SCIENCE I  
Semester Hours: 2

MIL 101L - LABORATORY  
Semester Hours: 0

MIL 102 - MILITARY SCIENCE I  
Semester Hours: 2
MIL 102L - LABORATORY
Semester Hours: 0

MIL 201 - MILITARY SCIENCE II
Semester Hours: 2

MIL 201L - LABORATORY
Semester Hours: 0

MIL 202 - MILITARY SCIENCE II
Semester Hours: 2

MIL 202L - LABORATORY
Semester Hours: 0

MIL 206 - LEADER'S TRAINING COURSE
Semester Hours: 6

MIL 301 - MILITARY SCIENCE III
Semester Hours: 3

MIL 301L - LABORATORY
Semester Hours: 0

MIL 302 - MILITARY SCIENCE III
Semester Hours: 3

MIL 302L - LABORATORY
Semester Hours: 0

MIL 401 - MILITARY SCIENCE IV
Semester Hours: 3

MIL 401L - LABORATORY
Semester Hours: 0

MIL 402 - MILITARY SCIENCE IV
Semester Hours: 3

MIL 402L - LABORATORY
Semester Hours: 0

MIL 498 - MILITARY SCIENCE-VA/A&M
Semester Hours: 2

MIL 499 - MILITARY SCIENCE-VB/A&M
Semester Hours: 2

Music (MU)

MU 100 - INTRO TO MUSIC LITERATURE
Semester Hours: 3

Basic music appreciation. Exploration of ideas and issues in various types of western music through reading, listening, and discussion. Offered every semester.

MU 102 - INTRODUCTION TO WORLD MUSIC
Semester Hours: 3

Exploration of ideas and issues in various types of non-Western music through reading, listening, and discussion. Includes optional travel abroad. Offered summer semesters only.
MU 106 - INTRO TO MUSIC TECHNOLOGY  
Semester Hour: 1  
Introduction to Music Technology provides students with an overview of the technical and scientific aspects of music such as: acoustics, music psychology/sociology, and modern electronics. There will be particular emphasis on the use of electronic devices, MIDI and computer software to facilitate recording, playback, composition, storage, performance and analysis. Offered Fall and Spring semesters only.

MU 108 - INTRODUCTION TO MUSIC THEORY  
Semester Hours: 3  
Music fundamentals presented in a practical way for students who have no musical training as well as for majors/minors with limited theory knowledge. Mechanical aspects of clefs, notation, scales, intervals, chords, and rhythm with some aural skills, and practice in writing and harmonizing melodies. For students who expect to major or minor in music, this course may not be taken for degree credit. Offered Summer and Fall semesters only.

MU 110 - INTRO ARTS MANAGEMENT  
Semester Hours: 3  
Designed to explore arts management and administration, focusing primarily on non-profit considerations, but also addressing commercial activities in the arts.

MU 120 - BEGINNING CLASS VOICE  
Semester Hour: 1  
This course is designed to aid beginning singers in learning the fundamentals of solo singing.

MU 130 - PIANO CLASS  
Semester Hour: 1  
Techniques of performance, note reading, and basic musicianship.

MU 131 - PIANO CLASS II  
Semester Hour: 1

MU 140 - BEGINNING GUITAR CLASS  
Semester Hour: 1  
The course objective is to provide basic guitar instruction for students who have had little or no experience playing the guitar. The course will cover note reading, posture, chords, strumming patterns, simple arpeggios, scales, and simple to intermediate solo playing.

MU 199 - MUSIC FORUM  
Semester Hours: 0  
Concert attendance is an indispensable aspect of a student's music education. Attendance requirements for this course include Thursday morning Music Forums as well as the number of formal concerts specified in the syllabus.

MU 201 - MUSIC THEORY I  
Semester Hours: 3  
Fundamentals of basic musicianship through practical as well as theoretical studies. Development of skills in written harmony and analysis. Appropriate Musicianship skills (e.g. MU 203) to be taken concurrently throughout theory program. Prerequisites: The approval of instructor or department chair. Offered Spring semesters only.

MU 202 - MUSIC THEORY II  
Semester Hours: 3  
Continuation of MU 201. Offered Fall semesters only. Prerequisites: MU 201 and MU 203.

MU 203 - MUSICIANSHIP SKILLS I  
Semester Hour: 1  
To be taken concurrently with MU 201 and designed to complement written studies. Exercises in sight singing using solfege, numbers or other systems. Basic conducting patterns, rhythmic execution and melodic, harmonic, and rhythmic dictation. Prerequisites: Approval of instructor or department chair. Offered Spring semesters only.

MU 204 - MUSICIANSHIP SKILLS II  
Semester Hour: 1  
Continuation of MU 203. Offered Fall semesters only. Prerequisites: MU 201 and MU 203.
MU 205 - JAZZ THEORY  
Semester Hours: 2

This course serves as an introduction to the theoretical analysis of jazz harmony, with an emphasis on styles from the bebop era and later. Offered every other Fall semester. Prerequisites: MU 201.

MU 207 - MUSIC TECHNOLOGY I  
Semester Hours: 3

Students will learn the basics of using a computer interface to create and edit music, using a software MIDI sequencer and Digital Audio Workstation. Students will learn the basics of MIDI sequencing and music production. Prerequisites: MU 106.

MU 208 - MUSIC TECHNOLOGY II  
Semester Hours: 3

Students will learn advanced techniques in digital audio production, including (but not limited to): Advanced MIDI sequencing, audio sampling, and production/mastering. Prerequisites: MU 106, MU 207.

MU 301 - THEORY OF MUSIC III  
Semester Hours: 3

A study on chromatic harmony and a continuation of the studies of MU 201 and MU 202. Prerequisites: MU 202 and MU 204.

MU 302 - MUSICAL MATLS OF MODERN ERA  
Semester Hours: 3

Systems of tonal organization, compositional procedures, terminology, and analytical methods that related to music since 1900. Offered every other Fall semester only. Prerequisites: MU 301 and MU 303 and MU 304.

MU 303 - MUSICIANSHIP SKILLS III  
Semester Hour: 1

Continuation of MU 204. Offered Spring semesters only. Prerequisites: MU 202 and MU 204.

MU 305 - MUSIC TECHNOLOGY I  
Semester Hours: 3

This course will focus primarily on analogue and digital audio systems setup and implementation. Mixing consoles, amplifiers, loudspeakers, microphones, keyboards, playback equipment, processing, cabling, configuration, computer hardware and software will be discussed and demonstrated in depth. Prerequisite: MU 106.

MU 306 - MUSIC TECHNOLOGY  
Semester Hours: 3

An exploration of music technology hardware and software, including and overview of acoustics, MIDI and digital audio data structures, and an introduction to multimedia authoring. Offered every other Spring semester only. Prerequisites: MU 106 and EE 100.

MU 311 - HISTORY OF MUSIC I  
Semester Hours: 3

Focus on music as an art in western civilization to 1750. Representative musical works and style. Understanding of musical concepts in view of historical background and cultural context. Offered Fall semesters only. Prerequisites: MU 100 and MU 301.

MU 312 - HISTORY OF MUSIC II  
Semester Hours: 3

Focus on music as an art in western civilization from 1750 to the present. Representative musical works and style. Understanding of musical concepts in view of historical background and cultural context. Offered Spring semesters only. Prerequisites: MU 100 and MU 301.

MU 313 - SURVEY OF CHURCH MUSIC  
Semester Hours: 3

Explores Christian music from historical and musical perspectives. Prerequisites: MU 100 and MU 301.

MU 314 - THE BEATLES  
Semester Hours: 3

The purpose of this course is to familiarize the student with the music, lyrics, recordings, personal and public lives, production techniques, career strategy, social ramifications, and technological impact of the musical group known as The Beatles. The course will provide the student with an appreciation for the music itself, and a broader comprehension of the social, economic, political, and cultural upheavals that gave rise to the musical trends of the Sixties.
MU 316 - HIST & APPRECIATION OF JAZZ
Semester Hours: 3

This course is designed to explore the history and development of jazz as an art form, from its origins as popular music to its evolution into an Art Music. Improvisation will be explained and explored in the context of the different styles of jazz. The course will focus on understanding through listening to jazz. Every other spring semester only. Prerequisite: MU 100.

MU 317 - JAZZ ARRANGING
Semester Hours: 2

This course provides the student with instruction in arranging for small and large jazz ensembles, both instrumental and vocal. Offered every other Spring semester only. Prerequisite: MU 205.

MU 320 - PIANO PEDAGOGY
Semester Hours: 2

Materials, techniques, and practices in teaching beginners and students through lower advanced grades of piano. Practical experience. Offered upon demand. Prerequisite: approval of instructor.

MU 321 - PIANO PEDAGOGY II
Semester Hours: 2

An examination of relevant methods in piano pedagogy and technique for all levels of instruction. The course will also assess the historical achievements made by previous pedagogues in the field of piano pedagogy. Prerequisite: MU 320.

MU 322 - DICTION FOR SINGERS
Semester Hours: 2

Intended as an overview for vocal and choral students who wish to learn the diction requirements for singing in Latin, Italian, German, French, and English. Offered every Fall semester only. Prerequisite: MUA 111.

MU 325 - CONDUCTING
Semester Hours: 2

Basic techniques of choral and instrumental conducting. Offered Fall semesters only. Prerequisite: MU 301.

MU 360 - CONDUCTING/OAKWOOD
Semester Hours: 2

MU 399 - SPECIAL TOPICS IN MUSIC
Semester Hours: 3

Special topics in music. Focus and emphasis of topics announced in advance. Offered upon demand.

MU 401 - FORM AND ANALYSIS
Semester Hours: 2

Musical forms and analysis. Offered every other Fall semester only. Prerequisites: MU 303 and 312.

MU 402 - CHURCH MUSIC METDS, MATRL & AD
Semester Hours: 3

Church Music Methods, Materials, and Administration. Prerequisite: MU 301.

MU 404 - MUSIC TECHNOLOGY INDIV PROJECT
Semester Hour: 1

Three-semester sequence for students enrolled in music technology majors and minors. Students will create individual projects in MIDI, sound creation and editing, and multimedia. Prerequisite: MU 306.

MU 406 - INTERNSHIP IN MUSIC TECHNOLOGY
Semester Hours: 3

An internship of eight hours per week working in the music technology industry. Offered upon demand. Prerequisite: MU 306.

MU 407 - INTERNSHIP MUSIC BUSINESS
Semester Hours: 3

Internship in Music Business. Prerequisites: MU 100 and MU 110 and MU 301 and MKT 301 and MGT 301 and FiN 410.
MU 408 - INTERNSHIP CHURCH MUSIC
Semester Hours: 3
An internship of nine hours per week working in church music. Prerequisites: MU 100 and MU 301 and MU 313 and MU 402 and MUE 328.

MU 409 - INTERNSHIP GRP PIANO PEDAGOGY
Semester Hour: 1
An internship of three hours per week working with an approved group piano program. Prerequisites: MU 100 and MU 321 and MU 420 and MUE 328.

MU 410 - INTERNSHIP INDIVID PIANO PEDAG
Semester Hours: 3
An internship of nine hours per week working with a local piano teacher. Prerequisites: MU 100 and MU 321 and MU 420 and MUE 328.

MU 411 - INTNSHIP INDVL PIANO PEDAGOGY
Semester Hours: 3
Courses of study and activity developed by the student and submitted to music faculty for approval. Projects to reinforce learning and performance experiences. May be repeated, but no more than two hours count toward degree requirements. Offered upon demand. Prerequisites: MU 100 and MU 321 and MU 420 and MUE 328.

MU 416 - ORCHESTRATION
Semester Hours: 2
Instruments of the band and orchestra, their ranges, transpositions, and capabilities. Practical experience in arranging for instruments. Offered every other Fall semester only. Prerequisite: MU 302.

MU 420 - PIANO LITERATURE
Semester Hours: 2
Music for string keyboard instruments from the pre-pianoforte period to the present. Representative works from all periods. Offered upon demand. Prerequisites: MU 302 and MU 304 and MU 312.

MU 425 - ADVANCED CONDUCTING
Semester Hours: 2
Review of basic conducting patterns. Emphasis on communication as the role of the conductor. Detailed score preparation. Offered every other Spring semester only. Prerequisite: MU 325.

MU 440 - STUDIO INSTR-VOICE
Semester Hours: 0.5

**Music Applied (MUA)**

MUA 111 - STUDIO INSTR-VOICE
Semester Hour: 1
For non-music majors, music minors, and music majors' secondary instrument.

MUA 115 - STUDIO INSTR-VOICE
Semester Hour: 1.5
For aspiring music majors who have not yet been accepted as music majors. Prerequisite: permission of instructor.

MUA 121 - STUDIO INSTR IN ORGAN
Semester Hour: 1
For non-music majors, music minors, and music majors' secondary instrument.

MUA 125 - STUDIO INSTR IN ORGAN
Semester Hour: 1.5
For aspiring music majors who have not yet been accepted as music majors. Prerequisite: permission of instructor.

MUA 131 - STUDIO INSTR-PIANO
Semester Hour: 1
For non-music majors, music minors, and music majors' secondary instrument.
MUA 135 - STUDIO INSTR-PIANO  
Semester Hour: 1.5  
For aspiring music majors who have not yet been accepted as music majors. Prerequisite: permission of instructor.

MUA 141 - STUDIO INSTR-GUITAR  
Semester Hour: 1  
For non-music majors, music minors, and music majors' secondary instrument.

MUA 145 - STUDIO INSTR-GUITAR  
Semester Hour: 1.5  
For aspiring music majors who have not yet been accepted as music majors. Prerequisite: permission of instructor.

MUA 151 - STUDIO INSTR-STRINGS  
Semester Hour: 1  
For non-music majors, music minors, and music majors' secondary instrument.

MUA 155 - STUDIO INSTR-STRINGS  
Semester Hour: 1.5  
For aspiring music majors who have not yet been accepted as music majors. Prerequisite: permission of instructor.

MUA 158 - STUDIO INSTR-STRINGS  
Semester Hour: 1  
For secondary instrument, instrumental music education students.

MUA 159 - STUDIO INSTR-STRINGS  
Semester Hour: 1  
For secondary instrument, instrumental music education students.

MUA 161 - STUDIO INSTR-WOODWINDS  
Semester Hour: 1  
For non-music majors, music minors, and music majors' secondary instrument.

MUA 165 - STUDIO INSTR-WOODWINDS  
Semester Hour: 1.5  
For aspiring music majors who have not yet been accepted as music majors. Prerequisite: permission of instructor.

MUA 171 - STUDIO INSTR-BRASS  
Semester Hour: 1  
For non-music majors, music minors, and music majors' secondary instrument.

MUA 175 - STUDIO INSTR-BRASS  
Semester Hour: 1.5  
For aspiring music majors who have not yet been accepted as music majors. Prerequisite: permission of instructor.

MUA 181 - STUDIO INSTR-PERCUSSION  
Semester Hour: 1  
For non-music majors, music minors, and music majors' secondary instrument.

MUA 185 - STUDIO INSTR-PERCUSSION  
Semester Hour: 1.5  
For aspiring music majors who have not yet been accepted as music majors. Prerequisite: permission of instructor.

MUA 191 - STUDIO INSTR-COMPOSITION  
Semester Hour: 1  
For aspiring music majors who have not yet been accepted as music majors. Prerequisite: permission of instructor.

MUA 195 - STUDIO INSTR-COMPOSITION  
Semester Hour: 1.5  
For aspiring music majors who have not yet been accepted as music majors. Prerequisite: permission of instructor.
MUA 211 - STUDIO INSTR-VOICE  
Semester Hour: 1.5  
For music majors' principal instrument. Prerequisite: MUA 111.

MUA 215 - STUDIO INSTR-VOICE  
Semester Hours: 2  
For music majors' principal instrument.

MUA 217 - STUDIO INSTRUCTION IN VOICE  
Semester Hours: 2  
For music majors' principal instrument.

MUA 218 - STUDIO INSTRUCTION IN VOICE  
Semester Hours: 2  
For music majors' principal instrument.

MUA 219 - STUDIO INSTRUCTION IN VOICE  
Semester Hours: 2  
For music majors' principal instrument.

MUA 221 - STUDIO INSTR-ORGAN  
Semester Hour: 1.5  
For music majors' principal instrument. Prerequisite: MUA 121.

MUA 223 - STUDIO INSTR-ORGAN  
Semester Hour: 1.5  
For music majors' principal instrument.

MUA 226 - STUDIO INSTRUCTION-ORGAN  
Semester Hours: 2  
For music majors' principal instrument.

MUA 227 - STUDIO INSTRUCTION-ORGAN  
Semester Hours: 2  
For music majors' principal instrument.

MUA 228 - STUDIO INSTRUCTION-ORGAN  
Semester Hours: 2  
For music majors' principal instrument.

MUA 229 - STUDIO INSTRUCTION-ORGAN  
Semester Hours: 2  
For music majors' principal instrument.

MUA 231 - STUDIO INSTR-PIANO  
Semester Hour: 1.5  
For music majors' principal instrument. Prerequisite: MUA 131.

MUA 236 - STUDIO INSTRUCTION-PIANO  
Semester Hours: 2  
For music majors' principal instrument.

MUA 237 - STUDIO INSTRUCTION-PIANO  
Semester Hours: 2  
For music majors' principal instrument.

MUA 238 - STUDIO INSTRUCTION-PIANO  
Semester Hours: 2  
For music majors' principal instrument.
MUA 239 - STUDIO INSTRUCTION-PIANO
Semester Hours: 2
For music majors' principal instrument.

MUA 241 - STUDIO INSTR-GUITAR
Semester Hour: 1.5
For music majors' principal instrument. Prerequisite: MUA 141.

MUA 246 - STUDIO INSTR-GUITAR
Semester Hours: 2
For music majors' principal instrument.

MUA 247 - STUDIO INSTR-GUITAR
Semester Hours: 2
For music majors' principal instrument.

MUA 248 - STUDIO INSTR-GUITAR
Semester Hours: 2
For music majors' principal instrument.

MUA 249 - STUDIO INSTR-GUITAR
Semester Hours: 2
For music majors' principal instrument.

MUA 251 - STUDIO INSTR-STRINGS
Semester Hour: 1.5
For music majors' principal instrument. Prerequisite: MUA 151.

MUA 256 - STUDIO INSTR-STRINGS
Semester Hours: 2
For music majors' principal instrument.

MUA 257 - STUDIO INSTR-STRINGS
Semester Hours: 2
For music majors' principal instrument.

MUA 258 - STUDIO INSTR-STRINGS
Semester Hours: 2
For music majors' principal instrument.

MUA 259 - STUDIO INSTR-STRINGS
Semester Hours: 2
For music majors' principal instrument.

MUA 261 - STUDIO INSTR-WOODWINDS
Semester Hour: 1.5
For music majors' principal instrument. Prerequisite: MUA 161.

MUA 268 - STUDIO INSTR-WOODWINDS
Semester Hours: 2
For music majors' principal instrument.

MUA 269 - STUDIO INSTR-WOODWINDS
Semester Hours: 2
For music majors' principal instrument.

MUA 271 - STUDIO INSTR-BRASS
Semester Hour: 1.5
For music majors' principal instrument. Prerequisite: MUA 171.
MUA 276 - STUDIO INSTR-BRASS  
Semester Hours: 2  
For music majors' principal instrument.

MUA 277 - STUDIO INSTR-BRASS  
Semester Hours: 2  
For music majors' principal instrument.

MUA 278 - STUDIO INSTR-BRASS  
Semester Hours: 2  
For music majors' principal instrument.

MUA 279 - STUDIO INSTR-BRASS  
Semester Hours: 2  
For music majors' principal instrument.

MUA 281 - STUDIO INSTR-PERCUSSION  
Semester Hour: 1.5  
For music majors' principal instrument. Prerequisite: MUA 181.

MUA 286 - STUDIO INSTR-PERCUSSION  
Semester Hours: 2  
For music majors' principal instrument.

MUA 287 - STUDIO INSTR-PERCUSSION  
Semester Hours: 2  
For music majors' principal instrument.

MUA 288 - STUDIO INSTR-PERCUSSION  
Semester Hours: 2  
For music majors' principal instrument.

MUA 289 - STUDIO INSTR-PERCUSSION  
Semester Hours: 2  
For music majors' principal instrument.

MUA 291 - STUDIO INSTR-COMPOSITION  
Semester Hour: 1.5  

MUA 311 - STUDIO INSTR-VOICE  
Semester Hour: 1.5  
For music majors principal instrument. Prerequisite: MUA 211.

MUA 321 - STUDIO INSTR-ORGAN  
Semester Hour: 1.5  
For music majors principal instrument. Prerequisite: MUA 221.

MUA 331 - STUDIO INSTR-PIANO  
Semester Hour: 1.5  
For music majors principal instrument. Prerequisite: MUA 231.

MUA 341 - STUDIO INSTR-GUITAR  
Semester Hour: 1.5  
For music majors principal instrument. Prerequisite: MUA 241.

MUA 351 - STUDIO INSTR-STRINGS  
Semester Hour: 1.5  
For music majors principal instrument. Prerequisite: MUA 251.
MUA 361 - STUDIO INSTR-WOODWINDS
Semester Hour: 1.5
For music majors' principal instrument. Prerequisite: MUA 261.

MUA 371 - STUDIO INSTR-BRASS
Semester Hour: 1.5
For music majors' principal instrument. Prerequisite: MUA 271.

MUA 381 - STUDIO INSTR-PERCUSION
Semester Hour: 1.5
For music majors' principal instrument. Prerequisite: MUA 281.

MUA 411 - STUDIO INSTRUCTION-VOICE
Semester Hour: 1.5
For music majors' principle instrument. Prerequisite: MUA 211.

MUA 416 - STUDIO INSTR-VOICE
Semester Hours: 2
For music majors' principal instrument.

MUA 417 - STUDIO INSTR-VOICE
Semester Hours: 2
For music majors' principal instrument.

MUA 418 - STUDIO INSTR-VOICE
Semester Hours: 2
For music majors' principal instrument.

MUA 419 - STUDIO INSTR-VOICE
Semester Hours: 2
For music majors' principal instrument.

MUA 421 - STUDIO INSTR-ORGAN
Semester Hour: 1.5
For music majors' principle instrument. Prerequisite: MUA 221.

MUA 422 - STUDIO INSTR-ORGAN
Semester Hours: 2
For music majors' principal instrument.

MUA 426 - STUDIO INSTR-ORGAN
Semester Hours: 2
For music majors' principal instrument.

MUA 427 - STUDIO INSTR-ORGAN
Semester Hours: 2
For music majors' principal instrument.

MUA 428 - STUDIO INSTR-ORGAN
Semester Hours: 2
For music majors' principal instrument.

MUA 429 - STUDIO INSTR-ORGAN
Semester Hours: 2
For music majors' principal instrument.

MUA 431 - STUDIO INSTR-PIANO
Semester Hour: 1.5
For music majors' principle instrument. Prerequisite: MUA 231.
MUA 432 - STUDIO INSTR-PIANO  
Semester Hours: 2  
For music majors' principal instrument.

MUA 433 - STUDIO INSTR-PIANO  
Semester Hours: 2  
For music majors' principal instrument.

MUA 434 - STUDIO INSTR-PIANO  
Semester Hours: 2  
For music majors' principal instrument.

MUA 435 - STUDIO INSTR-PIANO  
Semester Hours: 2  
For music majors' principal instrument.

MUA 436 - STUDIO INSTR-PIANO  
Semester Hours: 2  
For music majors' principal instrument.

MUA 437 - STUDIO INSTR-PIANO  
Semester Hours: 2  
For music majors' principal instrument.

MUA 438 - STUDIO INSTR-PIANO  
Semester Hours: 2  
For music majors' principal instrument.

MUA 439 - STUDIO INSTR-PIANO  
Semester Hours: 2  
For music majors' principal instrument.

MUA 441 - STUDIO INSTR-GUITAR  
Semester Hour: 1.5  
For music majors' principle instrument. Prerequisite: MUA 241.

MUA 445 - STUDIO INSTR-GUITAR  
Semester Hours: 2  
For music majors' principal instrument.

MUA 446 - STUDIO INSTR-GUITAR  
Semester Hours: 2  
For music majors' principal instrument.

MUA 447 - STUDIO INSTR-GUITAR  
Semester Hours: 2  
For music majors' principal instrument.

MUA 448 - STUDIO INSTR-GUITAR  
Semester Hours: 2  
For music majors' principal instrument.

MUA 449 - STUDIO INSTR-GUITAR  
Semester Hours: 2  
For music majors' principal instrument.

MUA 451 - STUDIO INSTR-STRINGS  
Semester Hour: 1.5  
For music majors' principle instrument. Prerequisite: MUA 251.
MUA 452 - STUDIO INSTR-STRINGS  
Semester Hours: 2
For music majors' principal instrument.

MUA 453 - STUDIO INSTR-STRINGS  
Semester Hours: 2
For music majors' principal instrument.

MUA 454 - STUDIO INSTR-STRINGS  
Semester Hours: 2
For music majors' principal instrument.

MUA 455 - STUDIO INSTR-STRINGS  
Semester Hours: 2
For music majors' principal instrument.

MUA 456 - STUDIO INSTR-STRINGS  
Semester Hours: 2
For music majors' principal instrument.

MUA 457 - STUDIO INSTR-STRINGS  
Semester Hours: 2
For music majors' principal instrument.

MUA 458 - STUDIO INSTR-STRINGS  
Semester Hours: 2
For music majors' principal instrument.

MUA 459 - STUDIO INSTR-STRINGS  
Semester Hours: 2
For music majors' principal instrument.

MUA 461 - STUDIO INSTR-WOODWINDS  
Semester Hour: 1.5
For music majors' principle instrument. Prerequisite: MUA 271.

MUA 462 - STUDIO INSTR-WOODWINDS  
Semester Hours: 2
For music majors' principal instrument.

MUA 467 - STUDIO INSTR-WOODWINDS  
Semester Hours: 2
For music majors' principal instrument.

MUA 468 - STUDIO INSTR-WOODWINDS  
Semester Hours: 2
For music majors' principal instrument.

MUA 469 - STUDIO INSTR-WOODWINDS  
Semester Hours: 2
For music majors' principal instrument.

MUA 471 - STUDIO INSTR-BRASS  
Semester Hour: 1.5
For music majors' principle instrument. Prerequisite: MUA 271.

MUA 473 - STUDIO INSTR-BRASS  
Semester Hours: 2
For music majors' principal instrument.
MUA 474 - STUDIO INSTR-BRASS
Semester Hours: 2
For music majors' principal instrument.
MUA 475 - STUDIO INSTR-BRASS
Semester Hours: 2
For music majors' principal instrument.
MUA 476 - STUDIO INSTR-BRASS
Semester Hours: 2
For music majors' principal instrument.
MUA 477 - STUDIO INSTR-BRASS
Semester Hours: 2
For music majors' principal instrument.
MUA 478 - STUDIO INSTR-BRASS
Semester Hours: 2
For music majors' principal instrument.
MUA 479 - STUDIO INSTR-BRASS
Semester Hours: 2
For music majors' principal instrument.
MUA 481 - STUDIO INSTR-PERCUSSION
Semester Hour: 1.5
For music majors' principal instrument. Prerequisite: MUA 281.
MUA 482 - STUDIO INSTR-PERCUSSION
Semester Hours: 2
For music majors' principal instrument.
MUA 483 - STUDIO INSTR-PERCUSSION
Semester Hours: 2
For music majors' principal instrument.
MUA 484 - STUDIO INSTR-PERCUSSION
Semester Hours: 2
For music majors' principal instrument.
MUA 485 - STUDIO INSTR-PERCUSSION
Semester Hours: 2
For music majors' principal instrument.
MUA 486 - STUDIO INSTR-PERCUSSION
Semester Hours: 2
For music majors' principal instrument.
MUA 487 - STUDIO INSTR-PERCUSSION
Semester Hours: 2
For music majors' principal instrument.
MUA 488 - STUDIO INSTR-PERCUSSION
Semester Hours: 2
For music majors' principal instrument.
MUA 489 - STUDIO INSTR-PERCUSSION
Semester Hours: 2
For music majors' principal instrument.
MUA 491 - STUDIO INSTR-COMPOSITION  
Semester Hour: 1.5

For music majors' principal instrument.

MUA 498 - SENIOR RECITAL  
Semester Hour: 1.5

Represents the final semester of studio instruction on the primary instrument for all music majors except those pursuing the performance emphasis, who typically perform this recital as juniors. The recital must include a minimum of 30 minutes of music. The student must pass a recital jury at least two weeks before the scheduled recital performance.

MUA 499 - PERFORMANCE EMPHASIS RECITAL  
Semester Hour: 1.5

For music majors pursuing the performance emphasis only. The Performance Emphasis Recital represents the final semester of studio instruction on the primary instrument for music majors pursuing the performance emphasis. The recital must include a minimum of 60 minutes of music. The student must pass a recital jury at least two weeks before the scheduled recital performance.

Music Education (MUE)

MUE 215 - MUSIC FOR YOUNG CHILD  
Semester Hours: 3

For elementary and special education teachers, recreational therapists, church school, or prospective teachers not trained in music. Preparation to teach children ages 3-12 through experience in singing, reading, planning, and presentation. Elementary education majors using music as their second area of study must select MUE 326 rather than MUE 215 for their GER.

MUE 321 - CHORAL/INSTRUMENTAL DIR OBSERV  
Semester Hour: 1

In this course, music education students will observe band or choral programs outside their primary area: choral students in an instrumental program and instrumental students in a choral program. The student will observe and assist the band or choir director, gaining an experience in working with ensembles outside the student's primary area. Prerequisite: MU 325.

MUE 328 - TEACHING GENERAL MUSIC  
Semester Hours: 3

Materials and methods. Emphasis on developing teaching competencies in general music, with an emphasis on the elementary school level. Prerequisite: MU 301.

MUE 428 - VOCAL/CHORAL METH SEC SCH  
Semester Hours: 3

Includes basic principles of breathing, posture, and resonance. Diction guidelines for Latin, Italian, German, and French; repertoire for both vocal and choral students; organizational methods for leading choral programs; rehearsal techniques; classroom management skills. Prerequisites: MUE 326 and MUE 327 and MU 425.

MUE 429 - ORG & DIR INSTRU GRP SEC SCH  
Semester Hours: 3

Reperotoire, procedures for administering and teaching school bands, orchestras and instrumental ensembles. Prerequisites: MUE 326 and MUE 427 and MU 425.

Music Jazz (MUJ)

MUJ 131 - JAZZ STUDIO INSTR-PIANO  
Semester Hour: 1

For non-music majors, music minors, and music majors' secondary instrument.

MUJ 141 - JAZZ STUDIO INSTR-GUITAR  
Semester Hour: 1

For non-music majors, music minors, and music majors' secondary instrument.
MUJ 151 - JAZZ STUDIO INSTRUCTION-BASS
Semester Hour: 1
For non-music majors, music minors, and music majors’ secondary instrument.

MUJ 152 - JAZZ STUDIO INSTR-BASS
Semester Hour: 1.5

MUJ 161 - JAZZ STUDIO INSTR-WOODWINDS
Semester Hour: 1
For non-music majors, music minors, and music majors’ secondary instrument.

MUJ 171 - JAZZ STUDIO INSTR-BRASS
Semester Hour: 1
For non-music majors, music minors, and music majors’ secondary instrument.

MUJ 181 - JAZZ STUDIO INST-PERCUSSION
Semester Hour: 1
For non-music majors, music minors, and music majors’ secondary instrument.

MUJ 205 - JAZZ THEORY
Semester Hours: 2
This course serves as an introduction to the theoretical analysis of jazz harmony, with an emphasis on styles from the bebop era and later. Offered every other Fall semester. Prerequisites: MU 201.

MUJ 231 - JAZZ STUDIO INSTR-PIANO
Semester Hour: 1.5
For music majors' principal instrument.

MUJ 237 - STUDIO INSTR: JAZZ PIANO
Semester Hours: 2

MUJ 241 - JAZZ STUDIO INST-GUITAR
Semester Hour: 1.5
For music majors' principal instrument.

MUJ 251 - JAZZ STUDIO INSTRUCTION-BASS
Semester Hour: 1.5
For music majors' principal instrument.

MUJ 261 - JAZZ STUDIO INSTR-WOODWINDS
Semester Hour: 1.5
For music majors' principal instrument.

MUJ 265 - JAZZ STUDIO INSTR-WOODWINDS
Semester Hours: 2
For music majors' principal instrument.

MUJ 271 - JAZZ STUDIO INSTR-BRASS
Semester Hour: 1.5
For music majors' principal instrument.

MUJ 281 - JAZZ STUDIO INSTR-PERCUSSION
Semester Hour: 1.5
For music majors' principal instrument.

MUJ 308 - JAZZ IMPROVISATION I
Semester Hours: 2

MUJ 309 - JAZZ IMPROVISATION II
Semester Hours: 2
MUJ 331 - STUDIO INSTR-PIANO  
Semester Hour: 1.5  
For music majors principal instrument. Prerequisite: MUJ 231.

MUJ 341 - STUDIO INSTR-GUITAR  
Semester Hour: 1.5  
For music majors principal instrument. Prerequisite: MUJ 241.

MUJ 351 - STUDIO INSTR-BASS  
Semester Hour: 1.5  
For music majors principal instrument. Prerequisite: MUJ 251.

MUJ 361 - STUDIO INSTR-WOODWINDS  
Semester Hour: 1.5  
For music majors principal instrument. Prerequisite: MUJ 261.

MUJ 371 - STUDIO INSTR-BRASS  
Semester Hour: 1.5  
For music majors principal instrument. Prerequisite: MUJ 271.

MUJ 381 - STUDIO INSTR-PERCUSSION  
Semester Hour: 1.5  
For music majors principal instrument. Prerequisite: MUJ 281.

MUJ 431 - JAZZ STUDIO INSTR-PIANO  
Semester Hours: 2  
For music majors’ principal instrument.

MUJ 441 - JAZZ STUDIO INSTR-GUITAR  
Semester Hours: 2  
For music majors’ principal instrument.

MUJ 461 - JAZZ STUDIO INSTR-WOODWINDS  
Semester Hours: 2  
For music majors’ principal instrument.

MUJ 471 - JAZZ STUDIO INST-BRASS  
Semester Hours: 2  
For music majors’ principal instrument.

MUJ 481 - JAZZ STUDIO INSTR-PERCUSSION  
Semester Hours: 2  
For music majors’ principal instrument.

MUJ 498 - SENIOR JAZZ RECITAL  
Semester Hour: 1.5  
For music majors pursuing the jazz emphasis only. The Senior Jazz Recital represents the final semester of studio instruction on the primary jazz instrument for music majors pursuing the jazz emphasis. The recital must include a minimum of 30 minutes of music. The student must pass a recital jury at least two weeks before the scheduled performance.

**Nursing (NUR)**

NUR 000 - NURSING-CREDIT BY VALIDATION  
Semester Hours: 4-40

NUR 001 - NURSING TESTING BLOCK  
Semester Hours: 0

Nursing Testing Block is a common block of time for students in different cohorts to take their examinations.
NUR 102 - MULTIDIMENSIONS OF NURSING  
Semester Hours: 3  
This course is designed for the student who has declared nursing as a major. Emphasis will be placed on the role of professional nurses working with clients and other health care professionals. The evolution of nursing as a profession will be examined and the student introduced to the health care delivery system.

NUR 201 - MULTIDIM ASPECTS HL CAREER OPT  
Semester Hours: 3  
This course is designed for the student who wishes to explore a career in the health care professions as a potential career path. Particular emphasis will be placed on the role of health care providers working in partnership with clients to promote health states and prevent disease.

NUR 202 - HEALTHY LIVING LIFESPAN  
Semester Hours: 3  
This class will focus on health and wellness across the lifespan, with an emphasis on promoting healthy living and preventing illness. It is designed to develop health literacy and to identify ways to put healthy ideas into practice. Diverse perceptions and beliefs related to health are explored and strategies to optimize health are presented.

NUR 220 - HEALTH PROMOTION NUR MAJORS  
Semester Hours: 3  
The focus of this class is on health and high-level wellness across the lifespan, with an emphasis on promoting healthy living and preventing illness. Diverse perceptions and beliefs related to health and wellness are explored, and ways to put healthy ideas into practice are applied. Medical terminology to improve healthcare communication is incorporated into the course.

NUR 301 - CONCEPTS IN NURSING  
Semester Hours: 3  
This course will focus on development using concepts and theories basic to the art and science of nursing. Students are introduced to the concepts of communication, teaching/learning, clinical decision making, ethical, legal, nursing history, and philosophy for knowledge development of the discipline. Prerequisites with concurrency: NUR 303, 304, 309, and 311.

NUR 302 - NURSING & HEALTH PROMOTION  
Semester Hours: 3  
Focus on nursing, health, and wellness across the life span. Emphasis on health promotion and prevention of illness. Strategies to optimize health are presented. Perceptions and beliefs related to health, illness, disease, and cultural diversity are explored as are mechanisms for promoting health through politics and the health care delivery system.

NUR 303 - HEALTH ASSESSMENT  
Semester Hours: 3  
Focus on holistic assessment of culturally diverse clients across the life span. Communication & psychomotor skills are developed in clinical laboratory settings with an emphasis on normal findings and health promotion.

NUR 303L - CLINICAL  
Semester Hours: 0

NUR 304 - APP PATHOPHYSIOLOGY LIFESPAN  
Semester Hours: 3  
The course is designed to help the student build on previous knowledge of anatomy and physiology and microbiology. Adaptations and alterations in health status throughout the lifespan are emphasized. Students explore the implications of lifestyle to pathology within a nursing framework, and learn to relate normal body functioning to the pathophysiological changes that occur in, and as a result of disease.

NUR 305 - NUR PROC MENTAL HLTH/ILLNESS  
Semester Hours: 4  
Nursing process in the promotion of psychosocial integrity. Emphasis is on the therapeutic use of self through providing interventions for individuals and groups in a variety of settings. Prerequisites: NUR 310 and NUR 312 and NUR 321.

NUR 305L - CLINICAL  
Semester Hours: 0
NUR 307 - INQRY TO EVIDNC BASED NURS PRC
Semester Hours: 3

This course identifies various modes of inquiry and critical analysis used in the development of nursing science. Explore evidence based models to examine the evidence from a variety of research designs used to formulate nursing decisions. Emphasis is on identifying and synthesizing the best evidence to solve complex health problems in order to deliver safe, competent nursing care to diverse populations. Prerequisites: NUR 310 and NUR 312 and NUR 321.

NUR 308 - NURS CARE ADULTS ALTER HLTH I
Semester Hours: 9

This course focuses on the application of the nursing process in the collaborative nursing management of adult clients experiencing simple to complex physiological health alterations. Clinical experiences provide opportunities for beginning to intermediate clinical reasoning in the acute care environment. The embodiment of professionalism and professional values are emphasized. Prerequisites: NUR 310 and NUR 312 and NUR 321.

NUR 308L - CLINICAL
Semester Hours: 0

NUR 309 - CLINICAL INFORMATICS
Semester Hours: 2

This course is designed to introduce clinical informatics as a tool to improve healthcare systems through safe, ethical, and evidence-based practice. Advances in technology, data management, and decision support software are explored. Competencies in basic computer skills are also included in the course to improve information literacy. Prerequisites with concurrency: NUR 301, 303, 304, and 311.

NUR 310 - PROFESSIONAL PRACTICE NURS I
Semester Hours: 6

This course will begin the process of learning foundational nursing skills to be used in nursing practice. Psychomotor nursing skills needed to assist individuals meet basic human needs will be taught with expectation the student will demonstrate competency in performing skills. Laboratory and clinical experiences are included. Prerequisites: NUR 301, NUR 303, NUR 304, NUR 309, NUR 311.

NUR 310L - CLINICAL
Semester Hours: 0

NUR 311 - CLINICAL CALCULATIONS
Semester Hour: 1

In this course, students will learn to accurately calculate medication dosages. Testing in this course will establish minimal medication calculation proficiency required to progress to the second semester of the nursing program. Prerequisites with concurrency: NUR 301, 304, 303, and 309.

NUR 312 - GERO NURSING CARE
Semester Hours: 3

This course is designed to focus on current health care issues affecting the older adult. Physical, psychological, sociocultural, and spiritual aspects of aging are examined within the context of the family and society. The course applies the nursing process with emphasis on optimal health for the older adult. Prerequisites: NUR 301, 303, 304, 309, and 311. Prerequisite with concurrency: NUR 310 and 321.

NUR 312L - CLINICAL
Semester Hours: 0

This is the clinical component of the Gerontological Nursing Care course. The course will focus on current health care issues affecting the older adult. Physical, psychological, sociocultural, and spiritual aspects of aging are examined within the context of the family and society. The course applies the nursing process with emphasis on optimal health for the older adult.

NUR 321 - PHARMACOLOGY IN NURS
Semester Hours: 3

This course comprises pharmacological concepts incorporating an overview of historical and current issues in drug therapy. Pharmacotherapeutics, pharmacodynamics, pharmacokinetics, contraindications and precautions for prototype drugs for multiple body systems are presented. Major emphasis is placed on nursing management practices using nursing process as well as the nurses’ role in optimizing reliable medication administration. Prerequisites: NUR 301, 303, 304, 309, 311.

NUR 336 - SPIRITUALITY IN NURSING
Semester Hours: 3

Spirituality aspects of client, family and community care are the focus of this course. The course reviews the history of spirituality in nursing care. The nurses’ role in meeting the spiritual needs of clients throughout the lifespan is explored.
NUR 339 - INFO MGMT IN HEALTHCARE
Semester Hours: 3
Provides experience in the use of basic and versatile software programs which have wide applicability within nursing practice and within the students' educational process. Elective, open to all university students. Prerequisite: NUR 410.

NUR 390 - INDEPENDENT STUDY
Semester Hours: 1-4
Individualized independent study of specific nursing problem under sponsorship of a nursing faculty member with special preparation in the field. Elective.

NUR 400 - SPECIAL TOPICS
Semester Hours: 3

NUR 401 - NURS CARE ADULTS ALTER HLTH II
Semester Hours: 4
This course explores the evidence-based collaborative nursing management of clients experiencing complex physiological health alterations. Clinical experiences will provide opportunities for advanced clinical reasoning in the acute and critical care environments. Prerequisites: NUR 305 and NUR 307 and NUR 308.

NUR 401L - CLINICAL
Semester Hours: 0

NUR 402 - POPULATION BASED HLTH CARE
Semester Hours: 3
Promotion of health, prevention of disease in at-risk aggregate populations. Examines complex problems and health care policy. Open to all university students.

NUR 402L - CLINICAL EXPERIENCE
Semester Hours: 0

NUR 403 - FAM CENTER/PARENT-INFANT NUR
Semester Hours: 4
This course explores internal and external factors, which impact the health of the family during the antepartal, intrapartal, postpartal and neonatal periods of childbearing. Emphasis is placed on nursing care of these clients, normal physiology, pathophysiology, psychological and sociocultural needs, and risk identification and reduction. Prerequisites: NUR 305 and NUR 307 and NUR 308 and NUR 321.

NUR 403L - CLINICAL
Semester Hours: 0

NUR 404 - FAMILY-CENTER NUR CARE CHILDR
Semester Hours: 4
This course is designed to introduce the concept of family centered pediatric care that is developmentally appropriate for a culturally diverse population. Clinical experiences in selected agencies. Prerequisites: NUR 301 and NUR 307 and NUR 308 and NUR 321.

NUR 404L - CLINICAL
Semester Hours: 0

NUR 405 - COMMUNITY HEALTH NURS
Semester Hours: 4
The course explores the community as client and teaches concepts and knowledge necessary to promote the health of the public and communities. Emphasis is on community health theory, individual, family, and community assessment, aspects of epidemiology, program planning and evaluation, trends and issues, legislation, ethics, research, health care economics and disaster management. Prerequisites: NUR 401 and NUR 403 and NUR 404.

NUR 405L - CLINICAL EXPERIENCE
Semester Hours: 0

NUR 406 - LEADERSHIP & MGMT IN NURSING
Semester Hours: 3
Describes and analyzes selected theories of management and leadership in health care systems with focus on broadening students’ knowledge base and skills as they relate to entry-level nursing management. Organization structures and dynamics as well as pertinent issues and trends are addressed.
NUR 407 - PROF PRACTICE IN NURSING II  
Semester Hours: 8

The focus of this course is the leadership and management functions of professional nursing. Essential skills are communication, interprofessional collaboration, delegation, coordination, and the application of evidence-based practice models. Clinical experiences will focus on performance of the professional nurse role in a concentrated practicum. Prerequisites: NUR 401 and NUR 403 and NUR 404.

NUR 407L - CLINICAL EXPERIENCE  
Semester Hours: 0

NUR 408 - PROF PRAC IN NURS III SEMINAR  
Semester Hours: 2

The purpose of this class is to facilitate the synthesis of knowledge, the application of critical thinking to decisions about patient care, and to ensure safe and competent nursing practice. Test-taking skills and time management concepts will be applied in preparation of the NCLEX-RN licensure exam. Prerequisites: NUR 407.

NUR 410 - TRANSITION INTO PROFESS ROLES  
Semester Hours: 3

For the registered nurse student, designed to synthesize previous experiences in nursing with selected theoretical knowledge. Examines the multi-dimensional role of the professional nurse in health systems. Through analysis of paradigm case(s) and development of a professional portfolio, the student evaluates his/her professional practice and develops goals designed to guide learning and professional development. Philosophical, social, political, legal, and ethical issues inherent in the practice of professional nursing in health systems. Thirty-two hours of nursing credit for prior learning will be conferred upon successful completion of this transition course.

NUR 411 - THEORETICAL APPL IN PROF NURS  
Semester Hours: 3

Designed for registered nurse students to synthesize knowledge gained from previous nursing experience when analyzing theories, issues and concepts that influence professional nursing practice. Theoretical concepts, which influence critical thinking, are applied to the nursing process. Analysis of normal processes and professional nursing responses to alterations in life processes across the lifespan are examined. Caring for diverse clients is emphasized. Ethical and legal issues which impact the care for client systems are examined when synthesizing theoretical and nursing practice issues.

NUR 412 - CARE FOR AGGREGATES, FAM & POP  
Semester Hours: 7

Designed for registered nurse students to apply theoretical concepts related to primary, secondary, and tertiary care of aggregates. Emphasis is on application of the nursing process in promoting community health for at-risk aggregate populations and is delivered in an on-line format. Course objectives are designed to meet the individual learning needs of the student in delivering and managing care of selected families with emphasis on the aggregate. Prerequisites: NUR 339 and NUR 410.

NUR 412L - CLINICAL EXPERIENCE  
Semester Hours: 0

NUR 413 - NUR LEADERSHIP PROF PRACT  
Semester Hours: 5

4 Course/1 Clinical. Designed for registered nurse students, this course focuses on the development and enhancement of leadership skills for the professional nurse in a variety of culturally diverse health care systems. Exploration of theories related to organizational models, change, and critical thinking; leadership in directing and controlling care; ethical, legal, and political influences on leadership; and enhancing self-awareness of leadership styles. Students are provided opportunities to apply nursing leadership concepts through a case study experience and in a clinical practice setting by conducting a clinical project. Prerequisite: NUR 410.

NUR 414 - HTH ASSESS PRACTICING PROF NUR  
Semester Hours: 3

Lecture/Lab 2 lecture/1 lab for the registered nurse student, the focus is on holistic health assessment of culturally diverse clients across the lifespan. Communication and psychomotor skills are developed in clinical laboratory settings.

NUR 414L - CLINICAL  
Semester Hours: 0

NUR 415 - HONORS DIRECTED RESEARCH  
Semester Hours: 2

This course allows for implementation of the student's research proposal as developed in the Honors section of NUR 307. The focus is on data collection and preliminary data analysis. The seminar format will provide students access to expert researchers.
NUR 416 - HONORS RESEARCH SEMINAR
Semester Hour: 1

The focus of this seminar is completion of final research report, as begun in NUR 307 and NUR 415.

NUR 417 - NURS CARE VUL POP
Semester Hours: 4

This course investigates factors related to increased vulnerability arising from threats to well-being for selected populations. Factors will include individual characteristics and conditions (such as profound and chronic illnesses, genetic factors, health behaviors), those attributable to group identity (such as age or socioeconomic status), and those due to environmental exposures (such as high risk occupations, exposure to toxins and pollution, and occurrences of nature). Students will examine strategies aimed at risk reduction and improvement in disparities in outcomes. Relevant professional and agency/organizational resources are explored. Prerequisite: NUR 410.

NUR 418 - GLOBAL HEALTH: INTERN'L STUDY
Semester Hours: 3

This course will focus on global health concepts and issues, and on selected international health care systems in comparison to the U.S. health care system. These systems will be examined and analyzed in relation to economic, social, cultural, policy, and environmental influences. Culmination of the course will center on international experiences with health care facilities, historical and cultural influences, and policy making bodies in another country. This course is an accepted elective in the nursing program (not all electives are offered each year).

NUR 419 - SCHOLRY INQUIRY IN NURSING PRA
Semester Hours: 3

Focuses on the various modes of inquiry used in the development of nursing science. Emphasis on the critical examination of nursing research including methodologies, utilization, and theoretical bases.

NUR 420 - EVIDENCE BASED NURS PRACTICE
Semester Hours: 3

This course focuses on developing the nurse to be an "evidence user" for the purpose of improving healthcare outcomes. Emphasis is on the critical analysis of evidence to be used in formulating nursing decisions and the design of client care guidelines. Structured for the registered nurse student.

NUR 421 - AC CARE NURS RNBSN
Semester Hours: 3

The nursing process is applied to clients experiencing physiological health alterations requiring complex and collaborative nursing strategies and appropriate resource management. Application experiences are focused in the acute care environment. Prerequisite: NUR 410.

NUR 422 - COMMUNITY HEALTH FOR PRCTNG RN
Semester Hours: 6

4 course/1 clinical. This course is designed for registered nurses to apply theoretical concepts related to primary, secondary, and tertiary care of families and aggregates. Emphasis is on application of the nursing process in promoting community health for at-risk populations. Application activities are designed to meet individual learning needs of the registered nurse student in delivering and managing care of selected families with emphasis on the aggregate. Prerequisite: NUR 410.

NUR 423 - EVID BASED RN
Semester Hours: 3

This course fosters the application of the best clinical evidence into practice in order to promote improvement in healthcare experiences and patient outcomes. Various modes of scientific inquiry used in the development of nursing science are incorporated into a survey of research techniques, methodologies, and ethical concerns. This will enable students to select and evaluate appropriate information relevant to evidence based practice. Students will develop skills in the use of electronic databases to facilitate acquisition of current information. Emphasis is placed on the critical analysis of evidence to be used in formulating nursing decisions and the design of client care guidelines. Prerequisite: NUR 410.

NUR 426 - SPACE LIFE SCIENCES
Semester Hours: 3

Theories and concepts of contemporary issues in health and nursing related to space life sciences.

NUR 427 - INTRODUCTION TO FORENSICS
Semester Hours: 3

This course provides an overview of the field of forensic nursing. Concepts of care for victims and family members of violence, abuse, traumatic accidents, and criminal activity are discussed. Current healthcare practices and medical/legal/ethical issues are reviewed. Elective, open to all university students.
NUR 428 - GERONTOLOGICAL NURSING
Semester Hours: 3

Nursing care of older adults in multiple settings. Issues and trends are incorporated.

NUR 430 - HLTH CARE WKFR:ISS/LDRSH STRAT
Semester Hours: 3

Description and analysis of contemporary issues regarding the health care workforce. Particular focus will be placed on the multifaceted nature of health care workforce shortages. Various models for analysis of workforce issues will be used and strategies being used will be examined. An evaluation of the nurse leader role in creating positive work environments and implementing solutions concludes the student experience.

NUR 434 - PALLIATIVE CARE
Semester Hours: 3

Palliative care is when there is no longer a medical treatment or cure for a physical problem. This palliative care course includes meeting the physical, emotional, social cultural and spiritual needs of individuals and their families. A course focus will be coping, grief, bereavement pain relief and managing living implications for individuals with life-threatening illnesses. There will be recognition of the importance of individuality, vulnerability, and resilience in the quality of living during the dying process.

NUR 437 - NURSING AS A POLITICAL FORCE
Semester Hours: 3

Overview of the legislative process and legislation relative to health care issues. The role of the professional nurse in the political climate is explored. Elective, open to all university students.

NUR 439 - NURSING MEDICAL MISSIONS
Semester Hours: 3

This course will focus on global health and humanitarian concepts and issues, and the nursing care needed to impact those issues. These issues will be examined and analyzed in relation to the mission country's economic, social, cultural, policy and environmental influences. Culmination of the course will center on international experiences with supervised nursing care for a medical mission in another country. This course is an accepted elective in the Nursing program.

Optical Engineering (OPE)

OPE 451 - OPTOELECTRONICS
Semester Hours: 3

Basic concepts for understanding electro-optic devices and systems. Blackbody radiation; light sources; quantum and thermal detector, noise in detectors; optical heterodyning; acoustooptic, magneto-optic, and electro-optic modulation. (Same as EE 451) Prerequisites: EE 307 and EE 315.

OPE 453 - LASER SYSTEMS
Semester Hours: 3

Spontaneous and stimulated emission, population inversion, optical resonators, three- and four-level systems, Q-switching and mode-locking, semiconductor lasers, integrated optic waveguides and couplers, scanning systems, high-power industrial application. Prerequisites: EE 307.

OPE 454 - OPTICAL FIBER COMMUNICATIONS
Semester Hours: 3

Introduction to optical fibers and their transmission characteristics, optical fiber measurements, sources and detectors, noise considerations for digital and analog communications, optical fiber systems. (Same as EE 454) Prerequisites: (EE 307 or PH 432) and (EE 382 or CPE 381).

OPE 456 - PHOTONICS LABORATORY
Semester Hours: 3

Photonic devices, wave nature of light, diffraction, spectral measurements, refractive index, single mode and multimode optical fibers, simple optical communication systems, fiber optic sensors, cast study. Prerequisites: OPE 451.

OPE 459 - OPTICAL ENGINEERING DESIGN I
Semester Hours: 3

Identification, documentation, and presentation of proposed senior design project, followed by initial project design, analysis, and development, including the consideration of legal economic, and ethical issues. Prerequisites: ISE 321 and OPE 456.

OPE 460 - OPTICAL ENGINEERING DESIGN II
Semester Hours: 3

Continuation of design project begun in OPE 459 to include prototype testing of the design optical or opto-electronic system. Prerequisites: OPE 459.
Optics (OPT)

OPT 341 - GEOMETRICAL OPTICS
Semester Hours: 3

Introduces geometrical optics. The nature of light, basic radiometry, rays and waves, Fermat's principle, Snell's law, thin and thick lenses, paraxial rays, ray transfer matrix and ray tracing, optical imaging and imaging system design, aberrations, optical instrumentation, prisms, and dispersion. Prerequisite: PH 113. Prerequisite with concurrency: PH 305 and MA 244.

OPT 342 - PHYSICAL OPTICS
Semester Hours: 3

Electromagnetic waves, superposition of waves, interference of light, Young's double slit experiment, Michelson interferometer, Fabry-Perot interferometer, coherence, diffraction gratings, polarization and its matrix treatment, and polarization generation. Offered Spring. Prerequisite with concurrency: OPT 341.

OPT 411 - GEOMETRICAL OPTICS LAB
Semester Hours: 2

Introduces optical laboratory techniques, focus and alignment with incoherent and coherent sources, the nodal slide, thin lenses, thick lenses, lens systems, the effects of aperture and stops, reflection, refraction and dispersion, aberrations, elements of radiometry. Offered Fall. Prerequisite with concurrency: OPT 341.

OPT 412 - PHYSICAL OPTICS LAB
Semester Hours: 2

Introduces physical optics phenomena, Young's double slit experiment, Lloyd's mirror, Fresnel biprism, Newton's rings, intensity distribution in fringe systems, Michelson and Fabrey-Perot interferometers, Fresnel and Fraunhofer diffraction, diffractions and diffraction gratings. Prerequisite with concurrency: OPT 341.

OPT 441 - OPTICAL SYSTEMS
Semester Hours: 3

Intermediate geometrical optics, first-order optics, linear transformations, paraxial optics, reflection and transmission at an interface, polarized light, Jones and Mueller calculi, matrix methods, ray tracing, apertures and stops, third order optics and aberrations. Offered Fall, even years. Prerequisite: OPT 342.

OPT 442 - INTERFERENCE & DIFFRACTION
Semester Hours: 3

Two beam interference, multiple beam interference, optical testing. Fraunhofer diffraction, Fresnel diffraction, the Fourier transform, Fourier methods in optics. Coherence, Holography.

OPT 444 - OPTOELECTRONICS
Semester Hours: 3

Reviews polarized light, propagation and modulation of light using effects of electro and acousto optics, Kerr, and Faraday. Photo-detection, signal processing, and signal-to-noise ratios. Design/analysis of beam scanners, various optical spectrum analyzers, sensors, and communication systems. Prerequisite: OPT 342.

OPT 445 - INTRODUCTION TO LASERS
Semester Hours: 3

Introduces concepts and principles of lasers. Stimulated emission, light amplification, optical pumping, optical resonator theory, cavity modes, gas lasers, solid state lasers, laser applications, Gaussian beams, coherence, and holography. Offered Fall, odd years. Prerequisite: PH 432. Prerequisite with concurrency: PH 351.

OPT 446 - RADIOMETRY, DETECTORS, SOURCES
Semester Hours: 3

OPT 447 - POLARIZED LIGHT & POLARIMETRY
Semester Hours: 3

Linear, circular, and elliptical polarization of light. Mueller and Jones calculi, Stokes vectors, measuring polarized light, polarization properties of crystals and thin films, polarization ray tracing. Offered Fall, odd years. Prerequisite: OPT 342.
Philosophy (PHL)

PHL 101 - INTRODUCTION TO PHILOSOPHY
Semester Hours: 3
Introduction to philosophical reflection focusing upon central problems in the major branches of the western tradition: metaphysics, epistemology and value theory.

PHL 102 - INTRO TO ETHICS
Semester Hours: 3
Major ethical positions in both classical and modern thought. The course may include a consideration of case studies drawn from practical contexts in engineering, medicine and other areas.

PHL 150 - TECH, SCIENCE & HUMAN VALUES
Semester Hours: 3
A philosophical examination of the intersection of human values with science and technology. Questions include: what exists, the nature and extent of knowledge, and moral problems posed by technical and scientific change.

PHL 201 - INTRODUCTION TO LOGIC
Semester Hours: 3
Methodology of formal and informal reasoning.

PHL 220 - CRIT THINKING FOR INTEL ANALYS
Semester Hours: 3
Examines critical reasoning strategies designed to correct cognitive biases and improve tradecraft skills in the context of intelligence analysis.

PHL 301 - ANCIENT PHILOSOPHY
Semester Hours: 3
Survey of classical philosophy from the Pre-Socratics through Aristotle. Prerequisite: 3 hrs of PHL, except PHL 201.

PHL 302 - MODERN PHILOSOPHY
Semester Hours: 3
Survey of the British and Continental traditions from Descartes through Kant. Prerequisite: 3 hrs of PHL, except PHL 201.

PHL 303 - CONTINENTAL PHILOSOPHY
Semester Hours: 3
Examination of important trends in the Continental tradition from nineteenth through twenty-first century thought.

PHL 310 - PHILOSOPHY OF ART
Semester Hours: 3
Major aesthetic theories of the western tradition, may include visual or non-visual arts. Prerequisite: 3 hrs of PHL, except PHL 201.

PHL 311 - PHILOSOPHY OF SCIENCE
Semester Hours: 3
Critical assessment of the historical and logical foundations of the natrual and theoretical sciences. Prerequisite: 3 hrs of PHL, except PHL 201.

PHL 312 - AMERICAN PHILOSOPHY
Semester Hours: 3
Survey of American thought with emphasis upon the development of pragmatism in the work of Pierce, James, and Dewey. Prerequisite: 3 hrs of PHL, except PHL 201.

PHL 314 - ASIAN PHILOSOPHY
Semester Hours: 3
Survey of philosophical traditions from Asia, such as various schools of Buddhism and Hinduism, Confucianism, Daoism. Topics may include: conceptions of human nature and the good life, the nature of the self and its relation to society, comparisons to philosophies from Europe and North America. Prerequisite: 3 hrs of PHL, except PHL 201.
PHL 317 - PHILOSOPHY OF MIND
Semester Hours: 3
A philosophical examination of a range of models, theories, and arguments concerning the nature of mind and its relationship to the physical world. Prerequisite: 3 hrs of PHL, except PHL 201.

PHL 320 - SYMBOLIC LOGIC
Semester Hours: 3
Symbolic deductive logic, including propositional calculus (truth-functional logic), predicate calculus (propositional functions and quantification), and the logic of relations. Prerequisite: PHL 201.

PHL 330 - CLASSI POLITI PHILOSOPHY
Semester Hours: 3
Careful analysis of the roots of political inquiry in selected works of ancient and medieval political philosophers. Major themes include the search for a just social order, the proper relationship between the citizen and the state, and other fundamental concepts of western political institutions. Prerequisite: PHL 101 or PHL 102 or PHL 202 or PSC 101.

PHL 332 - MODERN POLITICAL PHILOSO
Semester Hours: 3
Critical examination of the philosophical foundations for modern politics that emerged from the 15th through the 19th century in western Europe. Major themes and theorists include the concepts of individual rights, property, representation, majority rule, limited government, and revolution. Prerequisite: PHL 101 or PHL 102 or PHL 202 or PSC 101.

PHL 335 - FEMINIST PHILOSOPHY
Semester Hours: 3
Philosophical examination of issues related to feminism and feminist theory. Topics may include: women in the history of philosophy, contemporary feminist political theory, feminist ethics, feminist epistemology, or gender theory (including racial and sexual identity). Prerequisite: 3 hrs of PHL, except PHL 201.

PHL 337 - PHILOSOPHY OF RACE
Semester Hours: 3
Philosophical examination of the nature and importance of race. Topics may include: the debate between essentialist and constructionist views of race, the political importance of race, and the intersection of race and other forms of identity. Prerequisite: 3 hrs of PHL, except PHL 201.

PHL 385 - SELECTED TOPICS
Semester Hours: 3
Intensive examination of particular problems, periods, or movements in the history of philosophy. Prerequisite: 3 hrs of PHL, except PHL 201.

PHL 395 - RESEARCH SEMINAR
Semester Hours: 3
Intensive examination of particular problems, periods, or movements in the history of philosophy. Intensive examination of selected topics leading to the preparation of a substantial philosophical paper. Required of all majors. May be taken twice for credit. Prerequisite: 3 hrs of PHL, except PHL 201.

PHL 397 - PHILOSOPHY INTERNSHIP
Semester Hours: 1-3
A supervised experience in a professional environment enhanced by a student's background in philosophy. Paid or unpaid. Prerequisites: 18 hrs of PHL, JR/SR standing, minimum 3.0 GPA in PHL Major, approval of department chair.

PHL 399 - DIR STUDY IN PHILOSOPHY
Semester Hours: 1-3
Independent study in an area of philosophy selected in consultation with faculty advisor. Requires approval of department chair. Prerequisite: 3 hrs of PHL, except PHL 201.

PHL 401 - METAPHYSICS
Semester Hours: 3
Critical examination of traditional and contemporary responses to questions about the nature of reality. Prerequisite: 6 hrs of PHL, except PHL 201.

PHL 402 - EPISTEMOLOGY
Semester Hours: 3
Investigation of fundamental problems of knowledge such as the relation of knowledge and belief, truth, certainty and skepticism, perception, logic, explanation, and justification. Prerequisite: 6 hrs of PHL, except PHL 201.
PHL 403 - ADV MORAL PHILOSOPHY
Semester Hours: 3

Critical examination of significant works in moral and political philosophy such as the relationship between morality and human nature, the individual and the state, and the consequences of actions. Prerequisite: 6 hrs of PHL, except PHL 201.

PHL 438 - CONTEMPORARY POLITICAL THOUGHT
Semester Hours: 3

Systematic study of recent and current thinking on issues and problems of politics, social theory, and ethics with special attention to the philosophical dimension of these issues and problems. Prerequisite: 6 hrs of PHL or PSC, except PHL 201.

Physics (PH)

PH 100 - CONCEPTUAL PHYSICS
Semester Hours: 4

Classical and modern physics survey course. Approach physical laws conceptually and intuitively, with minimal mathematics. Motion, gravitation, energy, electricity and magnetism, quantum mechanics, physics of everyday phenomena, philosophical and historical implications. Offered Spring.

PH 100L - CONCEPTUAL PHYSICS LAB
Semester Hours: 0

PH 101 - GENERAL PHYSICS I
Semester Hours: 4

Introductory non-calculus based course. The basic laws of physics and their application to specific problems: Newtonian mechanics, energy, conservation laws, and thermodynamics. Laboratory included. PH 101 and 102 satisfy the laboratory science requirement. Offered Fall.

PH 101L - GENERAL PHYSICS I LAB
Semester Hours: 0

PH 101R - RECITATION
Semester Hours: 0

PH 102 - GENERAL PHYSICS II
Semester Hours: 4

Continuation of PH 101. Electrostatics, currents, magnetic phenomena, relativity, waves, quantum nature of matter. Laboratory included. Offered Spring. Prerequisite: PH 101.

PH 102L - GENERAL PHYSICS LAB II
Semester Hours: 0

PH 102R - RECITATION
Semester Hours: 0

PH 103 - GENERAL PHYSICS I/A&M
Semester Hours: 4

PH 110 - FRONTIERS IN SCIENCE
Semester Hours: 3

Introduces frontiers and problems of modern physical science. Physicist present the role of physics in diverse careers and physics fields. Introduction to physics applications and future employment opportunities motivates students to master skills required in undergraduate studies. Offered Fall. Prerequisite with concurrency: MA 171.

PH 111 - GEN PHYSICS W/CALCULUS I
Semester Hours: 3

PH 111R - RECITATION
Semester Hours: 0
PH 112 - GEN PHYSICS W/CALC II  
Semester Hours: 3-4  
Continuation of PH 111. Heat and thermodynamics, basic electricity, electric and magnetic fields. Offered all terms. Prerequisite: MA 172, PH 111, PH 114. Corequisite: PH 115.  
PH 112R - RECITATION  
Semester Hours: 0  

PH 113 - GEN PHYSICS W/CALC III  
Semester Hours: 3  
Continuation of PH 111 and 112. Wave motion, optics, relativity, quantum effects, atomic and nuclear structure, and elementary particles. Offered all terms. Prerequisite: MA 201 (or higher), PH 112, and PH 115. Corequisite: PH 116.  
PH 113R - RECITATION  
Semester Hours: 0  

PH 114 - GENERAL PHYSICS LAB I  
Semester Hour: 1  
Laboratory instruction in support of material covered in PH 111. Offered all terms. Corequisite: PH 111.  

PH 115 - GENERAL PHYSICS LAB II  
Semester Hour: 1  
Laboratory instruction in support of material covered in PH 112. Offered all terms. Corequisite: PH 112.  

PH 116 - GENERAL PHYSICS LAB III  
Semester Hour: 1  
Laboratory instruction in support of material covered in PH 113. Offered all terms. Corequisite: PH 113.  

PH 201 - GENERAL PHYSICS I/CALHOUN  
Semester Hours: 4  

PH 213 - GEN PHYSICS W/CALC A/CALHOUN  
Semester Hours: 4  

PH 216 - GEN PHYSICS LAB I/CALHOUN  
Semester Hour: 1  

PH 218 - MODERN PHYSICS/CALHOUN  
Semester Hours: 4  

PH 251 - SPECIAL RELATIVITY  
Semester Hour: 1  
Einstein's theory of special relativity. Invariance, geometry of Minkowski spacetime, non-Euclidean geometry; Principle of Relativity; clock synchronization; Lorentz transformations; counter-intuitive effects measured in relative motion; casualty and the speed of light; relativistic dynamics. Prerequisite: PH 112 and MA 172. Prerequisite with concurrency: PH 113.  

PH 301 - INTERMEDIATE MECHANICS  
Semester Hours: 3  
Reviews Newtonian mechanics, natural and driven oscillations, variational calculus and Lagrange's equations, application to central force motion, rigid body rotation and coupled oscillators. Offered Spring. Prerequisite: PH 111 and either PH 305 or MA 238.  

PH 305 - MATH METHODS IN PHYSICS  
Semester Hours: 3  
Applied analytical techniques to solve problems in physics. Complex analysis, Fourier series, linear algebra, differential equations and vector calculus. Applications to mechanics, electricity and magnetism, optics, and thermodynamics. Offered Spring. Prerequisite: PH 112.  

PH 306 - APPLIED PHYSICS  
Semester Hours: 3  
Computational and numerical techniques for problem solving. Applications to classical mechanics, electrodynamics, quantum mechanics, optics, astrophysics. Offered Fall. Prerequisite: PH 305, (CS 102 or CPE 112 or CS 121) and (MA 238 or MA 244 or MA 324).
PH 310 - INTERMEDIATE LAB I
Semester Hours: 2

Experiments in classical physics. Introduction to statistical methods. Offered Fall. Prerequisites: PH 113 or 116.

PH 311 - INTERMEDIATE LAB II
Semester Hours: 2

Experiments in modern physics. Offered Spring. Prerequisite: PH 251 and PH 310.

PH 337 - ELECTRONICS
Semester Hours: 4

Introductory course for all science students. Basic AC and DC circuits, operational amplifier circuits, transistor circuits, power supplies, digital logic and their use in laboratory instruments. Laboratory included. Offered Fall, odd years. Prerequisite: PH 112.

PH 351 - INTRODUCTION TO MODERN PHYSICS
Semester Hours: 3

Kinetic theory, Blackbody radiation, Quantum physics: wave packets, the uncertainty principle, Schroedinger's equation and solutions for simple systems, application to atomic, nuclear, and solid-state physics. Offered Fall. Prerequisite: PH 113, and either MA 238 or 244. Prerequisite with concurrency: PH 251.

PH 416 - SENIOR LABORATORY
Semester Hours: 2

Advanced experimental techniques in various sub-fields of physics. Offered Fall, Spring. Prerequisite: PH 311.

PH 420 - SENIOR THESIS
Semester Hours: 3

Research performed under direction of a faculty member. Final research report required. Offered all terms.

PH 421 - THERMAL & STATISTICAL PHYSICS
Semester Hours: 3

States of model system, entropy and temperature, Boltzmann distribution, thermal radiation and Planck distribution, chemical potential and Gibbs distribution, ideal gas, Fermi and Bose gases, heat and work, semiconductor statistics, kinetic theory. Offered Spring, even years. Prerequisite: PH 351. Prerequisite with concurrency: PH 301 and PH 306.

PH 431 - INTERM ELECTRIC & MAGNETISM I
Semester Hours: 3

PH 432 - INTERM ELECTRIC & MAGNETISM II
Semester Hours: 3

PH 451 - INTRO QUANTUM MECHANICS I
Semester Hours: 3

Waves and particles: deBroglie waves, wave-packets, and the uncertainty principle. Postulates of quantum mechanics. Schrodinger's equation: simple systems in one, two and three dimensions, the hydrogen atom. Angular momentum and spin. Offered Fall. Prerequisite: PH 305, PH 351, and (MA 244 or MA 238) and PH 306 with concurrency.

PH 452 - INTRO QUANTUM MECHANICS II
Semester Hours: 3

PH 453 - INTRO TO PARTICLE PHYSICS
Semester Hours: 3

PH 474 - INTRO TO GENERAL RELATIVITY
Semester Hours: 3

Introduces general relativity and gravitational physics as inferred from the behavior of particles and light rays for a selection of spacetimes. Major properties of black holes, wormholes, gravitational waves. Physics First approach, and introduces new math as required for discussion of physics. Prerequisite: PH 251 and PH 301.

PH 480 - SELECTED TOPICS
Semester Hours: 1-3

Offered upon demand. Topics include physics, optics, astrophysics, and space physics. Offered all terms. Prerequisite: PH 113 and MA 201.

PH 489 - SELECTED TOPICS
Semester Hours: 1-3

Offered upon demand. Topics include physics, optics, astrophysics, astronomy, computational physics, and space physics. Offered all terms. Prerequisites: PH 113 or 116 and MA 201.

PH 499 - PHYSICS PRACTICUM
Semester Hours: 3

"Capstone" course designed to provide real-world research experience for graduation seniors. Students work individually with faculty members on projects. Requires oral presentation and final research report. Offered all terms. Required courses on the POS must be taken prior to, or concurrently with, this course.

Professional Studies (PRO)

PRO 301 - THRY & PRAC ADULT LEARNING
Semester Hours: 3

This course presents an overview of five foundational learning theories and related research in adult education and development. The conceptual framework is centered on discovering what motivates the adult learner and the impact social perspectives have on adult learning through analysis and discussion. Students will define competencies needed for success in academic study and professional leadership, in setting educational goals, and in planning a learning experience to achieve them. Emphasis is placed on issues unique to adult re-entry students and the university services available to support nontraditional students.

PRO 310 - ACADEMIC WRITING PROFESS STUDI
Semester Hours: 3

Students will learn academic writing skills by engaging in the process of academic inquiry and argument. The course will cover a broad perspective of writing by exploring various writing and research styles used through different academic professions. Prerequisites: EH 102 or EH 105.

PRO 320 - INDS PERSPECT & CRITICAL THNKG
Semester Hours: 3

Interdisciplinary studies fosters foundational knowledge acquisition by which individuals draw on multiple disciplinary perspectives and integrate their insights and modes of thinking to advance the studies and the fundamental development of critical and analytical thinking skills. Complex issues are addressed from multi-facted perspectives that stimulate problem solving, problem defining and problem posing. Emphasis is placed on how to synthesize evidence drawn from multiple sources as a basis for informed decision-making.

PRO 325 - INDS RESEARCH & APPLICATIONS
Semester Hours: 3

Interdisciplinary research is a contemporary decision-making process for transcending the scope of a single discipline or program to develop insights that offer bold advances in knowledge, solutions to urgent societal problems, an edge in technological innovations, and a more integrative knowledge of multidisciplinary theories and concepts. This course introduces the primary drivers for interdisciplinary research and examines the interdisciplinary research process. Students will apply an integrated model for conducting research that draws on multiple disciplines. Prerequisites: PRO 310 and PRO 320.

PRO 498 - INQUIRY AND LEARNING
Semester Hours: 3

Inquiry-based learning accelerates understanding, fosters critical thinking skills, and facilitates self-direction and discovery. Using this method, students will identify an interdisciplinary problem related to their approved concentration area, perform the foundational research, and formulate a research proposal. This is the first of a two-semester progression to complete a Capstone research thesis/project in PRO 499. Prerequisite: PRO 325.
PRO 499 - CAPSTONE EXP: RSCH THESIS/PROJ
Semester Hours: 3

Students majoring in Professional Studies are required to complete a senior research thesis in their approved interdisciplinary concentration. This Capstone course requires the student to demonstrate his/her ability to integrate the core knowledge and skills gained in their interdisciplinary areas of study using inquiry-based learning methods. Research is conducted and a thesis-style paper is written and orally presented. Prerequisite: PRO 498 with minimum grade of C-.

Political Science (PSC)

PSC 101 - INTRO TO AMERICAN GOVERNMENT
Semester Hours: 3

What motivates individuals and groups to act politically? This course introduces students to political structures, decision-making, and public policy in the U.S. The role of history in the development of current institutional structures and current political developments will be considered.

PSC 102 - INTRO TO COMPARATIVE POLITICS
Semester Hours: 3

In this class we explore ways to compare countries and political systems. We study a wide variety of countries for a better understanding of political dynamics around the world. This includes countries at various stages of industrialization and democratization, in different regions of the globe.

PSC 103 - INTRO TO STATE & LOCAL GOVT
Semester Hours: 3

Surveys the principles, forms, functions, and processes of state and local governments in the context of the American federal system, with specific emphasis on the political environment. Students will better understand the major functions of - and the issues facing - state and local governments.

PSC 260 - INTRODUCTION TO INTERNATIONAL RELATIONS
Semester Hours: 3

Examination of the basic factors underlying the conduct of international relations, focusing on conflict and changes taking place due to globalization. This course also seeks to stimulate intellectual curiosity, enhance critical thinking, and improve oral and writing skills.

PSC 302 - THE AMERICAN CONGRESS
Semester Hours: 3

Studies the organization and role of the Congress, its leadership, internal processes, and relationships with other parts of the political system. The goal is to understand why Congress looks and acts the way it does, whose interests are represented, and how and why policies emerge as they do. Prerequisite: PSC 101.

PSC 304 - AMERICAN PRESIDENCY
Semester Hours: 3

Examination of the institution of the American presidency, its power, and the forces that shape it. Focus on developing students' ability to think conceptually and critically about the presidency, the president's role in the political system, and American politics in general. Prerequisite: PSC 101.

PSC 309 - POLI PARTIES/INTEREST GR
Semester Hours: 3

A survey of major linkages between citizens and government, this course studies the formation, organization, activities, and impacts of political parties and interest groups - and factors affecting them. Students will think critically about these institutions and their roles in the American system. Prerequisite: PSC 101.

PSC 330 - CLASSI POLITI PHILOSOPHY
Semester Hours: 3

Careful analysis of the roots of political inquiry in selected works of ancient and medieval political philosophers. Major themes include the search for a just social order, the proper relationship between the citizen and the state, and other fundamental concepts of western political institutions. Prerequisite: PSC 101 or PHL 101 or PHL 102 or PHL 202 or permission of instructor.

PSC 332 - MODERN POLITICAL PHILOS
Semester Hours: 3

Critical examination of the philosophical foundations for modern politics that emerged from the 15th through the 19th century in western Europe. Major themes and theorists include the concepts of individual rights, property, representation, majority rule, limited government, and revolution. Prerequisite: PSC 101 or PHL 101 or PHL 102 or PHL 202 or permission of instructor.
PSC 334 - AMER POLITICAL THOUGHT  
Semester Hours: 3  
In-depth study of theorists, concepts and forces that have shaped American political values from the founding of the republic to the present. Major themes include the relationship between liberty and equality, rights and democracy, and industrialization and the public good. Prerequisite: PSC 101.

PSC 399 - CURRENT AFFAIRS  
Semester Hour: 1  
An examination of current national and international issues. Focus is on developing critical reading, listening, and writing skills. The course may be repeated up to three times.

PSC 404 - AMERICAN POLITICAL THOUGHT/A&M  
Semester Hours: 3

PSC 420 - FEDERALISM & INTERGOV RELATION  
Semester Hours: 3

PSC 436 - POLITICAL IDEOLOGIES  
Semester Hours: 3

Critical examination of the philosophical foundations and political ethics of contemporary political ideologies. Among the major ideologies studied will be relevant examples of conservatism, liberalism, Marxism, Nazism, and religion, such as liberation theology and Islamism. Prerequisite: PSC 101.

PSC 438 - CONTEMPORARY POLITICAL THOUGHT  
Semester Hours: 3

Systematic study of recent and current thinking on issues and problems of politics, social theory, and ethics with special attention to the philosophical dimension of these issues and problems.

PSC 440 - REGIONAL STUDIES  
Semester Hours: 3

This class compares and examines the politics of Asia, Latin America, the Middle East, or Africa, depending on the term. We focus on select countries of themes within each region as part of our study of political structures, history, and culture, for a deeper understanding of each area. Prerequisites: PSC 101 and PSC 102.

PSC 451 - LAW, COURTS, & PUBLIC POLICY  
Semester Hours: 3

Examines the role of the courts in the making of public policy in the United States, with an emphasis on the use of the courts by interest groups seeking to achieve specific policy goals. Prerequisite: PSC 101.

PSC 452 - AMER CONSTITUTIONAL LAW  
Semester Hours: 3

Examination of the structure of the federal government and its powers through an analysis of leading cases from the Supreme Court. Topics include federalism, separation of powers, and the proper role and decision-making process of the Supreme Court. Prerequisite: PSC 101.

PSC 454 - CIVIL LIBERTIES  
Semester Hours: 3

Examines the relationship between the government and individuals in American society through an analysis of Supreme Court cases. The focus is on contemporary questions about the rights of individuals and appropriate limits to freedom of action set by government. Prerequisite: PSC 101.

PSC 462 - DECISION-MAKING FORGN & SEC PLY  
Semester Hours: 3

An examination of the history, culture, policies, and structures shaping the development of U.S. foreign and national security policies. Special attention will be placed on the roles of Congress, National Security Council, Defense Department, State Department, and the intelligence community. Prerequisite: PSC 101.

PSC 464 - AMERICAN FOREIGN POLICY  
Semester Hours: 3

An examination of the substance of contemporary U.S. foreign policies and the goals the country seeks to achieve around the world. Students will attempt to evaluate the effectiveness of those policies and examine why it is often difficult for the country to achieve its goals. Prerequisite: PSC 101.
PSC 466 - NATIONAL SECURITY STRGY & PLY
Semester Hours: 3

An examination of current U.S. national security strategy and policy. The course will review current strategy and policy documents, examine specific responses to the variety of threats facing the United States, and evaluate whether those policies are effective at achieving their goals. Prerequisite: PSC 101.

PSC 470 - ISSUES IN SECURITY POLICY
Semester Hours: 3

Examination of select security-related policy issues. The content of this course will vary during different terms, and students may take the course multiple times so long as the content differs. Prerequisite: PSC 101.

PSC 480 - ADVANCED TOPICS IN PSC
Semester Hours: 3

Select topics in local, state, national and world politics. This course may be repeated for credit as long as content of the course has changed.

PSC 484 - SENIOR SEMINAR
Semester Hours: 3

This class engages students in an advanced examination of the subfields of political science that are offered by the department. The course may be repeated with different faculty for up to 6 hours of credit. Prerequisites: PSC 101 and PSC 102.

PSC 495 - INTERNSHIP IN GOVERNMENT
Semester Hours: 1-6

Students may receive academic credit for an internship with a local, state, or federal governmental agency, or with political, legal, or public policy related organizations. Prerequisite: Instructor Permission.

PSC 498 - DIRECTED READINGS & RESEARCH
Semester Hours: 3

Supervised in-depth readings and/or individual research in an area of specialized interest to both student and instructor. Open to all students who have completed 15 semester hours in Political Science and have permission of the instructor.

Psychology (PY)

PY 101 - GENERAL PSYCHOLOGY I
Semester Hours: 3

Introduction to methods and research findings in the field. Topics include learning, memory, cognition, human development, personality theories, and abnormal behavior. Credit for PY 101 may be obtained by either Advanced Placement (AP) or the College Level Examination Program (CLEP).

PY 102 - APPLICATIONS IN PSYCHOLOGY
Semester Hours: 3

Introduction to applied topics in psychology, such as statistical analysis, counseling, human factors, health psychology, and industrial and organizational psychology. Career opportunities are discussed. Students are required to engage in approved experiential activities such as participating in current research studies and attending lectures. Prerequisite: PY 101.

PY 201 - LIFE-SPAN DEVELOPMENT
Semester Hours: 3

Examination of the psychological, social, and physical factors that affect human behavior and development from conception to death. Prerequisite: PY 101.

PY 300 - PSYCHOLOGICAL STATISTICS
Semester Hours: 3

Introduction to psychological statistics, with an emphasis on quantitative analysis of experimental data. Topics covered include probability, descriptive statistics, and hypothesis testing. Prerequisite: MA 107 or MA 110 or MA 112 or MA 113 or MA 115 or MA 120 or MA 171. Corequisite: PY 300L.

PY 300L - PSYCHOLOGICAL STATISTICS LAB
Semester Hour: 1

This course is an introduction to analyzing data with computerized statistical software. This course will provide students with a familiarity of SPSS, and the abilities to analyze experimental data, read computer statistical output, and write-up statistical results. Corequisite: PY 300.
PY 301 - PERSONALITY
Semester Hours: 3
Examinations of various theories of personality with possible implications for research. Prerequisite: PY 102.

PY 302 - EXPERIMENTAL PSYCHOLOGY
Semester Hours: 4
Design and execution of experiments in psychology. Data analysis and manuscript preparation. Prerequisite: PY 102 and PY 300 and PY 300L OR AHS 300.

PY 303 - PHYCHOMETRICS
Semester Hours: 3

PY 310 - CHILD PSYCHOLOGY
Semester Hours: 3

PY 314 - LEARNING
Semester Hours: 3
Analysis of learning principles from simple relationships with animals to the complexities of human language and problem solving. Prerequisite: PY 102.

PY 315 - DEVELOPMENTAL PSYCHOLOGY
Semester Hours: 3
Examines sensory systems and elements of perception. Topics include vision research, audition, chemical senses, and body sensations. Prerequisite: PY 102.

PY 316 - PERCEPTION
Semester Hours: 3
Examines sensory systems and elements of perception. Topics include vision research, audition, chemical senses, and body sensations. Prerequisite: PY 102.

PY 317 - PHILOSOPHY OF MIND
Semester Hours: 3
The problem of the nature of mind and its relationship to the physical world has been a perennial concern of philosophy. This course examines, theories, and arguments concerning the nature of mind. Prerequisite: PY 102.

PY 324 - WORK DESIGN
Semester Hours: 3
Introduces the portion of the design process that uses basic principles of methods analysis and ergonomics to fit a task to the human operator. Methods analysis topics include: work measurement, job analysis, and job evaluation. Prerequisite: PY 300 or ISE 390.

PY 330 - NONVERBAL COMMUNICATION
Semester Hours: 3
Examines the diversity of human nonverbal behavior and its influences on everyday communication experiences. Same as CM 330. Prerequisite: PY 101.

PY 375 - SOCIAL PSYCHOLOGY
Semester Hours: 3
Examination of the social influences on both individual and group behavior. Topics may include attitudes, group processes, intergroup conflict, interpersonal attraction, aggression, altruism, and impression formation. Prerequisite: PY 101 or SOC 100.

PY 380 - COGNITION
Semester Hours: 3
Information processing: how information is acquired, encoded, organized, stored, and retrieved. This process will be applied to specific areas of psychology such as language, earning, or personality. Prerequisite: PY 102.

PY 399 - PROFESSIONAL DEV FOR PSY MAJOR
Semester Hour: 1
Development of skills related to graduate work and to occupations in psychology. Career and internship exploration, resume and graduate school exploration. Exposure to work and research related topics, such as teamwork and ethics. Prerequisite: PY 102.
PY 402 - INDUSTRIAL & ORGANIZATIONAL PSY
Semester Hours: 3
Application of basic principles of learning, motivation, and perception to typical industrial and organizational problems. Open to students who have completed 15 hours of psychology. Prerequisite: PY 102.

PY 403 - HUMAN FACTORS PSYCHOLOGY
Semester Hours: 3
Human performance in human-technology-environment systems. Includes consideration of human capabilities and limitations as related to controls and displays. Open to students who have completed 15 hours of psychology. Prerequisite: PY 102.

PY 405 - PSYCHOPHARMACOLOGY
Semester Hours: 3
Introduction to drug classification and action with emphasis on physiological psychological interactions. Open to students who have completed 15 hours of psychology. Prerequisite: PY 102.

PY 406 - PSYCHOLOGY OF WOMEN
Semester Hours: 3
Examines theory and research in the psychological functioning of women, both in the United States and other nations. Topics include achievement and education, mental and physical health issues, and victimization of women. Open to students who have completed 15 hours of psychology. Senior Standing. Prerequisite: PY 102.

PY 407 - CROSS-CULTURAL PSYCHOLOGY
Semester Hours: 3
Examines psychological similarities and differences between members of industrialized and non-industrialized cultures. Comparisons will include development, social interaction, and perception. Open to students who have completed 15 hours of psychology. Senior Standing. Prerequisite: PY 102.

PY 408 - TEAMWORK & TEAM PROCESSES
Semester Hours: 3
This course provides an introduction to teams and teamwork processes. The foundation of the course is research-based; topics will be approached from the context of empirical research. The types of research designs that are typically used in team research are addressed. Junior Standing.

PY 420 - SPECIAL TOPICS
Semester Hours: 3
Pre-announced special areas in seminar discussion, laboratory work, or practicum. May be taken twice for credit. Open to students who have completed 15 hours of psychology. Prerequisite: PY 102.

PY 422 - INDIVIDUAL RESEARCH
Semester Hours: 3
With advice of instructor, design and execution of original experiment in psychology. May be taken twice for credit. Open to students who have completed 15 hours of psychology. Prerequisite: PY 102.

PY 426 - HISTORY & SYSTEMS IN PSY
Semester Hours: 3
Survey of psychological theory and experimentation regarding human behavior and mental processes from ancient times to the present. Open to students who have completed 15 hours of psychology. Prerequisite: PY 102.

PY 433 - ABNORMAL PSYCHOLOGY
Semester Hours: 3
Survey of major psychological approaches to conceptualizing abnormal behavior, with discussion of present diagnostic categories of psychological disorders. Open to students who have completed 15 hours of psychology. Prerequisite: PY 102.

PY 434 - PSYCHOLOGY AND LAW
Semester Hours: 3
This seminar is a survey of the major topics represented in the field of Psychology and Law. We will focus on how psychological research can contribute to a better understanding of issues related to law. Open to students who have completed 15 hours of psychology. Prerequisite: PY 302.

PY 436 - BIOLOGICAL PSYCHOLOGY
Semester Hours: 3
Neural and endocrinological systems underlying behavior. Open to students who have completed 15 hours of psychology. Prerequisites: (either a or b): (a) 15 hrs of PY or approval of instructor; (b) BYS 119 and BYS 120 and 6 hours of PY or approval of instructor. Same as BYS 436.
**Sociology (SOC)**

**PY 437 - PSYCHOBIOLOGY STRESS & ILLNESS**
Semester Hours: 3

Overview of physiological stress responses and their influence on health behavior and illness. Open to students who have completed 15 hours of psychology. Prerequisite: PY 102.

**PY 490 - READINGS IN PSYCHOLOGY**
Semester Hours: 3

Supervised in-depth readings in an area of particular interest to student. May be taken twice for credit. Open to students who have completed 15 hours of psychology. Prerequisite: PY 102.

**PY 491 - SPECIAL TOPICS IN PSYCHO**
Semester Hour: 1

Pre-announced special areas in seminar discussion, laboratory work, or practicum. May be taken twice for credit. Open to students who have completed 15 hours of psychology. Prerequisite: PY 102.

**PY 492 - SPECIAL TOPICS IN PSYCHO**
Semester Hours: 2

Pre-announced special areas in seminar discussion, laboratory work, or practicum. May be taken twice for credit. Open to students who have completed 15 hours of psychology. Prerequisite: PY 102.

**PY 498 - HUMAN RESEARCH I**
Semester Hours: 3

Capstone course for the PY major. Human behavior observation and/or experimentation. Students engage in data collection and analysis, and report their findings. Offered Fall Semester only. Prerequisite: PY 302.

**PY 499 - HUMAN RESEARCH II**
Semester Hours: 3

Continuation of PY 498. Open to students who have completed 15 hours of psychology. Prerequisite: PY 498 and approval of instructor. Offered Spring Semester only.

**Sociology (SOC)**

**SOC 100 - INTRO TO SOCIOLOGY**
Semester Hours: 3

An introduction to the critical and scientific study of society, culture, social institutions and social change. Illuminates the social and cultural context of our lives and is useful for exploring contemporary social issues, problems and change in society.

**SOC 102 - ANALYSIS OF SOCIAL PROBLEMS**
Semester Hours: 3

Application of the sociological perspective to understanding important contemporary social issues and the social actions and policies that attempt to address them. This course will explore different approaches to understanding the causes of social problems as well as social responses to them. Prerequisite: SOC 100.

**SOC 105 - INTRO CULTURAL ANTHROPOLOGY**
Semester Hours: 3

Cultural anthropology is one of the four sub-fields of anthropology concerned with a deeper understanding of cultural differences. This course examines cultural diversity in human behavior, social institutions, belief systems, and cultural change from a global and comparative perspective.

**SOC 150 - SOCIOLOGICAL PERSP TECH & SCI**
Semester Hours: 3

Introduces sociological approach to science and technology; how social factors affect science and technology, and how science and technology affect our lives; the relationship of science and technology to social issues such as those related to class, race, gender, or religion.

**SOC 206 - MARRIAGE AND FAMILY**
Semester Hours: 3

Explores family forms and functions across history and across cultures. Students will learn how the family affects and is affected by other social institutions, recent trends in the American family, the contexts in which marriage and families evolve, and key inequalities within and between families. Prerequisite: SOC 100.
SOC 301 - RESEARCH METHODS  
Semester Hours: 3

The object of this course is for students to be able to read, interpret, and explain scientific research in social science. Course covers key elements and process of sociological research methods, both qualitative and quantitative.

SOC 302 - SOCIOLOGICAL THEORY  
Semester Hours: 3

This course traces the development of major trends of sociological theory, past and present, and major theoretical problem areas. It also addresses how the socio-historical context within which the texts were written influences the issues and ideas expressed. Prerequisite: SOC 100.

SOC 303 - STATISTICS/SOCIAL SCIENCES  
Semester Hours: 3

Introduction to the basic quantitative data analysis techniques used by social scientists. Explore the ways researchers use statistics to examine and test ideas about the social world. In the lab, students learn how to use the statistical software SPSS to analyze social science datasets. Prerequisite: SOC 100 and one of the following math courses: MA 107, MA 110, MA 112, MA 113, MA 115, MA 120, MA 171.

SOC 304 - STATISTICS LAB  
Semester Hour: 1

SOC 306 - SOCIOLOGY OF GENDER  
Semester Hours: 3

Explores how social relationships create, structure and reinforce gender differences and inequalities. Students will learn about the social construction of gender, gender socialization, gender roles, and gender inequalities in income, poverty, occupation, and violence. Prerequisite: SOC 100.

SOC 307 - SOCIOLOGY OF LAW  
Semester Hours: 3

This course examines the relationship between law and society from a variety of theoretical perspectives. Topics include the social organization of legal institutions, cultural meanings of law, and social interactions among different actors in the legal context (police, lawyers, judges, legislators, etc). Prerequisite: SOC 100.

SOC 319 - DEVIANCE & SOCIAL CONTROL  
Semester Hours: 3

Examines several approaches to studying deviant behavior and its social control, with emphasis on the social construction of deviance and societal reactions to it. The focus is generally on deviation and control in the U.S. Prerequisite: SOC 100.

SOC 320 - SOCIOLOGY OF RELIGION  
Semester Hours: 3

Study of religion as a social phenomenon. The course examines sociological theories of religious behavior, religious beliefs, religion as a social institution, religious organization, new religious movements, and religion and social change.

SOC 330 - RACE AND ETHNICITY  
Semester Hours: 3

Examines the historical relationship between race, ethnicity and economic class/opportunity; and the social construction of ethnicity and race. The emphasis is on race and ethnicity in the U.S. with some discussion of international issues. Prerequisite: SOC 100.

SOC 340 - SPECIAL TOPICS  
Semester Hours: 1-3

Nontraditional topics of current sociological interest. Title of course and number of credit hours when offered will appear in course schedule along with prerequisites necessary for admission to course. May be taken more than once for credit as long as subtitles differ. Prerequisite: SOC 100.

SOC 350 - SOCIAL STRATIFICATION  
Semester Hours: 3

This course explores the causes and consequences of social stratification (focusing on economic inequality) in the United States, including: wealth and income disparities, labor markets, elites/power, impact of gender and race, privilege and oppression, and economic and social welfare policy. Prerequisite: SOC 100.
SOC 369 - ENVIRONMENTAL SOCIOLOGY
Semester Hours: 3
Examines the ways in which society and the natural environment interact and shape each other. This course engages with the major debates in the field of environmental sociology in order to better understand the challenges and options humans face as we head further into global environmental crisis. Prerequisite: SOC 100.

SOC 375 - SOCIAL PSYCHOLOGY
Semester Hours: 3
Fundamental principles of group processes, social influence, and group structure. Development of group solidarity, cohesion, intergroup conflict and cooperation, communication, leadership, opinion, propaganda, and suggestion. Prerequisites: SOC 100 or PY 101.

SOC 376 - MASS MEDIA IN AMERICA
Semester Hours: 3
Mass communication theory, history of American mass media, and criticism of contemporary forms and functions of mass media of communication in the U.S. Prerequisite: SOC 100.

SOC 390 - READING & INDIVIDUAL RES
Semester Hours: 3
Supervised readings or in-depth research or both in area of specialized interest to student or instructor. May be taken twice for credit with advisor's approval. Prerequisite: SOC 100.

SOC 395 - COMMUNITY SERVICES INTERNSHIP
Semester Hours: 3
An experiential-learning course for students who envision working in social service organizations. Internship opportunity is initiated by student and course includes an academic component of readings and assignments agreed upon by student, organizational representative and the internship Coordinator. Prerequisite: SOC 100.

SOC 415 - SOCIOLOGY OF GLOBALIZATION
Semester Hours: 3
Critical exploration of the processes of modernization and globalization and their impact on cultures, economies, and environments of developing societies. Topics include history and theories of development and case studies that examine the linkages among gender, class, culture, and development. Prerequisite: SOC 100.

SOC 425 - SOCIOLOGY OF EDUCATION
Semester Hours: 3
This course examines education systems and policies from a sociological perspective. We ask what and how students learn, the function of schools in society, results of recent policy decisions, and how educational systems interact with political, economic, cultural and family institutions. Prerequisite: SOC 100 and Junior or Senior Standing.

SOC 431 - ADVANCED SPECIAL TOPICS
Semester Hours: 3
Special topics of current sociological interest. Course title, credit hours and prerequisites will appear in course schedule. May be taken more than once for credit as long as subtitles differ. Different from SOC 340 Special Topics in terms of level of expectations and/or, prerequisites. Prerequisite: SOC 100.

SOC 435 - SOCIOLOGY OF SOCIAL MOVEMENTS
Semester Hours: 3
This course focuses on a variety of issues related to social movements, including questions about the origins and causes of social movements, the cultural, social and political contexts that impact movements, how movements mobilize people, and the use of strategies and tactics. Prerequisite: SOC 100 AND EITHER SOC 202 OR 300 OR 301.

SOC 439 - COMPLEX ORG INDUSTRIAL SOCIETY
Semester Hours: 3
Mainstream and critical sociological theories for understanding complex organizations in industrial society. Explores historical development, structure and processes, contradictions and conflict, and alternative forms of organizations in contemporary society. Prerequisite: SOC 100.

SOC 444 - SOCIOLOGY OF CULTURE
Semester Hours: 3
Examines the cultural dimensions of important social processes including race, class, gender, power, and resistance. Theoretical and empirical analyses of both high and popular cultural forms and processes of cultural production in various social settings. Prerequisite: SOC 100.
SOC 455 - SOC OF WORK & OCCUPATION  
Semester Hours: 3
Contemporary work situations and experiences. Alienation in work, impact of technological change and bureaucratization, primary work groups and work culture, professionalization, unionization, workers' self-management experiments, work-leisure relationship. Prerequisite: SOC 100.

SOC 469 - ENVIRONMENTAL JUSTICE  
Semester Hours: 3
Examination of (1) how social, economic, and political processes at the local and global levels contribute the distribution of both environmental 'goods' (e.g., clean air and water) and environmental 'bad's (e.g., toxic waste and pollution); (2) the principles and strategies of the environmental justice movement; (3) the interrelations between local and global level processes and their impact upon environmental inequality and the efforts and opportunities of the environmental justice movement. Prerequisites: SOC 100.

SOC 480 - SOCIOLOGY SCIENCE & TECHNOLOGY  
Semester Hours: 3
Explores how social relations produce scientific knowledge, the role of science in politics, how men and women move through careers in science differently, how technologies are socially constructed, and the relationship between culture, technology, and the evolution of civilizations. Prerequisite: SOC 100.

SOC 495 - SENIOR CAPSTONE SEMINAR  
Semester Hours: 3
Senior majors employ skills and knowledge acquired from courses to develop independent research projects. Course is designed to guide the research process with a focus on literature review, hypothesis development, data collection and analysis, and writing of a research article or formal report resulting from an internship. Prerequisite: SOC 301.

**Statistics (ST)**

ST 281 - ELEMENTS OF STAT ANALYSIS  
Semester Hours: 3
Descriptive statistics, fundamentals of probability theory, fundamentals of statistical inference, including estimation and hypothesis testing, and use of typical statistical package such as MINITAB. Prerequisites: MA 113 or MA 115 or Level 2 Placement.

ST 287 - APPLIED STATISTICS I  
Semester Hours: 3

ST 487 - INTRO TO MATH STATISTICS  
Semester Hours: 3
Brief review of basic probability theory, sampling distributions, estimations, hypothesis testing, experimental design, correlation and regression, analysis of variance, and nonparametric statistics. Prerequisites: MA 201 and either MA 385 or ISE 390.

**Theatre (TH)**

TH 100 - STAGECRAFT  
Semester Hours: 3
This course will provide students with the basic knowledge of stage construction, its practices, and implementation. Additional hands-on experience will be gained by working outside of class hours in the scene shop assisting in the construction and installation of main-stage productions.

TH 122 - THEATRE APPRECIATION  
Semester Hours: 3
Introductory survey of theater art focusing on understanding performance components and genres. Satisfies fine arts elective. Offered every term.

TH 150 - SCRIPT ANALYSIS  
Semester Hours: 3
This course is a hands-on look into script analysis, using plays from the western theatre canon, some of which will be produced by UAH Theatre during the school year. There will be individual and group work in script analysis, culminating in a full script analysis project at the end of the semester.

TH 221 - ACTING  
Semester Hours: 3
This course explores the foundations of acting through an understanding of basic techniques including scene study, script analysis, improvisation, and physical and vocal work. Offered every semester.
TH 225 - ELEMENTS OF THEATRE PRODUCTION
Semester Hours: 3

This course is designed to give students the opportunity to explore the design components of theatre including scenery, costumes, lighting and sound through class projects and practical application. Offered every Spring. Prerequisite: TH 122 or CM 122 or permission of instructor.

TH 322 - THEATRE HISTORY I
Semester Hours: 3

Explores the development of theater art from its origins to French neoclassicism and Moliere with particular emphasis on the Greeks, Shakespeare, and his contemporaries. Offered every two years.

TH 323 - THEATRE HISTORY II
Semester Hours: 3

Explores the development of theatre art from its origins as rituals around the world to French neoclassicism and Moliere with particular emphasis on the Greeks, Shakespeare, and his contemporaries. Offered every two years.

TH 330 - STAGE MANAGEMENT
Semester Hours: 3

This course concerns the role of the Stage Manager in theatrical productions. It focuses on the stage manager's duties, responsibilities, and procedures from pre-production to post-production. It explores the functions of various members of the production team and how the stage manager's interaction with each member of this team varies. It considers the role of the stage manager as the hub of communication for a production. Prerequisites: TH 122 and TH 225.

TH 340 - SPECIAL TOPICS IN THEATRE
Semester Hours: 3

Topics announced in advance. Representative topics include playwriting, directing, and ancient Greek theatre. May be repeated twice for credit.

TH 355 - SCENE DESIGN
Semester Hours: 3

This class introduces students to the many facets, both artistic and engineering-based, of scene design for the theatre including: history, research, design, stage, direction, technical direction, scenic art and props. Prerequisites: TH 100 and TH 225.

TH 375 - SOUND DESIGN
Semester Hours: 3

This course offers an exploration of the sound design process for the theatre. Script analysis and creating a design concept will underline the structure of the course. The students will have the opportunity to use a DAW (digital audio workstation) and various computer software programs including QLab. The course includes an overview of digital audio data structures, "plug-ins", processing, equalization and standard solutions for interfacing external devices with a computer. The students will participate in two productions and gain valuable hands-on experience. There will be an emphasis on the creative possibilities of sound design for the theatre and multimedia. Prerequisites: TH 225.

TH 390 - TEACHING THEATRE
Semester Hours: 3

This course is designed to help students develop the skills required to coach and direct student actors, focusing on best practices in teaching the fundamentals of directing, including various assessment rubrics and adapting activities to different age groups. The course emphasizes learning by doing. Prerequisite: TH 221.

TH 425 - THEATRE MAINSTAGE
Semester Hours: 1-3

This course provides students with an opportunity to experience the complete process of theatre including such elements as: direction, acting, design, tech and management. The class will produce two full length plays. Students will be auditioned to determine role in each production. Some will serve critical production roles such as design, direction, and management while others will act in one or both productions. In certain instances, a student actor may appear in both plays. Offered every semester.

TH 465 - DIRECTING
Semester Hours: 3

In this course, students will develop their skills in theatrical directing and production using script analysis, visual composition, design, and communication. Students will complete hands-on directing scene projects, supplemented with written analysis, dramaturgical research, and design images. Prerequisites: TH 105, and TH 322 or TH 323.
TH 475 - ENTREPRENEURSHIP
Semester Hours: 3

This course explores the current state of the entertainment industry's job market. Students from design, performance, video production, and dramaturgy build and refine the materials they will need to be employed within the entertainment industry. Prerequisites: TH 421, or TH 390, or TH 355, or TH 322 & TH 323.

Womens and Gender Studies (WGS)

WGS 200 - INTRO WOMEN'S & GENDER STUDIES
Semester Hours: 3

Focusing on gender as a fundamental category of meaning, the course will introduce methods and approaches to Women's and Gender Studies in a variety of disciplines, examining the pervasive and often unacknowledged ways that gender changes our social institutions, individual knowledge, and interpersonal relationships. The course includes guest lectures by many of our faculty teaching courses in the Women's and Gender Studies minor.

WGS 340 - SPECIAL TOPICS
Semester Hours: 1-3

Pre-announced special areas addressed in seminar format, laboratory work, or practicum. May be taken twice for credit.

WGS 499 - INDEPENDENT STUDY
Semester Hours: 1-3

World Languages and Cultures (WLC)

WLC 101A - INTRO FOREIGN LANG I: ARABIC
Semester Hours: 3

Teaches beginning listening, speaking, reading and writing within cultural contexts. Conducted in the target language. No prerequisites.

WLC 101F - INTRO FOREIGN LANG I:FRENCH
Semester Hours: 3

Teaches beginning listening, speaking, reading and writing within cultural contexts. Conducted in the target language. No prerequisites.

WLC 101G - INTRO FOREIGN LANG I:GERMAN
Semester Hours: 3

Teaches beginning listening, speaking, reading and writing within cultural contexts. Conducted in the target language. No prerequisites.

WLC 101J - INTRO FOREIGN LANG I:JAPANESE
Semester Hours: 3

Teaches beginning listening, speaking, reading and writing within cultural contexts. Conducted in the target language. No prerequisites.

WLC 101R - INTRO FOREIGN LANG I:RUSSIAN
Semester Hours: 3

Teaches beginning listening, speaking, reading and writing within cultural contexts. Conducted in the target language. No prerequisites.

WLC 101S - INTRO FOREIGN LANG I: SPANISH
Semester Hours: 3

Teaches beginning listening, speaking, reading and writing within cultural contexts. Conducted in the target language. No prerequisites.

WLC 102A - INTRO FOREIGN LANG II: ARABIC
Semester Hours: 3

Teaches beginning listening, speaking, reading, and writing within cultural contexts. Conducted in the target language. Prerequisites: WLC 101A or placement by exam.

WLC 102F - INTRO FOREIGN LANG II:FRENCH
Semester Hours: 3

Teaches beginning listening, speaking, reading, and writing within cultural contexts. Conducted in the target language. Prerequisites: WLC 101F or placement by exam.
WLC 102G - INTRO FOREIGN LANG II: GERMAN
Semester Hours: 3
Teaches beginning listening, speaking, reading, and writing within cultural contexts. Conducted in the target language. Prerequisites: WLC 101G or placement by exam.

WLC 102J - INTRO FOREIGN LANG II: JAPANESE
Semester Hours: 3
Teaches beginning listening, speaking, reading, and writing within cultural contexts. Conducted in the target language. Prerequisites: WLC 101J or placement by exam.

WLC 102R - INTRO FOREIGN LANG II: RUSSIAN
Semester Hours: 3
Teaches beginning listening, speaking, reading, and writing within cultural contexts. Conducted in the target language. Prerequisites: WLC 101R or placement by exam.

WLC 102S - INTRO FOREIGN LANG II: SPANISH
Semester Hours: 3
Teaches beginning listening, speaking, reading, and writing within cultural contexts. Conducted in the target language. Prerequisites: WLC 101S or placement by exam.

WLC 199A - SPECIAL TOPICS
Semester Hours: 3
Study of special topics in world languages, literature, or culture on campus or abroad. Prerequisites: Placement by exam.

WLC 199F - SPECIAL TOPICS
Semester Hours: 3
Study of special topics in foreign language, literature, or culture on campus or abroad. Prerequisites: Placement by exam.

WLC 199G - SPECIAL TOPICS
Semester Hours: 3
Study of special topics in foreign language, literature, or culture on campus or abroad. Prerequisites: Placement by exam.

WLC 199J - SPECIAL TOPICS
Semester Hours: 3
Study of special topics in world languages, literature, or culture on campus or abroad. Prerequisites: Placement by exam.

WLC 199R - SPECIAL TOPICS
Semester Hours: 3
Study of special topics in foreign language, literature, or culture on campus or abroad. Prerequisites: Placement by exam.

WLC 199S - SPECIAL TOPICS
Semester Hours: 3
Study of special topics in foreign language, literature, or culture on campus or abroad. Prerequisites: Placement by exam.

WLC 201A - INTERM FOREIGN LANG I: ARABIC
Semester Hours: 3
Teaches intermediate listening, speaking, reading, and writing within cultural contexts. Conducted in the target language. Prerequisite: WLC 102A or placement by exam.

WLC 201F - INTERM FOREIGN LANG: FRENCH
Semester Hours: 3
Teaches intermediate listening, speaking, reading, and writing within cultural contexts. Conducted in the target language. Prerequisite: WLC 102F or placement by exam.

WLC 201G - INTERM FOREIGN LANG: GERMAN
Semester Hours: 3
Teaches intermediate listening, speaking, reading, and writing within cultural contexts. Conducted in the target language. Prerequisite: WLC 102G or placement by exam.
WLC 201J - INTERM FOREIGN LANG: JAPANESE  
Semester Hours: 3  
Teaches intermediate listening, speaking, reading, and writing within cultural contexts. Conducted in the target language. Prerequisite: WLC 102 or placement by exam.

WLC 201R - INTERM FOREIGN LANG: RUSSIAN  
Semester Hours: 3  
Teaches intermediate listening, speaking, reading, and writing within cultural contexts. Conducted in the target language. Prerequisite: WLC 102R or placement by exam.

WLC 201S - INTERM FOREIGN LANG: SPANISH  
Semester Hours: 3  
Teaches intermediate listening, speaking, reading, and writing within cultural contexts. Conducted in the target language. Prerequisite: WLC 102S or placement by exam.

WLC 202A - INTERM FOREIGN LANG II: ARABIC  
Semester Hours: 3  
Teaches listening, speaking, reading and writing within cultural contexts. Conducted in the target language. Prerequisites: WLC 201A or placement by exam.

WLC 202F - INTERM FOREIGN LANG II: FRENCH  
Semester Hours: 3  
Teaches listening, speaking, reading and writing within cultural contexts. Conducted in the target language. Prerequisites: WLC 201F or placement by exam.

WLC 202G - INTERM FOREIGN LANG II: GERMAN  
Semester Hours: 3  
Teaches listening, speaking, reading and writing within cultural contexts. Conducted in the target language. Prerequisites: WLC 201G or placement by exam.

WLC 202J - INTERM FOREIGN LANG II: JAPANESE  
Semester Hours: 3  
Teaches listening, speaking, reading and writing within cultural contexts. Conducted in the target language. Prerequisites: WLC 201J or placement by exam.

WLC 202R - INTERM FOREIGN LANG II: RUSSIAN  
Semester Hours: 3  
Teaches listening, speaking, reading and writing within cultural contexts. Conducted in the target language. Prerequisites: WLC 201R or placement by exam.

WLC 202S - INTERM FOREIGN LANG II: SPANISH  
Semester Hours: 3  
Teaches listening, speaking, reading and writing within cultural contexts. Conducted in the target language. Prerequisites: WLC 201S or placement by exam.

WLC 204 - INTERNATIONAL CINEMA  
Semester Hours: 3  
Analyzes foreign language films centered on changing themes, such as gender issues, family, religion, children and society, the arts. Conducted in English. No prerequisite.

WLC 301F - CONVERSATION: FRENCH  
Semester Hours: 3  
Teaches conversational communication through cultural texts and media. Conducted in the target language. Prerequisite: WLC 202F or placement by exam.

WLC 301G - CONVERSATION: GERMAN  
Semester Hours: 3  
Teaches conversational communication through cultural texts and media. Conducted in the target language. Prerequisite: WLC 202G or placement by exam.
WLC 301J - CONVERSATION: JAPANESE
Semester Hours: 3
Teaches conversational communication through cultural texts and media. Conducted in the target language. Prerequisite: WLC 202J or placement by exam.

WLC 301R - CONVERSATION: RUSSIAN
Semester Hours: 3
Teaches conversational communication through cultural texts and media. Conducted in the target language. Prerequisite: WLC 202R or placement by exam.

WLC 301S - CONVERSATION: SPANISH
Semester Hours: 3
Teaches conversational communication through cultural texts and media. Conducted in the target language. Prerequisite: WLC 202S or placement by exam.

WLC 302F - COMPOSITION: FRENCH
Semester Hours: 3
Teaches writing skills through cultural texts and media. Conducted in the target language. Prerequisite: WLC 202F or placement by exam.

WLC 302G - COMPOSITION: GERMAN
Semester Hours: 3
Teaches writing skills through cultural texts and media. Conducted in the target language. Prerequisite: WLC 202G or placement by exam.

WLC 302R - COMPOSITION: RUSSIAN
Semester Hours: 3
Teaches writing skills through cultural texts and media. Conducted in the target language. Prerequisite: WLC 202R or placement by exam.

WLC 302S - COMPOSITION: SPANISH
Semester Hours: 3
Teaches writing skills through cultural texts and media. Conducted in the target language. Prerequisite: WLC 202S or placement by exam.

WLC 303F - FOREIGN LANG LIFE & PROF: FRENCH
Semester Hours: 3
Teaches foreign language skills for careers in business, technology, politics, etc. Conducted in the target language. Prerequisite: WLC 301F or WLC 302F.

WLC 303G - FOREIGN LANG LIFE & PROF: GERMAN
Semester Hours: 3
Teaches foreign language skills for careers in business, technology, politics, etc. Conducted in the target language. Prerequisite: WLC 301G or WLC 302G.

WLC 303R - FOREIGN LANG LIFE & PROF: RUSSIAN
Semester Hours: 3
Teaches foreign language skills for careers in business, technology, politics, etc. Conducted in the target language. Prerequisite: WLC 301R or WLC 302R.

WLC 303S - FOREIGN LANG LIFE & PROF: SPANISH
Semester Hours: 3
Teaches foreign language skills for careers in business, technology, politics, etc. Conducted in the target language. Prerequisite: WLC 301S or WLC 302S.

WLC 304F - CULTURE: FRENCH
Semester Hours: 3
Teaches the arts, histories, social customs, and values of the target culture. Conducted in the target language. Prerequisites: WLC 301F or WLC 302F.

WLC 304G - CULTURE: GERMAN
Semester Hours: 3
Teaches the arts, histories, social customs, and values of the target culture. Conducted in the target language. Prerequisites: WLC 301G or WLC 302G.
WLC 304R - CULTURE: RUSSIAN
Semester Hours: 3
Teaches the arts, histories, social customs, and values of the target culture. Conducted in the target language. Prerequisites: WLC 301R or WLC 302R.

WLC 304S - CULTURE: SPANISH
Semester Hours: 3
Teaches the arts, histories, social customs, and values of the target culture. Conducted in the target language. Prerequisites: WLC 301S or WLC 302S.

WLC 305F - INTRO TO LITERATURE: FRENCH
Semester Hours: 3
Introduces the literature of the target language in cultural contexts. Conducted in the target language. Prerequisite: WLC 301F or WLC 302F.

WLC 305G - INTRO TO LITERATURE: GERMAN
Semester Hours: 3
Introduces the literature of the target language in cultural contexts. Conducted in the target language. Prerequisite: WLC 301G or WLC 302G.

WLC 305R - INTRO TO LITERATURE: RUSSIAN
Semester Hours: 3
Introduces the literature of the target language in cultural contexts. Conducted in the target language. Prerequisite: WLC 301R or WLC 302R.

WLC 305S - INTRO TO LITERATURE: SPANISH
Semester Hours: 3
Introduces the literature of the target language in cultural contexts. Conducted in the target language. Prerequisite: WLC 301S or WLC 302S.

WLC 404F - TEXTS & CONTEXTS: SEM LIT: FRENCH
Semester Hours: 3
In-depth study of authors, genres, or movements in cultural contexts. Conducted in the target language. May be repeated when taught with a different topic. Prerequisite: WLC 301F or WLC 302F.

WLC 404G - TEXTS & CONTEXTS: SEM LIT: GERMAN
Semester Hours: 3
In-depth study of authors, genres, or movements in cultural contexts. Conducted in the target language. May be repeated when taught with a different topic. Prerequisite: WLC 301G or WLC 302G.

WLC 404R - TEXTS & CONTEXTS: SEM LIT: RUSSIAN
Semester Hours: 3
In-depth study of authors, genres, or movements in cultural contexts. Conducted in the target language. May be repeated when taught with a different topic. Prerequisite: WLC 301R or WLC 302R.

WLC 404S - TEXTS & CONTEXTS: SEM LIT: SPANISH
Semester Hours: 3
In-depth study of authors, genres, or movements in cultural contexts. Conducted in the target language. May be repeated when taught with a different topic. Prerequisite: WLC 301S or WLC 302S.

WLC 410 - INTL INTERN: COMP LANG/CULT
Semester Hours: 3-6
Capstone for majors, offering practical experience in commercial or public organizations domestically or abroad. Conducted in English. Prerequisite: WLC 303.

WLC 499F - INDEPENDENT STUDY: FRENCH
Semester Hours: 3
Independent study and/or study abroad. Prerequisite: WLC 202F.

WLC 499G - INDEPENDENT STUDY: GERMAN
Semester Hours: 3
Independent study and/or study abroad. Prerequisite: WLC 202G.
WLC 499R - INDEPENDENT STUDY: RUSSIAN
Semester Hours: 3
Independent study and/or study abroad. Prerequisite: WLC 202R.

WLC 499S - INDEPENDENT STUDY: SPANISH
Semester Hours: 3
Independent study and/or study abroad. Prerequisite: WLC 202S.

Faculty

(Date refers to original appointment to the university.)

A

Adams, Ellise, Associate Professor, Nursing, 2006, PhD, Texas Women's University.

Adams, Marsha, Professor, Nursing, 2014, PhD, University of Alabama at Birmingham.

Adcock, Lawana, Lecturer, Biological Sciences, 2016, PhD, Alabama AM University.

Ai, Shangbing, Associate Professor, Math, 2002, PhD, University of Pittsburgh.

Al-Hamdan, Ashraf, Clinical Assistant Professor, Civil and Environmental Engineering, 2007, PhD, University of Illinois at Chicago.

Alewine, Henry, Associate Professor, Accounting, 2010, PhD, University of Kentucky.

Alexander, Susan, Clinical Associate Professor, Nursing, 2009, DNP, University of Alabama in Huntsville.

Allen, David, Professor, Economics, 1994, PhD, University of Arkansas.

Allen, Mary Beth, Lecturer, Computer Science, 2017, M.S., Auburn University.

Allport, Christopher, Associate Professor, Accounting, 2005, PhD, Virginia Tech.

Altenkirch, Robert, President, Professor, Mechanical and Aerospace Engineering, 2011, PhD, Purdue.

Amiri, Azita, Assistant Professor, Nursing, 2012, MS, Iran.

Anderson, Michael, Associate Professor, Civil and Environmental Engineering, 1998, PhD, Iowa State University.

Argentina, Vincent, Assistant Professor, Art, Art History Design, 2014, MFA, University of Georgia.

Armentrout, Daniel, Lecturer, Mechanical and Aerospace Engineering, 2012, PhD, University of Denver.

Aygun, Ramazan, Associate Professor, Computer Science, 2003, PhD, New York State University.

B

Baginski, Melissa, Clinical Assistant Professor, Nursing, 2009, MSN, University of Virginia.

Baird, James, Professor, Chemistry, 1982, PhD, Harvard.

Baldwin, Katie, Assistant Professor, Art, Art History Design, 2013, MFA, University of the Arts, Pennsylvania.

Balla, Angela, Associate Professor, English, 2006, PhD, University of Michigan-Ann Arbor.

Banish, R. Michael, Associate Professor, Chemical and Materials Engineering, 1999, PhD, University of Utah.

Bao, Yeqing, Associate Dean, Professor, Marketing, 2001, PhD, Virginia Polytechnic Institute and State University.

Bao, Yongchuan, Associate Professor, Marketing, 2014, PhD, University of Southern California.

Barnby, Elizabeth, Clinical Assistant Professor, Nursing, 2009, DNP, University of Alabama in Huntsville.

Baun, Dylan, Assistant Professor, History, 2016, PhD, The University of Arizona.
Beck, Monica, Clinical Assistant Professor, Nursing, 2009, MSN, University of Alabama in Huntsville.

Benton, Anna, Clinical Instructor, Nursing, 2008, MSN, University of Alabama in Huntsville.

Berbrier, Mitchell, Professor, Sociology, 1996, PhD, Marquette University.

Betancourt, Jose, Associate Professor, Art, Art History Design, 2006, MFA, Hunter College.

Bianchi, Ann, Associate Professor, Nursing, 2007, MSN, University of Alabama in Huntsville.

Bitzer, Phillip, Associate Professor, Atmospheric Science, 2011, PhD, University of Alabama in Huntsville.

Blackmon, James, Research Professor, Mechanical and Aerospace Engineering, 2001, PhD, University of California.

Bollinger, Laurel, Professor, English, 1993, PhD, Princeton.

Bonamente, Massimiliano, Professor, Physics, 2002, PhD, University of Alabama in Huntsville.

Bonilla, Mary, Clinical Assistant Professor, Nursing, 1998, MSN, University of Alabama in Huntsville.

Bowman, Elizabeth, Lecturer, Math, 2001, MA, University of Alabama in Huntsville.

Bowman, Ronald, Lecturer, Electrical and Computer Engineering, 2005, MSEE, Clemson University.

Boyette, Maria, Lecturer, Foreign Language, 2015, M.A., Mississippi State University.

Boykin, Timothy, Professor, Electrical and Computer Engineering, 1992, PhD, Stanford University.

Bridges, Lindsay, Clinical Instructor, Nursing, 2003, MSN, Jacksonville State University.

Buksa, Irena, Associate Professor, Foreign Language, 1990, DA, Syracuse.

Burel, Joshua, Assistant Professor, Music, 2017, PhD, Florida State University.

Burnett, John, Associate Professor, Economics, 1992, PhD, University of Alabama.

Burns, Laird, Associate Professor, Management Science, 2009, PhD, Michigan State.

Bushman, Karissa, Lecturer, Art, Art History Design, 2015, PhD, University of Iowa.

Caires, Angela, Clinical Assistant Professor, Nursing, 2012, MSN, University of Alabama in Huntsville.

Carey, Lawrence, Associate Professor, Atmospheric Science, 2012, PhD, Colorado State University.

Carey, Matthew, Assistant Professor, Music, 2016, DMA, Texas Tech University.

Carmen, Christina, Clinical Associate Professor, Mechanical and Aerospace Engineering, 2006, PhD, University of Alabama in Huntsville.

Carpenter, Sandra, Professor, Physics, 1989, PhD, University of California Santa Barbara.

Cassibry, Jason, Associate Professor, Mechanical and Aerospace Engineering, 2004, PhD, University of Alabama in Huntsville.

Chittur, Krishnan, Professor, Chemical and Materials Engineering, 1991, PhD, Rice.

Choup, Anne Marie, Associate Professor, Political Science, 2007, PhD, University of North Carolina at Chapel Hill.

Christopher, Sundar, Professor, Atmospheric Science, 1997, PhD, Colorado State.

Christy, John, Distinguished Professor, Atmospheric Science, 1991, PhD, Illinois.

Clemmons, Tammy, Clinical Instructor, Nursing, 2006, MSN, University of Alabama in Huntsville.

Cling, Andrew, Professor, Philosophy, 1988, PhD, Vanderbilt.

Coby, Jim, Lecturer, English, 2016, PhD, University of Louisiana.

Coe, David, Associate Professor, Electrical and Computer Engineering, 2002, PhD, Georgia Institute of Technology.
Coffey, Sharon, Clinical Assistant Professor, Nursing, 2016, DNP, University of Alabama in Huntsville.

Coleman, Richard, Lecturer, Computer Science, 2013, PhD, University of Florida.

Collopy, Paul, Professor, Industrial Systems Engineering, 2013, PhD, Stanford University.

Conners, Ryan T., Assistant Professor, Kinesiology, 2015, PhD, Middle Tennessee State University.

Conway, Joseph, Associate Professor, English, 2011, PhD, Washington University in St. Louis.

Cooper, Judy, Lecturer, Biological Sciences, 2015, M.S., University of Alabama in Huntsville.

Cornelius, Sandy, Clinical Assistant Professor, Nursing, 2011, MSN, Jacksonville State University.

Crook, Genevieve, Lecturer, Math, 1989, MA, University of Alabama in Huntsville.

Cross, Heather, Lecturer, English, 2007, MA, University of Alabama in Huntsville.

Cruz-Vera, Luis, Associate Professor, Biological Sciences, 2007, PhD, CIINVESTAV-IPN, Mexico.

Cseke, Leland, Associate Professor, Biological Sciences, 2002, PhD, University of Michigan.

Curtis, Christine, Provost, Professor, Chemical and Materials Engineering, 2014, PhD, Florida State University.

D

Davis, Rebecca, Clinical Assistant Professor, Nursing, 2009, MSN, University of Alabama in Huntsville.

Delugach, Harry, Associate Professor, Computer Science, 1990, PhD, University of Virginia.

Deverapalli, Chakri, Director IT, Lecturer, Information Systems, 2008, MBA, University of Alabama in Huntsville.

Devlin, Anna, Assistant Professor, Management Science, 2014, PhD, University of Maryland.

Dillard, Anne, Clinical Instructor, Nursing, 2014, MSN, University of Alabama in Huntsville.

Dillihunt, Monica, Associate Professor, Education, 2004, PhD, Howard University.

Doty, Johnna, Lecturer, Music, 2012, MFA, Boston University.

Doty, Johnna, Lecturer, Communication Arts, 2012, MFA, Boston University.

Duan, Lingze, Associate Professor, Physics, 2007, PhD, University of Maryland.

Durm, Tracy, Clinical Assistant Professor, Nursing, 2013, MSN, University of Alabama in Huntsville.

E

Elliott, Jeremy M., Assistant Professor, Kinesiology, 2015, PhD, University of Georgia.

Elsamadicy, Abdalla, Lecturer, Physics, 2002, PhD, Alabama AM University.

Emich, Cheryl, Clinical Assistant Professor, Nursing, 2013, MSN, University of Alabama.

English, Jennifer, Associate Professor, Electrical and Computer Engineering, 2000, PhD, Georgia Institute of Technology.

Etzkorn, Letha, Professor, Computer Science, 1993, PhD, University of Alabama in Huntsville.

Ewere, Felix, Lecturer, Mechanical and Aerospace Engineering, 2016, PhD, University of Alabama in Huntsville.

F

Fahimi, Farbod, Associate Professor, Mechanical and Aerospace Engineering, 2010, PhD, Sharif U Tech, Tehran.

Farrington, Phillip, Professor, Industrial Systems Engineering, 1991, PhD, Oklahoma State University.

Ferguson, Rita, Clinical Assistant Professor, Nursing, 2006, MSN, University of Alabama in Huntsville.

Fikes, David, Lecturer, Mechanical and Aerospace Engineering, 2016, MS, University of Tennessee - Knoxville.
Fischer, Jeremy, Assistant Professor, Philosophy, 2014, PhD, University of Washington.

Florinski, Vladimir, Associate Professor, Space Science, 2008, PhD, University of Arizona.

Fong, Eric, Associate Professor, Management, 2004, PhD, University of Florida.

Foy, Anna, Assistant Professor, English, 2012, PhD, University of Pennsylvania.

Frederick, Robert, Professor, Mechanical and Aerospace Engineering, 1991, PhD, Purdue.

Frendi, Kader, Professor, Mechanical and Aerospace Engineering, 1999, PhD, Brown University.

Friedman, Susan, Lecturer, English, 2008, PhD, University of South Florida.

Frith, Karen, Professor, Nursing, 2007, PhD, Georgia State University.

Frost, Alanna, Associate Professor, English, 2008, PhD, University of Louisville.

Gaede, Rhonda, Associate Professor, Electrical and Computer Engineering, 1992, PhD, University of Texas-Austin.

Gandila, Andrei, Assistant Professor, History, 2013, PhD, University of Florida.

George, Michael, Associate Professor, Chemistry, 1997, PhD, Arizona State University.

Gholston, Sampson, Associate Professor, Industrial Systems Engineering, 1997, PhD, University of Alabama in Huntsville.

Gilchrist-Petty, Eletra, Associate Professor, Communication Arts, 2008, PhD, University of Memphis.

Goebel, Rolf, Professor, Foreign Language, 1985, PhD, University of Maryland.

Graves, Sara, Professor, Computer Science, 1978, PhD, University of Alabama in Huntsville.

Greene, Michelle, Lecturer, Chemistry, 2016, PhD, Indiana University.

Gregory, Don, Distinguished Professor, Physics, 1992, PhD, University of Alabama in Huntsville.

Gregory, John, Professor, Chemistry, 1983, PhD, Imperial College.

Griffin, Robert, Assistant Professor, Atmospheric Science, 2012, PhD, Penn State University.

Guerin, Amy, Assistant Professor, Theatre, 2016, MFA, University of Houston. Email: agg0008@uah.edu

Guerin, Amy, Assistant Professor, Theatre, 2016, MFA, University of Houston. Email: agg0008@uah.edu

Gunn, Sinceree, Lecturer, English, 2003, MA, University of Alabama in Huntsville.

Guo, Junpeng, Professor, Electrical and Computer Engineering, 2005, PhD, University of Illinois.

Gupta, Jatinder, Professor and Eminent Scholar, Information Systems, 2002, PhD, Texas Tech University.

Gyasi, Kwaku, Associate Professor, Foreign Language, 1999, PhD, Ohio State University.

Haleem, Kirolos, Lecturer, Civil and Environmental Engineering, 2016, PhD, University of Central Florida.

Hamilton, Frances, Assistant Professor, Education, 2014, PhD, Tennessee State University.

Han, Qingyuan, Associate Professor, Atmospheric Science, 1997, PhD, Columbia University.

Harwell, David, Associate Professor, Theatre, 2005, MFA, University of Illinois.

Hawk, Kathleen, Associate Professor, Political Science, 1998, PhD, University of Alabama.

Hazeli, Kavan, Assistant Professor, Mechanical and Aerospace Engineering, 2016, PhD, Drexel University.

Heerikhuisen, Jacob, Associate Professor, Space Science, 2008, PhD, University of Waikato, New Zealand.
Heikes, Deborah, Professor, Philosophy, 1998, PhD, University of Illinois.

Herrin, Kristen, Clinical Assistant Professor, Nursing, 2004, DNP, University of Alabama in Huntsville.

Hile, Kimberly, Assistant Professor, Education, 2017, PhD, University of Illinois.

Hite, Dennis, Lecturer, Electrical and Computer Engineering, 2005, MSE, University of Alabama in Huntsville.

Ho, Fat, Professor, Electrical and Computer Engineering, 1980, PhD, South Illinois University.

Hobson, Kay, Clinical Assistant Professor, Nursing, 2007, MSN, Medical College of Georgia.

Hollingsworth, Angela, Clinical Assistant Professor, Nursing, 2016, DNP, University of South Alabama.

Hollingsworth, Donald (Keith), Professor, Mechanical and Aerospace Engineering, 2011, PhD, Stanford University.

Hoy, Haley, Associate Professor, Nursing, 2006, PhD, Vanderbilt University.

Hsu, Liwu, Assistant Professor, Marketing, 2012, PhD, Boston University.

Hu, Leiqui, Assistant Professor, Atmospheric Science, 2017, PhD, University of Kansas, Lawrence.

Hu, Qiang, Assistant Professor, Space Science, 2012, PhD, Dartmouth.

Huang, Wenzhang, Professor, Math, 1994, PhD, Claremont Graduate School.

Hubbell, Gaines, Assistant Professor, English, 2015, PhD, Rensselaer Polytechnic Institute.

Hunter, Amy, Clinical Instructor, Nursing, 2014, MSN, University of Alabama in Huntsville.

Jayawardena, Surangi, Assistant Professor, Chemistry, 2017, PhD, University of Massachusetts-Lowell.

Johnson, David, Associate Professor, History, 2005, PhD, Washington University in St. Louis.

Johnson, Kathryn, Professor, Art, Art History Design, 2003, MFA, University of Georgia.

Johnson, Molly, Associate Professor, History, 2003, PhD, University of Illinois.

Johnson, Terri, Lecturer, Math, 2011, PhD, University of Alabama in Huntsville.

Joiner, Laurie, Associate Professor, Electrical and Computer Engineering, 1998, PhD, Clemson University.

Jones, Holly, Associate Professor, English, 2006, PhD, Penn State University.

Jones, Keith, Associate Professor, Art, Art History Design, 1996, MFA, Louisiana Tech University.

Jones, Nicholaos, Professor, Philosophy, 2007, PhD, Ohio State University.

Jovanov, Emil, Associate Professor, Electrical and Computer Engineering, 1998, PhD, University of Belgrade.

Joyce, Lillian, Associate Professor, Art, Art History Design, 1997, PhD, University of California, Los Angeles.

Kaiura, Leslie, Assistant Professor, Foreign Language, 2007, MA, University of Virginia.

Kang, Chang-kwon, Assistant Professor, Mechanical and Aerospace Engineering, 2013, PhD, University of Michigan.

Kansakar, Siroj, Professor, Math, 2012, PhD, University of Alabama in Huntsville.

Kaukler, William, Associate Research Professor, Chemistry, 1987, PhD, Toronto.

Keller, Karl, Lecturer, Foreign Language, 2007, MA, University of Alabama.

Knight, Kyle, Assistant Professor, Sociology, 2012, PhD, Washington State University.

Knupp, Kevin, Professor, Atmospheric Science, 1991, PhD, Colorado State University.
Kulick, Jeffrey, Professor, Electrical and Computer Engineering, 1990, PhD, University of Pennsylvania.

Kunin, Boris, Associate Professor, Math, 1992, PhD, University of Illinois - Chicago.

Kvach, John, Associate Professor, History, 2008, PhD, University of Tennessee at Knoxville.

LaFontaine, Yalitza, Lecturer, Intensive Language Center, 2011, MA, University of Alabama in Huntsville.

Lampley, Sandra, Assistant Professor, Education, 2016, PhD, Middle Tennessee State.

Landrum, David, Associate Professor, Mechanical and Aerospace Engineering, 1992, PhD, North Carolina State University.

Landry, Timothy, Associate Professor, Marketing, 2008, PhD, University of Missouri.

Lang, Joshua, Lecturer, Chemistry, 2016, PhD, University of Alabama in Huntsville.

Lanius, Candice, Lecturer, Communication Arts, 2016, Rensselaer Polytechnic Institute.

Lanz, Amelia, Clinical Assistant Professor, Nursing, 2012, MSN, University of Alabama in Huntsville.

Le Roux, Jakobus, Associate Professor, Space Science, 2008, PhD, Potchefstroom.

Leahy, Joseph, Associate Professor, Biological Sciences, 1997, PhD, University of Maryland.

Lee, Eunseok, Stanford University, Mechanical and Aerospace Engineering, 2016, PhD, Assistant Professor.

Lee, Shanhu, Associate Professor, Atmospheric Science, 2015, PhD, University of Tokyo.

Lee, Yeolan, Assistant Professor, Management, 2013, PhD, Ohio State University.

Lei, Yu, Assistant Professor, Chemical and Materials Engineering, 2013, PhD, U of Ill, Chicago (UIC).

Lenahan, Shelley, Lecturer, Math, 2004, MA, Texas AM.

Li, Gang, Associate Professor, Space Science, 2008, PhD, Indiana University-Bloomington.

Li, Wei, Associate Professor, Computer Science, 1996, PhD, Virginia Polytechnic Institute State University.

Li, Xiaotong, Professor, Information Systems, 2001, PhD, University of Mississippi.

Lieu, Richard, Distinguished Professor, Physics, 1995, PhD, Imperial College - London.

Ligrani, Phillip, Professor, Mechanical and Aerospace Engineering, 2014, PhD, Stanford University.

Lin, Mark, Associate Professor, Mechanical and Aerospace Engineering, 2000, PhD, Virginia Polytechnic Institute.

Lioce, Bonnie (Lori), Clinical Associate Professor, Nursing, 2014, PhD, University of Alabama in Huntsville.

Lonnergan, Melissa, Clinical Instructor, Nursing, 2012, MSN, Jacksonville State University.

Love-Rutledge, Sharifa, Assistant Professor, Chemistry, 2017, PhD, The University of Alabama.

Lynch, Thuy, Assistant Professor, Nursing, 2017, PhD, University of Alabama.

MacGregor, Gordon, Assistant Professor, Biological Sciences, 2010, PhD, University of Dundee, Scotland.

MacKenzie, William (Ivey), Associate Dean and Associate Professor, Management, 2010, PhD, University South Carolina.

Magnuson, Roy, Associate Professor, Biological Sciences, 1999, PhD, Massachusetts Institute of Technology.

Mahafza, Hamsa, Lecturer, Education, 2017, PhD, University of Texas at San Antonio.

Mahalingam, Brinda, Lecturer, Economics, 2012, PhD, University of Colorado.
Mahalingam, Shankar, Professor, Mechanical and Aerospace Engineering, 2010, PhD, Stanford University.

Maier, Linda, Professor, Foreign Language, 1993, PhD, University of Virginia.

Marinova, Sophia, Associate Professor, Management, 2014, PhD, University of Maryland.

Marschalk, Lacy, Lecturer, English, 2014, PhD, Auburn University.

Mathis, Shannon L., Assistant Professor, Kinesiology, 2011, PhD, Middle Tennessee State University.

McClellan, Lynn, Clinical Associate Professor, Nursing, 2017, DNP, University of Alabama at Birmingham.

McDavid, Nicole, Lecturer, Communication Arts, 2015, MA, Auburn University.

McFeeters, Robert, Associate Professor, Chemistry, 2008, PhD, Cornell.

McGinnis, Michael, Lecturer, English, 2015, PhD, Wayne State University.

Meade, Whitney, Clinical Assistant Professor, Education, 2011, PhD, Auburn University.

Mecikalski, John, Professor, Atmospheric Science, 2004, PhD, University of Wisconsin-Milwaukee.

Mendelson, Tobias, Clinical Assistant Professor, Accounting, 2017, JD, Samford University.

Mendenhall, Eric, Assistant Professor, Biological Sciences, 2013, PhD, University of Minnesota.

Menon, Vineetha, Assistant Professor, Computer Science, 2017, PhD, Mississippi State University.

Mesmer, Bryan, Assistant Professor, Industrial Systems Engineering, 2014, PhD, University of Buffalo.

Messimer, Sherri, Associate Professor, Industrial Systems Engineering, 1989, PhD, Texas AM.

Milenkovic, Aleksander, Professor, Electrical and Computer Engineering, 2001, PhD, University of Belgrade.

Miller, James, Professor, Physics, 1994, PhD, Maryland.

Miller, Richard, Professor, Physics, 2003, PhD, University of New Hampshire.

Mok, Wai Yin, Professor, Information Systems, 2001, PhD, Brigham Young University.

Moore, David, Lecturer, Library, 2002, MLS, University of Alabama.

Morales, Claudio, Professor, Math, 1982, PhD, University of Iowa.

Morgan, Tracie, Clinical Assistant Professor, Nursing, 2016, MSN, University of Alabama in Huntsville.

Morarity, Debra, Professor, Biological Sciences, 1984, PhD, Temple University.

Morris, Tommy, Associate Professor, Electrical and Computer Engineering, 2015, PhD, Southern Methodist.

Mukherjee, Anusree, Assistant Professor, Chemistry, 2013, PhD, University of Minnesota.

Mullins, Frank, Associate Professor, Management, 2017, PhD, Syracuse University.

N

Nair, Udaysankar, Associate Professor, Atmospheric Science, 2011, PhD, Colorado State University.

Nale, John, Assistant Professor, Philosophy, 2014, PhD, Penn State University.

Naviaux, Julie, Lecturer, English, 2016, PhD, University of Kentucky.

Nelson, George, Associate Professor, Mechanical and Aerospace Engineering, 2012, PhD, Georgia Tech.

Nelson, Jeffrey, Associate Professor, English, 1990, PhD, Chicago.

Neuschatz, Jeffrey, Professor, Psychology, 2000, PhD, Binghamton University.

Newchurch, Michael, Professor, Atmospheric Science, 1994, PhD, Georgia Institute of Technology.
Newman, Kathy, Associate Professor, Nursing, 1991, PhD, University of Alabama at Birmingham.

Newman, Timothy, Professor, Computer Science, 1994, PhD, Michigan State.

Ng, Joseph, Professor, Biological Sciences, 1998, PhD, University of California, Riverside.

Ng, Ka Man (Melody), Assistant Professor, Music, 2013, PhD, University of Wisconsin.

Ng, Yeow Chye, Assistant Professor, Nursing, 2013, PhD, University of Alabama at Birmingham.

Niemiller, Matthew, Assistant Professor, Biological Sciences, 2017, PhD, University of Tennessee.

Nishikawa, Ken-Ichi, Associate Research Professor, Physics, 2013, PhD, Nagoya University.

Norris, Casey, Clinical Assistant Professor, Nursing, 2014, MSN, Clemson University.

O'Brien, Jason, Associate Professor, Education, 2008, PhD, University of South Florida.

O'Keefe, Louise, Assistant Professor, Nursing, 2006, PhD, University of Alabama at Birmingham.

Olson, Charlotte, Lecturer, Library, 2007, MFA, University of Florida.

O'Neal, Pamela, Associate Professor, Nursing, 2005, PhD, Virginia Commonwealth University.

Ong, Belinda, Lecturer, Library, 2004, PhD, University of Kentucky.

Orman, Wafa, Associate Dean and Associate Professor, Economics, 2008, PhD, University of Arizona.

Pacino, Nicole, Assistant Professor, History, 2013, PhD, University of California, Santa Barbara.

Pan, David, Associate Professor, Electrical and Computer Engineering, 2002, PhD, University of Southern California.

Park, Jae, Associate Professor, Information Systems, 2015, PhD, George Mason University.

Patterson, LaToya, Clinical Instructor, Nursing, 2014, MSN, University of Alabama in Huntsville.

Pekker, Mark, Professor, Math, 1987, PhD, Cornell.

Peng, Chao, Assistant Professor, Computer Science, 2014, PhD, Virginia Tech.

Petnga, Leonard, Assistant Professor, Industrial Systems Engineering, 2017, PhD, University of Maryland.

Petty, Mikel, Associate Professor, Computer Science, 2005, PhD, University of Central Florida.

Pogorelov, Nickolai, Professor, Space Science, 2008, PhD, Russian Academy of Sciences.

Popp, Katie, Lecturer, Math, 2016, MA, University of Alabama at Birmingham.

Pottenger, John, Professor, Political Science, 1988, PhD, University of Maryland.

Pour, Maria, Assistant Professor, Electrical and Computer Engineering, 2015, PhD, University of Manitoba.

Preece, Robert, Associate Professor, Space Science, 2001, PhD, University of Maryland at College Park.

Price, Jodi, Associate Professor, Psychology, 2008, PhD, Georgia Institute of Technology.

Primeau, Marlena, Clinical Associate Professor, Nursing, 2004, MSN, University of Alabama in Huntsville.

Puckett, Christopher, Assistant Professor, Music, 2017, PhD, University of Missouri - Kansas City.

Que, Tingting, Assistant Professor, Finance, 2014, PhD, University of Iowa.

R

Ragsdale, Christopher, Associate Professor, Music, 2006, DMA, University of Miami, Florida.

Rahman, Tauhidur, Assistant Professor, Electrical and Computer Engineering, 2017, PhD, University of Florida.

Ramachandran, Kerrin, Lecturer, Intensive Language Center, 2011, MA, University of Alabama in Huntsville.

Ranganath, Heggere, Professor, Computer Science, 1982, PhD, Auburn University.

Rani, Sarma, Associate Professor, Mechanical and Aerospace Engineering, 2011, PhD, U of Illinois-Urbana-Champaign.

Ravindran, Sivaguru, Professor, Math, 1999, PhD, Simon Fraser University, British Columbia.

Ray, Biswajit, Assistant Professor, Electrical and Computer Engineering, 2016, PhD, Purdue University.

Reardon, Patrick, Assistant Professor, Electrical and Computer Engineering, 2013, PhD, University of Alabama in Huntsville.

Reeves, Andree, Associate Professor, Political Science, 1992, PhD, Rice University.

Reynolds, Mark, Clinical Assistant Professor, Nursing, 2009, MSN, University of Alabama in Huntsville.

Robinson, Joy, Assistant Professor, English, 2014, PhD, Illinois Institute of Technology.

Rochowiak, Daniel, Associate Professor, Computer Science, 1984, PhD, Notre Dame.

Roh, Kyung-Ho, Assistant Professor, Chemical and Materials Engineering, 2016, PhD, University of Michigan.

Roller, Sarah, Assistant Professor, Education, 2016, PhD, Michigan State.

Rose-Green, Ena, Associate Professor, Accounting, 2008, PhD, Florida State University.

Rountree, J. Clarke, Professor, Communication Arts, 1993, PhD, University of Iowa.

S

Sadeghi, Seyed, Associate Professor, Physics, 2007, PhD, University of British Columbia.

Sanders, Carolyn, Professor, Music, 1990, DMA, Florida State University.

Schneider, Judith, Professor, Mechanical and Aerospace Engineering, 2015, PhD, University of California-Davis.

Scholtz, Carmen, Professor, Chemistry, 1998, PhD, University of Technology, Dresden Germany.

Schwertfeger, Ron, Lecturer, Library, 2014, MA, University of Alabama.

Scroggin, Kristin, Lecturer, Communication Arts, 2007, MA, University of Alabama.

Sears, Christine, Associate Professor, History, 2007, PhD, University of Delaware.

Seemann, Eric, Associate Professor, Physics, 2003, PhD, Lousiana Tech University.

Setzer, Mary, Lecturer, Chemistry, 2005, MS, University of Alabama in Huntsville.

Sever, Thomas, Professor, Atmospheric Science, 2008, PhD, University of Colorado-Boulder.

Sheldon, Pavica, Associate Professor, Communication Arts, 2011, PhD, Lousiana State University.

Shen, Milton, Associate Professor, Accounting, 2011, PhD, University of Kentucky.

Shotorban, Babak, Associate Professor, Mechanical and Aerospace Engineering, 2008, PhD, University Illinois-Chicago.

Showalter, Darlene, Clinical Associate Professor, Nursing, 1998, DNP, University of Alabama in Huntsville.

Shtessel, Yuri, Professor, Electrical and Computer Engineering, 1993, PhD, Chelyabinsk/Russia.

Simon, Richard, Assistant Professor, Sociology, 2013, PhD, Penn State University.
Sims, Jennifer, Assistant Professor, Sociology, 2017, PhD, University of Wisconsin - Madison.

Singer, Diane, Lecturer, English, 1987, MA, Wichita State University.

Sitaraman, Bhavani, Associate Professor, Sociology, 1993, PhD, University of Massachusetts.

Smeal, Mary Alice, Professor, Math, 2015, PhD, Auburn University.

Smith, Derrick, Associate Professor and Department Chair, Education, 2008, EdD, Texas Tech University.

Smith, Eric, Professor, English, 2006, PhD, University of Florida.

Smith, Lenora, Clinical Assistant Professor, Nursing, 2013, MSN, University of Alabama at Birmingham.

Spencer, Sharon, Clinical Assistant Professor, Nursing, 2012, MSN, University of New Orleans.

St. John, Caron, Professor, Management, 2010, PhD, Georgia State University.

Stallsmith, Bruce, Associate Professor, Biological Sciences, 1999, PhD, University of Massachusetts.

Steidl, Christina, Assistant Professor, Sociology, 2012, PhD, Emory University.

Zhou, Hongyu, Assistant Professor, Civil and Environmental Engineering, 2014, PhD, Arizona State University.
Financial Information

In the following section you will find information pertaining to financial aspects of attending UAH including how you will be billed, how to pay your bill, estimated cost of tuition and other fees, and information regarding financial aid options. The cost of attendance for students at The University of Alabama in Huntsville will vary by their course of study, personal needs, and place of residence. Please note that all fees, charges, and costs detailed in this catalog are subject to change without notice. Financial obligations must be satisfied by the established deadlines. For additional information or questions please contact the Bursar’s Office (www.uah.edu/bursar).

Billing and Payment Procedure

Tuition, fees and all associated charges are to be paid in full by the first official day of the semester (click here to find first official day of semester). Acceptable forms of payment are:

- Cash
- Personal Checks
- Money Orders
- Cashier’s Checks
- Traveler’s Checks
- Electronic Checks
- Credit Cards/Debit Cards (VISA, MasterCard, American Express, or Discover - 2.75% service fee applies)

Payments may be made online through the student account, in person at the Bursar’s Office (SSB 123), or by phone at 256.824.2732. Students who do not pay their bill in full by the first day of the semester are assessed a $50.00 late fee. Students who do not pay their bill in full by the end of the second week of classes may be dropped from class rolls and their enrollment canceled. The University assumes no responsibility for students who attend classes without official enrollment. For summer sessions, please check dates in the Academic Calendar and on the UAH website.

Mail payments to:

The University of Alabama in Huntsville
Bursar’s Office
Student Services Building, Room 123
Huntsville, AL 35899-5050

Installment Plans

Installment plans are available to students fall and spring semesters for the management of that semester’s costs. UAH partners with Tuition Management Systems (TMS) to offer student installment plan accounts. A student may set up a plan or give access to others so they may establish a plan on the student’s behalf. Two plans are available - a 4 payment plan or a 5 payment plan. There is a $50.00 fee to establish a plan and the fee is due at the time the plan is initiated. Once a plan is established, all payments are to be made to TMS. Should you need to adjust your plan, contact TMS at 800-336-0528. For more information, or to set up an installment plan, click here.

Balances

Past due balances are a debt owed the State of Alabama and appropriate action will be taken to collect all balances. Holds will be placed on all student accounts that have past due balances. This hold prevents students from receiving grades and transcripts and from registering for another semester at UAH. To the extent permitted by the laws of the State of Alabama, any costs to collect a past due account, to include collection agency charges and attorney fees, will be charged back to the student who shall be liable for payment of those charges.

Refunds

Students may drop a class through the second week of classes (fall and spring) and receive a 100% tuition refund. Please check the UAH website (http://www.uah.edu/registrar/calendars) for summer dates. A student desiring to drop one or more classes may do so on the UAH online registration site or by submitting a drop request form to the Records and Registration Office, SSB 120. The date of the drop request is the date the written request is received at the Records and Registration Office.

Financial Aid

Students who apply for financial aid are responsible for completing the necessary paperwork far enough in advance to assure aid is received in a timely manner. For further information, please check with the Office of Financial Aid, Student Services Building, Suite 124.

Undergraduate Student Aid

UAH has several programs to assist students in financing their college education. Comprehensive, updated information on all financial aid offered through the Office of Financial Aid is available online at www.uah.edu/financialaid. It includes detailed information about types of aid, eligibility guidelines, application procedures, criteria for awards, disbursement methods and regulations, and institutional policy followed in administration of aid. Additional information and necessary forms are available online and in the Office of Financial Aid.

Students of academic promise who can demonstrate financial need are encouraged to apply for assistance. Realistic financial planning is an essential part of college preparation. UAH helps qualified students find employment, scholarships, and loans as resources permit.

Students should make financial plans well in advance of entering the University. There are two important priority dates for student aid—December 1 for scholarships and April 1 for federal aid (apply online at https://fafsa.ed.gov/). The priority dates are the dates by which completed scholarship applications are certain to be included in the first round of review and by which the Free Application for Federal Student Aid (FAFSA) can be processed in a timely manner. A new FAFSA application must be submitted each year aid is requested.

Types of Financial Aid

Scholarships

(See the Financial Aid (http://www.uah.edu/admissions/undergraduate/financial-aid/scholarships) website for Scholarship listings)

Loans

UAH participates in the William D. Ford Federal Direct Loan program. Student loan funds are made available directly from the U.S. Department of Education. Although it is sometimes necessary to borrow money to finance an education, caution is advised. Generally, a student should not rely primarily on loans and is advised not to borrow more than what is needed to meet expenses. Additional information regarding eligibility amounts, loan limits, application procedures and suggested application timelines may be found online at www.uah.edu/financialaid. This and other valuable information regarding the financial aid process is available in the Office of Financial Aid.

Grants

The Federal Pell Grant Program assists eligible students by providing help in meeting the cost of postsecondary education. To be eligible, a student must meet the following criteria:

1. demonstrate financial need (for most programs);
2. be a U.S. citizen or an eligible noncitizen;
3. have a valid Social Security number (with the exception of students from the Republic of the Marshall Islands, Federated States of Micronesia, or the Republic of Palau);
4. be registered with Selective Service, (https://studentaid.ed.gov/eligibility/basic-criteria/#selective-service) if you’re a male (you must register between the ages of 18 and 25);
5. be enrolled or accepted for enrollment as a regular student in an eligible degree or certificate program;
6. be enrolled at least half-time to be eligible for Direct Loan Program funds;
7. maintain satisfactory academic progress in college or career school;
8. sign statements on the Free Application for Federal Student Aid (FAFSA®) stating that
• you are not in default on a federal student loan and do not owe money on a federal student grant and
• you will use federal student aid only for educational purposes; and

9. show you’re qualified to obtain a college or career school education by
• having a high school diploma or a recognized equivalent such as a General Educational Development (GED) certificate or
• completing a high school education in a homeschool setting approved under state law.

A Federal Supplemental Educational Opportunity Grant provides aid to undergraduate students who would not otherwise be financially able to attend college. A student must be accepted for enrollment and be eligible for the Federal Pell Grant Program. Grants may be renewed for the four years of undergraduate study, subject to the availability of funds, unless a major change in the family’s financial condition causes the student to be ineligible. Grants are awarded in compliance with eligibility based on federal guidelines.

The Alabama Student Assistance Program is a state/federal aid program designed to provide Alabama residents financial assistance for undergraduate postsecondary education. Grants are awarded for one year. The grants are renewable, but new applications must be made each year. All awards are determined by student eligibility requirements, available funds, and student need. Students should contact the Office of Financial Aid for information regarding eligibility, application, selection, and awards procedures.

**Federal Work-Study Program**

The Federal Work-Study Program provides employment for students who need financial assistance. A participating student works part-time on campus or in a non-profit agency while attending the University. In determining eligibility, preference will be given to students with the greatest financial need.

**Return of Federal Financial Aid**

Federally funded financial aid (Pell, SEOG, Direct Loans) awarded to a student who withdraws from all classes after registration but before the end of the refund period, or who earns no passing grades for a specific term, must be repaid to the respective program source. When withdrawal or reduction of class load occurs after the end of the refund period, all tuition charges will be paid from the awarded aid and any remaining aid must be repaid to the respective aid source. Specific regulations governing this policy may be found online at www.uah.edu/financialaid.

Meal Plan Rates

2017 - 2018 Meal Plan Options

*These meal plan options and prices are per semester beginning August 2017 and January 2018.

Option # 1 - $1570

21 Meals per week + $175 Charger Bucks per Semester

This option meets the First-Year Residents' Requirement.

Option #1 provides 21 meals per week. 21 meals allow you to eat each and every meal served in the Charger Cafe or in Sandella's throughout the week!

If, on occasion, you wish to dine elsewhere, this plan includes Charger Bucks that can be used for purchases at Chick-fil-A, Papa John's, Sandella's, Charger Brew, Dunkin' Donuts, World of Wings, the C-Store, or the Gardenview Cafe.

Option # 2 - $1570

14 Meals per week + $275 Charger Bucks per Semester

This option meets the First-Year Residents' Requirement.

Option #2 provides 14 meals per week. As our most popular meal plan, 14 meals even out to 2 meals a day to be used in the Charger Cafe or Sandella's, perfect for hungry residents on the go!

Of course, #2 provides more Charger Bucks - giving students more flexibility and spending power when it comes to our resident and retail dining options: Chick-fil-A, Papa John's, Sandella's, Charger Brew, Dunkin' Donuts, World of Wings, the C-Store, and the Gardenview Cafe!

This is the default option for the meal plan requirement for all freshmen students living in on-campus housing should students not request a change by the end of the 2nd week of classes each semester.

Option # 3 - $1570

10 Meals per week + $425 Charger Bucks per Semester

This option meets the First-Year Residents' Requirement.

Option #3 provides 10 meals per week. Planning to eat at more retail locations? Need a take-out option for lunch? This is the plan for you!

Option #3 still gives students a meal per day in the Charger Cafe or in Sandella's, as well as the Charger Bucks to spend at Chick-fil-A, Papa John's, Sandella's, Charger Brew, Dunkin' Donuts, World of Wings, the C-Store, and the Gardenview Cafe!

Option # 4 - $1570

85 Meals per Semester + $675 Charger Bucks per Semester

This option meets the First-Year Residents' Requirement.

Option #4 provides 85 pre-paid meals per semester in the Charger Cafe or in Sandella's. These meals reset at the end of each semester.

With the most Charger Bucks of any plan, this option provides the student with maximum flexibility and spending power at Chick-fil-A, Papa John's, Sandella's, Charger Brew, Dunkin' Donuts, World of Wings, the C-Store, and the Gardenview Cafe!

Option # 5 - $535 Dining Dollars per semester

This option meets the Upperclassmen Resident's Requirement.

Option #5 provides in Dining Dollars to be used at Chick-fil-A, Papa John's, Sandella's, Charger Brew, the Charger Cafe, Dunkin' Donuts, World of Wings, the C-Store, and the Gardenview Cafe. Unlike Charger Bucks, Dining Dollar Funds roll over from the fall to spring semester and expire at the end of each spring semester.

This is the default option for the meal plan requirement for Upperclassmen living in on-campus housing in North Campus or Charger Village Residence should a student not request a change or decide to choose a meal plan of greater value by the end of the 2nd week of classes each semester.
Option #6 - $315 Dining Dollars per semester

This option meets the off-campus students', SCH, and FRSO Residents' Requirement.

Option #6 provides Dining Dollars that can be used at any on-campus dining location including Chick-fil-A, Papa John's, Sandella's, Charger Brew, the Charger Cafe, Dunkin' Donuts, World of Wings, the C-Store, and the Gardenview Cafe. Dining Dollar Funds roll over from fall to spring semester and expire at the end of the academic year.

This is the default option for the meal plan requirement for students living in on-campus housing in Southeast Campus or Greek Housing should students not request a change by the end of the 2nd week of classes each semester.

This is the default option for the meal plan requirement for full-time students not living on-campus should students not request a change or decided to choose a meal plan of greater value by the end of the 2nd week of classes each semester.

Option #7 - $550

5 Meals per week + $150 Charger Bucks per Semester

This option meets the Underclassmen Resident's Requirement, the off-campus students', SCH, and FRSO Residents' Requirement.

Option #7 provides 5 meals per week in the Charger Cafe plus $150 worth of Charger Bucks to be used at any on-campus dining location including: Chick-fil-A, Papa John's, Sandella's, Charger Brew, Dunkin' Donuts, World of Wings, the C-Store, and the Gardenview Cafe. Meals and Charger Bucks reset at the end of each semester.

Option #8 - $550

70 Meals per Semester + $150 Charger Bucks / Semester

This option meets the Upperclassmen Resident's Requirement, the off-campus students', SCH, and FRSO Residents' Requirement.

Option #8 provides 70 meals in the Charger Cafe plus $150 worth of Charger Bucks to use in any of on-campus dining locations including: Chick-fil-A, Papa John's, Sandella's, Charger Brew, Dunkin' Donuts, World of Wings, the C-Store and the Gardenview Cafe. Meals and Charger Bucks reset at the end of each semester. Get the most bang for your buck with this plan!

Tuition and Fees

The University reserves the right to change its tuition, fees, charges, rules and regulations at the beginning of any semester and without prior notice. Generally, the Board of Trustees of the University of Alabama System considers proposals for changes in fees at the June meeting. These fees do not apply to any short term, off-campus, or noncredit offering. For additional information on these courses, see section on College of Professional and Continuing Studies. Current fees are available on the web at www.uah.edu.

**Orientation Fees**
A one-time orientation fee of $225 is charged to all freshmen entering the university.

Transfer students online are charged a $25 orientation fee.

Transfer students on campus are charged a $50 orientation fee.

**Academic Transcript Fee**
$10 per request

**Listener’s License**
First Course - $250 (includes parking decal)
Each Additional Course - $130

**Credit by Departmental Exam**
$10 per hour

**Parking Decal Fee**
$120 - valid 09/01/17 to 08/31/18

**Charger Card Fee**
All newly admitted students will incur a one-time fee of $10.00 for an identification card with photograph. In addition to its official proof of your affiliation with UAH, the Charger card can provide security access to buildings on campus and declining balance account privileges. The charge for a replacement ID card is $25.00.

**Distance Learner Rate Tuition**
Students enrolled in online courses only during a semester/term are charged the distance learner rate. Students who are enrolled in on-campus courses and in on-campus/blended courses during a semester/term or are taking online courses while also taking on-campus courses during a semester/term are charged the campus rate, including the Facilities Fee, associated Campus Course Fees and Other Instructional Fees.

**Undergraduate Courses**
Degree Programs, Certificate Programs, and Non-Degree Seeking Students - $359 per credit hour

Policies and Procedures

The University of Alabama in Huntsville has various policies and procedures that guide our faculty, staff, and students. This section of the catalog provides detailed information on these policies, with which you should be familiar. Failure to read and comply with the policies listed here will not exempt a student from being held accountable to them. Additional policies are listed in the Student Handbook (http://www.uah.edu/student-support/student-conduct/handbook). Please note that the policies identified in this catalog do not represent an entire repository of university policies, as colleges and departments may implement policies that are not listed here. In addition, policies may be amended throughout the year.

Academic Achievement

Honor Scholar
An undergraduate student in good standing earning 12 or more semester hours in a semester with a GPA of 3.50-4.00 is distinguished by being identified as an honor scholar. A GPA of 4.00 is noted with an asterisk ***.

Scholar
An undergraduate student in good standing earning 12 or more semester hours in a semester with a GPA of 3.00-3.49 will be designated on the list of scholars.

Graduation with Honors
Graduation with honors at the baccalaureate level requires a minimum of 60 semester hours at UAH. Honors will be determined by the grade-point average for the last 60 semester hours of coursework taken at UAH or the overall GPA for all coursework taken at UAH, whichever is higher. The academic terms containing the last 60 semester hours of coursework taken at UAH will be identified and the GPA of all UAH courses taken during those terms to satisfy graduation requirements will be computed and the honors will be determined as follows:

- If the GPA computed as above is 3.90 or above, the student graduates summa cum laude
- If the GPA computed as above is 3.70 or above (but below 3.90), the student graduates magna cum laude.
- If the GPA computed as above is 3.40 or above (but below 3.70), the student graduates cum laude.

Honors Convocation
The University faculty recognizes and honors those students who have attained academic excellence at a convocation held in the spring of each year. At the Honors Convocation, students who have been inducted into the honor societies, who have been named to the dean's list in each college, and who have attained excellence in academic programs are recognized.

Academic Warning, Probation, and Dismissal
In order to be in good academic standing, students must maintain a grade point average above the Academic Action Threshold (AAT), which varies according to classification. For freshmen and sophomore students, the AAT is 1.9; for juniors and above, the AAT is 2.0. A student whose semester GPA at UAH falls below the applicable AAT will be placed on academic warning, probation, or dismissal.

Academic Warning
Students are subject to academic warning if they are in good standing and earn less than the applicable AAT for the semester; or if they earn the applicable AAT or greater for the semester but the UAH cumulative is less than the applicable AAT.

Probation
Students are subject to academic probation if they are on academic warning and the current semester GPA is less than the applicable AAT and the UAH cumulative is less than the applicable AAT.
Dismissal

Students are subject to academic dismissal if they are on academic probation and the current semester GPA is less than the applicable AAT and the UAH cumulative is less than the applicable AAT.

A regularly admitted student dismissed for the first time is automatically eligible to re-enter after being out of school one term. A student admitted in any special category and dismissed for the first time must petition the Admissions Committee for permission to re-enter after an absence of at least one term. A student dismissed for the second time is disqualified for readmission. After a period of one year, such student may petition for re-admission. Individual colleges may have additional requirements specific to their programs. Refer to college sections.

Conditional/Probational to Regular Status

Students admitted conditionally or on probation will be evaluated for regular student status after completion of at least 15 semester hours at UAH. If the student at that time has earned a 2.00 on all UAH coursework, the Conditional/Probational classification will be changed to regular student status. The deadline to submit a petition for readmission to the Registrar’s Office (SSB 120) are July 1 for Fall, November 15 for Spring, and April 1 for Summer readmission.

Academic Appeals Process

Academic appeals will originate in written form by the student and will be processed through the chair of the student’s major department, the Dean of the College, and the Office of the Provost and Executive Vice President for Academic Affairs, in that order. Students classified as “special” will be routed through the most appropriate academic dean. Students should contact their major advisor for assistance. The decision of the Provost is final.

Transcripts

There are two ways to request an official UAH transcript.

1. Fill out the transcript request form (http://www.uah.edu/images/admissions/Registrar/Charger%20Central/Forms/offtran071116.pdf). The completed form and payment information can be sent via fax to 256.824.7780 (http://catalog.uah.edu/undergrad/policies-procedures/academic-achievement/tel: (256)%20824-7780), scanned and emailed to registrar@uah.edu, mailed to our office, or dropped off in-person.

2. You can also request electronic or paper official transcripts through the National Student Clearinghouse (https://www.studentclearinghouse.org/secure_area/Transcript/login.asp?FICEcode=00105500).

   In order to send PDF transcripts, you must request them through the link above.

Please note: effective August 1, 2016, a 3% convenience fee will be added to all credit/debit card payments. However, if you use the National Student Clearinghouse (https://www.studentclearinghouse.org/secure_area/Transcript/login.asp?FICEcode=00105500) to request transcripts, you will not be charged the convenience fee.

Academic Responsibility

Students at the University of Alabama in Huntsville have the following academic responsibilities:

1. To enroll in only those courses for which the stated prerequisite(s) (if there are any) has/have been satisfactorily completed. Failure to comply with this procedure may result in administrative withdrawal.

2. To attend all meetings of each class in which they are enrolled. Instructors will announce at the beginning of the semester if they consider attendance in computing final grades.

3. To observe all regulations of their college and select courses according to the requirements of that college.

4. To consult their advisors on all matters pertaining to their academic careers, including changes in their programs.

5. To answer promptly all written notices from advisors, faculty, deans and other University officers.
6. To maintain the integrity of the classroom by practicing academic honesty. Students should refer to the student handbook for details regarding academic dishonesty.
7. To file an “Application for Degree” in the Office of Student Records by the published deadline.
8. To be personally responsible for fulfilling all requirements for graduation and observing all regulations at UAH.

Academic Honesty

Plagiarism and other forms of cheating are subject to penalties as outlined in the Student Handbook (http://www.uah.edu/dos/student-conduct/handbook).

Application for Graduation

Candidates for graduation must file their application at least one semester prior to the time requirements are expected to be completed. Deadlines are announced each semester and application forms may be obtained at http://www.uah.edu/registrar/commencement/apply-to-graduate. Early application will assist the student by confirming requirements remaining to be completed. Requirements must be completed and certified prior to the published deadline. Diplomas are issued at the end of each semester or during commencement ceremonies.

Total Degree Requirements

1. Minimum requirements for the Bachelor of Arts degree is 120 semester hours. Bachelor of Science in Business Administration has a minimum of 122 semester hours. Bachelor of Science and Bachelor of Science in Nursing degrees have a minimum of 128 semester hours. The Bachelor of Science in Chemical Engineering, Bachelor of Science in Computer Engineering, Bachelor of Science in Electrical Engineering, and the Bachelor of Science in Optical Engineering require 129 semester hours. The Bachelor of Science in Aerospace Engineering, Bachelor of Science in Civil Engineering, and the Bachelor of Science in Mechanical Engineering require 128 semester hours. The Bachelor of Science in Industrial and Systems Engineering requires 127 semester hours. A minimum of 25 percent of the total requirements and 12 of the last 18 semester hours must be completed at UAH. Also, unless otherwise specified by the department involved, a minimum of 12 semester hours of upper-level courses numbered 300 or above must be completed at UAH in a student's program (6 semester hours in the major and 6 semester hours in the minor or cognate studies). A minimum of 30 percent of the total degree requirements must be taken in numbered 300 or above (39 semester hours for a 128 semester hour requirement).
2. The maximum amount of correspondence or credit by examination allowed towards a bachelor's degree is 25 percent of the degree requirements.
3. An overall average of C is required for all courses taken at UAH; and in all courses in the major discipline taken at UAH; and in all courses in the minor discipline taken at UAH or in all courses listed in the cognate studies option taken at UAH.
4. Additional degree requirements for each degree are described in the appropriate sections of this catalog.

Time Limit

The degree requirements for graduation are normally those specified in the catalog in effect when a student first registers as a degree-seeking student at UAH. At any time during the student's enrollment that requirements for graduation are changed, a student may elect to graduate under the new requirements. If the student does not complete requirements for graduation within seven years from the date of entry or seven years from the date of the catalog chosen, the student must then change to the catalog in effect and meet the requirements as specified. If a student breaks enrollment for a period of at least 24 months, the student must then change to the catalog in effect at the time of re-enrollment and meet the requirements as specified. The student's advisor and college dean must approve any exceptions to this policy with the proper notation filed in the student's program of study in the Office of Student Records. At any point at which a change in catalog becomes necessary, a new program of study must be completed and proper notation filed in the Office of Student Records.

Confidentiality of Student Records

The Family Educational Rights and Privacy Act of 1974 (FERPA) is a federal law that protects the confidentiality of student education records. To implement FERPA, the University has formulated and adopted a written institutional policy governing the handling of these records.

The term "education records (http://www.uah.edu/registrar/ferpa#educational_record)" under FERPA includes generally any record, whether in a printed, handwritten, audio, video, or computer media format, maintained by the University and containing information related to a student in his/her role as a student (http://www.uah.edu/registrar/ferpa#student). Certain records are, however excluded by FERPA from this broad definition, such as those made by instructional, supervisory, and administrative personnel and kept in their sole possession, those made by campus police, and those made by a physician or other professional medical personnel in connection with treatment of the student.

Under FERPA and University policy, a student has a right of access to his/her education records and may inspect and review the information contained in them. To exercise this right, the student should present a request to the University office where the record is located, and a response will be made no later than 45 days later. In certain cases, a copy of the record may be provided, with a copying fee, as an alternative to actual inspection. Some records are not within this right of review, such as financial information from the student's parents and confidential letters or statements of recommendation where the student has waived the right of access.

A student who believes his/her education records contain information that is inaccurate, misleading, or in violation of his/her privacy rights may bring the matter to the attention of the appropriate records official. If by informal discussion with this official the student does not obtain the corrective action
If a student elects to earn a second degree simultaneously with a first degree (e.g., B.A. and B.S.), the student must:

**Dual Degree**

exceed 128 semester hours. B.A. or B.S. degree with a double major. If a minor is required for a major, then the minor requirement is waived for students with double majors. General With approval of the two appropriate departments, a student who wishes to concentrate in two disciplines may pursue a program of study that leads to a **Double Major** of the appropriate chairs and dean(s).

**Student Records** upon registration.

being calculated into the student's GPA. This course repeat policy will automatically be applied unless the student files for an exemption in the Office of Student Records.

Students may repeat a course in order to achieve a passing grade or an improved understanding. Students may not repeat a course for which they have higher level credit. For example, a student cannot repeat MA 112 after he/she has credit for Calculus. For other courses, the course repeat policy is as follows. For the first five courses repeated, the original grade will not be calculated into the student's grade point average. Only courses for which the student has received a grade of C, D, or F may be repeated for this purpose. Each course repeat counts against the maximum of five that can replace the previous grade. For instance, a student may use all five repeats in a single course or in five separate courses or any combination of separate courses and multiple repeats of single courses. The transcript will show both the original grades and the course repeat grades, but only the grade points and semester hours earned in the repeated courses count toward graduation and are averaged into the student's GPA. After five course repeats, all other courses repeated at UAH will result in both the original grade and the course repeat grade being calculated into the student's GPA. This course repeat policy will automatically be applied unless the student files for an exemption in the Office of Student Records upon registration.

**Course Repeat Policy**

Students should be aware that course repeats, for any reason, may not be looked upon favorably by some employers and by professional schools, and hence they should avoid the need for repeats.

Students may repeat a course in order to achieve a passing grade or an improved understanding. Students may not repeat a course for which they have higher level credit. For example, a student cannot repeat MA 112 after he/she has credit for Calculus. For other courses, the course repeat policy is as follows. For the first five courses repeated, the original grade will not be calculated into the student's grade point average. Only courses for which the student has received a grade of C, D, or F may be repeated for this purpose. Each course repeat counts against the maximum of five that can replace the previous grade. For instance, a student may use all five repeats in a single course or in five separate courses or any combination of separate courses and multiple repeats of single courses. The transcript will show both the original grades and the course repeat grades, but only the grade points and semester hours earned in the repeated courses count toward graduation and are averaged into the student's GPA. After five course repeats, all other courses repeated at UAH will result in both the original grade and the course repeat grade being calculated into the student's GPA. This course repeat policy will automatically be applied unless the student files for an exemption in the Office of Student Records upon registration.

**Double Major/Dual Degree/Second Bachelor’s Degree**

A student may choose to have a double major and earn one degree. The following policy applies to those students who wish to earn two degrees simultaneously or sequentially to a first degree. As early as possible, a student should meet with an assigned faculty advisor to indicate on the Program of Study form the intent to pursue a second degree. The Program of Study form must specify the requirements for each degree and contain the approval of the appropriate chairs and dean(s).

**Double Major**

With approval of the two appropriate departments, a student who wishes to concentrate in two disciplines may pursue a program of study that leads to a B.A. or B.S. degree with a double major. If a minor is required for a major, then the minor requirement is waived for students with double majors. General education requirements and all requirements stipulated for each of the two majors must be completed. The total requirements of some programs may exceed 128 semester hours.

**Dual Degree**

If a student elects to earn a second degree simultaneously with a first degree (e.g., B.A. and B.S.), the student must:
1. satisfy all applicable requirements for each degree,
2. earn at least a C average in all UAH coursework,
3. complete minimum degree requirements of the combined degree program, and
4. complete majors and/or minors appropriate to the degrees (a major for one degree may count as a minor for the other degree).

**Second Bachelor's Degree**

If a student elects to earn a second degree at UAH after having earned a first degree at UAH or another institution (e.g., B.A. after earning a B.S.B.A.), the student must:

1. satisfy all applicable requirements for each degree,
2. earn at least an average grade of C in all UAH coursework,
3. complete a minimum of 25% of the total degree requirements at UAH for the second degree, and
4. complete majors and/or minors appropriate to the degrees (a major for one degree may count as a minor for the other degree).

A specific course required for both the first and second degree does not have to be repeated; however, only courses completed after the first degree will be applied to the minimum number of semester hours required for the second degree.

Graduation with honors recognition for the second bachelor's degree requires a minimum of 60 semester hours of coursework taken at UAH above the requirements for the first bachelor's degree. Honors will be determined by the grade-point average for the last 60 semester hours of coursework taken at UAH above the requirements for the first bachelor's degree or all coursework taken at UAH above the coursework for the first baccalaureate degree, whichever is higher. Honors calculation for the second bachelor's degree follows the same procedures as graduation honors for the first baccalaureate degree.

**Registration**

Dates, times, procedures and eligibility conditions for registration are published on the UAH website. Registrations for Fall and Spring Semesters begin several weeks before the start of the new semester and continue through the fifth day of classes. All financial obligations to the University must be cleared before a student may register for courses. Students should consult with their academic advisor prior to registration. Non-degree students have a lower registration priority.

Concurrent registration for multiple sections of a course is not allowed.

A student who schedules courses during registration makes a financial commitment to the University. Course adjustments, drops and withdrawals must be officially transacted in writing on a Registration/Schedule Adjustment form and recorded by the Office of Student Records by the published deadlines. Adjustments in fees, if any, will be made by the Office of the Bursar. The University assumes no responsibility for students who attend classes without proper registration.

**The Semester System**

The academic year is divided into two semesters and one summer session. The fall semester begins in late August and ends in December. The spring semester begins in January and ends in May. The summer term consists of 10 weeks with two 5-week mini-sessions. The summer session begins in June and ends in August. (See Academic Calendar (p. 1186).)

A semester hour is an academic unit of credit awarded for the completion of educational activities. The amount of credit awarded depends on the expected amount of time required to complete in-class and out-of-class work during a semester for a course that is passed. For example, each semester hour awarded for a lecture course at UAH requires at least one hour of classroom or direct faculty instruction and a minimum of two hours out of class student work each week for approximately fifteen weeks for one semester. At least three hours of work per week is required for each semester hour awarded for practica, internships, activity courses, laboratory experiences, and distance learning courses, although there will be variations in the amount and type of instruction and the minimum amounts of outside student work to accommodate differences among academic disciplines and the natures of particular subject matters and courses. The institution reserves the right to make semester hour assignments that exceed the minimum time requirements stated. Time expectations for work outside of class are minimums and may be higher depending on the nature and level of the course as well as the ability, commitment, and learning style of the student.

In the Department of Art, an undergraduate studio semester hour at UAH consists of at least 1.66 hours of in class instruction with a minimum expectation of at least 1.33 hours of work outside of class each week. For a three semester hour studio art course this would equate to at least five (5) hours in class and at least four (4) hours outside of class per week during a 15-week semester. Time expectations for work inside and outside of class are minimums and may be higher depending on the nature and level of the course, and for outside work, [also] on the ability, commitment, and learning style of the student.

**Student Course Loads**

The typical full-time undergraduate course load is 15-18 semester hours each semester. Students should take between 30 and 33 semester hours annually in order to graduate in four years. The minimum full-time load for an undergraduate student is 12 semester hours a semester. A part-time
undergraduate student is one who is enrolled in less than 12 semester hours. Permission of the student's dean is necessary to enroll in 21 semester hours or more, including concurrent enrollment at other institutions and online courses. A student enrolling for a minimum load each semester should not expect to graduate in four years unless he or she enrolls in summer terms in addition to the regular academic year.

**Prerequisite, Prerequisite with Concurrency, Co-requisite**

Some courses offered at UAH require students to complete a prerequisite or prerequisites prior to registering for a course, to register for a prerequisite with concurrency, and to register for a co-requisite course. The definitions for these categories are as follows:

**Prerequisite** – a course must be taken before a target course, i.e., successful completion of EH 101 before registering for EH 102.

**Prerequisite with Concurrency** – a course must be taken before or at the same time as a target course, i.e., CH 101 and CH 105; PH 111 and PH 114; CE 271 and MA 201. A “W” or “F” grade in one course does not require that a student re-register for both courses. Prerequisite with concurrency courses do not have to be completed at the same time. A student may withdraw from a target course or a concurrent course and continue enrollment in the other course and vice versa. **Note:** A student may be asked to withdraw from a required course if in the judgment of the instructor/chair/advisor the student does not have the requisite knowledge to successfully complete the course (i.e., CE 271 and MA 201).

**Co-requisite** – a course must be taken simultaneously with a target course, i.e., BYS 119 and BYS 119L; PH 102 and PH 102L; CPE 211 and CPE 211L; CE 370 and CE 370L: MAE 311 and MAE 311L; NUR 660 and NUR 660L, and etc. Co-requisite courses must be completed at the same time. A student may withdraw from a target course; however, the student must also withdraw from the co-requisite course and vice versa.

**Student Classification**

An undergraduate is classified as indicated in the following table when a student has completed the number of semester hours shown.

<table>
<thead>
<tr>
<th>Semester</th>
<th>Hours Earned</th>
</tr>
</thead>
<tbody>
<tr>
<td>Freshman</td>
<td>0-30</td>
</tr>

<td>Sophomore</td>
<td>31-60</td>
</tr>
<tr>
<td>Junior</td>
<td>61-90</td>
</tr>
<tr>
<td>Senior</td>
<td>91 and up</td>
</tr>
</tbody>
</table>

**Schedule Adjustments**

After the beginning of an academic term, students seeking to change their course schedules must follow the Schedule Adjustment Process. Schedule adjustments fall into seven categories: Drop/Add, Late Addition, Credit/Audit, Withdrawal, Late Withdrawal, Retroactive Withdrawal, and Medical Withdrawal. The following definitions and procedures will govern the Schedule Adjustment Process.

**Drop/Add**

After classes have begun, students should consult with their academic advisor and other university officials for advice and approval before making any schedule changes. Students are advised to check the impact of dropping courses on things like financial aid, athletics eligibility, visa status, etc.

Through the fifth day of a ten-week or fifteen-week semester, the third day of a seven-week semester, or second day of a six-week or shorter semester, a student may Add a course through the web-registration process, by meeting with their advisor, or by submitting a Registration/Schedule Adjustment form to the Registrar’s Office.

Through the tenth day of classes for a ten- or fifteen-week semester, seventh day of a seven-week semester, fifth day of a five-week semester, or third day of a three- or four-week semester, students may Drop any or all courses from their schedule and receive a refund of tuition and fees associated with the dropped courses.

**Late Addition**

In rare circumstances a student may have a legitimate and substantial need to register, add a class or change a class section after the deadline (i.e., Last Day to Add a Class). In these instances the student must complete the Registration/Schedule Adjustment form, with recommendations (approval/non-approval) from the instructor and the chair of the department that offers the course. The Office of the Registrar will process the request once approvals are obtained.

New international students who want to register after the deadline must obtain approval from the International Student Advisor, and in the case of graduate students, the Graduate Dean. Approvals for late registration for new international students will include the respective academic units.

**Credit to Audit**

A student is permitted to change a course from credit to audit through the fourth week of a fifteen-week semester, the third week of a seven- or ten-week semester, and the second week of a five-week or shorter semester. The instructor is not required to grade any written assignments that may be submitted by an auditing student. A student who elects to audit a course may not at any point after electing to audit, change to “for-credit”, i.e., graded
status. Any student failing to follow established procedure for change to audit will continue to be enrolled in the class for credit and may receive a failing grade in that course.

Withdrawal
After the Drop/Add period a student may Withdraw from any course and receive a grade of W. The deadline for Withdrawal is the end of the tenth week of a fifteen-semester, end of the seventh-week of a ten-week session, the end of the fifth week of a seven-week session, the end of the third week of a five-week semester, or the end of the second week of a semester shorter than five weeks.

Withdrawal is accomplished by either 1) executing a withdrawal on the registration website or 2) by submitting a Registration/Schedule Adjustment form to the Registrar’s Office. No signatures or approvals are required for a Withdrawal, but students should consult with appropriate officials to determine the impact that withdrawing from a course may have on financial aid, athletics eligibility, visa status, etc.

Class non-attendance does not constitute withdrawal nor does notification to the instructor. Any student failing to follow the established procedure for withdrawal will continue to be enrolled in the class and may receive a failing grade in that course.

Late Withdrawal
After the Withdrawal period, a student may request a Late Withdrawal from a course under extenuating circumstances and with the approval of the dean of the college in which the student is enrolled. Avoidance of an undesirable grade does not justify withdrawal.

Students requesting a Late Withdrawal must submit the Late Withdrawal Form, along a written explanation of the extenuating circumstances and any appropriate documentation, to the Dean of Students for review. If the Dean of Students believes sufficient evidence exists to warrant a Late Withdrawal, the withdrawal request is forwarded to the Dean of the college in which the student is enrolled (minus personal documentation) for consideration.

Class non-attendance does not constitute withdrawal nor does notification to the instructor. Any student failing to follow the established procedure for withdrawal will continue to be enrolled in the class and may receive a failing grade in that course.

Retroactive Withdrawal
Undergraduate students may at times experience extraordinary problems during an academic semester. Within two years of having completed such a semester, a student may petition the Dean of Students to withdraw retroactively from ALL classes taken during that semester. A retroactive withdrawal is granted only under exceptional circumstances, such as extraordinary medical or personal problems. The petition should use the Retroactive Withdrawal form, and include clear and documented evidence whenever possible. The Dean of Students verifies the documentation and forwards the petition to the Associate Provost, who approves or denies the request. If the Associate Provost grants a retroactive withdrawal, the grades for ALL courses taken during the semester in question will be changed to W’s. Petitions for Retroactive Withdrawals are considered after final grades are posted. Students should be aware that retroactive withdrawals may have an impact on their ability to receive or retain financial aid and timely completion of their degree.

Medical Withdrawal
Students may at times experience medical hardships that prevent them from attending class and necessitate a withdrawal. Decisions on whether to award a Drop, Withdrawal, Refund, etc. must include sufficient documentation to justify the request. In such cases the student should contact the Dean of Students office for assistance.

Recording of Withdrawals
If the withdrawal process is completed during the first two weeks of the semester, the withdrawing student’s name does not appear on the final rolls of the class from which the student withdrew, and that course does not appear on the student’s permanent record. If the withdrawal process is completed after the first two weeks, then the withdrawing student’s name will be on the final roll of the class from which the student withdrew, and that course will be recorded on the student’s permanent record with a final grade of W.

Counseling
Students need to be aware that many potential employers, as well as graduate and professional schools, view an excessive number of W’s on a transcript as a flag that the student cannot be counted on to complete demanding projects. Advisors should be informed of this fact and students should be encouraged to discuss with their advisors any plans to withdraw from a course, especially after the first two weeks of the semester.

Course Repeat Policy
Undergraduate
Students should be aware that course repeats, for any reason, may not be looked upon favorably by some employers and by professional schools, and hence they should avoid the need for repeats.

Students may repeat a course in order to achieve a passing grade or an improved understanding. Students may not repeat a course for which they have higher level credit. For example, a student cannot repeat MA 112 (http://catalog.uah.edu/search?P=MA%20112) after he/she has credit for Calculus. For other courses, the course repeat policy is as follows. For the first five courses repeated, the original grade will not be calculated into the student’s
grade point average. Only courses for which the student has received a grade of C, D, or F may be repeated for this purpose. Each course repeat counts against the maximum of five that can replace the previous grade. For instance, a student may use all five repeats in a single course or in five separate courses or any combination of separate courses and multiple repeats of single courses. The transcript will show both the original grades and the course repeat grades, but only the grade points and semester hours earned in the repeated courses count toward graduation and are averaged into the student's GPA. After five course repeats, all other courses repeated at UAH will result in both the original grade and the course repeat grade being calculated into the student's GPA. This course repeat policy will automatically be applied unless the student files for an exemption in the Office of the Registrar upon registration.

Graduate

Students should be aware that course repeats, for any reason, may not be looked upon favorably by some employers and by professional schools; hence, they should avoid the need for repeats.

Students may repeat any course an unlimited number of times in order to achieve a passing grade or an improved understanding of the course material.

One course may be repeated with the previous grade excluded from the calculation of the student's grade-point average. The student must declare such a course repeat before the end of the regular registration period for the semester in which the course will be repeated. Only a course for which the student has received a grade of C, D, or F may be repeated under this option. When withdrawing from a course that has been declared as a course repeat, the previous grade will still be used in the computation of the GPA, and the course will not count toward the maximum of one repeat. Until a grade other than W is reported, the previous grade will be used for the GPA. The transcript will show both the original grades and the course repeat grades, but only the grade points and semester hours earned in the repeated course will count toward graduation and will be averaged into the student's GPA. Concurrent registration for multiple sections of a course is not allowed.

For all other courses repeated at UAH, both the original grade and the course repeat grade will show on the transcript and will be calculated in the student's GPA.

A student wishing to exercise the option of repeating a course with grade replacement must file the intent to do so in the Office of Student Records before the end of regular registration using a Graduate Course Repeat form.

Academic Bankruptcy Policy

An undergraduate student may petition the Office of the Provost to declare academic bankruptcy. These requests are reviewed by the Scholastic Affairs Committee, which will make a recommendation to support or deny petition. After reviewing the petition and recommendation from the committee, the Associate Provost will decide whether to grant the student academic bankruptcy. Under this policy, all college-level work completed at UAH prior to a date specified by the student is eliminated from computation of grade point averages and will not be applied toward a degree at UAH. Such work will not be expunged from the student's scholastic records and transcripts, although it will be designated as work not included in the computation of grade point averages or applied toward degree requirements. There must be a minimum of two calendar years between the date of petition and the date specified by the student in the bankruptcy petition. Academic bankruptcy will only be granted once during a student's academic career at UAH.

Grading System

The University of Alabama in Huntsville's grading system includes grades of A, B, C, D, F, I, X, W, S, U, P, AU, N, and NC. Instructors have the option of augmenting the course grades of A, B, C, and D with symbols "+" and "-" signifying, respectively, high and low achievement within the assigned grade. These augmented letter grades become part of the student's permanent record and appear on transcripts, but augmentation of a letter grade does not affect its value for the purposes of the GPA computation.

<table>
<thead>
<tr>
<th>Grade</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>Superior achievement. Four quality points given per semester hour.</td>
</tr>
<tr>
<td>AU</td>
<td>Audit. Course attendance as a listener. No credit given, no quality points assigned, no attendance requirement.</td>
</tr>
<tr>
<td>B</td>
<td>Above average achievement. Three quality points given per semester hour.</td>
</tr>
<tr>
<td>C</td>
<td>Average Achievement. Two quality points given per semester hour.</td>
</tr>
<tr>
<td>D</td>
<td>Passing work. One quality point given per semester hour.</td>
</tr>
<tr>
<td>F</td>
<td>Failing work. No credit given; no quality points assigned.</td>
</tr>
<tr>
<td>I</td>
<td>Incomplete. Assigned by the instructor when a student, due to circumstances beyond his /or her control, has not satisfied some requirement of the course. The deadline for a student to remedy a grade of I is the last day of class of the next semester enrolled or one calendar year from the date of the grade whichever occurs first. If the grade of I is on a student's record at the time of graduation, it is treated as an F.</td>
</tr>
<tr>
<td>N</td>
<td>No grade. Assigned by the Office of Student Records when the instructor does not report a grade.</td>
</tr>
<tr>
<td>P</td>
<td>Passing work. Assigned in some courses. See Pass-Fail Option.</td>
</tr>
</tbody>
</table>
S Satisfactory work. Applicable to noncredit courses and to some specified credit courses, and will not be counted in the GPA.

U Unsatisfactory work. Applicable to noncredit courses and to some specified credit courses.

W Withdrawal. (See Withdrawal Policy.)

Change of Grade

When it is believed that a grading error may have occurred, a student is permitted a maximum of one semester from the date a grade is assigned to request a change of course grade. Grades submitted to the Office of Student Records can normally be changed only by submission by the instructor on a Change of Grade form containing a written explanation of the error. The Change of Grade form must be approved by the department chair and received in the Office of Student Records no later than two semesters from the date the original grade was assigned.

Pass-Fail Option

A student wishing to exercise a P-F option must apply to the Office of Registrar (SSB 120) when registering or before the end of the third week of classes. Any undergraduate student not on academic probation may take courses on a P-F basis. P-F policies vary from college to college; consult your advisor before selecting this option.

A student is limited to 12 semester hours of credit on a P-F basis over the course of the degree. Courses listed on the Program of Study (major, minor, cognate, track, cluster, specialization, option and concentration) may not be taken P-F. Required courses in English composition and mathematics, as well as the rest of the Charger Foundations, (p. 36) may not be taken P-F. Departments may limit the P-F to courses outside the department or college.

A grade of P may be changed to a regular grade only if the student changes his or her program to an area in which a regular grade is required. The change must be initiated at the dean's office and must go through the normal grade change procedures. Once a P grade has been changed to a regular grade, the regular grade must remain. Under the P-F system, a grade of P will not be counted in a student's grade-point average; a grade of F will be counted in a student's grade-point average.

Even though a student chooses to take courses on the P-F basis, instructor's grade sheets will reflect the regular grade and the student may be informed of the regular grade upon request.

Examinations

During each semester, one or more announced examinations of class period length may be held. At the end of each semester, a final examination period is scheduled for each course. Absences from a scheduled final examination without previous arrangement with the course instructor (except in extenuating circumstances) will be classified unexcused and a failing grade in the course will be assigned.

Any student whose final examination schedule is such that the student is scheduled to take three examinations during a single day shall have the right to have the middle examination rescheduled. The date and time of the rescheduled examination shall be by mutual agreement between the student and the affected faculty member and must be agreed upon prior to the final week of the semester. It is the student's responsibility to notify the instructor of this type of conflict, and it is the instructor's responsibility to verify that the conflict actually exists. If a student is scheduled to take four examinations during a single day, then the same procedure shall apply except that the student shall now have the right to have both the second and fourth examinations rescheduled.

Student Grade Report

At the completion of each semester, a report of final grades is available for viewing using myuah.uah.edu.
Grade Point Average

The grade point average (GPA) is computed by dividing the total number of quality points earned at UAH by the total number of semester hours attempted at UAH (transfer grades are not included). Courses in which a grade of NC, W, P, S, X or AU is assigned are not included.

Change of College

Students who are pursuing a program of study in one college at UAH and desire to change to a program in another college may petition to do so by making application at the Office of Student Records. Academic advisement before changing programs may help students avoid losing credits. Application of previously earned credits toward the new program will be determined after the transfer has been approved.

Student Athletes

Student athletes must declare a major and follow an academic plan by the beginning of the third academic year or fifth academic semester.

Support Services

The University of Alabama in Huntsville provides a wide range of support services designed to help students succeed throughout their college career and after. Our Student Success Center is staffed with tutors and academic coaches who offer assistance in a variety of subjects, while the Student Health Center keeps our students performing at their best. We even have Career Services to help them plan for life after graduation. Information on the services we offer to enhance the college experience can be found in this section of the catalog.

Academic Support Services

Student Success Center (SSC)

M. Louis Salmon Library First Floor
www.uah.edu/ssc
ssc@uah.edu
256.824.2478

The Student Success Center (SSC) provides a variety of student-centered programs that help students to be successful in their academic pursuits and professional goals. The SSC is located in M. Louis Salmon Library. To participate in any of our programs, visit the SSC website (http://www.uah.edu/ssc) or call 256.824.2478.

Tutoring & Writing

The Tutoring & Writing Program offers assistance in a variety of subjects through one-on-one tutoring and small group sessions. Tutors work with students not only on content, but also on study and learning strategies. Writing tutors are also available to help with the writing process for academic writing. Tutors attend training throughout the semester and work towards College Reading & Learning Association (CRLA) certification.

To make an appointment and to see a current list of subjects offered for tutoring, visit the Tutoring & Writing Program website (http://www.uah.edu/ssc/tutoring) or call 256-824-2478.

Peer Assisted Study Sessions (PASS)

The Peer Assisted Study Sessions (PASS) Program provides academic support for students enrolled in specifically designated classes that are considered historically difficult. Students who have been successful in the class are hired to re-attend the class, along with currently enrolled students, and then facilitate group study sessions two to three times per week. PASS leaders are trained to work with students not only on content, but also on study and learning strategies. To find out more about the program, students can visit the PASS website (http://www.uah.edu/ssc/pass-program) or call 256-824-2478.

Peer Academic Coaching

Peer Academic Coaches specialize in the instruction of various academic skills including time management, study strategies, and test preparation. Any student who wishes to improve his or her academic performance is welcome to schedule a one-on-one session with a coach. During these sessions, the coach and student work together to identify academic strengths and obstacles, and to set up an action plan for achieving goals. Coaches attend training throughout the semester and work towards College Reading & Learning Association (CRLA) certification. Students can make an appointment by visiting the Academic Coaching website (http://www.uah.edu/ssc/academic-coaching) or by calling 256-824-2478. Student organizations and faculty may contact academic.coaching@uah.edu to request a workshop or presentation.

Rising Scholars

Rising Scholars is a selective mentoring program for undergraduate students. Each Rising Scholar is matched with a mentor at the beginning of the semester. The program consists of seven individualized mentoring sessions, as well as optional group sessions. If you are interested in learning more about the Rising Scholars program, visit the website (http://www.uah.edu/ssc/rising-scholars) or contact rising.scholars@uah.edu.
Exploratory Advising
Undergraduate students who want to take time to look at various options before making a final decision on a major can benefit from Exploratory Advising. Through structured conversation, students look at their interests and abilities as they could potentially relate to various fields of study.

Exploratory Advising also offers the Strong Interest Inventory. This computer-based inventory is helpful in identifying students’ options and preferences based on their interests. Students receive a one hour interpretation with exploratory staff which can aide in making appropriate choices about their major.

To find out more about Exploratory Advising, students are invited to visit the Exploratory Advising website (http://www.uah.edu/ssc/exploratory-advising) or call 256-824-2478.

College Academic Support Centers
College of Business Administration
The Office of Academic Assistance is located in the Business Administration Building, room 102. Advisement and tutoring arrangements may be scheduled by phone at 256.824.6024 or by email at undergradbiz@uah.edu.

College of Engineering
The College of Engineering Student Affairs Office is located in the Engineering Building, room 157. The office offers comprehensive advising services and coordinates tutoring when requested. Phone 256.824.6877 for information.

College of Arts, Humanities, and Social Sciences
The Liberal Arts Academic Advisor, Mr. Frank Bell, is located in Morton Hall 220. Liberal Arts students who have not filed a Program of Study must meet with Mr. Bell for schedule planning before registering. Call for an appointment at 256.824.2867 (bellf@uah.edu). The college maintains a student computer lab in the Salmon Library. In addition, there is a Sociology Library in MOR 344 and a Women’s Studies Resource Center in MOR 254.

College of Nursing
The Office of Nursing Student Affairs is located in room 207 of the Nursing Building, and is directed by Ms. Laura Mann (256.824.6742, mannl@uah.edu). Nursing students should visit the office for advisement and other academic needs. The college also maintains a Learning Resource Center on the fourth floor of the Nursing Building, directed by Ms. Andrea Payne (256.824.6139, paynea@uah.edu).

College of Science
The Science Academic Advisors, Ms. Morgan Lewis (256.824.6605, lewism@uah.edu) and Ms. Jennifer Bradley (bradleyj@uah.edu) are located in the Materials Science Building room 206C. Advising is provided for students until they declare a major, after which they are assigned to a departmental advisor. Each department in the College of Science provides its own student services, including tutoring. Information can be obtained in the departmental offices. There are, however, specialized support centers maintained by the college.

Mathematics Tutoring Center
The Mathematics Tutoring Center provides tutoring in MA 107, MA 110, MA 113, MA 115, MA 120, MA 171, and MA 172. The tutoring center is conveniently located in the Shelby Center for Science and Technology where most of the mathematics courses are taught, and is staffed by graduate assistants. The hours of the tutoring center vary from semester to semester. For more information, please call the Mathematical Sciences Department at 256.824.6470, or visit our web site at www.math.uah.edu.

Mathematics Computer Laboratory
The Mathematics Computer Laboratory has approximately 20 computers equipped with a variety of mathematical software packages including Maple, MATLAB, and various tutorial programs. Located on the lower level of the Shelby Center in Room 006, the Mathematics Computer Lab is open only to students enrolled in math courses, and a student ID is required in the Lab. It is open approximately 35 hours per week and is staffed by undergraduate student assistants. For more information, please call the Mathematical Sciences Department at 256.824.6470, or visit our website at www.math.uah.edu.

Calculus Workshop
UAH’s calculus workshop provides academic assistance to students at any level of calculus. No fee is charged and no grade is given. The workshop encourages students to work in groups on problems presented by graduate teaching assistants. Workshop participants get away from standard homework problems and see how math is used in the real world. This promotes teamwork, a sense of belonging to a community of math peers, and developing friendships which extend beyond the workshop.

Physics Success Center
The Physics Success Center exists to provide a central location (Optics Building 200) from which students in the physical sciences can seek guidance from experienced tutoring personnel free of charge. The center is supported by Physics Department faculty and provides supplementary class materials as well as on-going tutoring.
Information Technology Services

UAH students have access to a variety of microcomputer laboratories on campus. Personal email accounts are automatically generated when students begin their academic careers at UAH. Students living on campus have access to the university’s central system as well as to the OIT Help Desk which troubleshoots individual computer problems.

Student Facilities and Services

University Housing

The University of Alabama in Huntsville (UAH) offers a variety of housing facilities to meet the needs of its diverse student population. Please visit www.uah.edu/housing for the most current information for first and second year options, requirements, policies, and residence hall amenities/services. All first-year freshmen students who apply for University housing will be assigned to either the Central Campus Residence Hall (CCH), or Frank Franz Hall (FFH). First and second year students that reside outside of 30 miles from campus will be required to reside in University Housing. Sophomores and second year residents may apply to Charger Village (CGV), Frank Franz Hall (FFH), and North Campus Residence Hall (NCH). Students who are of at least junior status or 21 years of age may apply to the North Campus Residence Hall (NCH), or Southeast Campus Housing (SCH). CCH, FFH, CGV and NCH all have private rooms designed for students who are physically challenged.

All Housing and Residence Life suites have basic cable television connection and a dedicated telephone line. Each bedroom has a computer hookup that provides access to UAH’s mainframe and the Internet. Housing and Residence Life offers wireless service throughout all of its facilities.

All residence halls are convenient to the Salmon Library, the University Fitness Center, Charger Union, and all classroom facilities. Each resident has a carpeted, private bedroom in an air-conditioned suite and most share a bath with only one other suitemate. Every bedroom has a loftable extra-long twin bed, a wardrobe or closet, a chest of drawers, a desk and chair. Suites are furnished with a dining table and chairs, sofa, accent tables, and lounge chairs. CCH has a mini kitchen with a small refrigerator, microwave and sink. FFH, NCH, and CGV have a mini kitchen with an apartment-size refrigerator, microwave and sink. NCH also contains 33 studio (one-bedroom) apartments, reserved for upper-class students. Laundry facilities, a recreation/meeting room, study lounges, and mail service are available in each residence hall. Access to all halls except SCH is by an electronic smart card.

Southeast Campus Housing (SCH) consists of a cluster of nine three-story buildings located on John Wright Drive near the University Fitness Center and most engineering and science classrooms. Private and shared bedrooms in three-bedroom suites are available in Southeast Campus Housing for students ranking junior or above or at least 21 years of age. In addition, one-bedroom unfurnished private apartments are available for graduate students or students with spouses and/or children. Several of the one-bedroom apartments are accessible to disabled students. A sandpit volleyball court in the center of the Southeast complex and intramural fields surrounding the area provide recreational spaces for residents.

All housing facilities have a full time, live-in Resident Director and at least one student Resident Assistant (RA) on each floor. Southeast Campus is staffed with a Resident Director and a team of RA’s. RA’s develop activities and programs, provide assistance to student residents, serve as liaisons to other University departments and help create a residential community that contributes to effective student learning, personal and social growth, and individual responsibility.

Any admitted student to UAH is eligible for an assignment in University Housing. Housing and Residence Life applications are available on line at http://www.uah.edu/housing/prospective-residents/apply. Room assignments are contingent upon confirmation of admission. Priority for assignment is based upon academic class standing (first year student, graduate student, etc.), the date of receipt of the application, commitment fee, and availability of housing.

Current rates and additional information are all available from the:

Housing Office,
601 John Wright Drive
256.824.6108

or on line at http://www.uah.edu/housing. Individual and group tours of UAH Housing and Residence Life may be arranged by appointment through the Admissions Office.

University Food Service

Through the delivery of an exceptional food program, the UAH community is provided with options, quality, and convenience. Finding your favorite foods on campus is a snap. We are proud to offer a dining program, complete with signature brands and menu selections that entail just about every item you can imagine. Please visit www.uah.edu/dining for available dining locations, menus, meal plan hours, and meal plan options.
The Charger Cafe is an "All You Care To Eat" dining area located in the Conference Training Center (CTC). The menu program is known as Ultimate Dining and features rotating formats of food presentation: Classics, Pizzarette, The Grille, Innovation Station, Soup'n Salad, Made to Order Deli Station, Vegetarian Selections, Gluten Free Bar, Desserts and Beverages. A spacious dining room with an adjacent patio is available for all guests.

In addition to the Charger Cafe, the CTC also houses 'We Proudly Brew Starbucks Coffee' and Sandella's Flat Bread Cafe. A second Starbucks Coffee location offers a coffee shop atmosphere and menu in the Salmon Library. This is the ideal place for meetings, grab-and-go lunches, or afternoon coffee breaks. Freshly brewed gourmet coffees, teas, fresh baked gourmet muffins and cookies, salads, and sandwiches provide a variety of choices for all to enjoy.

Charger Village (CGV) houses Chick-fil-A, Papa John's Pizza, and a convenience store (The C-Store) featuring Boars Head Deli. A nice dining area and patio are available to meet with friends for a meal or to enjoy the view while studying.

Charger Union (CGU) is the home to Dunkin' Donuts and World of Wings. There are plenty of places in and around the building to enjoy a cup of coffee or meet friends to indulge in the best wings on campus.

Technology Hall is the home to Blue's Tech Hall mini convenience store featuring Simply-To-Go quick food options such as sandwiches, salads, fresh fruit and more! The store also offers assorted candy bars, energy drinks, or bottles soda's or water.

The Gardenview Cafe located in the Bevill Conference Center and Hotel is a full service All You Care To Eat dining facility available for students, faculty/staff, and the Huntsville community.

UAH Dining Services also provides catering services campus wide for any student or campus groups. Visit "www.uah.edu/bevill-center/catering" to view our menu options as well as limited time offers for special events.

The Charger Union
The Charger Union (CGU) serves as the heart of the UAH community. It provides a comfortable, safe, and welcoming environment for student life and engagement. The Charger Union supports the personal and professional development of students, offering formal and informal spaces to attend programs and access to high quality services that enhance the UAH educational mission.

The Charger Union offers meeting rooms, dining (World of Wings and Dunkin Donuts) and snack facilities, lounges, two game rooms (one traditional game room with pool tables and ping pong, and an e-gaming lounge with the latest e-gaming systems and large monitors), an information desk, student organization spaces, a theater, and the University Bookstore. Also located in the CGU are the offices of the Dean of Students, the Student Government Association, Association for Campus Entertainment, the Charger Times, Student Life, Student Engagement & Transitions, and Charger Union Administrative offices.

M. Louis Salmon Library
333 Salmon Library
Telephone: 256.824.6540
Email: library@email.uah.edu
Director: David Moore

The M. Louis Salmon Library supports the information, instructional, and research needs of faculty, staff, students, and the surrounding community. It is housed in a 105,000 square feet facility which includes an InfoArcade, five general-purpose laboratories, and a 75-seat lecture hall. It also houses the Faculty Resource Center (FRC) for the University. Over 250 workstations are supported in the facility. There is also a coffee shop on the ground floor with a large area for collaborative study, complete with comfortable seating and white boards.

The Library supports the academic and research programs of the University. It has a collection of over 350,000 print volumes, a selective collection of over 500,000 United States government publications, and over 600,000 materials in microform, and manuscript collections. In addition to books and microform materials, the Library offers a broad selection of books, journals, newspapers and other serials in electronic form. Approximately 67,000 online paid periodical titles, over 65,000 electronic books and over 350 databases can be accessed both on and off campus via the Library website at http://lib.uah.edu. In addition, the University Archives/Special Collections offer a number of unique collections, including the papers of former Congressman Robert Jones, the personal Library of Willy Ley, the architectural research collection of Harvie P. Jones, and several space-related collections involving such projects as the Saturn V rocket, Skylab and Apollo-Soyuz.

For students in science and engineering and technology, research at UAH is supported by the Redstone Scientific Information Center (RSIC), located five miles from campus. RSIC was developed to support the wide-ranging research interests of NASA and the United States Army Missile Command and is one of the finest technical libraries in the Southeast. UAH subscribes to numerous full-text and bibliographical databases each of which supports specific colleges, including Arts, Humanities, and Social Sciences; Business; Education; Engineering; Nursing; Professional and Continuing Studies; and Science. The Library is privileged to provide access to many major online resources including the entire Elsevier collection through Science Direct and Scopus, Springer, CINAHL, the IEEE collection through IEEEExplore, ABI/Inform, Bloomberg Terminals, Academic Search Complete, and JSTOR (Journal Storage). The Library is also a member of several consortia that
provide access to research materials not owned by libraries in north Alabama. Its membership in the Online Computer Library Center (OCLC) and the Network of Alabama Academic Libraries (NAAL) facilitates rapid document delivery/interlibrary loan service to faculty and students without charge.

Reference services are provided by reference librarians who are able to assist students in finding information in-person, by email, phone, text message, chat, or Twitter. Group Library instruction sessions are provided to teach students how to locate, manage, and evaluate the information they need for class projects and papers. Other Library services include wireless access, federated searching across databases (EBSCO Discovery Service OneSearch), instant linking to the article level in most databases (LinkSource), Turnitin.com training (plagiarism), group study rooms, PC and Mac computers, a scanner workstation, a digital audio/video area, and special computer accommodations for users with disabilities. Printing is available in the InfoArcade and labs.

**Loan Periods**

Undergraduates may borrow materials for four weeks; graduate students for 90 days. Overdue fines accrue at the rate of twenty-five cents per day. All fines must be paid before registration for the following semester.

**Contact Information**

For additional information about the Library, inquire at the User Services Desk, 256.824.6530, the Reference Desk, 256.824.6529, Interlibrary Loan, 256.824.6124, Twitter @uahEref, SMS Text to 256.824.2368, Email at erefq@uah.edu. Library home page is: http://www.lib.uah.edu.

**Student Identification Cards**

As your official student identification, the Charger Card gives you access to campus facilities and services and allows you to make purchases at participating locations.

Your Charger Card may be used for access to or purchases in:

- Food Service Venues
- Barnes and Noble's On-Campus Bookstore
- University Fitness Center
- Residence Halls
- Salmon Library
- Student Health Services
- Campus Entertainment and Athletic Events
- Computer Labs and Printers
- Copy and Laundry Machines

The Charger Card offers four (4) types of accounts:

- Meal plans
- Charger Bucks
- Dining Dollars
- Flex

Deposits by cash, check or credit card are accepted in UAH's Cashier's Office.

**Meeting Spaces**

**Meeting Rooms**

The Charger Union has meeting rooms designed for multipurpose functions. The rooms can accommodate meetings of a variety of sizes. The Center has a large number of tables, chairs, portable stages and audiovisual equipment, and can assist in designing set-up to make any conference or meeting a success.

**Lounges**

Spacious lounges, designed as a place to relax and meet friends, are equipped with comfortable furniture, tables and chairs for small group meetings, and plenty of places to charge your favorite electronic devices.

**Student Support Services**

**Dean of Students**

Student Affairs at UAH creates opportunities for students to engage in a diverse community of learners characterized by a supportive campus environment that encourages individual growth and development. This mission is accomplished through comprehensive programs and services focused
on student learning and success. Through the Dean of Students office, the interpretation and administration of the Code of Student Conduct takes place. The Code of Student Conduct protects students’ rights and assists students in their awareness of their obligations and responsibilities in being part of the University community.

Counseling Center
The Counseling Center, under the direction of the Dean of Students, at UAH provides specialized professional services designed to assist students in their academic, personal, and social development. Many students encounter personal difficulties that affect the course of their collegiate experience. The Counseling Center provides short-term therapy to help students cope with stress and/or learn new skills. Counseling services are available to all students currently enrolled in 3 or more credits at UAH. The staff is committed to meeting the needs of individuals from diverse backgrounds. Services are confidential and in accordance with the ethical guidelines of the American Psychological Association. Information from counseling sessions does not go on a student's academic record and is not released to any other individuals (on campus or off) without the student's written permission—except in rare situations as mandated by law. Students come in for a variety of concerns such as relationships, self-esteem, time management, anxiety, family concerns, depression, stress management, and many other concerns. See our webpage at http://www.uah.edu/counseling/ for more information. To schedule an appointment, contact the Counseling Center at 256.824.6203 or come by Wilson Hall 329.

Disability Support Services
Disability Support Services (DSS), under the direction of the Associate Provost, is committed to ensuring access to educational opportunity for all qualified students with disabilities. Any student who has a documented condition that substantially limits his or her learning activities can request coordination of appropriate academic support services. DSS collaborates with students, faculty, and staff to ensure appropriate services are provided to students registered with our office.

Students must self-identify to be eligible for accommodations and other disability services on campus. However, the student can choose whether or not to register for services. Disability support services are provided in accordance with federal law. To be eligible for services, students must provide documentation of disability from an appropriate practitioner. See our webpage at www.UAH.edu/counseling/disability (http://www.uah.edu/counseling/disability) or contact DSS for more information. To schedule an appointment contact our office at 256.824.1997 or come by Wilson Hall 317.

Office of International Services
The Office of International Services (OIS) prepares students, faculty and staff for success in today’s globally interconnected world through international study, research, teaching, service, and experience and through opportunities for intercultural engagement that foster strengthened awareness and understanding among people of different cultures. The purpose of OIS is to promote campus and community internationalization and to provide central administrative support for a wide-ranging network of international initiatives. Through the Office of International Student & Scholar Services, the Intensive Language & Culture Program, and the Office of International Programs, the OIS coordinates programs and services that extend the university to our local and global communities. The OIS is located in the Student Services Building, Room 218; phone 256.824.6055.

Undergraduate Minority Mentoring Program
The Office of Undergraduate Minority Student Mentoring at UAH fosters student success through personal mentoring and leadership development for underrepresented students which will increase opportunities for student engagement across the campus community. The peer mentoring relationship is designed to foster a network of support for first year students of African-American and Hispanic descent at UAH. Mentors serve as peer support personnel for these freshmen (Mentees) and share program goals and responsibilities aimed at ensuring the retention of these particular student groups. This office is located in Charger Union 201; phone 256.824.2775.

Multicultural Affairs
The Office of Multicultural Affairs (OMA), a division of the Office of the President and Vice President for Diversity, assists the University in providing an atmosphere that is welcoming, supportive and rewarding for students from diverse cultural backgrounds. Students are encouraged to achieve and aided in attaining academic excellence while learning to be competitive with their peers. OMA endeavors to foster an understanding and a respect for cultural diversity throughout the UAH community. Programs are designed for minority as well as non-minority students in order to promote a sense of community and acceptance of multiculturalism and racial appreciation on the UAH campus. Students may contact the Office of Multicultural Affairs in Conference Training Center, Room 104, or telephone 256.824.6822 (oma@uah.edu).

Student Health Services
The services of the Student Health Center are available to students enrolled for the current semester. Services available include treatment of illnesses and injuries, preventive health care, lab testing, immunizations and health counseling. There is a nominal fee for an office visit with additional minimum charges for laboratory testing, immunizations, and medications. The Student Health Center is located in Wilson Hall 325. The center is open Monday through Friday 8:15 a.m. – 5:00 p.m. For more information call 256.824.6775 or visit our website http://uah.edu/shc.
Tuberculosis Screening and Immunization Requirements

Immunization Requirements

The University of Alabama in Huntsville requires all students born after 1956 to have had 2 doses of measles (rubeola) vaccine. One dose must have been a Measles, Mumps, Rubella (MMR) vaccine. Students ages 30 and older may submit evidence of one dose of MMR if the dose was received after 1980. A copy of a lab report showing proof of immunity to measles (rubeola), mumps, and rubella may be submitted in lieu of the vaccine.

A meningitis vaccination within the past 5 years is required for all first time freshman and all students living in on-campus residence halls.

Tuberculosis Screening

Domestic students are required to complete a Tuberculosis Screening form. Tuberculosis testing may be required for domestic students based upon the information provided on the screening form.

International students are required to have a Tuberculosis test. The test must be administered in the United States within 12 months of the student's most recent arrival to campus. TB screening tests are administered upon your arrival to campus at the Student Health Center.

Documentation Requirements

All new students admitted to The University of Alabama in Huntsville must provide a completed Tuberculosis Screening and Immunization Requirements form which is signed by a physician or authorized individual. The physician's license number or clinic stamp must also be recorded on the form for verification purposes. The form and instructions for completion can be found at the Student Health Center website at www.uah.edu/shc. Forms, along with any necessary attachments, should be submitted to:

The University of Alabama in Huntsville
Student Health Center
Wilson Hall 325
301 Sparkman Drive
Huntsville, AL 35899
256.824.6775
256.824.6722 (Fax)
shc@uah.edu

Please note: The requirements noted above are for new students being admitted to The University of Alabama in Huntsville. Individual colleges, e.g. College of Nursing, may have additional immunization requirements.

UAH Police Department

The UAH Police Department works diligently to promote the security of our campus community through a variety of services and programs which are conducive to the support of the University's learning environment.

More information on UAH security policies and procedures can be found in the University's Annual Security Report (http://www.uah.edu/images/administrative/police/safety/asr_2016.pdf).

Security Tips

Get to know these valuable tips (http://www.uah.edu/police/programs/campus-security/157-facilities-operations/2262-police-campus-security-tips) that will help ensure your security on, and off, the UAH campus.

Reporting Crime

It is the policy of the university to strongly encourage students, employees, and visitors to UA Huntsville to promptly contact the university police, or if they wish, the Huntsville Police Department, about any criminal activities, accidents or medical emergencies occurring on campus. Reporting a crime does not mean an individual must take legal action – it may, however, help law enforcement stop further incidents as well as help them keep the community informed about criminal activity.

To make a report in person, an individual should go to the UAH Police Department, which is located in the Intermodal Facility, 501 John Wright Drive (Parking Garage). To make a report by phone, call 256-824-6596 and describe the situation to the communications operator. In emergency situations, including fires and medical emergencies, call 911 or UAHPD at 256-824-6911. All 911 calls made from campus phones go directly to the UAH Police Department; all cell phone 911 calls are routed to UAHPD through the Madison County 911 center.

Campus Security Authorities

A person may also report a crime to certain individuals who have been designated as a Campus Security Authority (CSA). These individuals include the Director of Housing and senior Housing Office staff members, Residence Directors, the Dean of Students, the Director of Judicial Affairs, the Director
of Student Activities, the Director of Greek Life, the Director of Student Leadership Development and Service Learning, the Director of Athletics or any coach, Staff in the Student Health Center, the Vice President of Diversity, the Associate Provost for Undergraduate Studies, the Associate Vice President for Human Resources, or other UAH officials with significant responsibility for student and campus activities. Upon request, the CSA may assist the reporting individual in contacting the University Police about an incident.

In some cases the reporting person may wish to remain anonymous or a victim may not want the police involved. The CSA will record the information on a special form that will be forwarded to the Chief of Police. The Police Chief will evaluate the information and determine if other actions required under Federal law may have to be taken. The reporting person will likely not be contacted. All such incident reports will help the University take steps to make the campus safer. They will be used, in particular, to determine whether there is a pattern of crime involving a particular location, offender, or method; to provide the basis for alerting the campus community about crimes posing a danger to students or employees; and to compile the crime statistics included in this annual report.

**KNOW WHAT TO DO: Emergency Preparedness at UAH**

As an ongoing effort, UAH has developed an Emergency Management Plan. Part of the plan is to inform our community of how to respond in the event of an emergency. Knowing what to do in an emergency situation will help keep the UAH community safe and secure. Each department/unit should also have an up-to-date Building Emergency Action Plan that includes information on assembly areas, shelter locations, hazardous materials storage, and building-specific emergency contacts. We encourage you to familiarize yourself with the Emergency Action Guidebook (http://www.uah.edu/images/administrative/facilities/oep/emergency_guidebook.pdf) and the building-specific emergency action plan(s) for each building you regularly visit.

**Veterans Affairs**

The Office of Veteran Student Services works to develop and implement a variety of programs to provide student support services focused on the special needs of today’s military veterans, service members, dependents, and survivors. The office, located on the second floor of the Charger Union in the Dean of Students suite (Room 223), offers a comprehensive educational benefits counseling program to help students maximize VA educational benefits. A variety of programs are offered to facilitate the transition to school and to help support our students by advocating for the needs of our veterans, service members, dependents, and survivors. The office offers Veteran Work Study positions for eligible students.

For questions about tuition and fees for Veterans, please consult the UAH Tuition Fee Guidelines (http://catalog.uah.edu/undergrad/admissions/residency) page.
The Graduate catalog is a comprehensive reference for your academic career. It provides a list of programs and courses offered at The University of Alabama in Huntsville. In addition, it gives you valuable information such as suggested and required degree plans and information about tuition, financial aid, and support services.

While we encourage you to follow the pathways outlined in this catalog, it is also recommended that you consult with your academic advisor to ensure that you are taking advantage of courses and university resources that will help you reach your educational and career goals by graduating on time. Please contact your department to learn who can assist you with your academic advising.

For questions regarding the content of this catalog please contact the Graduate School at 256.824.6002, GradDean@uah.edu, or SSB 222.

Academic Information

This section provides important information on the following topics for Graduate Students:

- Collaborative Programs
- Cooperative Education and Career Development Program
- Intensive Language and Culture
- JUMP
- Online Learning
- Study Abroad

Collaborative Programs

Between Auburn University and the University of Alabama System (UA, UAB, UAH)

In some designated programs, a student enrolled in either Auburn University or any campus of the University of Alabama System may register as a transient student at the other institution with the approval of both graduate deans, or their representatives, and the department or school in which the student wishes to take the courses. The amount of coursework that may be taken by a student under such an arrangement will be determined by the supervisory committee, with appropriate approvals at the other university. A student earning a master's degree at either institution must complete a majority of the required coursework at the institution granting the degree. For a course to be applicable for credit beyond the hours presently transferable toward a master's degree or beyond the master's, the course must be approved in advance by the student's major department and the graduate dean.

The deans of the graduate schools will serve as liaison officers in arranging programs for which the additional hours may be transferred.

Between UAH and Alabama A&M University

A visiting student policy has been established between Alabama A&M University and UAH. Under this arrangement, a graduate student at one institution may request permission to attend a course at the other. Conditions governing the granting of permission include the following:

1. The student is in good graduate standing.
2. The course desired is unavailable to the student at the home institution.
3. A visiting student is limited to one graduate course a semester at the host institution except where the second course is a laboratory required to accompany the first course.
4. A visiting student must have prerequisites for the course.
5. The number of courses taken under this plan cannot exceed those allowed in the policy on transferred credit.
6. The student's request requires the approval of the advisor, department chair, and graduate dean.
7. Permission of the host institution is dependent upon availability of space for the visitor after its own students are accommodated.

Interested students should contact the Office of the Registrar for appropriate forms.

Between UAH and The University of Alabama at Birmingham (UAB)

A collaborative program in engineering exists between UAH and UAB for the pursuit of doctoral degrees. A student at UAB may earn the doctoral degree at UAH with a major in electrical engineering, or mechanical engineering; while a UAH student may pursue the master's or the doctoral degree with a major in biomedical engineering at UAB. An interested student must first be admitted at the principal institution, i.e. the one offering the degree, but may
take courses and satisfy the residency requirements at either campus. All degree requirements must be satisfied at the principal institution. More details are available through the participating departments.

Cooperative Education and Career Development Program

Student Services Building 205
256.824.6741
chargerjobs@uah.edu
www.uah.edu/career-services

Career Center

Career Services

Career Services assists students in all phases of career planning and preparation including resume writing and critique, interview preparation, developing networking skills, career assessments and career coaching through one-on-one appointments as well as workshops and information sessions. Our services provide students with the knowledge and resources to make informed career choices and the personal skills to reach their objectives.

Career Services coordinates on and off campus recruiting opportunities and hosts two comprehensive career fairs each fall and spring semester for students in all majors. Career Fair allows our students the opportunity to speak with multiple employers in one location about co-op, internships and degree positions. Attendees are required to dress professionally and bring copies of their resumes for distribution.

Cooperative Education and Internships

Cooperative Education and Internships provide a unique, structured educational experience that allows students to gain practical, professional work experience while completing degree requirements. Through the integration of classroom theory and professional practices, students increase their understanding of the world of work.

The Cooperative Education program offers alternating and parallel options. Students working on an alternating schedule rotate semesters of full-time study with semesters of full-time work in their majors. Some students may complete continuous parallel (part-time work) assignments concurrently with a reduced class load. Co-op work experiences are progressive in responsibilities, monitored by the University, and directly related to the students’ academic and career goals. Students participating in Cooperative Education are required to register their co-op through the Career Center.

Internships are one semester degree related employment opportunities where students work one-on-one with professionals to gain practical experience in their field. Several academic programs on campus offer credit for internships; students should check with their academic advisor to learn about any credit bearing internship opportunities within their program of study.

Charger Path

Charger Path is UAH’s exclusive comprehensive career management system and all newly enrolled students receive an account during their first week of classes. In this system, students update their profiles, upload their resumes and apply for positions including co-ops, internships and professional, degree opportunities. Through Charger Path, students receive career announcements, view upcoming workshops and information sessions, have access to on-campus recruiting schedules and make appointments with the Career Center.

Intensive Language and Culture

SST 146
256.824.2370
ilc@uah.edu
http://www.uah.edu/ilcp

Mission

The Intensive Language and Culture Program (ILC) is an academically-oriented language and culture program that prepares students for engagement in the classroom, on the campus, and across the community. In the ILC, nonnative speakers of English can develop language skills for study in an English-medium university such as UAH. With a rigorous curriculum and strict attendance requirements, the program supports students as they progress in their acquisition of academic/professional English.

Overview

The ILC includes 18-20 hours of classroom instruction per week. Students develop their skills in both oral and written academic English. Instruction adheres to principles of communicative language teaching.

Students are instructed in the four component skills of listening, speaking, reading, and writing. Additional work in pragmatics, grammar and pronunciation supports progress in both accuracy and fluency, with special attention paid to interaction in a U.S. university context.
The Intensive Language and Culture Program (ILC) serves the needs of non-native speakers of English at UAH. Students in Levels 010-040 (High Beginning - High Intermediate) prepare for study at English-medium universities, such as UAH. Students in Level 050 (Advanced) polish their language skills and transition into undergraduate, graduate, or non-degree programs at UAH.

Additional Information
ILC Program information is also available on the program website (http://www.uah.edu/ilcp). If you are interested in applying to the ILC or receiving additional information, please email the director of the ILC at ilc@uah.edu.

Requirements

Students applying to the ILC at UAH should submit the following documents.

1. Official transcripts from secondary and/or postsecondary institutions attended, translated into English and certified.
2. TOEFL or IELTS scores (if not available, contact the director regarding options for demonstrating language proficiency, at ilc@uah.edu)
3. Financial support documentation (F-1 students only)

To apply online, visit the UAH Admissions Login (https://sierra.uah.edu:9021/PROD/bwskalog.P_DispLoginNon), choose APPLY FOR ADMISSION. On that page, choose First Time User Account Creation. Next, create a Login ID and PIN. Then, log in to the system and select Intensive English Program Application.

For a downloadable copy of the application form, select the UAH ILC Application (http://www.uah.edu/images/administrative/ilc/IEP%20application.pdf).

If you have questions or need additional information, contact the director via email at ilc@uah.edu.

ILC 010 - INT LANG & CULT I
Semester Hours: 4-20
Course designed to improve nonnative speaker's ability in their overall language proficiency at the high beginning level.

ILC 020 - INT LANG & CULT II
Semester Hours: 4-20
Course designed to improve nonnative speaker's ability in their overall language proficiency at the low intermediate level.

ILC 030 - INT LANG & CULT III
Semester Hours: 4-20
Course designed to improve nonnative speaker's ability in their overall language proficiency at the intermediate level.

ILC 040 - INT LANG & CULT IV
Semester Hours: 4-20
Course designed to improve nonnative speaker's ability in their overall language proficiency at the high intermediate level.

ILC 050 - INT LANG & CULT V
Semester Hours: 4-20
Course designed to improve nonnative speaker's ability in their overall language proficiency at the advanced level.

ILC 090 - ILC: SPECIAL TOPICS
Semester Hours: 1-3

JUMP

UAH's Joint Undergraduate Master's Program (JUMP) allows undergraduate students to study at the graduate level. By taking graduate courses in your senior year, you could reduce the time taken to get a graduate (M.S. or M.A.) degree.

Benefits for you:

1. No entrance exam!
2. Double count undergrad classes for grad degree!
3. Pay undergrad tuition for grad classes taken as a JUMP student!
4. No application fee!

**How to JUMP!**

- Apply any time before your last semester.
- Meet with your college JUMP advisor and submit application.

**Official Rules for JUMP!**

- For admission to JUMP, student must meet overall GPA requirements\(^1\) of the college. GPA includes all transfer coursework.
- Only courses taken at UAH and listed on JUMP application are eligible.
- Student must receive a B in each JUMP course for it to count towards graduate degree.
- Student must maintain minimum overall GPA throughout JUMP program until graduation.
- All coursework must be completed within six years of taking first JUMP class.
- Students are considered undergraduate students until all requirements for undergraduate degree are met.
- Students cannot hold a GTA, GRA, or graduate scholarship or fellowship until undergraduate degree is completed.
- If a change is made to initial JUMP application both a JUMP change form and a change to student's undergraduate Program of Study (POS) must be submitted for approval.
- If student's GPA upon graduation is less than the required minimum, the student does not receive admission to the graduate degree program automatically. Student must apply to the graduate school with admission test score and graduate application. Courses will be counted as if the student had been a non-degree seeking graduate student.
- Students must begin their graduate program within one year of their undergraduate graduation.
- Notify the Graduate School (deangrad@uah.edu?subject=JUMP! Notification) when you submit your application for undergraduate graduation.

More information available at [http://uah.edu/jump](http://uah.edu/jump)

---

\(^1\) Minimum GPA requirements by college or program

---

**Online Learning**

The University of Alabama in Huntsville offers a number of academically challenging online and hybrid-online programs. Please review a listing of available programs here: [http://www.uah.edu/online-learning](http://www.uah.edu/online-learning)

**State Authorization:**

The state of Alabama is a member of the SARA compact. The State Authorization Reciprocity Agreement is an agreement among member states, districts and territories that establishes comparable national standards for interstate offering of postsecondary online education courses and programs. It is intended to make it easier for students to take online courses offered by postsecondary institutions based in another state. For more information, including a current list of states in the SARA compact, please visit [http://www.nc-sara.org/](http://www.nc-sara.org/). The University of Alabama in Huntsville is an approved SARA institution.

For further information regarding SARA requirements on the UAH campus please see [http://www.uah.edu/academic-affairs/offices/oira/state-authorizations](http://www.uah.edu/academic-affairs/offices/oira/state-authorizations)

Topics include: Timeline for approval, International Residents, Territories and Provinces, Military Bases, Additional Resources, Professional Licensure, & Grievance Procedures

**Study Abroad**

The Office of Study Abroad within the Office of International Services serves as the coordinating office for study-abroad opportunities at UAH.

Faculty-Led Courses: Each year, UAH offers a number of faculty-led study abroad courses typically ranging from two to four weeks in length and conferring three to six academic credit hours in the course(s) offered.

Summer, Semester, and Academic-Year Programs: UAH works with international partners and education abroad organizations to offer students summer, semester, or academic-year study abroad programs at sites in Africa, Asia, Australia, and Europe. You can participate in these programs and earn academic credit toward your degree at UAH.

The Office of Study Abroad is located in the Student Services Building, Room 218M. Students can obtain additional information by visiting our website ([www.uah.edu/ois](http://www.uah.edu/ois)), by emailing studyabroad@uah.edu, or by calling 256-824-6055.
Admissions

Graduate Admissions

The University of Alabama in Huntsville welcomes inquiries and applications from interested persons who wish to further their education. Email inquiries are welcome and should be addressed to the specific department/program or to the Office of Graduate Admissions at deangrad@uah.edu. Further information is available at: http://www.uah.edu/graduate

The graduate student body is composed of individuals of all ages—traditional full-time college students and other adults who are combining their educational pursuits with work, family, and various activities. Prospective students should apply well in advance of the date of proposed entrance. Application deadlines can be found on the admissions website.

Faculty members and academic advisors for the various graduate programs are available to confer with interested individuals to discuss their enrollment plans and opportunities at UAH. Students may telephone or email departments or program offices directly or call the Office of Graduate Admissions (domestic students call 256.824.6198; international students call 256.824.6199).

Application Procedure

An applicant for a master's, doctoral or certificate program must submit a completed graduate application form and a nonrefundable application fee to the Office of Graduate Admissions. Application may be completed online or downloaded at http://www.uah.edu/admissions/graduate/admission-process. Printed applications can be mailed to:

The Office of Graduate Admissions
Student Services Building 222
The University of Alabama in Huntsville
Huntsville, AL 35899

Paper copies of the application are available in the Graduate School and in departmental offices. There is a non-refundable application fee of $60 for domestic students and international students which must accompany the application. Applicants who have previously enrolled at UAH will pay a $30 fee and should submit a paper application.

In addition, the student must request that the following items be sent to the Office of Graduate Admissions:

1. One official copy of the academic record from each collegiate institution attended;
2. For most programs, applicants should submit scores of the Graduate Record Examination (GRE) from Educational Testing Service (ETS). The institutional code for UAH is 1854. College of Business Administration applicants should submit scores for the Graduate Management Admissions Test (GMAT). Applicants for English, Nursing and Public Affairs should submit either a set of GRE scores or a score for the Miller Analogies Test (MAT); These scores must be submitted directly to UAH from the testing service.
3. The GRE/MAT requirement may be waived by the Graduate Dean upon recommendation of the department or program chair if at least one of the following conditions holds and other departmental requirements are met:
   a. the applicant is the holder of a graduate degree from an accredited institution;
   b. the applicant presents evidence of having taken the GRE/MAT over five years ago and hence cannot obtain official scores;
   c. the applicant graduated from an accredited college or university five or more years ago and has not subsequently been enrolled since that time, and has a record of consistent professional and/or academic achievement as documented on a submitted resume;
   d. FE exam - pass and show proof;

An applicant for an additional graduate program (including a different degree in the same discipline, e.g. adding a master's program to a Ph.D. program, or adding a certificate) who has been previously admitted to the Graduate School must submit a new application form to the Office of Graduate Admissions for the new program. The student must inform the chairs of both departments/programs that he/she is pursuing the two degree programs concurrently.

Students who fail to enroll in classes within one year of their date of admission must submit a new application.

Conditional Admission

The Graduate School may conditionally admit applicants who do not satisfy all of the requirements for unconditional admission, but who do show reasonable potential for doing graduate work. Conditional admission requires the approval of both the Graduate Dean and the chair of the department in which the applicant plans to pursue an advanced degree.

If a conditionally admitted student has an overall grade average of B (3.0) or better for all graduate work attempted up to and including the semester in which the student completes 12 semester hours of graduate work at UAH, then the student assumes the status of an unconditionally admitted student.
Otherwise, the student is dismissed from the Graduate School. Under exceptional cases, a student may be readmitted upon justified recommendation of the faculty in the student's major department and approval of the Graduate Dean.

Graduate Admission Requirements

For admission to the Graduate School, applicants must hold a bachelor's degree, or equivalent, from an approved institution. The following minimum requirements are acceptable to the graduate school; individual colleges and/or departments may require higher grade point averages and test scores or additional or more specific requirements. See college/departmental sections for specific admissions information.

Unconditional Admission

To qualify for unconditional admission, applicants must satisfy the following minimum criteria:

* Individual programs may have higher GPA and score requirements for unconditional admission.

All programs except those in the College of Business Administration

1. Have a minimum grade-point average of B (3.0) on the undergraduate record, and
2. Have a minimum total score of 300 on the Graduate Record Examination (GRE) and a minimum score of 3.0 on the analytical writing portion. For the English, Nursing, and Public Affairs programs, applicants must have a minimum total score of 410 on the MAT.

Graduate Assistantships

Graduate assistantships are offered to encourage graduate work, to promote teaching, and to promote research. Graduate assistants have a graduate degree as their primary goal, and the assistantships are part of their graduate education. Assistantships are available through various departments of instruction, under the auspices of the Graduate School. Any student qualified for admission to the Graduate School is eligible to apply for a graduate assistantship.

A student eligible for an assistantship may be appointed as a Graduate Teaching Assistant (GTA) or Graduate Research Assistant (GRA). Full assistantships usually require 20 hours per week service to the University, but may require more or fewer hours per week in exceptional cases. All full-time graduate assistants must be registered for a minimum of 9 semester hours (6 semester hours in the summer term) during any semester in which an appointment is held. Exceptions require permission of the Graduate Dean. Normally, all courses for which the student is registered shall be graduate credit courses. Exceptions must be approved by the Department Chair and Graduate Dean.

Benefits

Tuition

A graduate assistant who holds a full assistantship (20 hours per week) appointment will receive tuition and fees for 9 to 12 hours per semester (6 hours in the summer term). Tuition and fees for students who hold less than a full assistantship appointment are prorated accordingly.

Stipend

Assistantship stipends vary in amount by type, program, and student academic progress. Students receive an offer letter indicating the amount of the stipend.

Further information may be obtained in the department or in the Graduate School.

Two kinds of assistantships are available:

Graduate Teaching Assistantships

As the title implies, Graduate Teaching Assistants (GTAs) share the faculty's responsibility for teaching. The purpose of this assistantship is twofold: one is to support the departmental teaching program, and the other is to aid the student's professional development. The teaching assistant may have duties assigned as a classroom instructor, laboratory instructor, tutor, grader or other activities related to the educational mission of the department. Only students in good academic standing are eligible for and may be awarded a teaching assistantship. The GTA's teaching load will necessarily vary from one department to another, and the load should be proportional to the normal full-time teaching load carried by other faculty members in the department.
If a student holding an assistantship withdraws from courses during the semester such that his/her course load is below the minimum required hours, that student can be required to reimburse the University for tuition and health insurance prorated on the remaining course load. Students holding an assistantship that do not continue to make satisfactory progress toward their degree may have their assistantship revoked.

A mandatory online GTA workshop for all new GTAs is held prior to the beginning of classes each fall and spring semester.

For students whose native language is not English, English proficiency, as determined by the director of the ESL program, is a prerequisite for classroom or laboratory instruction. More information about international teaching assistants is available on the graduate web site at http://www.uah.edu/graduate. GTAs must have completed at least 18 semester hours of graduate coursework in their discipline to qualify as the instructor of record in any class.

**Graduate Research Assistantships**

A Graduate Research Assistant (GRA) performs research under the supervision of a faculty member. At times, a research project to which the research assistant is appointed may eventually lead to a thesis or dissertation topic; however, a research supervisor cannot guarantee that a particular project will provide suitable material for a thesis or dissertation. All assistantship appointments are subject to the continuing availability of funds. Appointments are made only when resources to support them are assured, but a financial emergency in the University could cause positions, including those of graduate assistants, to be terminated prior to the end of the appointment period. Assistantship support normally will not continue past the end of the semester in which the assistant expects to complete degree requirements. Some contracts or grants may specify U.S. citizenship as a prerequisite for appointment.

**Further Information**

If a student holding an assistantship withdraws from courses during the semester such that his/her course load is below the minimum required hours, that student can be required to reimburse the university for tuition prorated on the remaining course load. Students holding an assistantship that will not continue to make satisfactory progress toward their degree may have their assistantship revoked.

All GTA/GRAs are required to submit proof of health insurance to the Graduate School.

**Graduate Fellowships**

Several fellowship award programs exist, which can provide graduate student stipends, tuition allowances, and funds for other purposes (e.g., equipment purchase). Examples of such fellowships are the NASA Graduate Student Research Program (GSRP), National Science Foundation Fellowships, and Space Grant Fellowships. Announcements of these fellowships are typically made annually, both as brochures and on sponsoring websites. Interested students may also obtain information on such fellowships from departmental offices or http://www.uah.edu/graduate.

In addition, the Graduate Student Fellowship is awarded to newly admitted first-time, full-time students who have demonstrated superior academic achievement in their undergraduate education and who have submitted an application for admission, official transcripts, and standardized test scores to UAH are automatically considered for a Graduate Student Fellowship. Online students are ineligible for consideration. For more information, visit http://www.uah.edu/admissions/graduate.

Endowed fellowships for graduate study exist in several departments. See the graduate website at http://www.uah.edu/admissions/graduate for the most current listing.

**International Students**

**Additional Admission Requirements for International Students**

All applicants whose native language is other than English must demonstrate the linguistic proficiency necessary to function in degree programs at UAH.

1. Unconditional admission to degree programs.*
   a. In order to be considered for admission to degree programs with no additional English language training required, applicants must meet the following minimums on the TOEFL or IELTS.
      TOEFL (iBT): all sub-scores greater than or equal to 18 OR
      IELTS: all sub-scores greater than or equal to 6.0
   b. Students with two or more sub-scores below these minimum qualifications must enroll in the UAH Intensive Language and Culture (ILC) Program before they can enroll in graduate course work.

   *Language proficiency is only one factor in admission decisions. To confirm the full admission requirements for specific degree programs, please contact the department directly.

2. Admission to the ILC Program.
   a. Applicants who do not currently meet the requirements for admission to a degree program at the university are encouraged to apply for admission to the UAH Intensive Language and Culture (ILC) Program. Successful completion of the UAH ILC meets the language proficiency standard for admission to degree programs at the university.
3. a. To be considered for admission to the UAH Intensive Language and Culture Program, applicants must have the following minimums on the TOEFL or IELTS.*

TOEFL (iBT): Overall of at least 50 with no sub-score below 12 OR
IELTS: Overall of at least 4.0 with no sub-score below 3.5

*NOTE: If an applicant does not have a TOEFL or an IELTS score, he/she may request a pre-assessment and be considered for admission to the ILC. He/she will then be formally assessed upon arrival at UAH and will be placed in appropriate classes in the ILC program.

Nonnative English-speaking Graduate Teaching Assistants

To be considered for positions as teaching assistants or graduate assistants, students must have the following minimums on the TOEFL or IELTS.

TOEFL (iBT): no sub-score below 22 OR
IELTS: no sub-score below 6.5

*iBT = internet-based TOEFL; IELTS = International English Language Testing System

Official TOEFL or IELTS scores must be sent directly to the Graduate School from Educational Testing Services (ETS) or IELTS. College and/or departments may require a higher minimum TOEFL score for admission. All international applicants must apply for admission by the posted deadlines for the term in which they wish to enroll and all application materials must be received in the Office of Graduate Admissions by April 1 (September 1) for admission for the following Fall (Spring) semester.

In addition, all international students must request that:

1. One official copy in English of college or university transcripts be forwarded to UAH directly from the institution(s) attended. Do not send personal copies;
2. Graduate Record Examination (GRE) or Graduate Management Admission Test (GMAT) or Miller Analogies Test (MAT) scores, as appropriate, be sent directly to UAH from the testing service;
3. A certified financial statement be submitted as evidence of sufficient finances to cover fees and personal expenses while attending UAH. An Affidavit of Financial Support form is available at the Graduate School website. The completed affidavit form must be accompanied by a bank statement which indicates that there are sufficient funds to sponsor the student for one calendar year. This affidavit must be received before an I-20 can be issued. For more information about health insurance please see the following link http://www.uah.edu/health-and-wellness/student-health-center/student-insurance-plan. Proof of continued health insurance coverage must be presented by the student during each semester of enrollment.

Students who have earned a bachelor’s or higher degree from an accredited U.S. institution will be exempted from the TOEFL, IELTS, TSE requirements above. Students with degrees from non-U.S. institutions that have English as their primary language of instruction (e.g. United Kingdom, Canada, Australia, etc.) may petition the Dean of the Graduate School for an exemption from the English Language Placement Test (ELPT).

For information about English language courses visit http://www.uah.edu/ilcp.

Non-Degree Admission

Students who are interested in earning graduate credit but who are not applicants for a graduate degree program at UAH may be admitted as non-degree graduate students. Admission in this category requires proof of a bachelor’s degree from an accredited institution and department and/or college approval. This category is not available to students with non-immigrant visa status. Non-degree students are not eligible for federal financial aid.

All courses taken while in non-degree status require approval of the instructor. Students must maintain the same grade point average requirements expected of conditionally admitted graduate students. Graduate courses numbered 500 and above may be taken while in this category provided that all prerequisites have been met.

Individuals admitted as graduate non-degree students may decide to make formal application to a graduate degree or certificate program. If admitted, credit earned as a non-degree graduate student may be applied toward a graduate degree or certificate program subject to the following conditions and limitations:

• All grades earned in 500-level courses or above during non-degree status and applied to a graduate degree or certificate program must have been B or higher;
• No more than twelve (12) graduate semester hours for courses taken as a non-degree student may be applied to a degree program.
• Courses used to satisfy degree or certificate requirements are subject to approval by the major department and grades for those courses become part of the student’s graduate program GPA.

Provisional Admission

A student (other than an individual with non-immigrant visa status) whose application to the Graduate School is not complete, or is pending approval, may, with departmental recommendation, be admitted to UAH on a provisional basis. Students admitted in this category may register for graduate level courses for one semester with approval from the department(s), provided that all prerequisites for those courses have been met. Students admitted provisionally are not eligible for federal financial aid. Students may be admitted provisionally for one semester only unless specified otherwise by
the Graduate Dean. Within that period they must complete their application materials in time to be considered for regular admission prior to the start of the next semester, usually by the 10th week of the semester. Students who do not complete the application process within the allowed period, or are subsequently not admitted to the graduate program, will not be allowed to take additional graduate classes as a degree-seeking student.

Once a student gains regular admission to the Graduate School, all policies regarding conditional or unconditional admission become effective in the provisionally admitted semester. Graduate credit for courses at the 500-level or above taken as a provisional student may, with approval of the major department, be applied toward a graduate degree program only if the grades earned in such courses were B or higher.

Seniors Taking Graduate Courses

UAH seniors may take up to 9 semester hours of courses (500 or 600 level) for graduate credit while completing requirements for the baccalaureate if they meet the following qualifications:

1. An approved degree application is on file;
2. Overall GPA, or GPA for the last 40 semester hours, is at least 3.5;
3. Fewer than 13 semester hours remaining for degree completion;
4. A total course load of no more than 12 semester hours a semester;
5. Permission of the instructor.

Students initiate the request process by filling out the Request for Approval of Graduate Credit by UAH Senior, (Form 16), which is available on the Graduate School website or in the Graduate School and which requires the approval of the department chair and graduate dean. Graduate tuition and fee rates apply to courses taken in this category. A student may not use courses taken for graduate credit as part of the baccalaureate degree under this option.

JUMP

UAH's Joint Undergraduate Master's Program (JUMP) allows undergraduate students to study at the graduate level. By taking graduate courses in your senior year undergraduates can reduce the time taken to get a graduate (MS) degree. For more information, please visit: http://www.uah.edu/jump

Tuition Scholarships

A limited number of tuition scholarships may be awarded to students without assistantship appointments who have unconditional admission status and are in good academic standing. Such scholarships may be awarded for up to 9 graduate semester hours per semester (6 semester hours in the summer term). Students receiving tuition scholarships are bound by the same rules as graduate assistants with respect to course withdrawal, contingency of the award on satisfactory performance toward the graduate degree, general eligibility, and special department requirements.

The departmental faculty select the proposed awardees from qualified applicants. An appointment letter, similar to a graduate assistantship letter but without assigned duties, is prepared by the department chair and sent through the college dean to the graduate dean for approval at least one month prior to the start of the semester in which the scholarship is proposed.

Additional scholarships may be available. Please visit our financial aid website to learn more: http://www.uah.edu/admissions/graduate/financial-aid

Degree

Master of Arts

Dean: Mitch Berbrier, Ph.D., Professor of Sociology

Mission

The College of Arts, Humanities, and Social Sciences is committed to excellence in teaching, research, and service in the following disciplines:

- fine arts,
- humanities,
- the social and behavioral sciences, and
- teacher education.

For its own majors, as for those in the professional schools, the College strives to provide superior liberal arts education characterized by close interaction between teachers and learners. Its goals are to impart to each student

- a spirit of intellectual curiosity,
- critical thinking skills,
- abilities in writing and oral communication,
- aesthetic awareness and creativity,
- familiarity with human history and behavior,
- a knowledge of languages and cultures, and
- an understanding of the bases of ethical behavior and the duties of citizenship.

Believing in the centrality of liberal learning to the mission of a university, the College is committed to maintaining a diverse community of teacher-scholars of the highest quality and to providing an environment that encourages personal and professional growth. It considers teaching and research mutually enriching activities and strives to make its knowledge and expertise available to professional programs on campus and to the educational needs of society. Through its graduates and programs, the College contributes to the cultural, intellectual, and economic growth of the state and nation.

Accreditation

UAH is accredited by the Southern Association of Colleges and Schools Commission on Colleges (SACSCOC) to award bachelor's, master's, and doctoral degrees. Contact the Commission on Colleges at 1866 Southern Lane, Decatur, Georgia 30033-4097 or call 404.679.4500 for questions about the accreditation of UAH. The College of Arts, Humanities, and Social Sciences thus offers baccalaureate and master's programs under the auspices of that accrediting body. In addition, The University of Alabama in Huntsville is an accredited institutional member of the National Association of Schools of Art and Design and the National Association of Schools of Music. Teacher education programs are approved by the Alabama State Board of Education, according to standards of the National Association of the State Directors of Teacher Education and Certification (NASDTEC), for the issuance of appropriate professional certificates for service in public schools, and the Department of Education at The University of Alabama in Huntsville is accredited by the National Council for Accreditation of Teacher Education (NCATE).

Facilities

The College of Arts, Humanities, and Social Sciences utilizes the facilities and resources of the entire university. However, the College is housed primarily in two buildings, namely Morton Hall and Roberts Hall. Critical to study of the liberal arts is the Salmon Library, located in close proximity to both Morton and Roberts Halls. Supporting facilities include the instructional computer laboratories on the second floor of Salmon Library, art galleries in several buildings, and Union Grove Gallery and Meeting Hall, an historic church moved to campus in 1974 and currently used as an art gallery and a meeting place for students and faculty.

The Humanities Center

The Humanities Center was established in 1991 with the aid of an award from the National Endowment for the Humanities (NEH). The NEH award was a challenge grant that was subsequently matched by funds from other sources, including public, corporate, and private giving, to create the three endowments that support the Center's activities in five areas:

1. hiring of eminent and visiting scholars,
2. library enhancement grants,
3. public programming grants,
4. faculty travel, and
5. faculty research.

The Humanities Center is located on the second floor of Morton Hall.
Degrees and Programs

Graduate study in the College of Arts, Humanities, and Social Sciences brings together faculty and advanced students to share the excitement of creative learning. All degree candidates plan a Program of Study with faculty members who share the student’s intellectual interests. Students design, in consultation with a faculty advisor, a graduate program fitted to their particular interests and needs.

The College of Arts, Humanities, and Social Sciences offers programs of study leading to the Master of Arts degree in

- English
- History
- Professional Communication
- Psychology
- Public Affairs.

Class A teacher certification is available with degree programs in English and History, as well as the disciplines of Biology, Chemistry, Mathematics and Physics (offered within the College of Science).

Teacher certification may be achieved through either traditional (including the Strengthened Subject Matter Option or the Technology Option) or non-traditional “fifth year” approaches. Those students who have earned graduate degrees in appropriate disciplines may be eligible for certification only programs.

English

Students wishing to pursue graduate work in English have a number of options, ranging from certificates (http://catalog.uah.edu/grad/colleges-departments/arts-humanities-social-sciences/english-ma/#programtext) that prepare them to pursue professional opportunities in technical writing (http://catalog.uah.edu/grad/colleges-departments/arts-humanities-social-sciences/english-ma/tech-writing) or teaching (either in English (http://catalog.uah.edu/grad/colleges-departments/arts-humanities-social-sciences/english-ma/fifth-year) or English as a Second Language (http://catalog.uah.edu/grad/colleges-departments/arts-humanities-social-sciences/english-ma/tesol)), to more standard M.A. programs with (http://catalog.uah.edu/grad/colleges-departments/arts-humanities-social-sciences/english-ma/thesis) or without (http://catalog.uah.edu/grad/colleges-departments/arts-humanities-social-sciences/english-ma/capstone) a thesis. Students are encouraged to consult with their advisors or the Director of Graduate Studies (laurel.bollinger@uah.edu) to select the program that best meets their needs. Specific requirements for each program are available under the Programs tab on this page.

Master of Arts in English:

• English, MA Thesis Option (Plan I) (p. 838)
• English, MA Capstone Project (Plan II) (p. 834)
• English, MA with Technical Writing Certificate (p. 836)
• English, MA Alternative Fifth Year Program for Class A Certification in English (p. 835)
• English, MA with TESOL Certificate (p. 838)
• JUMP Program (p. 20)

Graduate Certificates:

• Technical Writing Certificate (p. 836)
• TESOL Certificate (p. 837)

English, MA Plan II Capstone Option

Capstone Requirements:

This option leads to an M.A. in English but does not require a thesis. Instead, you will take 33 hours (11 courses) in English, subject to the basic requirements overviewed below. At the end of your program, generally in the final semester you anticipate being enrolled, you would complete a Graduate Capstone Project. For more information contact the Director of English Graduate Studies (laurel.bollinger@uah.edu) or review the FAQ (https://www.uah.edu/ahs/departments/english/programs/graduate/faq) page on the Graduate section of the English Department’s webpage.

Basic Requirements:

• At least half of the hours you take toward your degree (but not including any thesis hours) should be at the 600 level.
• At least 18 hours in your program should be in literature. To count, a course should deal with literature directly, rather than with writing or other topics. Please check to confirm if you have any questions about a specific course. Special certificate programs require additional hours that are determined in consultation with the appropriate program advisors.
• You must complete all work toward your degree within thirty semesters of the first course you take (counting summers). Courses taken between eighteen and thirty semesters prior to your degree program completion date may be re-validated by departmental exams negotiated with the specific faculty member who has responsibility for that course; any graduate course more than thirty semesters old may not be used.
• EH 540 and EH 649 indicate “Special Topics” courses. Often these are new courses, or courses taught by visiting faculty. You may include any number of these classes in your program of study, as long as you meet other requirements.
• Up to nine hours of graduate work in English may be transferred from other institutions with the approval of the Director of Graduate Studies (laurel.bollinger@uah.edu). At least nine hours in English courses numbered 600 or above must be completed here at UAH (exclusive of thesis hours).
• To be a full-time student, you will need to take a course load of 9 hours per semester. While you are permitted to take up to 15 semester hours per term, you should consult with the Director of Graduate Studies (laurel.bollinger@uah.edu) about doing so.
• You must maintain a 3.0 G.P.A. in all courses taken at the graduate level. If in any semester your cumulative G.P.A. falls below that 3.0 level, you will be on probation. You might also wish to assess your commitment to a graduate program.
• All students complete either a thesis or a capstone project. For more information, see the FAQ (https://www.uah.edu/ahs/departments/english/programs/graduate/faq) on the English Department Graduate page.
The additional English courses you would take is:

Basic Requirements:

- You must demonstrate reading proficiency of French, German, Spanish, or another language deemed by the department to be academically appropriate. Adequate reading knowledge may be demonstrated by one of the following options:
  - Three semesters or their equivalent in one language with a minimum average grade of B at an accredited institution, completed not more than five years before your first graduate course in the UAH program or taken during your time in the M.A. program.
  - Intermediate-level performance on a UAH examination in the language, given by arrangement with the appropriate member of the faculty in the Department of World Languages and Cultures.
  - In lieu of the language requirement, additional graduate coursework of three semester hours in Linguistics. EHL 505 (Survey of General Linguistics) or EHL 507 (Advanced English Grammar Studies) or a designated course of a similar nature is required. These three semester hours are generally in addition to the hours required for the M.A. degree itself. Bear in mind that many Ph.D. programs still expect proficiency in one or often two foreign languages, however.

English, MA Alternative Fifth-Year Program with Class A Licensure

This program is for people who have earned a bachelor's degree, and have now decided that they want to teach English in Alabama's public schools. At the end of this program, you will have both an M.A. in English and a recommendation for a Class A teaching certificate. If you have an undergraduate degree in English or Language Arts, you will probably not need to take additional coursework before being admitted to the program. Otherwise, you need to have undergraduate credits in speech, theatre, and/or journalism (at least two out of the three). You can take the relevant coursework during your first semesters as an M.A. student prior to applying for the Education certification. The M.A. program itself consists of 24 credit hours in English, of which 18 hours must be in literature; 24 hours of graduate Education courses, a 1-hour practicum in Education, and a 6 hour internship. You will need to complete a capstone project for this program, as the course requirements do not leave room for a thesis. We usually advise you to take the English component first, because in the event that you change your mind and decide against becoming certified, the English courses, unlike those in Education, will still lead toward an M.A. degree. The program generally requires 5 semesters to complete prior to the semester-long internship. Expect to work closely with both the Education College and the Director of English Graduate Studies (laurel.bollinger@uah.edu) to be sure you are meeting all state-level requirements toward an M.A. degree. The program itself consists of 24 credit hours in English, of which 18

You will also need to meet the additional requirements listed below.

Basic Requirements:

- At least half of the hours you take toward your degree (but not including any thesis hours) should be at the 600 level.
- At least 18 hours in your program should be in literature. To count, a course should deal with literature directly, rather than with writing or other topics. Please check to confirm if you have any questions about a specific course. Special certificate programs require additional hours that are determined in consultation with the appropriate program advisors.
- You must complete all work toward your degree within thirty semesters of the first course you take (counting summers). Courses taken between eighteen and thirty semesters prior to your degree program completion date may be re-validated by departmental exams negotiated with the specific faculty member who has responsibility for that course; any graduate course more than thirty semesters old may not be used.
- EH 540 and EH 649 indicate “Special Topics” courses. Often these are new courses, or courses taught by visiting faculty. You may include any number of these classes in your program of study, as long as you meet other requirements.
- Up to nine hours of graduate work in English may be transferred from other institutions with the approval of the Director of Graduate Studies (laurel.bollinger@uah.edu). At least nine hours in English courses numbered 600 or above must be completed here at UAH (exclusive of thesis hours).
- To be a full-time student, you will need to take a course load of 9 hours per semester. While you are permitted to take up to 15 semester hours per term, you should consult with the Director of Graduate Studies (laurel.bollinger@uah.edu) about doing so.
- You must maintain a 3.0 G.P.A. in all courses taken at the graduate level. If in any semester your cumulative G.P.A. falls below that 3.0 level, you will be on probation. You might also wish to assess your commitment to a graduate program.
- All students complete either a thesis or a capstone project. For more information, see the FAQ (https://www.uah.edu/ahs/departments/english/programs/graduate/faq) on the English Department Graduate page.
- In lieu of meeting the language requirement, your program includes a Linguistics course. EHL 505 (Survey of General Linguistics) or EHL 507 (Advanced English Grammar Studies) or a designated course of a similar nature is required.

Total Semester Hours: 30

In addition to the requirements for any applicant to our programs, the Department of Education has additional requirements. Because such requirements do shift regularly (and are outside UAH’s control), students are advised to confirm with the Education Program that they meet the current requirements. However, at this time, students admitted to any of the programs that include teacher certification must have a cumulative grade point average of at least 2.5.

Technical Communication Certificate

The English Department offers an 18-credit-hour Graduate Certificate in Technical Communication. This Certificate prepares students for careers in technical communication, technical editing, graphic design, proposal writing, and user experience. In preparation for future employment, certificate students get exposure to real-world documents and writing opportunities, both in class and through optional internships. The programs routinely offers special studies courses in topics including Grant and Proposal Writing, Document Design, and Writing about Science and Technology. Students also use current technical communication software, such as Adobe Robohelp, Captivate, Framemaker, and InDesign as well as MadCap Flare.

The Graduate Certificate requires four graduate English courses in technical writing or editing, including EH 501 and EH 603 as well as to English Electives (including EH 542, EH 552, EH 554, EH 601, EH 602, EH 649, and EH 662). In addition, students take two related graduate courses outside of English in an allied field (http://www.uah.edu/la/departments/english/graduate-program/74-main/liberal-arts/english/7080-graduate-certificate-in-technical-writing-allied) selected in consultation with the Director of Business and Technical Writing (rw0019@uah.edu). Graduate Certificate in Technical Communication students enroll in the following Program of Study (POS):

EH Technical Writing Elective
Allied Field Course
Allied Field Course

Total Semester Hours: 15

Students who wish to earn the Certificate in Technical Communication must be admitted to the Graduate School (http://grad.uah.edu), but may pursue the certificate independent of a master’s degree program. These courses may also count toward a master’s degree in English if the student meets admission requirements for the M.A. For the stand-alone certificate, no there is no specific language requirement.

No more than six credit hours taken at another institution may be applied to the certificate, and certificate courses taken at UAH must include EH 501 and EH 603.

For further information about UAH programs in technical communication, contact Dr. Ryan Weber, Director of Business and Technical Writing, at rw0019@uah.edu or (256) 824-6320.

English, MA with Technical Communication Certificate

Technical Communication Certificate Requirements:

This program leads to an M.A. in English with a Certificate in Technical Writing. In addition to the basic requirements listed below, this program requires additional coursework in technical writing and editing as well as coursework in a technical or allied field. Those courses will be determined in consultation with the Director of Technical Writing (rw0019@uah.edu). The program requires 12 courses (36 hours) for completion, 6 of which (18 hours) will be in literature. You will need to complete either a Capstone Project or a Thesis. The other course requirements are as follows:
Basic Requirements:

• At least half of the hours you take toward your degree (but not including any thesis hours) should be at the 600 level.

• At least 18 hours in your program should be in literature. To count, a course should deal with literature directly, rather than with writing or other topics. Please check to confirm if you have any questions about a specific course. Special certificate programs require additional hours that are determined in consultation with the appropriate program advisors.

• You must complete all work toward your degree within thirty semesters of the first course you take (counting summers). Courses taken between eighteen and thirty semesters prior to your degree program completion date may be re-validated by departmental exams negotiated with the specific faculty member who has responsibility for that course; any graduate course more than thirty semesters old may not be used.

• EH 540 and EH 649 indicate “Special Topics” courses. Often these are new courses, or courses taught by visiting faculty. You may include any number of these classes in your program of study, as long as you meet other requirements.

• Up to nine hours of graduate work in English may be transferred from other institutions with the approval of the Director of Graduate Studies (laurel.bollinger@uah.edu). At least nine hours in English courses numbered 600 or above must be completed here at UAH (exclusive of thesis hours).

• To be a full-time student, you will need to take a course load of 9 hours per semester. While you are permitted to take up to 15 semester hours per term, you should consult with the Director of Graduate Studies (laurel.bollinger@uah.edu) about doing so.

• You must maintain a 3.0 GPA in all courses taken at the graduate level. If in any semester your cumulative GPA falls below that 3.0 level, you will be on probation. You might also wish to assess your commitment to a graduate program.

• All students complete either a thesis or a capstone project. For more information, see the FAQ (https://www.uah.edu/ahs/departments/english/programs/graduate/faq) on the English Department Graduate page.

• You must demonstrate reading proficiency of French, German, Spanish, or another language deemed by the department to be academically appropriate. Adequate reading knowledge may be demonstrated by one of the following options:
  • Three semesters or their equivalent in one language with a minimum average grade of B at an accredited institution, completed not more than five years before your first graduate course in the UAH program or taken during your time in the M.A. program.
  • Intermediate-level performance on a UAH examination in the language, given by arrangement with the appropriate member of the faculty in the Department of World Languages and Cultures.
  • In lieu of the language requirement, additional graduate coursework of three semester hours of Linguistics. EHL 505 (Survey of General Linguistics) or EHL 507 (Advanced English Grammar Studies) or a designated course of a similar nature is required. These three semester hours may be folded into your Technical Writing Certificate program.

TESOL Certificate

This program leads to a graduate certificate in Teaching English as a Second Language (TESOL). The program offers tracks that prepare students for one of two opportunities: A) instruction at post-secondary/adult levels, or B) technical communication in corporate/non-profit settings. Specific decisions should be reached in consultation with the Director of TESOL, Dr. Andrea Word (worda@uah.edu)?subject=Inquiry via UAH English Dept MA-TESOL Cert). The program requires 6 courses (18 hours) for completion. You will need to complete a Practicum Project (EHL 610). The course requirements are as follows:

<table>
<thead>
<tr>

English, MA with TESOL Certificate

TESOL Certificate Requirements:
This program leads to an M.A. in English with a certificate in Teaching English as a Second Language (TESOL). In addition to the basic requirements for the M.A. listed below, this program requires additional coursework in TESOL. The program offers tracks that prepare students for one of two opportunities: A) instruction at post-secondary/adult levels, or B) technical communication in corporate/non-profit settings. Either program might prepare a student to pursue doctoral work in applied linguistics or other areas of English Studies. Specific decisions should be reached in consultation with the Director of TESOL (worda@uah.edu). The program requires 12 courses (36 hours) for completion, 6 of which (18 hours) will be in literature. You will need to complete either a Capstone Project or a Thesis in addition to a Practicum Project (EHL 610). The other course requirements are as follows:

Option A: Instruction
- EH 500  COMPOSITION STUDIES TCHRS
- EH 601  ACTION RESCH WRITING STUDIES

Option B: Technical Communication
- EH 501  THRY & PRACTICE TECHNICAL COMM
- EH 603  EDITING FOR PUBLICATION

Total Semester Hours 18

Basic Requirements:
- At least half of the hours you take toward your degree (but not including any thesis hours) should be at the 600 level.
- At least 18 hours in your program should be in literature. To count, a course should deal with literature directly, rather than with writing or other topics. Please check to confirm if you have any questions about a specific course. Special certificate programs require additional hours that are determined in consultation with the appropriate program advisors.
- You must complete all work toward your degree within thirty semesters of the first course you take (counting summers). Courses taken between eighteen and thirty semesters prior to your degree program completion date may be re-validated by departmental exams negotiated with the specific faculty member who has responsibility for that course; any graduate course more than thirty semesters old may not be used.
- EH 540 and EH 649 indicate “Special Topics” courses. Often these are new courses, or courses taught by visiting faculty. You may include any number of these classes in your program of study, as long as you meet other requirements.
- Up to nine hours of graduate work in English may be transferred from other institutions with the approval of the Director of Graduate Studies (laurel.bollinger@uah.edu). At least nine hours in English courses numbered 600 or above must be completed here at UAH (exclusive of thesis hours).
- To be a full-time student, you will need to take a course load of 9 hours per semester. While you are permitted to take up to 15 semester hours per term, you should consult with the Director of Graduate Studies (laurel.bollinger@uah.edu) about doing so.
- You must maintain a 3.0 GPA in all courses taken at the graduate level. If in any semester your cumulative GPA falls below that 3.0 level, you will be on probation. You might also wish to assess your commitment to a graduate program.
- All students complete either a thesis or a capstone project. For more information, see the FAQ (https://www.uah.edu/ahs/departments/english/programs/graduate/faq) on the English Department Graduate page.

English, MA Plan I Thesis Option

Thesis Requirements:
All Master of Arts in English Programs share certain basic requirements (listed below).

This program leads to an M.A. in English, and includes the thesis option. You take 24 hours of coursework (8 courses), plus a minimum of six hours of thesis credit (EH 699). The six hours would ordinarily be spread across a minimum of two semesters, generally toward the end of your program. If you are not finished with the thesis at the end of those 6 hours, you may take additional thesis hours, subject to the rules about time-to-completion of the degree. You must register for thesis hours in the semester you complete and defend the thesis, and in any other semester or term where you anticipate requiring your advisor’s assistance. Other than basic requirements overviewed below, there are no other specific courses required. For more on the thesis, contact the Director of English Graduate Studies (laurel.bollinger@uah.edu).
Basic Requirements:

• At least half of the hours you take toward your degree (but not including any thesis hours) should be at the 600 level.
• At least 18 hours in your program should be in literature. To count, a course should deal with literature directly, rather than with writing or other topics. Please check to confirm if you have any questions about a specific course. Special certificate programs require additional hours that are determined in consultation with the appropriate program advisors.
• You must complete all work toward your degree within thirty semesters of the first course you take (counting summers). Courses taken between eighteen and thirty semesters prior to your degree program completion date may be re-validated by departmental exams negotiated with the specific faculty member who has responsibility for that course; any graduate course more than thirty semesters old may not be used.
• EH 540 and EH 649 indicate “Special Topics” courses. Often these are new courses, or courses taught by visiting faculty. You may include any number of these classes in your program of study, as long as you meet other requirements.
• Up to nine hours of graduate work in English may be transferred from other institutions with the approval of the Director of Graduate Studies (laurel.bollinger@uah.edu). At least nine hours in English courses numbered 600 or above must be completed here at UAH (exclusive of thesis hours).
• To be a full-time student, you will need to take a course load of 9 hours per semester. While you are permitted to take up to 15 semester hours per term, you should consult with the Director of Graduate Studies (laurel.bollinger@uah.edu) about doing so.
• You must maintain a 3.0 GPA in all courses taken at the graduate level. If in any semester your cumulative GPA falls below that 3.0 level, you will be on probation. You might also wish to assess your commitment to a graduate program.
• You must demonstrate reading proficiency of French, German, Spanish, or another language deemed by the department to be academically appropriate. Adequate reading knowledge may be demonstrated by one of the following options:
  • Three semesters or their equivalent in one language with a minimum average grade of B at an accredited institution, completed not more than five years before your first graduate course in the UAH program or taken during your time in the M.A. program.
  • Intermediate-level performance on a UAH examination in the language, given by arrangement with the appropriate member of the faculty in the Department of World Languages and Cultures.
• In lieu of the language requirement, additional graduate coursework of three semester hours in Linguistics. EHL 505 (Survey of General Linguistics) or EHL 507 (Advanced English Grammar Studies) or a designated course of a similar nature is required. These three semester hours are generally in addition to the hours required for the M.A. degree itself. Bear in mind that many Ph.D. programs still expect proficiency in one or often two foreign languages, however.

History, MA

In addition to the requirements of UAH’s graduate school, the History Department requires the following for the Master of Arts degree:

Plan A: Thesis with Language
1. 30 semester hours total.
2. HY 605 is required.
3. At least nine additional semester hours in courses numbered 600 or above (excluding thesis semester hours at UAH). At least 50 percent of the semester hours for a graduate degree (excluding thesis semester hours) in courses numbered 600 or above.
4. At least twelve additional semester hours in courses numbered 500 or above (excluding thesis semester hours at UAH).
5. Within the 24 non-thesis semester hours, eighteen semester hours of graduate work in history.
   a. Equal course distribution of U.S. and non-U.S. history is expected within these 18 semester hours.
   b. Twelve semester hours may be transfer credit approved by the departmental graduate committee.
   c. Six semester hours of elective graduate courses in a related subject approved by the graduate committee.
6. Master’s thesis carrying a minimum of six semester hours credit; In order to write a thesis, the student must have a 3.75 GPA in the first twelve semester hours taken, or permission of the department chair.
7. Reading proficiency in French, German, Latin, Russian, or Spanish.
8. Oral comprehensive examination covering courses and thesis. Students must demonstrate competency in at least two fields of history.

Plan B: Thesis without Language
Same as above, excluding language requirement.

Plan C: Non-Thesis
1. 33 semester hours total.
2. HY 605 is required.
3. Fifteen additional semester hours in courses 600 or above. At least 50 percent of the semester hours for a graduate degree (excluding thesis semester hours) in courses numbered 600 or above.

4. At least fifteen additional semester hours in courses numbered 500 or above (excluding thesis semester hours at UAH).

5. Within thirty-three semester hours total,
   a. Eighteen semester hours equally distributed between U.S. and non-U.S. history.
   b. Twelve semester hours in history may be transfer credit approved by the departmental graduate committee.
   c. Six semester hours of elective graduate courses a related subject approved by the graduate committee.

6. Oral and written comprehensive examination covering coursework. Students must demonstrate competency in at least two fields of history.

The requirements for the Master of Arts degree for those students seeking Class A certification are the same as above with the following exceptions:

Class A Teacher Certification in History (non-thesis)

1. 33 semester hours total;
2. Nine semester hours in courses 600 or above in Education;
3. HY 605 is required;
4. Six additional semester hours in courses 600 or above are required. At least 50 percent of the semester hours for a graduate degree (excluding thesis semester hours) in courses numbered 600 or above;
5. At least fifteen additional semester hours in history courses numbered 500 or above (excluding thesis semester hours at UAH);
6. Within twenty-four semester hours in history sub-total,
   a. Eighteen semester hours equally distributed between U.S. and non-U.S. history.
   b. Twelve semester hours in history may be transfer credit approved by the departmental graduate committee.
   c. Six semester hours of elective graduate courses a related subject approved by the graduate committee.
7. Oral and written comprehensive examination covering coursework. Students must demonstrate competency in at least two fields of history.
8. The College of Education will coordinate and direct any supplementary requirements.

The History Department does not recommend undertaking an MA thesis in History and teacher certification. If a student wishes to pursue this option, they should consult with the History Department Chair.

Graduate Certificates

• Comparative Cultures and Conflicts (p. 840)

Comparative Cultures and Conflicts Certificate

The Comparative Cultures and Conflicts certificate program offers post-baccalaureate students a program of study that will establish a global context for their careers in the civilian and military sectors. The program will contextualize the cultural, diplomatic, military, and economic variables that influence various societies around the world and explain how these societies interact with the United States and the global community as a whole.

CCC STUDENT LEARNING OUTCOMES

Upon completion of the certificate, students will be able to:

1) Analyze contemporary global patterns to show how various regions and cultures develop over time.
2) Explain the historical causes and contexts of contemporary conflicts, both within and among states.
3) Discuss the historical context of U.S. relations and interactions with the world.
4) Compare the ways nations, groups, and individuals experience conflict.
5) Practice historical thinking as central to engaged citizenship and leadership.
6) Communicate historical knowledge and interpretation coherently in writing and in oral presentations.

CCC REQUIREMENTS

Course Requirements: To complete the CCC program, students must complete 15 semester hours selected from the following History classes:

Courses

| HY 538 | MODERN AMERICA | 3 |
### RECENT AMERICAN HISTORY

<table>
<thead>
<tr>

</tr>
</tbody>
</table>

**Portfolio Requirements:** In the final term of study, certificate candidates will prepare a Capstone Portfolio and Presentation for the Comparative Conflicts and Cultures Steering Committee, which consists of the department chair and three additional participating faculty members. The committee will assess the portfolio and presentation. This portfolio will feature three papers or projects prepared for three different classes completed as part of the certificate program, as well as a cover letter which specifically discusses how the papers included within the portfolio address the first five Student Learning Outcomes (see above). It is not expected that each individual paper address all SLOs, but the portfolio as a whole must display the student’s mastery of each SLO. Students will complete a Capstone Presentation of approximately 20 minutes in length, which will discuss the papers within the portfolio and the cover letter. Following the Presentation, the Comparative and Cultures Steering Committee will ask the student questions about the student’s broader experience within the program.

### Political Science - Public Affairs, MA

The Master of Arts in Public Affairs (public policy) requires 36 semester hours of approved graduate work from the following courses. Select a minimum of 12 semester hours at the 600-level.

Other Options

Total Semester Hours 36

1. Although these courses are required, they are not strictly prerequisites for other courses in the program. However, it is advised that students complete them as early in their program as practical.

2. The Capstone course is required and should be taken during the last year of the program.

3. Students may take or transfer a maximum of nine hours of coursework from outside of the department, including from other universities. Students must consult with the department chair to determine the appropriate coursework from other disciplines.

The International Security Policy (ISP) Certificate Program provides students with a shorter graduate program experience. The ISP certificate is awarded upon the completion of 12-15 semester hours of graduate courses from the following schedule:

Prerequisites for the Certificate:

- If a student does not have at least three courses in Political Science as an undergraduate (including American Government), prior to taking the required coursework he or she must take PSC 600.

Professional Communication, MA

The Master of Arts in Professional Communication prepares students to work in communication intensive jobs, including social media management, user experience, advertising, public relations, professional writing, human resources, fundraising, event management, general management, training, and consulting, among other things. It fosters basic understanding of communication processes, including:

- Understanding of the major theoretical concepts and practical applications associated with the study of human communication

- The ability to conduct scientific research ethically and effectively, to interpret statistical information, and to assess its practical import for understanding communication in the world.

- Understanding of variables in communication situations, including the number (especially as it impacts interaction), background, interests, and values of participants; language, communication purposes, and contextual factors.

- Understanding of the implications of a multicultural world on appropriate and effective forms of communication.

- Understanding of how to adapt to variable communication situations for informative and persuasive purposes.

- Understanding of special forms of communication such as that related to advertising, public relations, social media, technical writing, and communication technology, among others.

- The ability to effectively produce and critically analyze persuasive messages.

Students in the MA in Professional Communication must complete 33 total hours, including the core requirements and either Plan I (non-thesis) or Plan II (thesis). They may select electives freely or follow one of the suggested emphases below. All students must complete 33 hours, including 18 hours of 600-level coursework (excluding CM 699).

Other Areas of Emphasis

Students in the MA in Professional Communication program may request to take up to four courses from other graduate programs that cover areas not included here. For example, Alabama A&M University has graduate emphases in Counseling and in Telecommunications that would be suitable. The Graduate Adviser must approve such courses.

Psychology, MA

1. The thesis student must complete at least 30 semester hours of graduate work, including a minimum of 6 semester hours of thesis. Only 6 semester hours may be transfer courses that are approved by the graduate committee of the department.

2. The student’s Program of Study must include

PY 607  PROFESSIONAL DEV IN RES & TCHG  1
PY 608  GRAD PRACT TCHG & CAREER EXPLO  1
PY 610  EXPERIMENTAL DESIGN  3
PY 611  STAT FOR EXPERI METHODS  4
PY 641  CONC READ/RES SPECIALIZ AREA  3
PY 699  MASTER'S THESIS  6

Total Semester Hours  18

3. In addition, the student’s Program of Study will include other graduate level courses in psychology selected with the advice of the student’s advisor. If approved by the graduate committee of the department, the student’s Program of Study may include up to 6 semester hours of graduate credit from related departments at UAH.

4. The student must pass an oral defense of their thesis.
5. The student must meet requirements for the Master of Arts degree as specified by the School of Graduate Studies.

Psychology, MA - Industrial/Organizational Psychology Specialization

Within our M.A. in Experimental Psychology program, students who are interested in applying psychology in business settings may choose an Industrial/Organizational psychology specialization. The courses in this specialized sequence prepare students for jobs in industry or more extensive study in a Ph.D. program. Graduates with this background are prepared for jobs that require the following skills:

- training
- psychometrics
- job analysis
- personnel selection
- interviewing
- performance appraisal
- empirical research
- statistical analysis
- technical writing

The projected job growth in these areas, nationally, is higher than average.

We welcome both full-time and part-time students. Two of our courses are available through Distance Learning: PY 502 and PY 503. Students will have opportunities to work in faculty research labs in our small, personalized department.

Prerequisites for the M.A. program are a Bachelor's degree in Psychology, including coursework in experimental design and statistics. Prospective students who do not yet have these pre-requisites can take the necessary pre-requisites in our undergraduate curriculum prior to applying to the graduate program; students should contact the Chair of the Psychology Department to discuss this possibility.

Program Requirements

The student’s program of study must include:

<table>

Technical Communication Certificate

Certificate Programs in Technical Communication and TESOL

Students who wish to earn the Certificate in Technical Communication and/or in TESOL must be admitted to the Graduate School, but may pursue the certificate independent of a master’s degree program.

Graduate Certificate in Technical Communication

The English Department offers an 18-semester-hour Graduate Certificate in Technical Communication. The certificate requires:

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Title</th>

<td>6</td>
</tr>
</tbody>
</table>

Total Semester Hours 18

¹ Such as EH 601, EH 602, or EH 649
² In an allied field such as linguistics, management, or information systems

All certificate courses may count toward the M.A. in English. No more than six semester hours taken at another institution may be applied to the certificate, and certificate courses taken at UAH must include EH 501 or EH 502. Students wishing to write a thesis in technical communication may use the six allied field semester hours as thesis semester hours (EH 699).

Mission

The UAH College of Business serves business and society through the expertise of our alumni, students, and faculty. We provide academically rigorous programs emphasizing the application of theory and skills in scientific, technological, and traditional business environments. We are committed to offering degree programs that build analytical skills, develop an entrepreneurial mindset, and provide opportunities to engage with practice through projects, practica, and internships.

Accreditation

The College of Business is accredited by AACSB International - The Association to Advance Collegiate Schools of Business.* AACSB provides the highest standard of accreditation offered to business schools worldwide, with fewer than 25% of U.S. business schools and fewer than 5% of worldwide business schools achieving the distinction. To maintain AACSB accreditation, we must have a specific plan and sufficient resources to support high quality undergraduate and graduate programs, a highly qualified faculty who maintain credentials through continuous research or engagement with practice, and a process for assessing that our students are learning what we teach. We report to AACSB annually and undergo a comprehensive site visit every five years.

UAH is designated by the National Security Agency and the Department of Homeland Security as a National Center of Academic Excellence in Information Assurance Education (CAE/IAE) and Cyber Defense (CAE/CD).

*AACSB International is a not-for-profit corporation comprised of member organizations and institutions devoted to the promotion and continuous improvement of higher education for business administration and management. Organized in 1916, AACSB International is the premier accrediting agency for bachelor's, master's and doctoral degree programs in business administration and accounting.
Graduate Degrees and Certificates

The College of Business offers seven graduate degrees and seven graduate certificates.

- Master of Accountancy (MAcc) (http://www.uah.edu/cba/grad/degrees/macc)
- Master of Business Administration (MBA) (http://www.uah.edu/cba/grad/degrees/mba)
- M.S. in Cybersecurity (Management Track) (http://www.uah.edu/cba/grad/degrees/mscbs)
- M.S. in Information Systems (http://www.uah.edu/cba/grad/degrees/ms-is)
- M.S. in Management-Human Resource Management (http://www.uah.edu/cba/grad/degrees/hrm)
- M.S. in Management Science-Business Analytics (http://www.uah.edu/cba/grad/degrees/analytics)
- M.S. in Supply Chain & Logistics Management (http://www.uah.edu/cba/grad/degrees/scm)
- Graduate Certificate in Business Analytics

- Graduate Certificate in Technology & Innovation Management (http://www.uah.edu/cba/grad/graduate-certificates/overview/58-main/business/1472-cbatechnologyandinnovationcertificate)

Expectations about Degree Progress

Course Load: The usual semester course load for a full-time graduate student is 9 to 12 semester hours. Students who are employed full time should seek counsel from the Graduate Program Director before enrolling in more than 6 hours per semester. Once admitted, students are expected to make satisfactory progress toward the degree, with such progress defined as the satisfactory completion of at least 3 courses during each 12-month period following admission.

Time limit: All requirements toward the master's degree, including transfer credit, must have been earned during the six years (18 fall, spring, and summer semesters) immediately preceding the date on which the master’s degree is to be awarded. Credit for individual graduate courses at UAH completed more than 18 semesters but less than 30 semesters before the completion of all requirements for the degree must be validated by the department that offered the course through the administering of a written or oral examination. Once a course is validated, it is considered valid through the tenth year only. Credit for courses more than ten years old cannot be validated. Up to six hours of transfer courses that are more than 18 semesters but less than 30 semesters may be validated by a committee of at least three members of the graduate faculty appointed by the department or program chair, with the results reported to the graduate dean.

Graduate Assistantships

A limited number of graduate assistantships are available to select full-time students on a competitive basis. Graduate assistantships may require up to half-time (20 hours per week) service to the College, carry a stipend, and have up to 9 semester hours of tuition paid. Assistantship applications are available from the Graduate Program Director or at http://www.uah.edu/admissions/graduate/financial-aid/assistantships.

Graduate Teaching Assistantships (GTA) are awarded to a few students who assist with the College’s undergraduate teaching mission as tutors, graders, and coordinators of program activities. Graduate Research Assistantships (GRA) are made available through externally funded grants or contracts. GRAs do research under the supervision of a faculty member or center director. Because GRAs assist with specific research activities, the ability of applicants to assist with these specific activities is considered when awarding assistantships.

Master's Programs in Business:

- Accountancy, MAcc (p. 848)
- Master of Business Administration, MBA (p. 849)
- Information Systems, MS-IS (p. 851)

**Accountancy, MAcc**

For additional information about graduate programs within the College of Business, please contact graduate advisor Jennifer Pettitt at GradBiz@uah.edu (gradbiz@uah.edu). Information about the application process can be found in the Graduate Studies section of the catalog.

**Degree Requirements**

The MAcc program normally consists of 33 semester hours of graduate coursework. The program includes a minimum of 18 semester hours of accounting (including at least 15 semester hours at the 600-level) and a minimum of 12 semester hours in other disciplines (including at least 9 semester hours at the 600-level). The accounting theory class, ACC 680, should be taken toward the end of the student's program, must be taken at UAH, and must be completed with a grade of A or B (including an average of at least B on all individual components). A maximum of 12 semester hours of graduate work may be transferred from another institution.

Program prerequisites may be satisfied by either of the following:

1. possession of a Bachelors degree in accounting from an AACSB accredited institution or
2. possession of a Bachelors degree and satisfactory (i.e., "C" or higher) completion of the following list of basic skills, business foundation, and accounting courses.

Basic skills and business foundation:

<table>

Electives  Non-Accounting electives 600-level courses  9
Electives  Non-accounting elective, 500- or 600-level  3
Electives  Free elective, 500- or 600-level  3

**Total Semester Hours**  51

1. Students must take a minimum of 18 semester hours of Accounting with at least 15 of those semester hours at the 600-level. They must also take a minimum of 12 semester hours of non-accounting courses with at least 9 semester hours at the 600-level.
2. Thesis option reduces the required semester hours to 30 semester hours. Students may eliminate a 500-level non-accounting elective.
3. ACC 600 or ACC 602 may not be used in the MAcc program.

### CPA Examination in Alabama

Students planning to sit for the CPA examination in Alabama must complete the subject matter shown below. The courses can be counted as electives in the MAcc.

- **BLS 511**  BUS LAW FOR ACCOUNTANTS  3
- **ACC 513**  CORP/PARTNERSHIP/ESTATE TAXES  3
- **or ACC 520**  STATE AND LOCAL TAXATION  3
- **ACC 517**  ACC FOR STATE/LOCAL GOV/NON-PR  3

### Thesis Option

A thesis option requiring 30 semester hours of graduate work, including 6 semester hours of thesis credit is available. Students interested in this option should contact the Graduate Program Director, BAB 102, 256.824.6681, before completing 12 semester hours of graduate study.

### Transfer Credit

Up to 12 semester hours of graduate credit taken at other universities may be transferred to meet MAcc degree requirements. Inquiries about the transferability of specific courses should be directed to the CBA Director of Graduate Programs, who will consult with the faculty to determine whether the content of the class will be accepted for transfer credit.

### Master of Business Administration, MBA

For additional information about graduate programs within the College of Business, please contact graduate advisor Jennifer Pettitt at GradBiz@uah.edu (gradbiz@uah.edu). Information about the application process may be found in the Graduate Studies section of the catalog.

### Purpose

The Master of Business Administration (MBA) program is designed as a general management graduate degree, offering a unique *management of technology* theme. The educational emphasis of the program builds upon knowledge and skills in all of the business disciplines to prepare students for careers in organizations that face opportunities and challenges afforded by technological change.

The MBA program was fashioned to be an interdisciplinary program in business for practicing administrators, primarily for early- and mid-career managers. The typical student aspires to managerial positions. The curriculum is designed to accommodate students from engineering, science, the liberal arts and other non-business backgrounds. Students in this program typically have five to fifteen years of full-time work experience. They aspire to upward career mobility or are seeking to change career paths.

The MBA program emphasizes the development of integrative systems thinking skills in order to build capable, creative managers able to face successfully both external challenges such as rapid technological change and increasing environmental complexities, and internal issues such as changing employee expectations and methods of increasing productivity.

The program orients students to the rigors of holistic thinking about technology-driven problems and opportunities, introduces students to concepts and tools from all the business disciplines to operate in a technological environment, and instills a commitment to teamwork. The curriculum provides instruction in financial reporting, analysis and markets; domestic and global economic environments of organizations; creation and distribution of goods and services; and human behavior in organizations. It provides advanced study in decision science and human aspects of organizational problem-solving. It provides education in managing technological innovations and processes, and integrating technology into the organization’s strategic objectives. It addresses such issues as analyzing problems through economic and financial frameworks, developing and using information systems,
providing information on accounting costs, marketing, managing the development of technology, reducing new product development time, managing technical professionals, and integrating technology into the overall strategic objectives of the organization.

The MBA program is recognized internationally through accreditation by AACSB International-The Association to Advance Collegiate Schools of Business.

**Degree Requirements**

**Program Prerequisites**

(1) written and oral English communications

(2) quantitative analysis/statistics

(3) computer proficiency achieved either through prior experience and education or as part of the student's MBA program of study

**Program Foundation Courses**

The MBA curriculum includes a group of six courses (18 credit hours) that serves as the program foundation.

Select 9 semester hours of graduate electives

Select one of the following plans:

--- Plan I: ---

Thesis: 6 Semester Hours

Select 3 semester hours of graduate electives

--- Plan II: ---

Select 9 semester hours of graduate electives

**Total Semester Hours**  
33

^1MGT 698, Strategic Management, is the capstone course and should be taken toward the end of the student's program. A student must earn a grade of B or better in MGT 698.

**Potential Emphasis Areas**

MBA students take nine semester hours of graduate electives consistent with their professional development aspirations. Students may choose to focus the nine semester hours in one area to create an "emphasis area." MBA students should seek the advice of the Director of Graduate Programs before selecting an emphasis area. Through careful selection of courses, students may pursue an emphasis is accounting, acquisitions management, cybersecurity, information systems, finance, human resource management, marketing, project management, or supply chain & logistics management.
MBA Thesis Option

Some MBA students are interested in pursuing a research project and may choose a thesis option. Students who choose to pursue a thesis option substitute six semester hours of elective coursework with six hours of thesis research coursework.

Information Systems, MS-IS

For additional information about graduate programs within the College of Business, please contact graduate advisor Jennifer Pettitt at GradBiz@uah.edu (gradbiz@uah.edu). Information about the application process may be found in the Graduate Studies section of the catalog.

Purpose

The purpose of the MS-IS degree program is to prepare students to enter the information technology (IT) profession in a wide variety of positions. While the curriculum emphasizes both managerial and technical aspects of IT, its overall structure is designed to prepare students for a career leading to managerial- and/or executive-level positions related to IT and Business Information Systems. Students will learn to design, implement, and operate information systems with the purpose of providing organizational decision-makers with the information needed to manage effectively and efficiently. In addition, students will learn to obtain new business insights by using various business analytics and data management tools.

Program prerequisites are kept to a minimum and the program is designed to meet the needs of students with a wide variety of educational backgrounds.

Program Prerequisites

Program prerequisites include a bachelor’s degree in any field and demonstration of competency in each of the following three areas:

1. **Computer Applications Competency.** Students must demonstrate this competency by passing an on-line computer applications competency exam or by successful completion of the IS 146 or its equivalent. IS 146 or its equivalent will not count towards the requirements of the MS-IS degree.

2. **Computer Programming Competency.** Students must demonstrate this competency by passing an on-line computer programming exam or by successful completion of IS 210 or its equivalent. IS 210 or its equivalent will not count towards the requirements of the MS-IS degree.

3. **Information Systems Competency.** Students must demonstrate this competency by passing an on-line IS competency exam or by successful completion of IS 600, Information Technology in the Modern Business Environment, or its equivalent. IS 600 or its equivalent will not count towards the requirements of the MS-IS degree.

Degree Requirements

The MS-IS program consists of 30 semester hours of graduate coursework. The coursework includes a six-course core that is required of all students, nine credit hours of directed electives, and three credit hours of business electives. The directed elective choices are designed to provide students a broader understanding of multiple business functions normally expected for executive-level positions in an organization.

IS 691, Information Systems Strategy and Applications, is the capstone course and should be taken toward the end of the student’s program. A student must earn a grade of B or better in IS 691.

Business Elective, select one course from the five groupings above. 2  3

Total Semester Hours 30

1. MS-IS students whose previous studies include the undergraduate equivalents of IS 512, IS 560, and/or IS 571 must substitute a 3-credit-hour graduate-level IS course for each of the latter.

2. Students are required to satisfy the prerequisites for any elective they choose. Students who wish to substitute some other courses as directed electives may seek prior approval for such a substitution by contacting the Director of Graduate Programs in UAH Business School.

Additional Information

Thesis Option

A thesis option is available. Students interested in this option should contact the both the faculty member who the student wants to serve as the thesis advisor and the Director of Graduate Programs in the College of Business before completing 12 hours of graduate study. If selected, the student will register for the IS 699 Masters Thesis course for 6 credit hours in lieu of 6 credit hours of directed and business electives.

Transfer Credit

Up to 12 semester hours of graduate credit taken at other universities may be transferred to meet MS-IS degree requirement. Inquiries about the transferability of specific courses should be directed to the CBA Director of Graduate Programs, who will consult with the IS faculty to determine whether the content of the class will be accepted for transfer credit.

Cybersecurity, MS-CBS Interdisciplinary - Management Track

Purpose

The MS-CBS degree is a unique program in that it is an interdisciplinary program of study among three colleges: Business, Engineering, and Science. Due to this collaboration between the colleges, students will be exposed to a diversified core curriculum with a choice of 3 different elective tracks; having in-depth curriculum in their track while gaining familiarity in the other two. Upon graduation students will be able to perform: Cybersecurity Analysis of vulnerabilities and threats to network environments, Network Penetration Testing, Auditing for Certification & Accreditation, and Technical Project Management in Information Technology. Students will also be able to integrate the business and scientific underpinnings of information technology trends related to the System Development Life Cycle and understand the federal, state & local statutory requirements associated with Information and cybersecurity through the Information Assurance Technical Framework (IATF).

Program prerequisites are kept to a minimum and the program is designed to meet the needs of students with a wide variety of educational backgrounds. The admission and program requirements for those pursuing the Management track are described below.

Degree Requirements

Prerequisites

Program prerequisites include a bachelor’s degree in any field and demonstration of competency in each of the following three areas:

1. Computer Applications Competency. Students must demonstrate this competency by passing an on-line computer applications competency exam or by successful completion of the IS 146 or its equivalent. IS 146 or its equivalent will not count towards the requirements of the MS-CBS degree.
2. Computer Programming Competency. Students must demonstrate this competency by passing an on-line computer programming competency exam or by successful completion of the IS 210 or its equivalent. IS 210 or its equivalent will not count towards the requirements of the MS-CBS degree.

3. Computer Science and Networks competencies. Students must be competent to be enrolled in graduate level core courses including those in computer science and networks. If a student does not have these competencies, s/he may be required to either self-prepare by reviewing online tutorials and passing a competency exam or to register for additional courses which will not count towards the 30 credit hours required for this degree.

The MS-CBS program consists of 30 semester hours of graduate coursework. The coursework includes a five-course core that is required of all students, 9 credit hours of management track required courses, and 6 credit hours of electives. The directed elective choices are designed to provide students a broader understanding of multiple cybersecurity functions normally expected in an organization.

IS 692 (http://catalog.uah.edu/search/?P=IS%20692)/CPE 692 (http://catalog.uah.edu/search/?P=CPE%20692)/CS 692 (http://catalog.uah.edu/search/?P=CS%20692) is the capstone course and should be taken toward the end of the student’s program. Students must earn a grade of B or better in the capstone course.

Graduate Certificate, Business Analytics

The graduate Certificate in Business Analytics prepares graduates to employ contemporary business analytics techniques and systems in commercial and governmental environments, and provides students with an understanding of their importance in organizations and their power to enhance organizational performance.

Because it is a graduate program, some of the credit hours earned in the business analytics certificate program can also be applied toward a master’s degree. All credits hours earned in the business analytics certificate program can also be applied toward a master’s degree in Management Science - Business Analytics.

### Graduate Certificate, Enterprise Resource Planning

The graduate Certificate in Enterprise Resource Planning is designed for students who want a more in-depth knowledge of enterprise systems. UAH is a member of the SAP University Alliance, and students will have the opportunity to get hands-on experience using SAP - one of the leading software solutions for enterprise systems. Students completing the certification will also be well positioned to obtain certification as an SAP Business Associate (TERP 10). Training for the certification and discounted certification exams are provided periodically at UAH for students in the program. A subset of the certificate courses may be used to satisfy some requirements for the MS in Information Systems, MS in Supply Chain and Logistics Management, MS in Business Analytics, or the MBA program. The required courses for the graduate Certificate in Enterprise Resource Planning include the following:

### Graduate Certificate, Federal Contracting and Procurement Management

The graduate Certificate in Federal Contracting and Procurement Management is a program that is designed to provide professional development for individuals pursuing careers in contract management with either the Federal government or with government contractors. The program is designed for individuals possessing a bachelor degree in a field other than federal contracting, acquisition or procurement management. The certificate program consists of 18 semester hours. For students interested in completing both the MBA and the Certificate, a subset of these courses may be used to satisfy elective requirements within the MBA program. The required courses for the Graduate Certificate in Federal Contracting and Procurement Management include the following:

### Graduate Certificate, Cybersecurity Studies

The graduate Certificate in Cybersecurity Studies is a specialized program that is designed to prepare students for a range of career opportunities within the cybersecurity field. UAH is certified as a national Center of Academic Excellence in Information Assurance/Cyber Defense Education. The certificate program includes 18 semester hours of classes and covers topics including cryptography, data and information security, network defense, and digital forensics. A subset of these courses may be used to satisfy elective requirements within the MS in Cybersecurity or MS in Information Systems programs.

Graduate Certificate, Technology and Innovation Management

The graduate Certificate in Technology and Innovation Management focuses on management in technology-intensive environments. The certificate program introduces participants to the role technology and innovation play in transforming industries, organizations, and work. It provides insight into the processes of product development, human resource management, marketing, and technical project management within high tech environments.

The certificate consists of 18 semester hours. For students interested in completing both the MBA and the certificate, three of the courses below are required for both the certificate and the MBA. The other three certificate courses may be used for the MBA program electives. The required courses for the graduate Certificate in Technology and Innovation Management include the following:

- **MGT 601** TECH & INNOVATION MGMT 3
- **MGT 629** LEADERSHIP: THRY & PRACTICE 3
- **MGT 631** HRM & ORGANIZATIONAL BEHAVIOR 3
- **MGT 640** PRIN OF PROJECT MGMT 3
- **MKT 604** NEW PRODUCT DEVELOPMENT 3
- **MKT 606** MKT IN HIGH TECH ENVIRON 3

Total Semester Hours 18

Supply Chain and Logistics Management, MS

For additional information about graduate programs within the College of Business, please contact graduate advisor Jennifer Pettitt at GradBiz@uah.edu (gradbiz@uah.edu). Information about the application process may be found in the Graduate Studies section of the catalog.

**Purpose**

The Master of Science in Supply Chain and Logistics Management (MS-SCLM) program is designed as a specialized management graduate degree to serve working professionals who are interested in developing and/or enhancing their knowledge and skills in supply chain management.

The MS-SCLM program aims to graduate candidates who will use supply chain management theories and methods to make significant contributions in solving strategic and managerial supply chain problems. Students learn supply chain theories and methods – including supply chain strategy, supply chain design, supply chain management, transportation and logistics, supply chain risk management & mitigation, and decision modeling – and how to apply those methods to solve business problems in technology-oriented, government, and industry organizations.

Students are introduced to such issues as understanding supply chain dynamics; conducting analyses necessary for the design of a supply chain management system that fulfills an organization’s supply chain strategy; modeling and interpreting supply chains and processes for identifying problems, improving efficiencies, and improving service to stakeholders; translating data from supply chain systems into useful information for improved decision making; and managing all aspects of an integrated supply chain across an organization.

The MS-SCLM program is designed to meet the highest standards of curriculum quality, faculty excellence, and program relevance in accordance with the College of Business’ accreditation by AACSB International - The Association to Advance Collegiate Schools of Business. Program prerequisites are kept to a minimum and the program is designed to meet the needs of students with a wide variety of educational backgrounds.

**Prerequisites**

Program prerequisites include a bachelor’s degree in any field and demonstration of competency in basic skills in statistical analysis and computer usage must be achieved either by prior experience and education or as part of the MS-SCLM curriculum.

**Degree Requirements**

The MS-SCLM program consists of 30 semester hours of graduate coursework. The coursework includes an eight-course core that is required of all students and two elective courses. MGT 693, Supply Chain Strategy & Practicum, is the capstone course and should be taken toward the end of the student's program. A student must earn a grade of B or better in MGT 693.

**Core Courses**

- **ACC 600** FOUNDATIONS ACC MANAGERS & ENG 3
- **MSC 600** QUANTITATIVE METHODS 3
- **MSC 605** OPERATIONS MANAGEMENT 3
- **MGT 611** SUPPLY CHAIN MANAGEMENT 3
- **MSC 510** TRANSPORTATION & LOGISTICS 3
Additional Information

Thesis Option
A thesis option is available. Students interested in this option should contact the both the faculty member who the student wants to serve as the thesis advisor and the Director of Graduate Programs in the College of Business before completing 12 hours of graduate study. If selected, the student will register for the IS 699 (http://catalog.uah.edu/search/?P=IS%20699) Masters Thesis course for 6 credit hours in lieu of 6 credit hours of directed and business electives.

Transfer Credit
Up to 12 semester hours of graduate credit taken at other universities may be transferred to meet MS-SCLM degree requirement. Inquiries about the transferability of specific courses should be directed to the College of Business Director of Graduate Programs, who will consult with the faculty to determine whether the content of the class will be accepted for transfer credit.

Management - Human Resource Management, MS
For additional information about graduate programs within the College of Business, please contact graduate advisor Jennifer Pettitt at GradBiz@uah.edu (gradbiz@uah.edu). Information about the application process may be found in the Graduate Studies section of the catalog.

Purpose
The Master of Science in Management – Human Resource Management (MSM-HRM) program is designed as a specialized management graduate degree to serve working professionals who are interested in developing and/or enhancing their knowledge and skills in Management with a specific focus on Human Resources.

The purpose of this program is to prepare individuals to be professionals in human resource management (HRM). This curriculum provides a generalist program of study. Specifically, the program addresses and HRM theories and methods - including organizational behavior, employment law, employee staffing and development, strategic compensation management, and strategic human resource management. The program content also gives students the general business tools that HRM professionals need to align HRM practices with the broader strategic orientation of the organization. Although the MSM-HRM program prepares students for an HRM career in any industry, there is a focus on the unique human resource challenges encountered in a technological environment. Students will gain valuable experience in the field of HRM by completing a practicum prior to graduation.

The MSM-HRM program is designed to meet the highest standards of curriculum quality, faculty excellence, and program relevance in accordance with the College of Business’ accreditation by AACSB International-The Association to Advance Collegiate Schools of Business.

Degree Requirements
The MSM-HRM program consists of 30 semester hours of graduate coursework. The coursework includes a five-course management core, nine credit hours of Human Resource Management courses, and six credit hours of electives.

MGT 694, Human Resource Management Practicum, is the capstone course and should be taken toward the end of the student’s program. A student must earn a grade of B or better in MGT 694.

Transfer Credit
Up to 12 semester hours of graduate credit taken at other universities may be transferred to meet MSM-HRM degree requirements. Inquiries about the transferability of specific courses should be directed to the College of Business Director of Graduate Programs, who will consult with the Management faculty to determine whether the content of the class will be accepted for transfer credit.

Management Science - Business Analytics, MS
For additional information about graduate programs within the College of Business, please contact graduate advisor Jennifer Pettitt at GradBiz@uah.edu. Information about the application process may be found in the Graduate Studies section of the catalog.

Purpose
The Master of Science in Management Science-Business Analytics (MS-MSBA) program is designed as a specialized management graduate degree to serve working professionals who are interested in developing and/or enhancing their knowledge and skills in Management Science with a specific focus in Business Analytics.

The MS-MSBA program aims to graduate candidates who will use business analytic theories and methods to make significant contributions in solving managerial and technical problems. Students learn about business analytical theories and methods including (big) data management, business intelligence, data mining, predictive modeling, machine learning, descriptive analytics and other quantitative methods to solve business problems, focusing on problems faced in technology-oriented, government, and government contractor organizations in the northern Alabama region. Students are introduced to such issues as translating business problems into analytical problems, managing big volumes of data, analyzing data for providing solutions across business functional areas, interpreting analytical solutions for managerial decision-making, and communicating analytical results to novice and advanced technical audiences in a business environment.

The MS-MSBA program is designed to meet the highest standards of curriculum quality, faculty excellence, and program relevance in accordance with the College of Business' accreditation by AACSB International-The Association to Advance Collegiate Schools of Business.

Degree Requirements

Prerequisites
The program is designed to meet the needs of students with a wide variety of educational backgrounds. Program prerequisites include a bachelor's degree in any field and demonstration of competency in basic skills in statistical analysis and computer usage must be achieved either by prior experience and education or as part of the MS-MSBA curriculum.

The MS-MSBA program consists of 30 semester hours of graduate coursework divided into four (4) 3-credit-hour required management science core courses (12 credit hours), four (4) 3-credit-hour required business analytics core courses (12 credit hours), and two (2) elective courses to be selected from several possible areas.

MSC 692, Business Analytics Practicum, is the capstone course and should be taken toward the end of the student's program. A student must earn a grade of B or better in MSC 692.

Additional Information

Thesis Option

A thesis option is available. Students interested in this option should contact the both the faculty member who the student wants to serve as the thesis advisor and the College of Business Director of Graduate Programs before completing 12 hours of graduate study. If selected, the student will register for the MSC 699 Master’s Thesis course for 6 credit hours in lieu of 6 credit hours of electives.

Transfer Credit

Up to 12 semester hours of graduate credit taken at other universities may be transferred to meet MS-MSBA degree requirements. Inquiries about the transferability of specific courses should be directed to the College of Business Director of Graduate Programs, who will consult with the Business Analytics faculty to determine whether the content of the class will be accepted for transfer credit.

Degrees

Master of Arts in Teaching (initial teaching certification only)

Master of Education (advanced teaching certification)

Mission

The College of Education at The University of Alabama in Huntsville is a member of a diverse academic community of teacher scholars that challenges teacher candidates to strive for excellence in all aspects of their lives. The professional environment affords the College of Education unique opportunities to make a difference in the lives of elementary, middle, and high school students regardless of socio-economic backgrounds. In addition, the College educates teacher candidates who will live and work effectively in increasingly complex societies. Consistent with the mission of the university, the College of Education defines its mission through three focal elements:

1. to prepare teachers and other school personnel who are academically strong, competent in both theory and practice, and prepared to contribute to the needs of a dynamic, complex world;
2. to provide an environment that encourages the department faculty to model sound pedagogy, engage in research and scholarly activities, and become leaders in their area of expertise; and
3. to make our teaching, research, and service available to the entire community in order to meet the changing needs of schools, organizations, and professional communities in our region, state, nation, and international community.
The mission of the College of Education is communicated through our shared vision and articulated in our theme, Through Teaching, We Lead. The establishment of this theme codifies the major purpose of our College: to graduate teachers who are exceptionally well-prepared in disciplinary, pedagogical, and professional knowledge, who understand and are prepared to address the needs of all learners, and who are committed to serving as leaders in the educational community to ensure that all students receive a high-quality public or private education.

Master of Education (M.Ed.)
The Department of Curriculum and Instruction provides the Master of Education (M.Ed.) for teachers already certified at the baccalaureate level and seeking advanced level (Alabama Class A) certification. The M.Ed. has five concentration areas that include:

- Differentiated Instruction in Elementary Education (K-6);
- Special Education/Collaborative Teaching: Autism Spectrum Disorder (K-6 or 6-12);
- Reading Education (Reading Specialist P-12);
- English Speakers of Other Languages (ESOL; P-12); and,
- Differentiated Instruction in Secondary Education (6-12) (biology, chemistry, English language arts, history, mathematics, and physics)

Master of Arts in Teaching (MAT) Alternative Fifth Year
The Alternative Fifth Year Program Master of Arts in Teaching (MAT) is available to individuals who have completed a baccalaureate degree from a regionally accredited institution in a field other than teacher education. Students eligible for this program do not have a Class B (baccalaureate level) teaching certificate. Students should contact the Teacher Certification Officer and the advisor in the chosen teaching field for an individual evaluation concerning undergraduate deficiencies prior to initial registration in this program. The Alabama State Department of Education requires all applicants for the alternative fifth year program to an academic major in the teaching field (EHLA) or if an academic major is not on the official transcript, 32 semester hours appropriate to the teaching field including at least 19 semester hours of upper-division credit.

Certification for alternative fifth-year programs is available in the following areas: biology, chemistry, English language arts, English Speakers of Other Languages, history, mathematics, and physics.

Accreditation
Teacher education programs in the College of Education at The University of Alabama in Huntsville are accredited by the National Council for Accreditation of Teacher Education (NCATE) and approved by the Alabama State Board of Education, according to standards of the National Association of the State Directors of Teacher Education and Certification (NASDTEC), for the issuance of appropriate professional certificates for service in public schools.

Master of Arts in Teaching (MAT) Degree Program
Admission Requirements
1. Unconditional admission to UAH and major department (if applicable).
2. GPA of 3.0 or higher in undergraduate teaching field courses and education courses; no grade lower than C.
3. Passing score on required Praxis II Content Area Exam.
4. Program of Study (POS) on file in Education.

Master of Education (M.Ed.) Degree Program
Admission Requirements
1. Unconditional admission to UAH and major department (if applicable).
2. Valid Alabama Class B Teaching Certificate in same or broader field in which advanced certification is sought.
3. GPA of 3.0 or higher in undergraduate teaching field courses and education courses; no grade lower than C.
4. Program of Study (POS) on file in Education.

Additional Requirements for Reading Specialist (P-12) Candidates
1. Two years of successful classroom teaching experience
2. A valid baccalaureate certificate (Class B) in an area of education
3. Certification in Early Childhood, Elementary, or Collaborative Teacher Education; or two reading courses, one of which is introductory.

Mid-Point Review (After Completion of 19-21 Semester Hours)
1. Maintain 3.0 or higher GPA in Education and in teaching field courses with no grade lower than C.
2. Interview with College of Education advisor and/or faculty to determine pacing in program of study.
Completion Requirements
1. Completion of all education and teaching field courses with GPA of 3.0 or higher.
2. Pass comprehensive written examinations in teaching field and education, and on Praxis II when required.
3. Satisfactory Completion of Capstone Action Research Project.

Certification Requirements for All Master’s Degree Programs
Alabama teaching certificates are the legal responsibility of the Alabama State Department of Education. Colleges and universities cannot issue professional teaching certificates. In order to be recommended for certification, candidates must complete a state approved program. Approved graduate certification programs offered by the UAH College of Education are designed to prepare candidates for professional Class A certification with a master’s degree.

It is the candidate’s responsibility to initiate the application for the teaching certificate by meeting with the Certification Officer. Candidates must provide official transcripts of all undergraduate and graduate coursework, complete all forms required by the Alabama State Department of Education, and pay appropriate fees. Candidates who expect to teach in states other than Alabama are responsible for knowledge of the licensure requirements of those states. Such candidates should inform the certification officer of their intentions.

Certificate Renewal
1. The Class A certificate is valid for five years. This certification may be renewed upon verification of successful teaching for three years and completion of an approved professional development program or additional graduate level credits in the certification area.
2. Individuals who allow their certificates to lapse for more than 6 months will also be required to renew their certificates and to obtain another background clearance for the issuance of a renewed certificate or license. The UAH College of Education in accordance with the Alabama State Board of Education provides courses for persons who hold expired certificates and wish to reinstate them.

Master of Arts in Teaching (initial teaching license for grades 6-12)
- Biology (p. 867)
- Chemistry (p. 868)
- English Language Arts (p. 868)
- English Speakers of Other Languages (p. 868)
- History (p. 869)
- Mathematics (p. 869)
- Physics (p. 869)

Master of Education (leads to Class A licensure)
- Autism Spectrum Disorders (Collaborative K-6 or 6-12) (p. 869)
- Elementary Education - Differentiated Instruction (Elementary K-6) (p. 870)
- English Speakers of Other Languages (P-12) (p. 871)
- Reading Specialist (P-12) (p. 871)
- Secondary Education - Differentiated Instruction (6-12) (p. 872)¹

¹ Pending Alabama State Department of Education approval

ED 500 - SPEC TOPICS EDUCATION
Semester Hours: 1-3

Independent study, special projects, and special in-service programs.

ED 501 - INTRO TO EDUCATION
Semester Hour: 1

Initial practicum experience designed to provide the opportunity to explore the role of the classroom teacher in today’s diverse school settings. Required for graduate students receiving their initial certification.
ED 510 - FOUNDATIONS OF LITERACY
Semester Hours: 3

This course includes a study of methods, materials, and strategies for reading instruction. Components of the course will include but not be limited to the five pillars of reading instruction identified by the National Reading Panel (2000): phonemic awareness, phonics, fluency, vocabulary, and comprehension. Emphasis is placed on the various stages of and approaches to literacy development, knowledge of which is required for the Alabama Reading Specialist licensure.

ED 513 - LITERATURE FOR CHILDREN & ADOL
Semester Hours: 3

Course content will include the study of various genres of children's and adolescent literature and their relationship to beginning reading, enhancement of reading comprehension, and intervention instruction in the various content areas. (Same as EH 613) Must be admitted to the Teacher Education Program.

ED 520 - COMPUTER BASED INSTRUCT'L TECH
Semester Hours: 3

Introduces prospective teachers to current state of the art in educational technology. Extensive hands-on experiences with microcomputers and other emerging technology. Emphasis on effectively integrating technology into instructional setting for both special and regular students.

ED 521 - TCHNG ENGLISH MID & SEC SCHLS
Semester Hours: 3

This course is designed to provide graduate level English Education majors with the theory, tools and techniques for teaching middle and secondary students. The focus of the course is primarily, though not exclusively, on designing lessons that allow for maximum student participation and control while remaining aligned to Alabama Content Standards. Students will study, discuss, and implement a variety of environments middle and secondary students reside in, special attention will be given to the use of various technologies as a means of content exploration and student evaluation. As this is a graduate level course, students are expected to engage in substantive scholarly research. Admissions to the Teacher Education Program of permission of instructor is required before registering for this class.

ED 522 - TCHNG MATH MID & SEC SCHLS
Semester Hours: 3

The math methods course provides background for middle school and secondary teaching from the perspective of theory, research, and practice. It is designed to provide an introduction to and practice in ways in which to engage students in learning in mathematics in middle and secondary classrooms. Topics include specific educational philosophies of mathematics equation, lesson and unit planning, instructional strategies, use of mathematics manipulatives and technology, and student assessment within the content area. Applications will include microteaching and intensive school-based experiences in area schools. Intensive field experience required. Must be admitted to Teachers Education Program or permission of instructor required before registering for this course.

ED 523 - TCHNG SCIENCE MID & SEC SCH
Semester Hours: 3

This course is designed for students who are pursuing teaching certification in middle and/or secondary science. The course will first focus on how middle and secondary students learn science, and then from this knowledge base, the class context will focus on how to plan, design, and implement inquiry-based science instruction. Assessment development in science, the interpretation, and the use of assessment results to guide student understanding will also be incorporated in teaching methodology.

ED 524 - TCHNG SOC STUD MID & SEC SCH
Semester Hours: 3

This course is designed to study effective techniques and strategies employed by social science teachers at the middle and secondary levels. As well as learning theoretical foundations in social studies education, students will learn pedagogic skills, instructional strategies, and modes of reasoning unique to the social studies classroom. Intensive field experience required. Students are required to observe, participate, and teach a lesson in a secondary social studies classroom. Admission to the Teacher Education Program or permission of chair is required for this course.

ED 530 - APPLIED MULTICULTURALISM
Semester Hours: 3

Through an examination of constructs such as race, ethnicity, social class, gender, sexual orientation, and religious affiliation, students will develop an understanding of the connections between identity, difference, power, and privilege and the role(s) school (could/should) play in perpetuating or ending discriminatory practices. Furthermore and more importantly, students will develop an understanding of the ways research in both the humanities and social sciences can be used to interpret, analyze, and critique multiculturalism. Students will leave the course with research-based pedagogical practices designed to help all students learn to the best of their abilities.
ED 532 - SPACE ORIENTATION TEACHERS  
Semester Hours: 3

A weeklong course at the U.S. Space and Rocket Center in Huntsville, Alabama for pre-service and in-service teachers. The inquiry based workshops are taught around the theme of space exploration include activities to be done across the curriculum. All activities are correlated to National Math, Science, Technology, Social Studies, and Reading Standards. Activities based on curriculum developed by NASA, CAP, NSATA, and the USSRC. Topics include moon, mars, rocketry, propulsion, hydroponics, math, biology, history and literature.

ED 535 - INTRO APPLIED EDUCATIONAL RES  
Semester Hours: 3

Introduction to the nature of research and its relationship to educational thought and practice. Primary focus will be on planning and executing research activities (i.e. action research, thesis development) in the diverse classroom and analyzing the collected data to improve instruction, educational performance, and adding to the body of knowledge in educational practices.

ED 540 - COGN DEV THEORIES LEARNING  
Semester Hours: 3

The course is designed to inform students about recent developments in Cognitive Psychology and their implications for teaching and learning. Students will leave the course with a variety of “cognitive understandings” for use in differentiated classrooms.

ED 545 - CURR & INSTR IN SEC SCHOOLS  
Semester Hours: 3

This course is designed to address various contemporary teaching and learning strategies, as well as related issues, assessments strategies, and applicable theories related to secondary teaching and learning.

ED 560 - CURR/EMERGING INSTR TECH  
Semester Hours: 3

Designed to build competency in computer technologies appropriate to instructional use. Concepts of authoring and scripting will be used to unify course materials. (Same as CS 560.).

ED 565 - INTRO DIFFERENTIATED INSTRUCTI  
Semester Hours: 3

The course provides an introduction to the philosophy and practice of differentiation. Students will examine the elements, content, process, product, affect and environment by which instruction can be differentiated to address the complex challenges of meeting the diverse learning needs of all students.

ED 570 - DIFF INSTRUCTION SPEC POP  
Semester Hours: 3

The course provides practical strategies to maximize learning for all students, particularly those with disabilities, gifted/talented, and English language learners (ELL).

ED 575 - READING PRIMARY GRADES  
Semester Hours: 3

An introduction to the basic principles of literacy instruction in culturally and linguistically diverse primary grade classrooms, including theoretical bases for instruction, methods of instruction and organization, developmentally appropriate strategies and materials, and assessment of children's literacy. Class activities include mini-lessons, discussions, group activities, and presentations. An intensive school-based practicum in grades preK-2 is required.

ED 580 - PROJECT BASED LEARNING  
Semester Hours: 3

Develop a robust understanding of Project Based Learning (PBL) through critiquing, evaluating, and synthesizing PBL's core theoretical concepts.

ED 593 - ED EXCEPT CHILD & YOUTH  
Semester Hours: 3

Introduction to the field of exceptional children and youth, including observations. This course, or equivalent, is a prerequisite to certification. Intensive field experience required.

ED 600 - SPEC PROB IN EDUCATION  
Semester Hours: 1-3

Independent study, special projects, and in-service programs.
ED 604 - CONTRIBUTION PSY TO EDUC
Semester Hours: 3
Principles, theory, and practice of psychology for teaching and administrative service in educational institutions. Factors that determine learning and conditions of effective teaching. Administrator and supervisor as organizer of the milieu wherein teaching, learning, and growth occur. Intensive field experience required.

ED 605 - READING RESEARCH & INSTRUCTION
Semester Hours: 3
Elements of effective reading instruction for beginning readers as supported by current research and practice. Topics include balance, language-rich/print-rich environment, language development, phonemic awareness, print awareness, phonics, writing, spelling, and comprehension. Intensive field experience required.

ED 607 - EDU LEADER AS EVALUATOR
Semester Hours: 3
Procedures and techniques of evaluation and research approaches. Emphasis on teachers as evaluators; based on action research in the classroom. Intensive field experience required.

ED 608 - EXPAND RDG ABIL CONT AREA INST
Semester Hours: 3
Strategies to enhance reading comprehension when using materials in all subject areas. Teacher-directed, integrated instruction; extensive use of authentic printed materials; discussion at literal and higher levels of understanding, motivation, vocabulary, and writing. Intensive field experience required.

ED 609 - CLASSROOM & BEHAVIOR MGMT
Semester Hours: 3
A focus on the variety of instructional management options to meet classroom and individual student needs to ensure success in school is integrated throughout all course activities. A range of management practices, including strategies for diverse and special populations is offered. Theoretical and reflective practices are incorporated during classroom meetings. Students will observe, research, and discuss current classroom approaches. After reflections, effectiveness of observed practices will be assessed. Student will discuss and develop alternative activities that promote successful management techniques. Intensive field experience required. Admission to the Teacher Education program or permission of chair is required for this class.

ED 612 - DIAGNOSIS & ASSESSMENT OF READING
Semester Hours: 3
Focuses on ways to address the needs of students who do not read at grade level. Intervention strategies such as ongoing assessment and evaluation, explicit instruction in phonemic awareness and phonics, extensive practice, comprehension strategies, and writing, along with careful examination of standardized state assessment measures. Intensive field experience required.

ED 615 - READING INTERMEDIATE GRD
Semester Hours: 3
This course provides an in-depth study in and application of the process of reading and reading instruction, theoretical approaches, instructional strategies, classroom organization, and the formal/informal assessment of reading in intermediate grades. This course is required of all elementary education majors and secondary education candidates who are pursuing a middle school endorsement. Intensive field experience required. Prerequisites: Admission to the Teacher Education Program.

ED 620 - USING TECH REACH SPEC POP
Semester Hours: 3
Prepares teachers to plan curriculum integration by using computer technology and software in various curriculum areas for both regular and special students. Students will develop competency in instructional design and production skill techniques and implement instructional events using long-distance technologies.

ED 635 - ASSESSING DIFFERENTIATED INSTRUCTION
Semester Hours: 3
The focus of this course would be to use a variety of norm-referenced, criterion-referenced and other assessment data to inform instruction for a diverse classroom within the RTI model. Students would learn to use formative and summative assessments to determine the type of strategies needed to teach content.
ED 640 - DIFD STRGTY RES & TEACH ELL  
Semester Hours: 3  
The course is designed to provide current educators the foundation for informed and effective classroom teaching in diverse classrooms with ELL students. The course includes theoretical underpinnings of historical and contemporary ELL education, instructional methods, analysis and critique of methodologies, and strategies for pedagogically sound classroom instruction and lesson planning within linguistically and culturally diverse classrooms.  

ED 650 - DIFFNT ELEM MATH & SCI INSTRUC  
Semester Hours: 3  
This course will focus on guiding the learner to apply the concepts of differentiated instruction within mathematics and science contexts. Participants will learn how to implement effective strategies for managing flexible groups, acquire ideas for providing students with a variety of options to successfully target mathematics and science standards and understand how to plan strategically in order to reach the needs of diverse learners within the classroom through inquiry-based learning.  

ED 665 - DIFFNT ELEM LITERACY (R & W)  
Semester Hours: 3  
This course will focus on guiding the learner to apply the concepts of differentiated instruction to elementary literacy concepts. Advanced teacher candidates will develop and implement differentiated instructional plans that utilize individual and flexible grouping strategies and resources to support the growth of strategic, independent readers and writers.  

ED 671 - TCHG ELEM LANGUAGE ARTS  
Semester Hours: 3  
Introduction to current practices in language arts instruction with emphasis on the development of an integrated curriculum using children's literature as a foundation. Includes appropriate techniques for teaching of grammar, spelling, and handwriting. Intensive field experience required. Prerequisites: Admission to the Teacher Education Program.  

ED 672 - TCHG ELEM SOCIAL STUDIES  
Semester Hours: 3  
Teaching social studies in grades K-6. Helping beginning teachers acquire background skills in organizing and teaching units of work. Intensive field experience required. Prerequisites: Admission to the Teacher Education Program.  

ED 673 - TCHG NATURAL/HLTH SCIENCE  
Semester Hours: 3  
Integrates concepts from reflective practice with elementary science teaching. Opportunity to refine teaching skills in the planning, implementation, and evaluation of science lessons and units of instruction. Intensive field experience required. Prerequisites: Admission to the Teacher Education Program.  

ED 674 - TCHG ELEM. MATHEMATICS  
Semester Hours: 3  
Overview of the mathematics concepts and skills taught in grades K-6 with an emphasis on the principles, methods, and materials used in the teaching and evaluation of elementary school mathematics. Focuses on the attitudes and behaviors of students and teachers in the actual planning and implementation of mathematics instruction for an elementary school classroom. Intensive field experience required. Prerequisites: admission to the teacher education program.  

ED 690 - MASTER'S ACTION RESEARCH PROJ  
Semester Hours: 3  
The capstone course will serve as a mechanism to support the research, methodology, development, and experimental stages of the required action research. The student's work will be approved and supervised by a selected faculty advisor with direct connections to the research area. A symposium in which students present their research report will be culminating activity.  

ED 691 - PORTFOLIO SEMINAR & SYMPOSIUM  
Semester Hour: 1  
The seminar will provide a forum in which the student's culminating portfolio is refined and submitted for faculty review. The seminar will also serve as a mechanism to support the final writing stages of the required action research project or case study report. The student's work will be approved and supervised by the faculty advisor(s). A symposium in which students present their research will be the culminating activity.  

ED 693 - ELEMENTARY INTERNSHIP  
Semester Hours: 6  
Observation, participation and teaching in elementary school (full time, 15 week semesters). Students will also attend campus-based seminars designed to meet specific needs of the interns.
ED 696 - P-12 INTERNSHIP
Semester Hours: 3-6

ED 698 - HIGH SCHOOL INTERNSHIP
Semester Hours: 3-6

Observation, participation, and teaching in middle/high school (full-time, 15 week semester). Students will also attend campus based seminars designed to meet specific needs of interns.

ED ADD - FUND OF CHRISTIAN ED/OAKWOOD
Semester Hours: 2

EDC 511 - INSTRUCTIONAL STRATEGIES
Semester Hours: 3

This course provides foundational, in-depth pedagogical strategies for assisting learners in constructing their own understanding of information. This course focuses on multiple instructional options that all learners need in order to be successful. It takes a broad approach to the multiple teaching models that are necessary for working with diverse populations.

EDC 625 - ASSISTIVE TECH EDUC INDV W/ASD
Semester Hours: 3

This course provides an overview of assistive technology devices and services that are used in the instruction of students with autism spectrum disorders (ASD) and other communication disabilities.

EDC 636 - INTRO STUD AUTISM SPECTR DISOR
Semester Hours: 3

This course will provide advanced teacher candidates with an introduction to working with students diagnosed with autism spectrum disorders. Candidates will develop an understanding of the range of characteristics and behaviors associated with ASD, the effectiveness of early intervention on behaviors, and the theories regarding the etiology of the disorder.

EDC 645 - ASMT & BEHAVIOR APPLC ASD
Semester Hours: 3

This course focuses on assessment and intervention planning for children with ASD. Candidates will enhance their knowledge of various assessments appropriate to the ASD population and develop skills to administer and interpret assessments. The course will provide candidates with an overview of the Applied Behavioral Analysis approach to assessing and teaching students with ASD.

EDC 655 - COLLAB & TRANSITION PLANNG
Semester Hours: 3

Using case-based instructional strategies, this course is designed to assist advanced teacher candidates in learning to build supportive relationships with families, paraprofessionals, and related service providers, including community agencies, as a foundation for designing differentiated learning experiences for students with disabilities.

EDC 660 - PRCTL APPLC VIS INSTR STRATEGY
Semester Hours: 3

Advanced candidates will participate in an extensive summer clinic for children with ASD. Candidates learn how to create an appropriate learning environment, organize schedules for individual students, develop materials, engage in instruction, respond to behavioral issues, and document student progress.

### Autism Spectrum Disorders (Collaborative K-6 or 6-12)

**Description of the Program**

A focus on how to plan, instruct, conduct assessments and collaborate to maximize learning opportunities for students with Autism Spectrum Disorders.
Admission Requirements
• Holds a minimum of a bachelor's degree;
• Holds a teaching certificate in education (any content area);
• Pass the GRE/MAT requirements, OR have 3 years of successful teaching, OR 3.0 undergraduate cumulative GPA, OR other master's degree.

Requirements
Core Courses
- ED 530 APPLIED MULTICULTURALISM 3
- ED 535 INTRO APPLIED EDUCATIONAL RES 3
- ED 540 COGN DEV THEORIES LEARNING 3
- ED 565 INTRO DIFFERENTIATED INSTRUCTI 3

**English Speakers of Other Languages (P-12)**

**Description of the Program**

A focus on how to best support the needs of students whose native language is not English, facilitate professional development and offer resources to teachers, students and families, and differentiate instruction and assessment for English language learners.

**Admission Requirements**

- Holds a minimum of a bachelor's degree;
- Holds a teaching certificate in education (any content area);
- Pass the GRE/MAT requirements, or have 3 years of successful teaching, or 3.0 undergraduate cumulative GPA, or other master's degree.

## Autism Spectrum Disorders Certificate

### Program Description

This graduate certificate will allow students to study the educational needs of learners with autism spectrum disorder (ASD). The graduate certificate will introduce students to the characteristics of ASD, the assessment needs of students with ASD, the social and communication profiles and educational needs of these learners, the unique behavioral characteristics of this population, and will teach educational strategies which benefit learners with an ASD disorder.

Increasing numbers of those identified with Autism Spectrum Disorders (ASD) require the skills and expertise of professionals trained to address specific ASD needs. UAH’s online/hybrid Autism Spectrum Disorders Graduate Certificate is a **non-licensure program** designed for teachers and human service agency staff to acquire these skills and expertise. This Graduate Certificate meets the Professional Content Standards of the Council for Exceptional Children (CEC) and offers students the opportunity to pursue graduate-level education through the flexibility of online/hybrid learning from UAH faculty and ASD professionals.

The Autism Spectrum Disorders Graduate Certificate is ideal for educators, interventionists, psychologists, pathologists, behavior analysts, or family members who want to enhance their preparation for working with children and adults affected with autism spectrum disorders. Teacher certification is not a requirement for admission to this program.

### Program completers will be prepared to:

- Work as public school teachers in a broad range of educational settings including the general education classroom and special education programs
- Work as human service agency personnel implementing research-validated intervention strategies for children, youth and adults in community agencies
- Implement research-validated instruction/intervention strategies for children, youth and young adults with autism spectrum disorders
- Assess the effectiveness of individualized instruction/intervention programs for individuals with autism spectrum disorders

This 15-credits graduate certificate program consists of 5 classes. The graduate certificate can be completed as a stand-alone certificate or a maximum of 12 semester hours (4 credits) can be applied toward the degree requirements for a Master of Education (M.Ed.).

### Admission Requirements

The items listed below are required for admission to this program; only complete files are reviewed.

1. Baccalaureate degree from a regionally accredited institution.
2. GPA of 3.0, or at least 3.25 for the last 30 semester credits of graded course work.
3. Completed “Application for Admission to Graduate Study” form indicating Graduate Certificate for Autism Spectrum Disorders (ASD).
4. Undergraduate and other transcripts sent directly from the institution to the UAH Graduate Studies Office.
5. Non-refundable application fee to UAH.

Engineering

102 Engineering Building  
Telephone: 256.824.6474  
Email: eng_grad@uah.edu (eng_grad@uah.edu)

Mission

The mission of the College of Engineering is to advance knowledge through research and education of students in core engineering disciplines. The college promotes ethical, innovative, and multidisciplinary approaches in an environment of collaboration with local and global partners to address society's technological problems.

- **Dean**: Shankar Mahalingam, B.Tech., M.S., Ph.D., Professor of Mechanical Engineering
- **Associate Dean for Graduate Education and Research**: Michael D. Anderson, Ph.D., Professor of Civil Engineering

Departments and Degree Programs

The College of Engineering has five academic departments: Chemical and Materials Engineering, Civil and Environmental Engineering, Electrical and Computer Engineering, Industrial and Systems Engineering and Engineering Management, and Mechanical and Aerospace Engineering. The academic departments offer several graduate degree programs including:

- Master of Science in Engineering (Options in Civil, Chemical, Computer, Electrical, Industrial, and Mechanical)
- Master of Science in Aerospace Systems Engineering
- Master of Science in Operations Research
- Master of Science in Software Engineering
- Doctor of Philosophy (Aerospace Systems, Civil, Computer, Electrical, Industrial, and Mechanical)

The College of Engineering also supports several interdisciplinary graduate degree programs including:

- Master of Science in Cybersecurity
- Master of Science in Material Science
- Doctor of Philosophy in Biotechnology Science and Engineering
- Doctor of Philosophy in Material Science
- Doctor of Philosophy in Optical Science and Engineering

Engineering Graduate Study

The College of Engineering comprises five academic departments of instruction and research. These units offer programs of study and research leading to master's and doctoral degrees. Some departments also offer programs in one or more subdisciplines as well as joint programs with other UAH colleges/departments or other universities in the University of Alabama system.

The College of Engineering graduate programs are designed to provide a balance of strong academics and graduate level research. Engineering faculty members provide broad and vigorous research programs with excellent opportunities for thesis and dissertation work.

Admissions

Applicants for graduate study in the College of Engineering must apply for admission to the UAH Graduate Studies. Applicants may initiate the admissions process at http://register.uah.edu. More information about the admissions process may be found here (http://www.uah.edu/admissions/graduate/admission-process).

Unconditional admission to an Engineering Master's degree program may be granted to applicants who have
1. earned a baccalaureate degree in engineering from institutions with ABET-accredited programs (not required for MS in Operations Research),
2. earned a minimum 3.0/4.0 grade point average for their baccalaureate work
3. earned minimum GRE scores of 145 (Verbal) and 155 (Quantitative) and
4. have met specific program requirements. An engineering department may choose to waive one or more of these requirements with appropriate and documented justification.

International students may be granted unconditional admission if they meet the requirements for unconditional admission described above AND have earned a minimum of 18 on each TOEFL subscore.

For admission to an Engineering Doctoral degree program, additional admissions criteria is specified by each department or program. Students should consult their major engineering department for the additional requirements.

Graduate Assistantships
Financial aid, in the form of teaching and research assistantships, is available for qualified students. Admission to an Engineering graduate degree program does not guarantee financial aid. Students should consult their major department for information on applying for assistantships.

Initial Advisement
Applicants who are granted admission to graduate study in the College of Engineering will be referred to the major department for the assignment of a temporary advisor.

Master's Degree General Requirements
The College of Engineering master's degree programs include a Plan I, thesis option, or a Plan II, non-thesis option. Students who choose the Plan I option must complete and defend a thesis based on research performed under a faculty advisor. Students who choose the Plan II option must complete a capstone experience or a comprehensive exam. Each engineering master's degree program requires a minimum of 30 semester hours. Students should consult with their major department for additional requirements.

A minimum overall grade point average of 3.0/4.0 is required for all graduate courses at UAH, whether or not the course is required to satisfy the master's degree requirements. Further, a minimum overall grade point average of 3.0/4.0 is required for all courses taken at the 600-level or above. With permission of the major department, students may transfer up to 12 semester hours of acceptable graduate credit earned at an approved institution to satisfy master's degree requirements. Transfer coursework may not be older than 10 years at the time of graduation. All requirements for the master's degree must be completed in six years.

Doctoral Degree General Requirements
The College of Engineering doctoral degree programs require a minimum of 48 hours of graduate level coursework and a minimum of 18 hours of dissertation. All programs will require a qualifying examination, which is administered by the supervisory committee within a year after the student has completed their graduate coursework. All programs also require the completion and defense of a dissertation based on research performed under a faculty advisor. Some programs may also require a preliminary examination or other subject examination as well as a research proposal presentation. For those students who have already earned a Master's degree, a minimum of 18 semester hours of approved coursework beyond the Master's degree, with an average grade no lower than a B.

A minimum overall grade point average of 3.0/4.0 is required for all graduate courses at UAH, whether or not the course is required to satisfy the master's degree requirements. Further, a minimum overall grade point average of 3.0/4.0 is required for all courses taken at the 600-level or above. With permission of the major department, students may transfer acceptable graduate credit earned at an approved institution to satisfy Ph.D. degree requirements. Transfer coursework may not be older than 10 years at the time of graduation. All requirements for the Ph.D. degree must be completed within 5 years after the student has passed the qualifying exam.

Programs leading to the degree of Doctor of Philosophy are offered in the College of Engineering and are granted on the basis of general demonstrated ability to do independent, original investigation. These attributes are tested in a comprehensive examination and in a dissertation that must clearly and effectively present the substantial results of research. These accomplishments, rather than mere accumulation of residence and course credits, are essential considerations in awarding the Ph.D. degree.

Residency Requirements
A majority of semester hours (including thesis/dissertation hours) must be earned at UAH or in the case of joint/shared program, at the participating institution. Residence may be established through either (1) being enrolled as a full-time student (at least 9 graduate semester hours) either for one continuous academic year, or for Spring and Fall semesters in the same calendar year, or (2) being enrolled in at least 6 hours of graduate course work in at least three of the four consecutive semesters.

All research effort presented for residence credit toward the Ph.D. degree must be performed under the direction of a member of the graduate faculty who holds full membership status.
Master’s Programs in Engineering

- Aerospace Systems Engineering, MSASE (p. 925)

Chemical and Materials Engineering

117 Engineering Building
Telephone: 256.824.6810
Email: chegrad@uah.edu

Interim Chair: Krishnan Chittur, Professor

Mission

The Department of Chemical and Materials Engineering is dedicated to developing and maintaining undergraduate and graduate programs that educate students in the safe control and manipulation of matter in industrially important chemical and materials systems. The faculty will continue to educate students and maintain its programs by providing intellectual leadership, innovative teaching, university and community service, while conducting internationally recognized research. Undergraduate and graduate programs within the department are continuously refined based on national standards and are designed to encourage interdisciplinary education. Research objectives focus on technology important to the further development of the university, the community, the state of Alabama, and the nation.

Degree Programs

The Department of Chemical and Materials Engineering offers coursework and research leading to the Master of Science degree in Engineering. The Doctor of Philosophy degree is available through the Materials Science PhD program, the Biotechnology Science and Engineering Program, or the Chemical Engineering Option of the Mechanical Engineering PhD program.

The range of research interests in the chemical engineering faculty is broad. It affords graduate students opportunities for advanced work in processes, reaction engineering, electrochemical systems, material processing and biotechnology and energy. The MSE degree granted in these areas of concentration is equivalent to those available in a traditional chemical engineering program. Please contact the Department of Chemical and Materials Engineering (256.824.6810) or visit the CHE homepage at http://www.uah.edu/eng/departments/cme for further details.
Chemical Engineering, MSE

The MSE in CHE requires a total of 30 semester hours. There are two options: Plan One includes 24 semester hours of coursework and 6 semester hour of thesis work and Plan Two The basic program of study contains a minimum of 18 semester hours of graduate-level coursework that must include 12 semester hours in graduate chemical engineering courses and 6 semester hours of courses in Graduate Engineering Analysis.

Chemical Engineering, PhD options

The College of Engineering does not offer a PhD in Chemical Engineering. However, students with a background in chemical engineering may pursue one of the following interdisciplinary options:

• PhD in Materials Science. This program is an innovative joint-program involving all three campuses of the University of Alabama System (UAB, UAH, and UA) and multiple departments from the UAH College of Science and College of Engineering. The requirements include a three-part program examination, 48 credit hours of graduate coursework, 18 credit hours of dissertation (MTS 799) and successful defense of a doctoral dissertation.
• PhD in Biotechnology Science and Engineering. This is a joint program between the UAH College of Science and College of Engineering. The requirements include 48 credit hours of graduate coursework, 18 credit hours of dissertation (BSE 799) and successful completion of a preliminary examination and a doctoral dissertation.
• PhD in Mechanical Engineering with a Chemical Engineering option. The Chemical Engineering Option of the Mechanical Engineering PhD program requires 48 credit hours of graduate coursework. Students should consult the requirements for the Mechanical Engineering PhD.

Students who wish to pursue one of these options should consult the catalog entries for these programs for more information or visit the CME Department office.

Graduate Programs in Chemical & Materials Engineering

• Chemical Engineering, MSE (p. 878)
CHE 540 - PHYSICAL PROP OF FLUIDS
Semester Hours: 3
Theoretical, experimental, and correlation methods for determining and predicting the thermodynamic and transport properties of various fluids. Critical properties, equations of state, vapor pressure and latent heat, heat capacity. Viscosity, thermal conductivity, diffusion coefficient, phase equilibrium, heat and free energy for formation.
CHE 541 - CHEMICAL KINETICS & REACTOR DE
Semester Hours: 3
Fundamental principles of chemical kinetics and chemical reactor engineering along with the design of both thermal and catalytic reactors.
CHE 549 - INTRO ENVIRONMENTAL ENGR
Semester Hours: 3
Engineering aspects of air, water, and thermal pollution. Hydrologic cycle, water sources and uses; industrial and other sources of primary and secondary pollutants. Transport process in environmental problems and in their control.
CHE 552 - EXPER TECH IN FLUID MECH
Semester Hours: 3
CHE 559 - SELECTED TOPICS/CHE
Semester Hours: 1-6
Discussion of biocompatible polymers and their application in drug delivery systems. Polymers of natural and synthetic origin will be studied, special emphasis will be placed upon the synthesis of biocompatible polymers. The formation of polymeric micelles, hydrogels and liposomes will be studied. The process of extravasation as uptake mechanism for polymeric delivery systems will be discussed. Reading material will be based on the latest publications in the field.
CHE 560 - INTRO TO BIOPROCESS ENGR
Semester Hours: 3
Application of engineering principles to the analysis of and the development and design of processes using biological catalysts including enzymes, plant and animal cells, and genetically engineered cells. Other topics include fermentation and biological mass transport processes.
CHE 561 - BIOSEPARATIONS RECOMBI TECH/PR
Semester Hours: 3
General characteristics of separation processes used in the biotechnology industry, including removal of insolubles, isolation and purification of thermally sensitive products for final use by the customer. Application of unit operation principles for biological separations, recombinant DNA techniques, protein engineering.
CHE 594 - APPLIED MATERIALS PROCESSING  
Semester Hours: 3  
Synthesis and processing methods of materials for engineering applications. Selection and use of materials performance factors for design of structural and functional components. Use of computational methods in solving open-ended design problems that depend on an understanding of the nature and properties of materials will be emphasized. All classes of materials are covered.

CHE 595 - POLYMER ENGINEERING  
Semester Hours: 3  

CHE 641 - ADV THERMODYNAMICS  
Semester Hours: 3  
Application of classical thermodynamics. Treatment of problems involving nonideal gases and liquids, phase equilibrium, and chemical equilibrium.

CHE 642 - PHYSICOCHEMICAL HYDRODYNAMICS  
Semester Hours: 3  
Treatment of electrokinetic phenomena, axial dispersion, convective diffusion in liquids, Brownian motion, flows driven by surface tensions, capillary motion.

CHE 644 - INTRO ELECTROCHEM SYSTEM  
Semester Hours: 3  
Thermodynamics, transport, and kinetics of electrodes and cells. Systems analysis of batteries, fuel cells, porous electrodes, electroplating, electrowinning, and corrosion processes. Convective diffusion at high Schmidt numbers.

CHE 646 - THERMODYNAMICS OF MATRLS  
Semester Hours: 3  
Fundamental thermodynamic review, phase equilibrium, chemical reaction equilibrium, free energy, binary and ternary phase transformations, solution models and selected topics.

CHE 648 - TRANSPORT PHENOMENA I  
Semester Hours: 3  

CHE 649 - TRANSPORT PHENOMENA II  
Semester Hours: 3  

CHE 650 - PRINC LIQUID/SOLID INTER  
Semester Hours: 3  
Applies basic principles in thermodynamics and kinetics to characterize surfaces and surface phenomena. Fundamental properties of gas-liquid, liquid-liquid, solid-liquid, and solid-gas interfaces and phenomena occurring at these interfaces.

CHE 652 - INTRO TO AIR POLLU CONTROL  
Semester Hours: 3  
Technology of air pollution dealing with air pollutants, effects, sources, combustion processes, and abatement and control technology. Engineering contributions to both the problems and their solutions. Nature of air pollution problem and fundamental technological approaches to its solution.

CHE 657 - ADVANCED PROCESS CONTROL  
Semester Hours: 3  
Application of modern control theory to chemical processes; multivariable control; estimation and adaptive control, optimal control.

CHE 658 - CATALYSIS/REACTOR DESIGN  
Semester Hours: 3  
Treatment of homogeneous and heterogeneous reaction kinetics, transport in fluid-solid reactions, catalyst deactivation and their effects on the analysis and design of chemical reactors.
The CME Department offers two plans leading to the MSE degree for the Chemical Engineering option. These are designated:

- Plan I (Thesis),
- Plan II (Non-thesis)

The following sections describe the requirements for each of these options. Additional requirements, policies and required forms may be found in the CME Department office.

**Basic Program of Study**

The Basic Program of Study, common to both the Plan I and Plan II (Non-thesis) MSE options, contains a minimum of 24 semester hours of graduate-level course work that must include:

**Engineering Major**

Select an engineering major consisting of 12 semester hours of graduate courses including supporting engineering courses

<table>
<thead>
<tr>
<th>MAE 692</th>
<th>GRAD ENGR ANALYSIS I</th>

<td></td>
</tr>
</tbody>
</table>
Plan I, Thesis Option

Students selecting this option must:

- Complete Basic Program of Study as described above
- Master's Thesis
  - CHE 699 MASTER'S THESIS
- Complete an acceptable thesis including a public defense

Total Semester Hours

Plan II, Non-Thesis Option

Students selecting this option must:

- Complete Basic Program of Study as described above
- Select 6 semester hours of graduate courses to complete an approved extended program of study

Total Semester Hours

Civil and Environmental Engineering

S201 Technology Hall
Telephone: 256.824.6854
Email: ceegrad@uah.edu

Interim Chair: Shankar Mahalingam

Mission

The mission of the Civil Engineering program is to educate students with the fundamental knowledge, and analytical skills necessary for successful careers in civil and environmental engineering. Through rigorous scholarship, innovative instruction, and service, we advance knowledge to improve our global community.

Degrees

- Master of Science in Engineering (Civil Engineering) (p. 885)
- Doctor of Philosophy in Civil Engineering (p. 886)

The Civil and Environmental Engineering (CEE) Department offers coursework and research leading to the MSE and PhD degrees. The PhD program is offered jointly with the Department of Civil and Environmental Engineering at the University of Alabama at Birmingham (UAB).

Research performed by the civil engineering faculty emphasizes state-of-the-art technology and is geared largely toward space-based applications. The philosophy and unique qualifications of the faculty afford graduate students opportunities for advanced work in structural engineering and structural materials, geotechnical engineering, engineering mechanics, environmental engineering, hydraulics and hydrologic processes, transportation planning, intelligent transportation systems, experimental mechanics/applied optics and natural hazard mitigation.

Under a cooperative agreement, several courses are co-listed and jointly taught by civil and mechanical engineering faculty so that a variety of courses can be offered on a regular basis. Courses are also available by the Intercampus Interactive Telecommunications System (IITS) from faculty at UAB, USA, and UA. Financial support is available at attractive levels for qualified students in the form of assistantships. Graduate Co-op positions are also available with many local research and industrial organizations. UAH has the intellectual and social environment to provide a well-rounded, high technology oriented degree. The MSE degree granted by the department is equivalent to those available in traditional civil and environmental engineering programs.

Civil Engineering, MSE

Students wishing to pursue the MSE in Civil Engineering must meet the admission requirements of the UAH Graduate Studies as well as the College of Engineering. A beginning student files a Program of Study in consultation with the faculty advisor. The MSE in Civil Engineering requires a minimum of
30 semester hours and consists of two options. The thesis option requires 24 hours of graduate coursework and 6 hours of thesis. Under this options, students must complete a written thesis and an oral defense. The non-thesis option requires 30 hours of graduate coursework.

Civil Engineering, PhD

The CEE Department offers a program (jointly with UAB) leading to the Doctor of Philosophy (PhD) in Civil Engineering. Courses are offered jointly by CEE faculty from both universities and are available in real time via IITS. The doctoral work is supervised by an experienced researcher and recognized authority in the field and the supervisory Committee is made up of faculty from both UAH and UAB and a minimum number of course semester hours must be taken from each campus. Coursework, written and oral examinations, and the dissertation are all essential components of the doctorate. The doctoral program requires 48 semester hours of coursework beyond the BS degree, plus 24 semester hours of dissertation. However, for students entering with an MSE degree with thesis, the dissertation requirement is 18 semester hours. PhD students must meet the minimum requirements set by the School of Graduate Studies, the College of Engineering, and the department.

In addition to the graduate coursework, students must pass a preliminary exam which ascertains their academic, technical and intellectual preparedness to pursue doctoral level work. For doctoral students with a master's degree, the preliminary exam must be administered within the first two semesters of study, and for doctoral students with a baccalaureate degree after completion of 24 semester hours of graduate coursework. More information about this exam is available in the CEE Department office.

Students must also pass a qualifying exam, which is administered after all course work is completed by the student's supervisory committee. The qualifying exam is given in conjunction with the presentation of the dissertation proposal to the supervisory Committee and is designed to determine the student's research competence. This exam process includes both written questions related to the coursework and an oral presentation of the proposal to the committee. The exam should be completed at least two semesters (one academic year) before the PhD is awarded. Students are allowed two attempts at the qualifying exam.

Finally, students must write a dissertation on their research work. When the dissertation has been completed, the supervisory committee will give the candidate a final oral examination as a part of a public dissertation defense. More information about the dissertation process is available in the CEE department office.

Master's Program in Civil and Environmental Engineering

- Civil Engineering, MSE (p. 885)

Doctoral Program in Civil and Environmental Engineering

- Civil Engineering, PhD (Joint with UAB) (p. 886)

CE 511 - INTRO GEOGRAPHICAL INFO SYS
Semester Hours: 3

Introduces vector, raster and tabular concepts, emphasizing the vector approach. Topics include: spatial relationships, map features, attributes, relational database, layers of data, data ingesting, digitizing from maps, projections, output, applications, and availability of public data sets.

CE 520 - URBAN TRANSPORTATION PLANNING
Semester Hours: 3

Planning of highway systems and terminals as part of a complete planning approach; public transportation system planning; transportation planning studies, projection analysis, plan formulation, and programming.

CE 541 - OPEN CHANNEL HYDRAULICS
Semester Hours: 3

Design and analysis of erodible and non-erodible channels. Uniform flow, channel roughness, gradually and spatially varied flow, rapidly varied flow, hydraulic jumps, gradually varied unsteady flow, flood routing, flow measurements, channel models, channel and culvert design.

CE 549 - INTRO ENVIRONMENTAL ENGR
Semester Hours: 3

Engineering aspects of air, water, and thermal pollution. Hydrologic cycle, water sources and uses; industrial and other sources of primary and secondary pollutants. Transport process in environmental problems and in their control.

CE 550 - ENVIRONMENTAL CONTROL
Semester Hours: 3

Engineering design and synthesis of environmental control systems. Control of multiphase systems with application to air and water pollution control.

CE 552 - INDUSTRIAL WASTE TREATMENT
Semester Hours: 3

Advanced topics in the area of hazardous waste management and water quality control. Emphasis on industrial waste, including hazardous waste management. Topics include: generation, storage, collection, transfer, disposal, recycling, economic, environmental, and regulatory considerations.
CE 554 - SOLID & HAZARDOUS WASTE MGMT
Semester Hours: 3
Waste characterization, minimization, collection, treatment, transport, and disposal. Landfill design and incineration options. Leachate characteristics and potential groundwater contamination.

CE 555 - WATER QUALITY LABORATORY
Semester Hours: 3
Properties of natural water sources and laboratory methods associated with water and wastewater treatment systems. Students design and demonstrate a water treatment system to bring a water sample into compliance with drinking water standards.

CE 556 - WATER QUALITY CONTROL PROC
Semester Hours: 3
Principles of public water supply design. Source selection, collection, purification, and distribution for municipal use. Collection of waste waters, their treatment, and disposal.

CE 557 - HYDROLOGY
Semester Hours: 3
Occurrence and movement of water over the earth's surface for engineering planning and design. Relationship of precipitation to streamflow with frequency analysis, flood routing, and unit hydrograph theory.

CE 558 - ENVIRONMENTAL ENGR DSGN
Semester Hours: 3
Engineering design and project management of environmental quality/restorationsystems. Students will complete a design project focusing on one of the following systems: sanitary landfill, municipal incinerator, or groundwater/site remediation. Lectures will address skills for technical presentations and proposal writing, as well as process design and decision making.

CE 559 - SEL TOPICS CIVIL ENGINEERING
Semester Hours: 1-6

CE 561 - VIBRATIONS ELASTIC SYS
Semester Hours: 3
Formulation of the equations of motion of discrete and continuous systems, analytical and numerical methods of solution, eigenvalue problems, and dynamic response.

CE 571 - ADVANCED SOIL MECHANICS
Semester Hours: 3
Continuum mechanics applied to soil behavior. Theoretical approaches to consolidation, shear strength, slope stability and soil stabilization.

CE 572 - SOIL DYNAMICS
Semester Hours: 3
Behavior of soils under dynamic, earthquake and blast loading. Analysis of foundation vibration and isolation.

CE 573 - EARTH STRUCTURES ENGINEERING
Semester Hours: 3
Principles of earth structure design. Theories of earth pressures and the design of retaining wall systems including gravity, cantilever, mechanically stabilized earth, flexible sheet pile, and anchored wall systems. Methods of stability analyses for retaining walls, earth slopes, and embankment design.

CE 574 - APP MECHANICS OF SOLIDS
Semester Hours: 3
Stresses and strains at a point, theories of failures, stress concentration factors, thick-walled cylinders, torsion of noncircular members, curved beams, unsymmetrical bending, and shear center.

CE 577 - EXP TECH SOLID MECHANICS
Semester Hours: 3
Experimental methods to determine stress, strain, displacement, velocity, and acceleration in various media. Theory and laboratory applications of electrical resistance strain gages, brittle coatings, and photoelasticity. Application of transducers and experimental analysis of engineering systems.

CE 578 - MATRIX METH STRUCT MECH
Semester Hours: 3
Matrix application to formulation and solution of linear problems in structural mechanics. Stresses, vibrations, and stability of engineering structures.
CE 581 - STRUCTURAL ANALYSIS II  
Semester Hours: 3  
Reactions, shears, moments and deformations in complex structural systems. Statically indeterminate systems, advanced geometric and energy methods.

CE 583 - REINFORCED CONCRETE DESIGN  
Semester Hours: 3  
Theory and practice of reinforced concrete design. Theory and design of high strength concrete mixtures. Design of reinforced concrete beams, slabs and columns using the ultimate strength design code of the American Concrete Institute.

CE 584 - STEEL DESIGN  
Semester Hours: 3  
Principles of the design of steel structures using ASD methods. Analysis and design of structural elements including beams, columns, connection details.

CE 585 - FOUNDATION ENGINEERING  
Semester Hours: 3  
Design of foundations with emphasis on reinforced concrete, footings, caissons, piles, retaining walls, and mat foundations. Effect of bearing pressure on foundations.

CE 586 - ADV CEMENTITIOUS & COMPOSITE  
Semester Hours: 3  
Concrete structures, rheology, mechanical properties, environmental durability, dimensional stability, advanced concrete technologies (such as high strength, fiber reinforced, and fracture mechanics), advanced fiber polymer composites, and repair/rehabilitation of concrete structures.

CE 587 - BRIDGE DESIGN  
Semester Hours: 3  
Bridge loads, load distribution, composite beam bridges, bridge bearings, reinforced and prestressed concrete slab and T-beam bridges, bridge evaluations and ratings, and upgrade methodology.

CE 603 - ADVANCED CONCRETE DESIGN  
Semester Hours: 3  
Design of concrete columns; bond, anchorage and reinforcing details; design of two-way slabs; design and analysis of multistory building frames; introduction to prestressed concrete; design of prestressed cross-sections for moment.

CE 611 - GIS IN CIVIL ENGINEERING  
Semester Hours: 3  
Advanced topics in geographical information systems (GIS) with civil engineering applications. Emphasis will be placed on spatial/temporal data analyses using digitized maps and database information in an area of CE specialization. Research project will be required.

CE 622 - ADVANCED TRAFFIC ENGRG DESIGN  
Semester Hours: 3  
In depth analysis of traffic engineering concepts related to intersection analysis (signalized and un-signalized) as well as arterial systems.

CE 646 - EROSION & SEDIMENTATION  
Semester Hours: 3  
River morphology and river response, incipient erosion and its prediction, bed form and roughness, degradation, aggradation, and local scour in alluvial rivers. Design of stable channels, computation of bed load.

CE 650 - ENVIRONMENTAL IMPACT ANAL  
Semester Hours: 3  

CE 651 - ENVIRONMENTAL REGULATIONS  
Semester Hours: 3  
Basic understanding of environmental law with an appreciation for the practical implementation of regulations for environmental engineers. Includes an overview of the major American environmental laws for protection of water and air resources, as well as permitting requirements and health/safety responsibilities.
CE 652 - INTRO TO AIR POLLUTION CONTROL  
Semester Hours: 3  
Technology of air pollution dealing with air pollutants, effects, sources, combustion processes, and abatement and control technology. Engineering contributions to both the problems and their solutions. Nature of air pollution problem and fundamental technological approaches to its solution.

CE 653 - GROUNDWATER ENGINEERING  
Semester Hours: 3  

CE 654 - ENVIRONMENTAL TRANSPORT  
Semester Hours: 3  
Fundamental principles of mass transport, chemical partitioning/transformation in environmental systems. Practical transport examples for surface water, ground water, and atmospheric systems will be presented and mathematical modeling will be utilized for solutions.

CE 655 - HAZARDOUS WASTE MGMT  
Semester Hours: 3  
Topics include definition of hazardous waste, regulatory considerations, risk assessments, and categories of waste. Current and emerging treatment and disposal technologies will be explored.

CE 656 - ENV SYSTEMS SAMPLING & ANAL  
Semester Hours: 3

CE 657 - ADVANCED HYDROLOGY  
Semester Hours: 3  
Hydrologic cycle, including interrelationships between classical and statistical methods of hydrology. Evaluation of governing equations, linearizations, analytical approximations and numerical solution techniques for various boundary conditions. Stochastic hydrologic modeling in both temporal and spatial domains.

CE 658 - SUSTAINABLE DESIGN  
Semester Hours: 3  
The built environment has a substantial impact on energy and material resources as well as being a critical determinant of health and productivity. This course covers topics such as site planning and construction variables, energy and water alternatives, and current rating systems. Case studies and field trips of historic and contemporary projects exemplifying various sustainability features will be included.

CE 659 - SEL TOPICS CIVIL ENGINEERING  
Semester Hours: 1-6

CE 660 - STRUCTURAL DYNAMICS  
Semester Hours: 3  

CE 662 - GEOTECHNICAL ENGINEERING  
Semester Hours: 3  
Shallow foundation's immediate and consolidated settlement, advanced deep foundations under lateral and axial loads, design of single and pile groups, soil-pile interaction, introduction to seismology, earthquake characteristics, dynamic soil properties and response, soil profile response spectra, soil liquefaction.

CE 666 - EARTHQUAKE ENGR & STRUCT DYNAM  
Semester Hours: 3  
This allows structural engineers to consolidate their knowledge on the effect of earthquake ground motions on civil engineering structures. The course will cover the analysis and the theories of structures made of various materials that are located in active seismic zones. Finally, the course will allow structural engineers to acquire new basic knowledge in earthquake engineering that will allow them to communicate better with scientists and engineers of other disciplines in earthquake engineering (e.g. seismologist, geotechnical engineers, etc.).

CE 671 - CONTINUUM MECHANICS  
Semester Hours: 3  
Kinematics and kinetics, various coordinate systems, constitutive equations for continuous media; governing partial differential equations from first and second laws of thermodynamics; applications to solids, liquids, and gases.
CE 672 - THEORY OF ELASTICITY
Semester Hours: 3

Formulation of boundary-value problems of classical elasticity. Application to plane problems, prismatic members, and axisymmetric problems. Introduction to three-dimensional problems.

CE 673 - PLASTICITY
Semester Hours: 3

CE 674 - FINITE ELEMENT ANALYSIS I
Semester Hours: 3

Finite element theory, variational methods, weighted residuals. Applications to linear partial differential equations in continuous media. Solution of boundary value and initial value problems.

CE 675 - ROCK MECHANICS
Semester Hours: 4

Principles of continuum mechanics applied to the design of structures in rock; tunnels, underground structures and foundations. Joint behavior; stresses; analysis of rock slopes; instrumentation.

CE 676 - VISCOELASTICITY
Semester Hours: 3

CE 677 - OPTICAL TECH IN SOLID MECH
Semester Hours: 3

Overview of conventional methods for experimental stress analysis. Introduction to applied optics with emphasis on non-destructive, laser-based testing methods, fiber optic recording systems, photoelectronic-numerical data acquisition, and computer aided analysis.

CE 678 - MECHANICS OF COMPOSITE MATRALS
Semester Hours: 3

Introduction to composite materials, micro- and macro-mechanical behavior of laminae; bending, buckling and vibration of laminated plates.

CE 679 - HYPERVELOCITY IMPACT PHENOMENA
Semester Hours: 3

Fundamental principles of penetration mechanics. Analytical and numerical approaches to perforation and penetration problems. Shock jump conditions, hugonions, and equations of state; low, high, and hypervelocity impacts of finite and thin targets.

CE 681 - ADVANCED STRUCTURAL ANALYSIS
Semester Hours: 3

Explores modern methods of structural analysis, matrix formulation of flexibility and stiffness methods, and analysis of structures with material and geometric nonlinearities. Also introduces energy methods for indeterminate structures.

CE 683 - GRADUATE SEMINAR
Semester Hour: 1

Professional activities designed to promote the skills required to organize and deliver oral technical presentations and to broaden the individual's awareness of technical issues. Required for all students pursuing a graduate degree. Students will be graded "S" (Satisfactory) or "U" (Unsatisfactory) based upon their performance and attendance. Students who do not receive an "S" grade must register for the course until an "S" is obtained.

CE 696 - GRAD INTERNSHIP CE ENGR
Semester Hours: 1-9

Active involvement in an engineering project in an engineering enterprise, professional organization or government agency that has particular interest and relevance to the graduate student. Permission of CEE faculty member required.

CE 697 - MASTER'S PLAN II PROJECT
Semester Hours: 3

Application-oriented student project designed to show competence in an area of civil engineering.
CE 699 - MASTER'S THESIS
Semester Hours: 1-9

Required each semester in which a student is working and receiving direction on a master's thesis. Minimum of two semesters and 6 hours required for M.S.E. students. A maximum of nine hours of credit is awarded upon successful completion of master's thesis. The 1 hour option is only available to students who have successfully defended their thesis and submitted it for approval, but do not meet the deadlines for graduation in the semester submitted. Students may only use the 1 hour option once in their career.

CE 722 - SLIDING MODE CONTROL
Semester Hours: 3

CE 756 - HAZARDOUS WASTE REMEDIATION
Semester Hours: 3

Engineering design skills applied to the solution of real-world hazardous waste remediation problems. Remedy screening and selection; treatment train development for a Superfund facility.

CE 762 - WAVE MOTION CONT ELASTIC BODIES
Semester Hours: 3

Elements of stress wave propagation in bounded elastic media. Propagation of elastic waves in infinite and semi-infinite bodies, cylinders, rods, and beams.

CE 765 - RAND VIBRAT ELASTIC SYSTEM
Semester Hours: 3

CE 772 - THEORY STRUCT STABILITY
Semester Hours: 3

CE 773 - THEORY OF SHELLS
Semester Hours: 3

Analysis of thin plates and shells, including higher approximations theories and transverse-shear deformations; illustration of theories by selected problems.

CE 774 - FINITE ELEMENT ANALYSIS II
Semester Hours: 3

Advanced topics in finite element analysis: application to nonlinear partial differential equations in continuum mechanics: theoretical studies of convergence and stability of solutions.

CE 778 - FRACTURE MECHANICS
Semester Hours: 3

CE 779 - ADV PENETRATION MECHANIC
Semester Hours: 3

Advanced analytical modeling of penetration and perforation phenomena, hydrocode development and applications, and similitude analysis.

CE 799 - DOCTORAL DISSERTATION
Semester Hours: 3-9

Civil Engineering, MSE

Civil Engineering, MSE

The CEE Department offers two plans leading to the MSE degree for the Civil Engineering option. These are designated:

- Plan I (Thesis),
- Plan II (Non-thesis)
The following sections describe the requirements for each of these options. For both options, 50% of the graduate coursework must be at the 600-level or above and students must earn a grade of B or better in all 600-level or above coursework. Students should consult their faculty advisor when selecting courses for their Program of Study.

**Basic Program of Study**

The Basic Program of Study, common to both Plan I and Plan II MSE options, contains a minimum of 24 semester hours of graduate-level course work that must include:

**Engineering Major**
Select 12 semester hours of graduate courses in an engineering major including supporting engineering courses
**First Minor**
Select a first minor of 6 semester hours in an approved engineering area of specialization
**Second Minor**
Select a second minor of 6 semester hours in Mathematics or Graduate Engineering Analysis

Total Semester Hours 24

**Plan I, Thesis Option**

Students selecting this option must:

- Complete Basic Program of Study as described above
- CE 699 MASTER'S THESIS 6
- Complete an acceptable thesis including a public defense

Total Semester Hours 30

**Plan II, Non-Thesis Option**

Students selecting this option must:

- Complete Basic Program of Study 24
- Select 3 semester hours of graduate coursework to complete an approved extended program of study 3
- CE 697 MASTER'S PLAN II PROJECT 3
- Pass comprehensive final examination

Total Semester Hours 30

**Civil Engineering, PhD (Joint with UAB)**

The CEE Department offers a PhD program (jointly with UAB) in Civil Engineering.

The following table is an outline of the program of study requirements. Students should consult their dissertation advisor and supervisory committee to develop their program of study.

**Program of Study**

Students entering the joint PhD degree program with a baccalaureate degree and without a master's degree must complete the following graduate coursework:

**Engineering Major**
Select a minimum of 27 semester hours of graduate coursework in a major area

**First Minor**
Select 9 semester hours of graduate coursework in an approved engineering area of specialization

**Second Minor**
Select 6 semester hours of graduate coursework in mathematics and/or Graduate Engineering Analysis

**Additional Courses**
Select 6 additional semester hours of graduate coursework in the major, first or second minors

**Doctoral Dissertation**
24 hours of CE 799 - Doctoral Dissertation  

**Total Semester Hours**

<table>
<thead>
<tr>
<th>Hours</th>
</tr>
</thead>
<tbody>
<tr>
<td>24</td>
</tr>
<tr>
<td>72</td>
</tr>
</tbody>
</table>

1. Students entering the joint PhD program after completing their master's degree must complete 24 semester hours of coursework beyond the coursework required for their master's degree. The combined coursework completed in the master's and doctoral programs of study must satisfy the semester hour requirements for the major and minor areas specified above.

2. 24 semester hours of CE 799 must be completed for those who entered the program with a master's degree without a thesis. 18 semester hours of CE 799 must be completed for those who entered the program with a thesis.

**Electrical and Computer Engineering**

272 Engineering Building  
Telephone: 256.824.6316  
Email: ecegrad@uah.edu

**Chair:** Ravi Gorur, Professor

**Mission**

The mission of the Electrical and Computer Engineering Department is to develop and maintain high quality undergraduate and graduate programs in electrical, computer, and optical engineering to meet the needs of its constituents, and to participate in scholarly and productive research that contributes to the economic well-being and quality of life for the residents of Huntsville, the State of Alabama, and the citizens of the United States of America.

**Degree Programs**

The ECE Department supports several degree programs that provide a unique academic and research experience for students including:

- Master of Science in Engineering (Computer Engineering)
- Master of Science in Engineering (Electrical Engineering)
- Master of Science in Software Engineering
- Master of Science in Cybersecurity
- Doctor of Philosophy in Computer Engineering
- Doctor of Philosophy in Electrical Engineering

The Department of Electrical and Computer Engineering (ECE) offers opportunities for advanced work in a variety of fields including radar and radar systems, digital signal processing, digital communications, digital and analog electronics, computer architecture, parallel processing, software engineering, software safety, optics, and photonics.

Co-located in one of the nation's largest research parks, UAH has the intellectual and social environment to provide a well-rounded, technologically-oriented degree. ECE graduate students have outstanding opportunities for research, collaboration, cooperative employment, and future employment with government research centers and high-tech businesses. In addition, a number of UAH research centers collaborate with the ECE Department, including the Center for Rotorcraft Systems Engineering and Simulation, the Center for Modeling, Simulation & Analysis, the Center for Applied Optics, and the Nano and Micro Devices Center.

Prospective and current students are encouraged to visit the ECE Department web site at www.uah.edu/eng/departments/ece for information about faculty research interests, ongoing research projects, funding opportunities and course availability. Other information about the ECE graduate programs are available in the department office.

**MSE in Computer or Electrical Engineering**

The MSE in Computer or Electrical Engineering each require 31 semester hours and consist of two options. The thesis option requires 24 semester hours of graduate coursework and a minimum of 6 semester hours of thesis. Students under this option, must complete a written thesis and an oral defense. The non-thesis option requires 30 hours of graduate coursework and 1 hour of Practicum.

Students wishing to pursue a MSE degree in Computer or Electrical Engineering must meet the admission requirements of UAH Graduate Studies as well as the College of Engineering. Students who are admitted to these programs must file a program of study made in consultation with their faculty advisor.

**MS in Software Engineering (MSSE)**

The MSSE degree program has two options: Plan I and Plan II. Plan I requires 24 semester hours of graduate coursework and a minimum of 6 semester hours of thesis. Plan I students must also write and defend a thesis as a final examination. Plan II requires 36 semester hours of coursework including 6 semester hours of Software Studio. Students who are admitted to these programs must file a program of study made in consultation with their faculty advisor.
advisor. Students wishing to pursue a MSSE degree must meet the admission requirements of UAH Graduate Studies, as well as the College of Engineering.

**MS in Cybersecurity (MSCBS)**

The MSCBS degree program is an interdisciplinary program with the Colleges of Science and Business with a distinct computer engineering track. The MSCBS has one option: 30 semester hours of graduate coursework with no thesis. Students who are admitted to these programs must file a program of study made in consultation with their faculty advisor. Students wishing to pursue a MSCBS degree must meet the admission requirements of UAH Graduate Studies, as well as the College of Engineering.

**PhD in Computer or Electrical Engineering**

The ECE Department offers a program leading to the degree of Doctor of Philosophy (PhD) in Computer or Electrical Engineering. The PhD is a research-oriented degree awarded upon completion of a defined program of study, demonstration of scholarly competence, distinctive achievement in a special field, and demonstrated ability to do an independent, original investigation. Demonstration of substantial scholarly research accomplishments, rather than mere accumulation of residence and course credits, is an essential consideration in awarding the PhD degree.

The ECE Department doctoral programs require 48 semester hours of approved coursework. Students must register for a minimum of 18 semester hours of dissertation research. Students must meet with their doctoral advisors to develop a program of study, which lists the approved coursework required for the PhD. In addition, students must register for dissertation research every semester after the completion of the program of study until the dissertation defense. At the end of the coursework, a student must pass a Qualifying Examination. Finally, a student must write an acceptable dissertation which must be defended in front of the supervisory committee. More details about these examinations are available in the department office. In order for a student's doctoral dissertation to be approved, at least one refereed journal or refereed national conference article must be published or accepted for publication.

Students wishing to pursue a PhD must meet the admission requirements of UAH Graduate Studies as well as the College of Engineering. Students who do not have the appropriate bachelor's or master's degree from an ABET-accredited Computer or Electrical Engineering program must complete the foundation courses described below or demonstrate proficiency by completing similar courses or providing evidence based on employment experience.

**Foundation Courses**

The Computer and Electrical Engineering degree programs described above assume that students have a bachelor's degree and/or master's degree in Computer or Electrical Engineering, respectively.

To pursue the MSE or PhD in Computer Engineering, students who do not have a bachelor's degree in Computer Engineering should complete coursework or demonstrate knowledge in the following CPE foundation areas:

<table>
<thead>
<tr>
<th>Programming Languages/Software Engineering</th>
<th>3</th>
</tr>
</thead>
<tbody>
<tr>
<td>CPE 211 INTRO COMPUTER PROG FOR ENGR</td>
<td></td>
</tr>
<tr>
<td>CPE 212 FUNDAMENTALS SOFTWARE ENGRG</td>

<td></td>
</tr>
</tbody>
</table>

**Total Semester Hours** 24

An entering student can demonstrate knowledge of the material in one of the following ways: completing the courses at UAH, completing similar courses at another institution, or by providing evidence based on employment experience. A student may be required to successfully pass a placement exam to demonstrate their knowledge of the material. Up to 3 credit hours from CPE 531 may be applied towards a student's graduate program if: (1) The student has completed the foundation courses at UAH as a part of their graduate program, and (2) the student is enrolled in Plan II (non-thesis) MSE in the CPE program.

To pursue the MSE or PhD in Electrical Engineering, students who do not have a bachelor's degree in Electrical Engineering should complete coursework or demonstrate knowledge in the following subjects:

<table>
<thead>
<tr>
<th>Electrical Engineering</th>
<th>3</th>

EE 315  INTRO ELECTRONIC ANAL & DESIGN  3
EE 382  ANALY METH CONTINUOUS TIME SYS  3
EE 383  ANALY METH MULTIVARIABLE  3
EE 385  RANDOM SIGNALS & NOISE  3

Total Semester Hours  21

1 An entering student can demonstrate knowledge of the material in one of the following ways: completing the courses at UAH, completing similar courses at another institution, or by providing evidence based on employment experience. A student may be required to successfully pass a placement exam to demonstrate their knowledge of the material.

To pursue either the MSSE or the MSCBS degrees, students who do not have a Computer Science or Computer Engineering bachelor's degree from an ABET-accredited program must complete the following courses or demonstrate knowledge in those subject areas. Experience in the development of a large scale, industrial strength software system is highly desirable.

CPE 211  INTRO COMPUTER PROG FOR ENGR (or programming in C, C++ or Java)  3
CPE 212  FUNDAMENTALS SOFTWARE ENGRG (Data Structures)  3
CS 214  INTRO DISCRETE STRUCTURE  3
CS 317  INTRO DESIGN/ANALYSIS OF ALG  3
CPE 431  INTRO COMPUTER ARCHITECTURE  3
CPE 434  OPERATING SYSTEMS  3

Total Semester Hours  18

1 An entering student can demonstrate knowledge of the material in one of the following ways: completing the courses at UAH, completing similar courses at another institution, or by providing evidence based on employment experience. A student may be required to successfully pass a placement exam to demonstrate their knowledge of the material.

Master's Programs in Electrical & Computer Engineering

• Computer Engineering, MSE (p. 902)
• Electrical Engineering, MSE (p. 903)
• Master of Science in Cyber Security (p. 902)
• Master of Science in Software Engineering, MSSE (p. 904)

Doctoral Programs in Electrical & Computer Engineering

• Computer Engineering, PhD (p. 900)
• Electrical Engineering, PhD (p. 901)

CPE 512 - INTRO PARALLEL PROGRAMMING
Semester Hours: 3

CPE 523 - HARDWARE/SOFTWARE CO-DESIGN
Semester Hours: 3

Study and design of Systems On a Chip (SOC). Emphasis on Field Programmable realizations of SOC systems.

CPE 526 - VLSI HARDWARE DESC LANG/MODL/S
Semester Hours: 3

Modern VLSI design techniques and tools, such as silicon compilers, (V)HDL modeling languages, placement and routing tools, synthesis tools, and simulators. Students will design, simulate, and layout using both programmable logic families and ASIC libraries.

CPE 527 - VLSI DESIGN I
Semester Hours: 3

Introduction to VLSI design using CAD tools, CMOS logic, switch level modeling, circuit characterization, logic design in CMOS, systems design methods, test subsystem design, design examples, student design project. Design project to be fabricated and tested in CPE 528. Students enrolling in CPE 527 must enroll concurrently in CPE 527L.
CPE 527L - LABORATORY
Semester Hours: 0

Students enrolling in CPE 527L must enroll concurrently in CPE 527.

CPE 528 - VLSI DESIGN II
Semester Hours: 3

Advanced experience with CAD tools for VLSI design, IC testing. Design project from CPE 527 will be fabricated and tested. Implementation and verification of test programs, IC testing and troubleshooting, legal, economic, and ethical design issues. Oral presentations and written reports are required. Students enrolling in CPE 528 must enroll concurrently in CPE 528L.

CPE 528L - LABORATORY
Semester Hours: 0

Students enrolling in CPE 528L must enroll concurrently in CPE 528.

CPE 531 - INTRO COMPUTER ARCHITECTURE
Semester Hours: 3

Existing computer structures. Computer organization with emphasis on busing systems, storage systems, and instruction sets. Special purpose architecture, performance models and measures, VLSI influence on architecture.

CPE 534 - OPERATING SYSTEMS
Semester Hours: 3

Study of the fundamentals of operating systems. Emphasis on processes, file management, interprocess communication, input-output, virtual memory, networking and security.

CPE 536 - INTERNALS OF MODERN OPER SYS
Semester Hours: 3

In-depth study of the design of modern operating systems such as Unix, NT, and Linux. Emphasis on the internals and implementation details of interrupt processing, real-time clocks, device independent I/O, process management, memory management, file management.

CPE 538 - REAL TIME & EMBEDED SYSTEMS
Semester Hours: 3

Study of design methodologies for reliable real time systems.

CPE 548 - INTRO TO COMPUTER NETWORKS
Semester Hours: 3

Introduction to the concepts and architecture of computer networks. Review of communication protocols using the Internet and the TCP/IP model as major examples. High-speed networking, congestion control, data compression, security and distributed processing.

CPE 549 - INTRO TO CYBERSECURITY ENGINEERING
Semester Hours: 3

Introduction to cryptography and computer security through hardware and physical security to knowledge of audit methods, security management, and public law. The course will introduce security engineering skills such as business process analysis, software security, IAE evaluation, and IAE testing.

CPE 549L - INTRO INFORM ASSURANCE ENGR LAB
Semester Hours: 0

Students enrolling in CPE 549 must enroll concurrently in CPE 549L.

CPE 561 - TRANSLATION SYSTEMS
Semester Hours: 3

Grammars, parsers, and lexical analyzers; implementation of translators via top-down and bottom up techniques; grammar analysis to identify ambiguities. Practical applications of translators including conversion of file formats and compilation of traditional computer languages.

CPE 590 - SPECIAL TOPICS IN COMP ENGR
Semester Hours: 1-3

CPE 590L - SELECTED TOPICS LABORATORY
Semester Hours: 0

CPE 601 - SURVEY INFORMATION ASSURANCE
Semester Hour: 1
CPE 610 - SELECTED TOPICS IN COMPUTER EN
Semester Hours: 1-6

CPE 612 - PARALLEL ALGORITHMS
Semester Hours: 3

Introduction to metrics describing the performance and scalability of parallel algorithms. Performance analysis of parallel algorithms for performing sorting, matrix multiplication, solving linear equations, and FFT.

CPE 613 - GEN PURPOSE GPU COMPUTING
Semester Hours: 3

The focus of this course is to introduce emerging techniques and programming paradigms that can be used to accelerate the processing speed of scientific and other high performance applications using Graphics Processing Units, GPUs. GPUs represent low-cost highly parallel video processing hardware that can be programmed for general purpose applications using UDA/OpenCL software architecture. The course will survey the current state of research and industrial activity and will give student's hands-on experience implementing design applications on real-world GPU facilities for a wide range of scientific applications.

CPE 619 - MODELING & ANAL COMPU/COMMUN S
Semester Hours: 3

CPE 621 - ADVANCED EMBEDDED SYSTEMS
Semester Hours: 3

Deeply embedded low-power wireless sensors. Low-power microcontroller architectures, sensor platform architecture, wireless intelligent sensors, low power wireless communication standards, battery powered systems, resource constrained operating systems, data aggregation/sensor synergy, and collaborative signal processing.

CPE 625 - CMOS ANALOG CIRCUIT DESIGN
Semester Hours: 3

CPE 626 - ADVANCED VLSI DESIGN
Semester Hours: 3

Advanced VLSI Design. Case study of the VLSI design of a modern RISC processor using a Hardware Description Language.

CPE 628 - TESTING OF HARDWARE SYSTEMS
Semester Hours: 3

Introduction to testing of digital electronic circuits and systems. Topics include: fault modeling, testing problems, testing schemes, test generation for combinational and sequential circuits, the complexity of testing, design for testability, built-in self-testing and boundary scan.

CPE 631 - ADV COMP SYSTEMS ARCHITECTURE
Semester Hours: 3

Study of architectural features of modern processors, including cache memories and memory systems, pipeline designs, branch prediction techniques. Design of superscalar, multithreaded VLIW processors, code optimization for such systems will be studied. Quantitative evaluation of architectural features are emphasized throughout the course.

CPE 633 - FULT-TOLERANT COMPUTING SYSTEM
Semester Hours: 3

Analysis and design of very high reliability and availability systems. Fault types, reliability techniques, and maintenance techniques. Case studies of high-availability long-life, life-critical systems. Both hardware and software techniques for achieving fault-tolerance will be studied.

CPE 635 - SYSTOLIC ARRAY PROCESSING
Semester Hours: 3

Systolic structure of fast algorithms and switchable array realizations.
CPE 641 - DATA & DIGITAL COMMUNICATIONS  
Semester Hours: 3

Introduction to digital and data communications; transmission channels; modulation and coding; telephone networks; data communication standards; noise and distortion; computer interfacing; protocols.

CPE 643 - OPTICAL COMMUNICATIONS  
Semester Hours: 3

CPE 645 - COMPUTER NETWORK SECURITY  
Semester Hours: 3

Principles and concepts of computer network security. Introduction to cryptography, confidentiality, authentication, digital signatures, E-mail security, IP security, web security, intruders, malicious software, firewall, and other network security-related issues.

CPE 646 - MOBILE & WIRELESS NETWORKS  
Semester Hours: 3

High-level issues in mobile and wireless networks. The main topics are mobile IP, mobile Ad hoc NETworks (MANETS) wireless sensor networks, wireless LAN, Bluetooth, cellular networks, satellite systems and security issues in mobiles and wireless networks.

CPE 647 - UBQUITOUS COMPUTING  
Semester Hours: 3

The course is based on the new "anytime, anywhere" computing paradigm, also known as ubiquitous computing. This course is project oriented, and explores issues of mobile, wireless, and distributed computing in Internet environment, advanced human-computer interfaces, and power efficient computing.

CPE 648 - ADVANCED COMPUTER NETWORKS  
Semester Hours: 3

Advanced principles and concepts of general-purpose computer networks, with a special emphasis to internetworking and Internet. Transport and higher level protocols emphasis. Programming issues. High-speed networking, congestion control, data compression, security and distributed processing will be covered.

CPE 649 - ADV CYBERSECURITY ENGINEERING  
Semester Hours: 3

Introduction to topics ranging from how to attack computer systems and networks to how to protect and recover from attacks on computer systems and networks. Basic process utilized by computer attackers in order to develop a complete understanding and appreciation of the threat to information assurance. Process of detecting, preventing, and recovering from information assurance attacks. Intrusion Detection and Prevention Systems, Auditing, Security Vulnerability Assessments, and the Incident Response process.

CPE 649L - ADV INFORM ASSURANCE ENG LAB  
Semester Hours: 0

Students enrolling CPE 649 must enroll concurrently in CPE 649L.

CPE 656 - SOFTWARE ENGRG STUDIO I  
Semester Hours: 3

This is the first course in a two course studio series required for the MSSE degree in the College of Engineering. Students will work in small design teams on medium sized software projects. Activities include developing requirements, designing and constructing system prototypes, developing and implementing test and verification plans, and presenting the project for evaluation. The practice of software design and evaluation will be conducted in an iterative cycle using best software engineering practices, so that design and execution can be refined over the lifecycle of the project.

CPE 658 - SOFTWARE ENGRG STUDIO II  
Semester Hours: 3

This is the second course in a two course studio series required for the MSSE degree in the College of Engineering. Students will work in small design teams on medium sized software projects. Activities include developing requirements, designing and constructing system prototypes, developing and implementing test and verification plans, and presenting the project for evaluation. The practice of software design and evaluation will be conducted in an iterative cycle using best software engineering practices, so that design and execution can be refined over the lifecycle of the project.

CPE 690 - SELECTED TOPICS COMPUTER ENGRG  
Semester Hours: 1-6
CPE 692 - CYBERSECURITY CAPSTONE
Semester Hours: 3

A capstone course emphasizing the integration of various principles, theories, and techniques for developing, implementing and using cybersecurity strategies and applications in organizations. Includes readings, lectures, tours, situation analysis, cases, and the completion of a major practical project. Normally taken in the last semester of a student's program. Minimum grade B required. Prerequisites: CS 585, CPE 549, IS 660, IS 663.

CPE 695 - PROJECTS IN COMPUTER ENGRG
Semester Hours: 3

CPE 699 - MASTER’S THESIS
Semester Hours: 1-9

Required each semester student is working and receiving direction on a master's thesis. Minimum of two semesters and 6 hours required for M.S.E. students. A maximum of 9 hours credit is awarded upon successful completion of master's thesis. The 1 hour option is only available to students who have successfully defended their thesis and submitted it for approval, but do not meet the deadlines for graduation in the semester submitted. Students may only use the 1 hour option once in their career.

CPE 710 - SEL TOPICS IN PARALLEL PROC
Semester Hours: 3

CPE 715 - SELECTED TOPICS IN COMPUTAT TH
Semester Hours: 3

CPE 720 - SELECTED TOPICS IN VLSI DESIGN
Semester Hours: 3

CPE 726 - ALGORITHMS FOR VLSI DESIGN TOO
Semester Hours: 3

Tools for VLSI Design. This course is concerned with the algorithms found in VLSI design tools.

CPE 730 - SELECTED TOPICS IN COMPUTER SY
Semester Hours: 3

CPE 731 - DISTRIBUTED SHARED MEMORY SYS
Semester Hours: 3

Study issues related to performance, granularity of sharing, multithreading, cache coherence, memory consistency models, pull vs push caching, false sharing, thread migration. Case studies systems, including DASH, FLASH ThreadMarks, SHRIMP, Calypso, Alewife to understand these issues.

CPE 735 - SELECTED TOPICS IN OPERATING S
Semester Hours: 3

CPE 740 - SPEC TOPICS COMPUTER NETWORKS
Semester Hours: 3

CPE 742 - PARALLEL PROCESS DESIGN
Semester Hours: 3

CPE 748 - MOBILE & WIRELESS NETWORKS
Semester Hours: 3

High-level issues in mobile and wireless networks. The main topics are mobile IP, Mobile Ad hoc NETworks (MANETs), wireless sensor networks, wireless LAN, Bluetooth, cellular networks, satellite systems, and security issues in mobiles and wireless networks.

CPE 760 - SEL TOPICS COMPILER/TRANSLAT S
Semester Hours: 3

CPE 790 - SEL TOPICS COMPUTER ENGRG
Semester Hours: 1-6

CPE 795 - RESEARCH IN COMPUTER ENGRG
Semester Hours: 1-6

CPE 799 - DOCTORAL DISSERTATION
Semester Hours: 3-9

Required each semester student is enrolled and receiving direction on doctoral dissertation.
EE 500 - RANDOM SIGNALS & NOISE
Semester Hours: 3

EE 501 - DIGITAL SIGNAL PROC ARCHITECTU
Semester Hours: 3
Introduction to digital signal processor architecture, applications, assembly language programming, and development tools for designing and implementing DSP systems.

EE 503 - COMMUNICA SYS & SIMULAT W/LAB
Semester Hours: 3
Modern test equipment and computer-based simulation methods are used to conduct experiments in the area of communication systems. Hands-on experiments are conducted using digital oscilloscopes, arbitrary waveform generators, vector impedance meters and other relevant test and measurement equipment. Methods are investigated for signal modulation and demodulation; studies are conducted on AM, FM, PSK, PCM and delta modulation circuits and systems. Several types of filters are investigated, both analytically and experimentally. Properties and behavior of phase-locked loop are studied by using both hardware and numerical simulations.

EE 504 - INTRO DATA COMMUNICA NETWORKS
Semester Hours: 3
Overview of historic development of modern telephone and data communication system, system architecture, standards, broadband switching systems, modems, protocols, personal and mobile communications, digital modulation techniques.

EE 505 - INTRO CONTROL/ROBOTIC SY
Semester Hours: 3
The basic theories and analytical techniques for modeling, analysis and control of dynamical systems. Transfer functions, block-diagrams, frequency response, stability criteria, series and feedback controller design, digital control. Introduction to the dynamic analysis and control of robotic systems.

EE 506 - COMMUNICATION THEORY
Semester Hours: 3

EE 510 - SELECTED TOPICS/ECE
Semester Hours: 1-6

EE 510L - SELECTED TOPICS LABORATORY
Semester Hours: 0

EE 514 - ANALOG AND DIGITAL
Semester Hours: 3
Analog filter design via Butterworth, Chebyshev, and elliptical approximation. Active filter design using operational amplifiers. Digital filter design methods.

EE 516 - DIGITAL ELECTRONICS
Semester Hours: 3
Introduction to digital electronics. The Metal-Oxide-Semiconductor (MOS) transistor. MOS inverter and gate circuits. Bipolar junction transistors, ECL inverters, and bipolar digital gates. Semiconductor memories. Circuit design for VLSI.

EE 519 - DIGITAL ELECTRONICS LAB
Semester Hour: 1

EE 527 - ELECTROMAGNETIC ENGINEERING
Semester Hours: 3
Review of Maxwell's equations, uniform plane waves in different types of media, reflection and transmission of uniform plane waves, transmission lines, microwave and fiber optic waveguides, antennas, wireless applications.

EE 532 - OPTICAL SYSTEMS DESIGN
Semester Hours: 3
Introduction to the geometrical design and analysis of optical systems, and to the design principles of lens systems.
EE 534 - OPTICAL FIBER COMMUNICATIONS  
Semester Hours: 3  
Introduction to optical fibers and their transmission characteristics, optical fiber measurements, sources and detectors, noise considerations for digital and analog communications, optical fiber systems.

EE 541 - OPTICS I  
Semester Hours: 3  
Foundations and physics of geometrical optics, Fermat’s principles and Huygen wavelets, refraction and reflection. The many forms of Snell’s Law. Optical path lengths, geometrical wavefronts and rays. Ray tracing, ynu-chart and matrix methods. Gaussian imagery and paraxial optics, conjugate elements, cardinal points, and image-object relations. Stops and pupils, chief and marginal rays, vignetting, and the optical or Lagrange invariant. The y-ybar diagram, design of common systems: objectives, magnifiers, microscopes, collimators and detectors. Optical glasses and chromatic aberrations, wavefront and transverse aberrations, spot diagrams and ray fan plots.

EE 542 - PHYSICAL OPTICS  
Semester Hours: 3  
Scalar and electromagnetic waves, polarization, coherence, reflection and refraction; two beam and multiple beam interference, interferometers, Fabry-Perots, thin films, diffraction, and absorption and dispersion.

EE 543 - OPTICAL COMM SYS & NETWORKS  
Semester Hours: 3  
Spontaneous and stimulated emission, population inversion, optical resonators, three- and four-level systems, Q-switching and modelocking, semiconductor lasers, integrated optic waveguides and couplers, scanning systems, high power industrial applications. Includes a research project and oral presentation.

EE 553 - LASER SYSTEMS  
Semester Hours: 3  

EE 558 - INTRO MODERN CONTROL SYSTEMS  
Semester Hours: 3  

EE 601 - LINEAR SYSTEMS  
Semester Hours: 3  
Formulation and solution by transform methods of differential equations of linear electrical and electromechanical systems, state equations, signal-flow graphs, and discrete-time systems.

EE 603 - RANDOM SIGNALS IN COMMUNICATIONS  
Semester Hours: 3  
Random processes applied to communication and control. Concepts covered include stationarity, correlation, power spectrum, Brownian motion, thermal noise, Markov processes, and queuing theory. Emphasis on systems with noisy excitation.

EE 604 - DIGITAL IMAGE PROCESSING  
Semester Hours: 3  

EE 605 - CLASSICAL CONTROL DESIGN  
Semester Hours: 3  
Design of feedback, feedforward, and minor-loop controllers/compensators using classical control engineering techniques and classical performance criteria. Frequency domain synthesis of lead, lag, lead-lag, etc. compensators; tuning of PD and PID controllers; error budgets; use of commercial CAD software for classical control design and performance evaluation; digital simulation techniques. CAD laboratory sessions.
EE 606 - STATISTICAL COMM THEORY  
Semester Hours: 3  

EE 607 - ROBOTIC SYSTEMS CONTROL  
Semester Hours: 3  
In-depth study of information, decision and control problems associated with robotic system design. Sensor systems, recognition and decision algorithms, kinematics and dynamics, trajectory planning, analog and digital controllers, adaptive and optimal control.

EE 609 - ELECTROMAGNETIC FIELD THEORY  
Semester Hours: 3  

EE 610 - SELECTED TOPICS/ECE  
Semester Hours: 1-6

EE 612 - GRADUATE DESIGN PROJECT  
Semester Hours: 3  
Graduate design project in support of an M.S.E. program.

EE 613 - LASER ELECTRONICS  
Semester Hours: 3  

EE 615 - ANALOG CIRCUIT DESIGN  
Semester Hours: 3  
Use of operational amplifiers to synthesize special-purpose filters and circuits for analog signal processing and conditioning; linear and switching power supplies; high-frequency effects; circuits for transmitters and receivers; digital circuits from an analog viewpoint; A/D and D/A converters; selected topics.

EE 616 - MICROELECT DEV/INTE CIRC  
Semester Hours: 3  

EE 617 - VLSI INTEGRATION DEVICES  
Semester Hours: 3  
Operation and modeling of the MOS transistor. Second-order considerations for a MOSFET, VLSI device fundamentals and scaling laws. Micron-length and submicron-length semiconductor devices. Basic technology and applications of VLSI. Impact of VLSI on computer architecture. VLSI computer aided design.

EE 618 - VLSI CIRCUITS  
Semester Hours: 3  

EE 619 - INTRO RADAR SYSTEMS  
Semester Hours: 3  
Topics include radar equation, CW radar, MTI and pulse Doppler radar, tracking radar, major systems components, detection in the presence of noise and clutter, ambiguity, and resolution.

EE 620 - CMOS ANALOG CIRCUIT DESIGN  
Semester Hours: 3
EE 629 - ANAL & COMP METH IN ELEC ENG I
Semester Hours: 3
Analytic and numerical solution techniques applicable to problems arising in engineering, utilizing complex variable theory, linear algebra, matrix theory, and transform methods.

EE 630 - ANAL & COMP METHODS ELEC EG II
Semester Hours: 3
Analytical and numerical solution techniques applicable to problems arising in electrical engineering. Partial differential equations, vector differential and integral calculus, special functions, Fourier analysis with applications and integral equations.

EE 632 - FOURIER OPTICS
Semester Hours: 3
Introducing the optical system as an invariant linear system, convolution, Sommerfield's diffraction integral, Fourier Transform, angular spectrum, coherent and incoherent imaging, optical transfer function.

EE 633 - ELECTRO-OPTICAL ENGINEER
Semester Hours: 3
Propagation of optical beams in homogeneous and guiding media, optical resonators, and spectrum analyzers, theory of laser oscillation, some specific laser systems, parametric oscillators, electro-optical and acousto-optical modulators.

EE 634 - OPTICAL COMMUNICATIONS
Semester Hours: 3
Optical communication systems; counting statistics; the optical detector response process; direct detection; homodyne detection parameter estimation in optical communications; pointing, spatial acquisition and tracking.

EE 642 - DATA & DIGITAL COMMUNICATION
Semester Hours: 3
Introduction to digital and data communications; transmission channels; modulation and coding; telephone networks; data communication standards; noise and distortion; computer interfacing; protocols.

EE 648 - DIGITAL SIGNAL PROCESSING
Semester Hours: 3
Theory and applications of signal processing by digital techniques. Difference equations, Z-transform theory, digital-filter design, fast Fourier transform, quantization effects, and discrete estimation. Applications in digital filtering, signal processing, data analysis and smoothing, and image processing.

EE 654 - OPTICAL TESTING
Semester Hours: 3
EE 670 - OPTOMECHANICAL DESIGN & MANUF
Semester Hours: 3
EE 672 - DIGITAL PROC RANDOM SIGNALS I
Semester Hours: 3
Discrete signals, linear systems, spectral analysis and probability; and random discrete-time signals. Introduction to statistical interference, time-series analysis and spectral estimation of random discrete-time signals. Cross correlation and cross spectra, multitaper spectrum estimation and multivariable spectral analysis.

EE 673 - DIGITAL PROC RANDOM SIGNALS II
Semester Hours: 3
Parametric models for random signal processing; AR (autoregressive), MA (moving average), ARMA (autoregressive moving average), and Prony method. Two-dimensional spectral estimation; higher-order spectral analysis and multiresolution signal analysis.

EE 690 - UNIFORM GEOM THY DIFFRAC
Semester Hours: 3
Geometrical optics fields, geometrical optics reflected fields, two-dimensional wedge diffraction (GTD and UTD), three-dimensional wedge diffraction and corner diffraction, equivalent currents, diffraction at a smooth convex conducting surface, radar cross section.
EE 693 - ECE CAPSTONE  
Semester Hours: 1-3

The purpose of this course is for students to perform research in a subject gained from courses taken at the graduate level. Students will be introduced to rhetorical theory, training in oral and written communication skills. They are required to organize and deliver oral and written technical presentations on individual research, journal articles, or design projects.

EE 696 - GRAD INTERN EE ENGR  
Semester Hours: 1-9

Active involvement in an engineering project in an engineering enterprise, professional organization or government agency that has particular interest and relevance to the graduate student. Permission of EE faculty member is required.

EE 699 - MASTER'S THESIS  
Semester Hours: 1-9

Required each semester student is working and receiving direction on a master's thesis. Minimum of two semesters and 6 hours required for M.S.E. students. A maximum of nine hours of credit is awarded upon successful completion of master's thesis. The 1 hour option is only available to students who have successfully defended their thesis and submitted it for approval, but do not meet the deadlines for graduation in the semester submitted. Students may only use the 1 hour option once in their career.

EE 700 - SAMPLED DATA CONT SYS  
Semester Hours: 3

Classical and modern methods for analysis and design of sampled data-control systems; Ztransforms, transport lags, z and w plane analysis, state variables, and the transition matrix.

EE 701 - ADV LINEAR CONTROL THRY  
Semester Hours: 3

Modern techniques for analysis and design of linear control systems. Matrix formulation, multivariable control systems, state variable concepts. Linear transformation, controllability, observability, discrete-time systems.

EE 703 - MODERN CONTROL DESIGN  
Semester Hours: 3

Use of modern (state-variable) control concepts and theories to design high-performance controllers for multi-input/multi-output set-point regulation and servo-tracking/pointing problems. Modeling of uncertain disturbances; design of disturbance-accommodating controllers; introduction to adaptive and stochastic control. Use of commercial CAD software for modern control design and performance evaluation. CAD laboratory sessions.

EE 704 - NONLINEAR CONTROL SYSTEM  
Semester Hours: 3

Classical and modern methods for analysis and design of nonlinear automatic control systems. State variables, phase plane, limit cycles, stability, describing functions, relay control, stabilization theory.

EE 705 - THEORY OPTIMAL CONTROL  
Semester Hours: 3

EE 706 - KALMAN FILT TECH CON & SIG PRO  
Semester Hours: 3

Basic concepts of Kalman Filtering Theory with applications to: 1) analysis and design of control systems for dynamic processes with noisy sensors and random-type disturbance inputs, and 2) estimation, smoothing and prediction of information in noisy signals; Optimum Stochastic Control and the Separation Principle. Matrix Riccati Equation, Covariance Matrix, Orthogonal Projection Theorem.

EE 707 - INFORMATION THEORY  
Semester Hours: 3

Self-information, entropy, mutual information, and channel capacity, encoding, error detecting and correcting codes. Sampling theorem. Discrete and continuous channels.

EE 709 - DISCR RANDOM SIG/SPEC ES  
Semester Hours: 3

Review of linear systems theory, random discrete processes, classical spectral estimation, parametric models of discrete random processes, autoregressive (AR), moving average (MA), autoregressive moving average (ARMA) models.
EE 710 - SELECTED TOPICS/ECE
Semester Hours: 1-6

EE 711 - ANTENNA THEORY
Semester Hours: 3
Antennas and antenna arrays. Radiation patterns and impedance characteristics. Spheres, cylinders, horns, slots, microwave lenses, traveling-wave, and frequency independent antennas.

EE 716 - DEVICE MOD INTEG CIR DSG
Semester Hours: 3

EE 717 - SPACE APPLI/ELECTROMAGNE
Semester Hours: 3
Plasma as a dielectric; dielectric functions for cold, warm, isotropic and anisotropic plasmas, body-plasma interaction; space craft electrodynamics, antennas in plasmas; mode of radiation, input impedance and radiation pattern, scattering problems involving plasmas.

EE 718 - MICROWAVE TECHNIQUES
Semester Hours: 3

EE 721 - ROBUST AND ADAPTIVE CONTROL
Semester Hours: 3
Introduction to fundamental ideas of robust and adaptive control. Effects of parameter and disturbance uncertainties, H-infinity and mu-synthesis ideas; parameter estimation techniques; adaptive control algorithms; stability considerations; model-reference and linear adaptive control techniques.

EE 722 - SLIDING MODE CONTROL
Semester Hours: 3
The basic and advanced theories and analytical techniques for modeling and analysis of systems dynamics in sliding manifolds. Traditional and High Order Sliding mode controller design. Discontinuous and equivalent control, robustness. Applications to control of electro-mechanical systems, reusable launch vehicle, air craft, spacecraft, and DC-to-DC power converters.

EE 724 - RADAR WAVEFORMS & SIGNAL PROCE
Semester Hours: 3
Stretch Processing. Synthetic Aperture Radar and SAR signal processing, Space-time adaptive processing (STAP). Phase coded waveforms and processing. Frequency hop waveforms.

EE 725 - ADVANCED RADAR TECHNIQUE
Semester Hours: 3
Modern radar systems for search and tracking are analyzed with emphasis on signal processing. Modeling and simulation of system and environment. Advanced techniques include CFAR, binary modulation, frequency agility, polarization agility, and synthetic aperture.

EE 726 - DECIS/ESTIMATION THEORY
Semester Hours: 3
Classical detection theory, including maximum likelihood, Neyman-Pearson, Bayes and minimax criteria. Estimation theory concepts and criteria, linear estimators, Kalman filters, maximum likelihood and least-squares estimator, matched filters, Cramer-Rao lower bound. Introduction to pattern recognition.

EE 727 - NUMER METH ELECTROMAGNET
Semester Hours: 3
EE 733 - NONLINEAR OPTICS APPLICATIONS  
Semester Hours: 3  
Modeling of optical nonlinearities; Kerr, thermal and photorefractive effects; nonlinearity-induced beam distortion; applications of nonlinearities in crystals and fibers; quantum well and SEED devices; soliton-based communication system; nonlinear optical switches, deflectors and limiters; measurements of nonlinearities.

EE 734 - FIBER OPTICS  
Semester Hours: 3  
Propagation in dielectric slab and fibers with step and graded index of refraction; electromagnetic and ray optical methods; eikonal equations; ray trajectory; WKB method; paraxial approximation; weakly guiding structures.

EE 735 - STATISTICAL OPTICS  
Semester Hours: 3  
Introduction to random variables and random processes; first-order properties of light waves; coherence of optical waves, partial coherence and imaging systems, imaging in randomly inhomogeneous media, fundamental limits in photoelectric detection of light.

EE 737 - CHAN CHAR COMM RAND MEDI  
Semester Hours: 3  
Modeling stationary and not strictly stationary random media; scatter communications channels; line of sight communication channels ? weak scattering and strong scattering.

EE 738 - OPT TRANSF/PATTN RECOGNI  
Semester Hours: 3  
Systems and transforms in diffraction theory; two-dimensional Fourier transform; Hankel transforms; generalized Hankel transforms; optical signals, correlation coherence; filtering; apodization; applications to optical pattern recognition.

EE 742 - WIRELESS COMMUNICATIONS  
Semester Hours: 3  
Design and analysis of wireless transmission systems.

EE 744 - CODING THRY & SPREAD SPECTRUM  
Semester Hours: 3  
Linear block coding techniques, convolutional codes and the Viterbi decoding algorithm, probability of error bounds, channels with intersymbol interference and additive Gaussian noise. Introduction to spread spectrum direct sequence and frequency hopping methods.

EE 745 - MOD/PHASE LOCK TECH COMM  
Semester Hours: 3  

EE 747 - PATTERN RECOGNITION ALGORITHMS  
Semester Hours: 3  
Introduction to digital signal processors hardware architecture. Applications of digital signal processing in telecommunications, speech and image processing, radar and sonar. Development and implementation of DSP algorithms; DSP laboratory session.

EE 799 - DOCTORAL DISSERTATION  
Semester Hours: 3-9  
Required each semester student is enrolled and receiving direction on doctoral dissertation.

**Computer Engineering, PhD (Shared with UAB)**

The ECE Department offers, jointly with UAB, a PhD program in Computer Engineering.

The following table is an outline of the program of study requirements. Students should consult their dissertation advisor and supervisory committee to develop their program of study.
Program of Study

CPE Major
Select a major consisting of a minimum of 18 semester hours of approved related coursework in Computer Engineering 18

Math Minor
Select one of the following options: 12

- **Option 1:** Select 12 semester hours in approved graduate level mathematics courses

- **Option 2:** Select 6 semester hours in approved graduate level mathematics courses and select one of the following approved two-course sequences

  - MA 585 & CPE 619: PROBABILITY and MODELING & ANAL COMPU/COMMUN S
  - MA 540 & MA 640: COMBINATORIAL ENUMERATION and GRAPH THEORY
  - MA 640 & MA 740: GRAPH THEORY and COMBINATORIAL ALGORITHMS
  - EE 629 & EE 630: ANAL & COMP METH IN ELEC ENG I and ANAL & COMP METHODS ELEC EG II
  - MA 542 & CPE 645: ALGEBRA and COMPUTER NETWORK SECURITY

Engineering or Computer Science Area of Specialization Minor
Select a minor consisting of 12 semester hours of approved coursework in engineering or computer science 12

Supporting Coursework and Dissertation Semester Hours
Select 6 semester hours of approved ECE graduate coursework 6

Complete a dissertation 18

Total Semester Hours 66

Electrical Engineering, PhD

The ECE Department offers a PhD in Electrical Engineering.

The following table is an outline of the program of study requirements. Students should consult their dissertation advisor and supervisory committee to develop their program of study.

Program of Study

EE Major
Select a minimum of 18 semester hours of approved related coursework in Electrical Engineering 18

Math Minor
Select one of the following options: 12

- **Option 1:** Select 12 semester hours in approved graduate level mathematics courses

- **Option 2:** Select 6 or 9 semester hours in approved graduate level mathematics courses and one of the following approved two-course sequences

  Select one of the following approved two course sequences:

  - EE 629 & EE 630: ANAL & COMP METH IN ELEC ENG I and ANAL & COMP METHODS ELEC EG II
  - PH 607 & PH 609: MATHEMATICAL METHODS I and MATHEMATICAL METHODS II

Engineering or Computer Science Area of Specialization Minor
Select a minor consisting of 12 semester hours of approved coursework in engineering or computer science 12

Supporting Coursework and Dissertation Semester Hours
Select 6 additional semester hours of approved graduate level ECE coursework 6

Complete a dissertation 18

Dissertation research 18

Total Semester Hours 66
Computer Engineering, MSE

The CPE program offers two plans leading to the MSE with a Computer Engineering option. These are designated:

- Plan I (Thesis)
- Plan II (Non-thesis)

The following sections describe the requirements for each of these options. With prior approval, up to 12 semester hours of 500-level courses may be taken in fulfillment of the MSE requirements.

Basic Program of Study

The Basic Program of Study, common to both the Plan I and Plan II MSE options, contains a minimum of 24 semester hours of graduate-level course work that must include:

<table>
<thead>
<tr>
<th>CPE Core 1</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>CPE 512 INTRO PARALLEL PROGRAMMING</td>
<td>3</td>
</tr>
<tr>
<td>CPE 526 VLSI HARDWARE DESC LANG/MODL/S</td>
<td>3</td>
</tr>
<tr>
<td>CPE 631 ADV COMP SYSTEMS ARCHITECTURE</td>
<td>3</td>
</tr>
</tbody>
</table>

3 semester hour graduate course in computer engineering or a related field

<table>
<thead>
<tr>
<th>Math Minor</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>6 hours of coursework with mathematical or theoretical foundation. The courses must be approved by the student’s academic advisor.</td>
<td>6</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Engineering Area of Specialization Minor</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Select a 2-course sequence from engineering, or computer science 2</td>
<td>6</td>
</tr>
</tbody>
</table>

Total Semester Hours 24

1 Students who have completed these or similar courses elsewhere may request course substitutions. All substitutions must be approved by the student’s academic advisor.

2 At least one of those courses should be at the 600 level. The selected courses must be approved by the student’s academic advisor or Supervisory Committee.

Plan I, Thesis Option

Students selecting this option must:

Complete the Basic Program of Study as described above 24

CPE 699 MASTER’S THESIS 6

Complete an acceptable thesis including a public defense

Total Semester Hours 30

Plan II, Non-Thesis Option

Students selecting this option must:

Complete the Basic Program of Study as described above 24

Select 6 semester hours of graduate coursework to complete an approved extended program of study 1 6

EE 693 ECE CAPSTONE 1

Total Semester Hours 31

1 At least 3 semester hours must be at the 600-level or above

MS in Cybersecurity, Computer Engineering Track

The CPE program offers a Master of Science degree in Cybersecurity as part of an interdisciplinary program with the College of Science and the College of Business. The program requires 30 semester hours of graduate course work. There is no thesis option.

For this degree program, at least 50% of the coursework must be at the 600-level or above and a grade of B or better is required for all courses. All coursework must be approved by a faculty advisor.
**Program of Study**

The program of study for the MS in Cybersecurity must include:

### CBS Core
- IS 660 CYBERSECURITY MANAGEMENT 3
- IS 663 COMPUTER FORENSICS 3
- CPE 549 INTRO TO CYBERSECURITY ENGINRG 3
- CS 585 INTRO TO COMPUTER SECURITY 3

### CBS: Computer Engineering Track
- CPE 645 COMPUTER NETWORK SECURITY 3
- CPE 646 MOBILE & WIRELESS NETWORKS 3
- CPE 649 ADV CYBERSECURITY ENGINEERING 3

### CBS: Electives
Select 3 semester hours from the following approved CPE electives 3
- CPE 534, CPE 548, CPE 647, or CPE 648

Select 3 semester hours from the following approved electives in Computer Engineering (see list above), Computer Science, or Information Systems 3
- Computer Science: CS 553, CS 565, CS 570, CS 617, CS 650, CS 670, CS 685, or CS 690
- Information Systems: IS 560, IS 571, IS 577, IS 640, IS 670, or IS 691

### CBS: Capstone
- CPE 692 CYBERSECURITY CAPSTONE 3

**Total Semester Hours** 30

---

**Electrical Engineering, MSE**

The EE program offers two plans leading to the MSE with a Electrical Engineering option. These are designated:

- Plan I (Thesis)
- Plan II (Non-thesis)

The following sections describe the requirements for each of these options. With prior approval, up to 6 semester hours of 500-level courses may be taken in fulfillment of the MSE requirements. All courses in the program of study must be approved by a faculty advisor.

### Basic Program of Study

The Basic Program of Study, common to both the Plan I and Plan II MSE options, contains a minimum of 24 semester hours of graduate-level course work that must include:

#### EE Major
Select 12 semester hours of related graduate-level courses in an EE subject area 12

#### Math Minor
6 hours of coursework with mathematical or theoretical foundation. 6

#### Engineering Area of Specialization Minor
Select a 2-course sequence from engineering, or computer science. 2 6

**Total Semester Hours** 24

---

1. Typically, students take EE 629 and EE 630 or an approved sequence of courses in mathematics.
2. At least one of those courses should be at the 600 level.

### Plan I, Thesis Option

Students selecting this option must:

- Complete the Basic Program of Study as described above 24
- EE 699 MASTER'S THESIS 6

**Total Semester Hours** 30
### Plan II, Non-Thesis Option

Students selecting this option must:

<table>
<thead>
<tr>
<th>Requirement</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>Complete the Basic Program of Study as described above</td>
<td>24</td>
</tr>
<tr>
<td>Select 6 semester hours of graduate coursework to complete an approved extended program of study</td>
<td>6</td>
</tr>
<tr>
<td>EE 693 ECE CAPSTONE</td>
<td>1</td>
</tr>
<tr>
<td><strong>Total Semester Hours</strong></td>
<td><strong>31</strong></td>
</tr>
</tbody>
</table>

### Master of Science in Software Engineering, MSSE

The CPE program offers two plans leading to the MSSE. These are designated:

- Plan I (Thesis)
- Plan II (Non-thesis)

The following sections describe the requirements for each of these options. Students must consult their faculty advisor when constructing their program of study.

### Basic Program of Study

The Basic Program of Study, common to both Plan I and Plan II MSSE options, contains a minimum of 24 semester hours of graduate-level coursework that must include:

<table>
<thead>
<tr>
<th>CS Courses</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>CS 650 SOFT'W ENGINEERING PROC</td>
<td>3</td>
</tr>
<tr>
<td>Select 6 semester hours from any two of three CS areas</td>
<td>6</td>
</tr>
<tr>
<td><strong>CPE Courses</strong></td>
<td><strong>9</strong></td>
</tr>
<tr>
<td>Select 9 semester hours of CPE electives</td>
<td>9</td>
</tr>
<tr>
<td><strong>Studio Courses</strong></td>
<td><strong>24</strong></td>
</tr>
<tr>
<td>CPE 656 SOFTWARE ENGRG STUDIO I</td>
<td>3</td>
</tr>
<tr>
<td>CPE 658 SOFTWARE ENGRG STUDIO II</td>
<td>3</td>
</tr>
<tr>
<td><strong>Total Semester Hours</strong></td>
<td><strong>24</strong></td>
</tr>
</tbody>
</table>

1. Choose from **Formal Methods**: CS 617 or CS 655; **Software Engineering & Design**: CS 652; **Software Applications**: CS 553, CS 658, or CS 656

2. CPE Electives include: CPE 512, CPE 536, CPE 538, CPE 548, CPE 549, CPE 628, CPE 631, CPE 633, CPE 645, CPE 647, CPE 648, or CPE 649.

### Plan I, Thesis Option

Students selecting this option must:

<table>
<thead>
<tr>
<th>Requirement</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>Complete the Basic Program of Study as described above</td>
<td>24</td>
</tr>
<tr>
<td>CPE 699 MASTER'S THESIS</td>
<td>6</td>
</tr>
<tr>
<td><strong>Total Semester Hours</strong></td>
<td><strong>30</strong></td>
</tr>
</tbody>
</table>

### Plan II, Non-thesis Option

Students selecting this option must:

<table>
<thead>
<tr>
<th>Requirement</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>Complete the Basic Program of Study described above</td>
<td>24</td>
</tr>
<tr>
<td><strong>CS Core</strong></td>
<td><strong>3</strong></td>
</tr>
<tr>
<td>Select one course from remaining CS core area</td>
<td></td>
</tr>
<tr>
<td><strong>CPE Courses</strong></td>
<td><strong>6</strong></td>
</tr>
<tr>
<td>Select 6 semester hours from the list of approved CPE electives</td>
<td></td>
</tr>
<tr>
<td><strong>Total Semester Hours</strong></td>
<td><strong>33</strong></td>
</tr>
</tbody>
</table>
Industrial and Systems Engineering and Engineering Management

N143 Technology Hall
Telephone: 256.824.6256
Email: isegrad@uah.edu

Chair: Paul D. Collopy, Professor

Mission
To provide integrated, applications-oriented education and research programs in the areas of Industrial Engineering, Systems Engineering, and Engineering Management to support the needs of students and organizations in the Huntsville area and beyond.

Degrees
- Master of Science in Engineering (Engineering Management, Industrial Engineering, Systems Engineering concentrations)
- Master of Science in Operations Research

The Department of Industrial and Systems Engineering and Engineering Management offers major options and associated minors in the subject areas of Operations Research, Industrial Engineering, Systems Engineering, and Engineering Management. All students are encouraged to tailor their graduate programs with a blend of theory and applications. ISEEM faculty are actively involved in research programs, which affords graduate students opportunities for coursework and research inquiry in the areas described above. Please contact the ISEEM Department (256.824.6256) or visit the ISEEM homepage at http://www.uah.edu/iseem for further details.

Industrial and Systems Engineering, MSE & MSOR

Additional Admission Requirements
The requirements for admission for graduate study in an ISEEM program conform to the policies of the School of Graduate Studies and the College of Engineering. In addition, the MSE Engineering Management and Systems Engineering Options require two years of engineering work experience.

General Requirements
Students pursuing an MSE option or the MSOR under ISEEM must follow the requirements for either Plan I (Thesis Option) or Plan II (Non-Thesis Option). Both plans require 24 semester hours of approved graduate coursework. Plan I requires a minimum of 6 semester hours of thesis work and the successful completion of the thesis as approved by the supervisory committee. Plan II requires an additional 6 semester hours of approved graduate coursework.

MSE Concentrations
The MSE-Engineering Management Concentration was developed to meet the needs of practicing engineers who find themselves performing engineering management functions without the benefit of formal management education. The Engineering Management Concentration is designed to build upon the mathematical and analytical expertise gained from both a formal engineering education and professional experience. The Engineering Management curriculum emphasizes the application of the management function in the technological setting, while recognizing the basic and applied sciences in engineering systems.

The MSE-Industrial Engineering Concentration is offered for engineers who possess a bachelor’s degree in a traditional engineering discipline and who have the desire to broaden their engineering problem solving skills. This is accomplished by providing them with a better understanding of traditional and contemporary problem solving skills in the areas of operation research, quality control, computer integrated manufacturing, and simulation. The program is applications-oriented and can be tailored to fit the individual needs of the student.

The MSE-Systems Engineering Concentration is offered for engineers with a bachelor’s degree in a traditional engineering area who desire to broaden their background into systems oriented aspects of engineering. Methods of systems design, cost-benefit analysis, decision making and trade studies, and systems modeling provide students with knowledge and skills to supplement their baccalaureate engineering program.

MS Operations Research
The MS in Operations Research Option is for individuals who desire to broaden their background into operations research. Courses in the curriculum include linear programming, optimization, queueing, Markov processes, and systems modeling.
Industrial and Systems Engineering, PhD.

The PhD in Industrial Engineering offers majors in Engineering Management, Industrial Engineering, Operations Research, or Systems Engineering. The content of these programs can vary to suit the needs and goals of the student.

Additional Admission Requirements

The requirements for admission for graduate study in an ISEEM program conform to the policies of the School of Graduate Studies and the College of Engineering. In addition, the PhD in Industrial Engineering majors of Engineering Management and Systems Engineering Options require five years of engineering work experience.

General Requirements and Exams

Students pursuing a PhD option under ISEEM must complete 48 semester hours of approved graduate coursework beyond the bachelor’s degree. A maximum of six hours of Master’s Thesis credit may be included in the 48 semester hour requirement. A Program of Study must be submitted to the student’s supervisory committee for review and approval.

The PhD program in the ISEEM Department has a Preliminary Examination requirement under which students must achieve a 4.0 GPA in their four principal core courses. If courses fail to meet the GPA requirement, they may be retaken until the requirement is met.

After completing the coursework on the Program of Study, students will complete a Comprehensive Exam that either contains both written and oral portions, or, at the option of the student’s committee, is based on writing a journal article.

After passing the Comprehensive exam, students will prepare a dissertation proposal to satisfy the Qualifying Examination requirement. Upon completion of the Qualifying Examination, students have five years to complete and defend a research dissertation, which is then approved by the supervisory committee, College Dean, and Graduate Dean.

Foundation Courses

Outstanding students (3.5 GPA) from other technical fields may gain admittance to the College of Engineering MSE and PhD graduate programs by completing the following courses, or equivalents as approved by the ISEEM Faculty. Applicants who have passed the Fundamental of Engineering Exam (FE) may substitute the exam for the courses.

Total Semester Hours 45

Online Learning

Several engineering graduate programs are available to qualified graduate students through the College of Engineering Online Learning program. The Industrial and Systems Engineering and Engineering Management (ISEEM) department has options of the MSE degree available to students who cannot attend on-campus classes. The ISEEM Department also has options of the departmental PhD program available by online learning. For information about the availability of other Online Learning programs, contact the Online Learning Office at 256.824.7391.
Master’s Programs in Industrial and Systems Engineering and Engineering Management

- Industrial and Systems Engineering, MSE (p. 912)
- Industrial and Systems Engineering, MSOR (p. 914)

Doctoral Program in Industrial Engineering

- Industrial and Systems Engineering, PhD (p. 910)

ISE 502 - INDUSTRIAL & ORGANIZA PSY
Semester Hours: 3
Application of basic principles of learning, motivation, and perception to typical industrial and organizational problems.

ISE 503 - HUMAN FACTORS PSYCHOLOGY
Semester Hours: 3

ISE 523 - INTR STATISTICAL QUALITY CONTR
Semester Hours: 3
This course introduces statistical theory and techniques to control quality of manufacturing products. This course will provide a solid foundation in Statistical Quality Control (SQC). The Six Sigma methodology is also introduced in this course. Students can take the certification exam to earn a Green Belt in Six Sigma.

ISE 526 - DESIGN/ANALY OF EXPERIMENT
Semester Hours: 3
Advanced topics in statistical experiments with emphasis on design aspect. Confounding, fractional replication, factorial and nested design.

ISE 530 - MANUF SYS & FACILITIES DESIGN
Semester Hours: 3
Overview of modern manufacturing systems design with emphasis on facility location and plant layout. Includes classical systems, just-in-time systems, basic principles of integrated manufacturing systems design, as well as analysis of process flow, process productivity, and available space to determine plant layout. Includes laboratory exercises.

ISE 533 - PRODUCTION/INVENTORY CONTR SYS
Semester Hours: 3
Inventory models including classical optimal economic order quantity models, manufacturing resource planning (MRP) systems, master production scheduling, material requirements planning, and purchase order control. Emphasis on manufacturing system revision, continuous process improvement, and the implementation of lean principles.

ISE 537 - ELECTRONICS MANUF PROCESSES
Semester Hours: 3
Current concepts, facilities, and technology utilized in the manufacture of electronic components and products. Includes printed wiring board fabrication and component mounting methods, automation, quality and reliability, product testing, and economic issues.

ISE 539 - SELECTED TOPICS/ISE
Semester Hours: 1-3

ISE 547 - INTRO TO SYSTEMS SIMULATION
Semester Hours: 3
Philosophy and elements of digital discrete-event simulation. Emphasis on modeling and analysis of stochastic systems, including probabilistic models, output analysis, and use of simulation software.

ISE 623 - ENGR ECON ANALYSIS
Semester Hours: 3
This course is designed for graduate students in industrial engineering, systems engineering and engineering management. This course involves mathematical models for expenditure analysis under uncertainty; investment decision criteria; capital planning and budgeting; and decisions involving expansion, acquisitions, replacement, and disinvestment.
ISE 624 - HUMAN FACTORS IN SYS DESIGN
Semester Hours: 3
Psychological, physiological, and anthropometric requirements for human beings and the integration of these requirements into the design of tools, machines, and systems.

ISE 626 - INTRO OPERATIONS RESEARCH
Semester Hours: 3
Philosophy and methodology of operations research. Includes linear programming, game theory, sequencing, and networks.

ISE 627 - ENGINEERING SYSTEMS
Semester Hours: 3
Development of a systems-scientific framework for the integration of systems theory, systems thinking, systems engineering, and systems management. Emphasis is on the conception, design, and management of systems to accommodate complex environments.

ISE 630 - COMPUTER INTEGRATED MANUFACT
Semester Hours: 3
In-depth analysis of integrated manufacturing/computer integrated manufacturing. Reviews the tools, concepts, and enabling technologies necessary to integrate the physical, information, and managerial aspects of a manufacturing enterprise.

ISE 635 - LINEAR PROGRAMMING
Semester Hours: 3
Application of linear programming to complex allocation problems. Methods for determining maximum or minimum of objective functions whose variables are subject to constraints. Simplex methods, degeneracy, modified simplex, transportation problems, flows, goal programming, and sensitivity analysis.

ISE 637 - SYSTEMS MODELING & ANALYSIS
Semester Hours: 3
System analysis and modeling of large complex systems using systems engineering fundamentals. Life cycle simulations developed as a focus for the multidisciplinary analysis integration using computational systems engineering techniques including probability, statistics, design of experiments, response surfaces, and optimization. State of the art software tools will be used for simulation development.

ISE 638 - ENGINEERING RELIABILITY
Semester Hours: 3
Methodology of reliability prediction including application of discrete and continuous distribution models. Reliability estimation, reliability logic diagrams, life testing, and reliability demonstrations.

ISE 639 - SELECTED TOPICS/ISE
Semester Hours: 1-6

ISE 641 - ADVANCED QUALITY CONTROL
Semester Hours: 3
This capstone course uses advanced statistical quality tools such as autocorrelated data, multi-variate quality controls charts, response surface methodology, ridge analysis, and evolutionary operations (EVOP). Advanced Six Sigma concepts will be taught and students will have the opportunity to earn a Black Belt in Six Sigma upon successful completion of the certification exam and an acceptable project.

ISE 647 - ADVANCED SYSTEM SIMULATION
Semester Hours: 3
Methods and procedures for simulation of large and complex systems. Discrete increment, continuous time and combined models. Comparison of discrete-event simulation languages. Model verification and validation. Statistical inference. Input data collection and analysis, output analysis, and comparison of alternatives.

ISE 670 - INTEGRATED PRODUCT & PROC DES
Semester Hours: 3
This capstone course incorporates curriculum materials to support an integrated products and process design process. Particular attention is devoted to multifunctional teams and their value in promoting the concept of life-cycle engineering. Provides experience with tools and technologies that support the IPPD philosophy.

ISE 690 - STATISTICAL METHODS FOR ENGR
Semester Hours: 3
Application of statistics for estimation and inference using parametric and nonparametric methods. Descriptive statistics, sampling distributions, point and interval estimates, tests of hypotheses, ANOVA, and linear regression.
ISE 696 - GRAD INTERN ISE ENGR
Semester Hours: 1-9

Active involvement in an engineering project in an engineering enterprise, professional organization, or government agency that has particular interest and relevance to the graduate student. Permission of ISE faculty member required.

ISE 697 - INDUS & SYSTEMS ENGR PROJECT I
Semester Hours: 3-9

Application oriented student project designed to show competence in Industrial and Systems Engineering.

ISE 698 - IND & SYSTEMS ENGR PROJECT II
Semester Hours: 3-9

Required each semester student is working and receiving direction on a master's thesis. Minimum of two semesters and 6 hours required for M.S.E. students. A maximum of 9 hours of credit is awarded upon successful completion of master's thesis.

ISE 699 - MASTER'S THESIS
Semester Hours: 1-9

Required each semester student is working and receiving direction on a master's thesis. Minimum of two semesters and 6 hours required for M.S.E. students. A maximum of 9 hours of credit is awarded upon successful completion of master's thesis. The 1 hour option is only available to students who have successfully defended their thesis and submitted it for approval, but do not meet the deadlines for graduation in the semester submitted. Students may only use the 1 hour option once in their career.

ISE 726 - SYSTEMS MODELING
Semester Hours: 3

The capstone course for the operations research option studies the philosophy and methodology for modeling probabilistic systems. Includes Markov processes, queueing theory, and inventory theory. Team project required.

ISE 728 - OPTIMIZA METH OPER RES
Semester Hours: 3

Classical optimization theory with introduction to search techniques, the Jacobian, and Lagrangian methods. Kuhn-Tucker conditions, quadratic programming, geometric and dynamic programming, and several search procedures.

ISE 729 - ADV NONLINEAR PROGRAM
Semester Hours: 3

Continuation of ISE 728 with emphasis on development and application of nonlinear programming algorithms. SUMT algorithm, Zoutendijk's method of feasible directions, Rosen's gradient method, and selected algorithms from current literature.

ISE 730 - MULTI-CRITERIA DEC ANALY
Semester Hours: 3

Methods for analysis of management-decision problems involving multiple goals and constraints. Linear and nonlinear goal programming; risk programming and decision making in fuzzy environments.

ISE 732 - INDUST FORECASTING/ANALY
Semester Hours: 3

Industrial forecasting methods. Simple forecasting models, multivariate regression, correlation, and spectral analysis, exponential smoothing, and Box-Jenkins forecasting.

ISE 734 - DECISION ANALYSIS
Semester Hours: 3

Decision making for systems engineering and engineering management, with an emphasis on applications to complex systems. Builds a rigorous foundation in decision making under uncertainty using expected utility theory. Topics include decision trees, value models, predictive models, preferences and bias.

ISE 735 - DISCRETE OPTIMIZATION
Semester Hours: 3

Integer programming and network analysis. Zero-one problem formulation and Balas method, cutting plane techniques, branch and bound, out-of-kilter algorithm, and special applications of integer programming.
ISE 738 - RELIAB/AVAL/IAB/MAINTAINA
Semester Hours: 3

In-depth application of decision theory and MIL-HDBK-217, and maintenance engineering techniques in order to achieve targeted reliability, availability and maintainability design goals.

ISE 739 - SELECTED TOPICS/ISE
Semester Hours: 1-6

ISE 741 - QUALITY ENGINEERING
Semester Hours: 3

Application of quality engineering techniques to the design and improvement of products and processes. Topics include: multivariate analysis, Taguchi methods, mixture experiments, and response surface analysis.

ISE 761 - EVOL THRY ENG MGMT/IND SYS ENG
Semester Hours: 3

Development of applicable engineering management or industrial and systems engineering theory using classical concepts, contemporary studies and practices at successful technology-based organizations.

ISE 767 - CONTEMPORARY APPL EM/ISE
Semester Hours: 3

Application of key qualitative and quantitative principles of engineering management or industrial and systems engineering to real-world case problems. Students work both in teams and as individuals to solve multidimensional problems which require an integrative point of view.

ISE 790 - ADV STATISTICAL APPLICATIONS
Semester Hours: 3

Continuation of ISE 690 with extension to regression models and nonparametric methods.

ISE 799 - DOCTORAL DISSERTATION
Semester Hours: 3-9

Required each semester student is enrolled and receiving direction on doctoral dissertation.

Industrial and Systems Engineering, PhD

The ISEEM Department offers a PhD in Industrial Engineering with the following concentrations: Engineering Management, Industrial Engineering, or Systems Engineering. The following tables provide an outline of the program of study for these concentrations. Students must consult with their faculty advisor and supervisory committee when developing their program of study.

Program of Study: Engineering Management

Dissertation
Industrial and Systems Engineering, MSE

The ISEEM Department offers three plans leading to the Master of Science in Engineering degree. Each plan is designated as:

- Plan I (Thesis),
- Plan II (Non-thesis, coursework only)

For each plan, students may choose concentrations in Engineering Management, Industrial Engineering, or Systems Engineering. The following sections describe the requirements for each of these concentrations. Additional requirements, policies, and required forms may be found in the ISEEM Department office.

Program of Study: Engineering Management

The Basic Program of Study, common to the Plan I and Plan II MSE options, contains a minimum of 24 semester hours of graduate-level course work that must include:

<table>

Plan I, Thesis Option

Students selecting this option must:

- Complete Basic Program of Study as described above 24
- Master’s Thesis
  - ISE 699 MASTER’S THESIS 6
- Complete an acceptable thesis including a public defense

Total Semester Hours 30

Plan II, Non-Thesis Option (Coursework Only)

Students selecting this option must:

- Complete Basic Program of Study as described above 24
- Select 6 semester hours of graduate courses to complete an approved extended program of study 6

Total Semester Hours 30

Program of Study: Industrial Engineering

The Basic Program of Study, common to the Plan I and Plan II MSE options, contains a minimum of 24 semester hours of graduate-level course work that must include:

Plan I, Thesis Option

Students selecting this option must:

- Complete Basic Program of Study as described above 24
- Master’s Thesis
  - MASTER’S THESIS 6
- Complete an acceptable thesis including a public defense

Total Semester Hours 30

Plan II, Non-Thesis Option (Coursework Only)

Students selecting this option must:

- Complete Basic Program of Study as described above 24
- Select 6 semester hours of graduate courses to complete an approved extended program of study 6

Total Semester Hours 30
## Engineering Major

- **ISE 623**: ENGR ECON ANALYSIS (3 hours)
- **ISE 626**: INTRO OPERATIONS RESEARCH (3 hours)
- **ISE 641**: ADVANCED QUALITY CONTROL (3 hours)
- **ISE 726**: SYSTEMS MODELING (3 hours)

### First Minor
Select six hours in approved Engineering Management or Systems Engineering (6 hours)

### Second Minor
- **ISE 526**: DESIGN/ANALY OF EXPERIMENT (3 hours)
- **ISE 690**: STATISTICAL METHODS FOR ENGR (3 hours)

### Total Semester Hours
24

## Plan I, Thesis Option

Students selecting this option must:

- Complete Basic Program of Study as described above (24 hours)
- **ISE 699**: MASTER'S THESIS (6 hours)
- Complete an acceptable thesis including a public defense

### Total Semester Hours
30

## Plan II, Non-Thesis Option (Coursework Only)

Students selecting this option must:

- Complete Basic Program of Study as described above (24 hours)
- Select 6 semester hours of graduate courses to complete an approved extended program of study (6 hours)

### Total Semester Hours
30

## Program of Study: Systems Engineering

The Basic Program of Study, common to the Plan I and Plan II MSE options, contains a minimum of 24 semester hours of graduate-level course work that must include:

### Engineering Major

- **ISE 623**: ENGR ECON ANALYSIS (3 hours)
- **ISE 627**: ENGINEERING SYSTEMS (3 hours)
- **ISE 670**: INTEGRATED PRODUCT & PROC DES (3 hours)
- **ISE 734**: DECISION ANALYSIS (3 hours)

### First Minor
Select six hours in approved Engineering Management, Quality Engineering, Systems Engineering, Industrial Engineering, Operations Research, Engineering Reliability or Human Factors courses (6 hours)

### Second Minor
- **ISE 526**: DESIGN/ANALY OF EXPERIMENT (3 hours)
- **ISE 690**: STATISTICAL METHODS FOR ENGR (3 hours)

### Total Semester Hours
24

## Plan I, Thesis Option

Students selecting this option must:

- Complete Basic Program of Study as described above (24 hours)
- **ISE 699**: MASTER'S THESIS (6 hours)
- Complete an acceptable thesis including a public defense

### Total Semester Hours
30
Plan II, Non-Thesis Option (Coursework Only)

Students selecting this option must:

- Complete Basic Program of Study as described above 24
- Select 6 semester hours of graduate courses to complete an approved extended program of study 6
- Total Semester Hours 30

Industrial and Systems Engineering, MSOR

The ISEEM Department offers three plans leading to the MSOR degree. These are designated:

- Plan I (Thesis),
- Plan II (Non-thesis with final project paper; exit exam is an oral examination)
- Plan II (Non-thesis, coursework only; exit exam is over coursework)

The following sections describe the requirements for each of these options. Additional requirements, policies and required forms may be found in the ISEEM Department office.

Basic Program of Study

The Basic Program of Study, common to the Plan I and Plan II (Non-thesis) MSE options, contains a minimum of 24 semester hours of graduate-level course work that must include:

Engineering Major

Mechanical and Aerospace Engineering

N274 Technology Hall
Telephone: 256.824.6154
Email: maegrad@uah.edu

Chair: D. Keith Hollingsworth, Professor

Mission

The mission of the Department of Mechanical and Aerospace Engineering is to provide undergraduate and graduate education, research, and public service in the Mechanical and Aerospace Engineering disciplines and to support the Mechanical and Aerospace Engineering needs of Huntsville, the State of Alabama, the region, our nation, and the international community.

Degree Programs

- Master of Science in Engineering (Mechanical Engineering)
- Master of Science in Aerospace Systems Engineering
- Doctor of Philosophy in Mechanical Engineering
- Doctor of Philosophy in Aerospace Systems Engineering

The broad range of faculty research interests in the Department of Mechanical and Aerospace Engineering offers opportunities for advanced work in rocket propulsion, combustion, applications of plasma science, fluid and solid mechanics, heat transfer, acoustics, aerodynamics, transport phenomena in energy systems, computational mechanics, experimental mechanics, dynamics and controls, and autonomous vehicles.

Located in one of the nation's leading centers for aviation and space research, UAH has the intellectual and social environment to provide a well-rounded, technologically-oriented degree. MAE graduate students have outstanding opportunities for research, collaboration, cooperative employment, and future employment with government research centers and high-tech businesses. In addition, a number of UAH research centers collaborate with the MAE Department, including the Propulsion Research Center, the Center for Rotorcraft Systems Engineering and Simulation, the Center for Modeling, Simulation & Analysis, the Center for Space Plasma and Aeronomic Research, the Center for Applied Optics, and the Nano and Micro Devices Center.

Prospective and current students are encouraged to visit the MAE Department web site at www.uah.edu/eng/departments/mae for information about faculty research interests, ongoing research projects, funding opportunities and course availability. Other information about the MAE graduate programs are available in the department office.

MS in Aerospace Systems Engineering or MSE in Mechanical Engineering

Students wishing to pursue an MAE master's degree must meet the admission requirements of the UAH Graduate School as well as the College of Engineering. Students who are admitted to the MAE department master's program have the option to enroll in the MS in Aerospace Systems Engineering or the MSE in Mechanical Engineering. All courses in the department are open to students in either option. A beginning student files a Program of Study in one of the specialized areas of concentration (e.g. aerodynamics, materials, solid mechanics, etc). These selections are made in consultation with the faculty advisor (for students in the thesis program) or with the Graduate Director (for students in the non-thesis program). Each area of concentration may have other requirements.

The MS in Aerospace Systems Engineering and the MSE in Mechanical Engineering each require 31 semester hours and consist of two options. The thesis option requires 24 hours of graduate coursework, 1 hour of graduate seminar, and 6 hours of thesis. Students under this option must complete a written thesis and an oral defense. The non-thesis option requires 30 hours of graduate coursework and 1 hour of graduate seminar.

PhD in Aerospace Systems Engineering or in Mechanical Engineering

The MAE Department offers a program leading to the degree of Doctor of Philosophy (PhD) in Aerospace Systems Engineering or in Mechanical Engineering. The PhD is a research-oriented degree awarded upon completion of a defined Program of Study, demonstration of scholarly competence, distinctive achievement in a special field, and demonstrated ability to do an independent, original investigation. Demonstration of substantial scholarly
research accomplishments, rather than mere accumulation of residence and course credits, is an essential consideration in awarding the PhD degree. A Program of Study leading to a PhD degree in Chemical Engineering is also administered by the MAE Department. In addition to the admission requirements of the School of Graduate Studies and the College of Engineering for the MSE, students must also have a minimum graduate grade point average of 3.25 for an application to be processed. Specific admission requirements for students with an MSE degree from UAH or from another graduate institution are available by contacting the MAE department office.

The PhD Program of Study should exhibit both a breadth of understanding of engineering with a demonstrated depth in a focused area of Aerospace or Mechanical Engineering. The MAE Ph.D. Program of Study consists of a minimum of 67 course and research semester hours beyond the B.S.E. degree. The course semester hour requirement for students with a M.S.E. degree is a minimum of 48 semester hours, that is, a minimum of 18 semester hours beyond the MSE degree. The specific Ph.D. Program of Study is designed by the student, his/her advisor, and the Supervisory Committee. In addition to the coursework required, a PhD student must pass three examinations before being awarded the degree; the Preliminary Examination, the Qualifying Examination, and the Final Comprehensive Examination. Specific details on each examination are provided in the MAE Department Office.

Details about these degree options can be found at http://catalog.uah.edu/grad/colleges-departments/engineering/mechanical-aerospace-engineering/#text.

**Timing Requirements (Effective Fall Semester 2016)**

Students who are pursuing a Ph.D. degree are subject to the following four timing requirements:

1. Part I of the Qualifying Examination (i.e., MAE Ph.D. Prelim Exam) must be completed successfully either within **one year** from the start of the Ph.D. degree program or prior to the completion of **12 credit hours of graduate course work** (whichever comes later).

2. A Ph.D. Dissertation Advisor and Ph.D. Supervisory Committee must be arranged and approved within **one year** of the successful completion of Part I of the Qualifying Examination.

3. Part II of the Qualifying Examination must be completed successfully **two years** of the successful completion of Part I of the Qualifying Examination but **no less than six months** prior to the Dissertation Defense.

4. All Ph.D. degree requirements must be completed successfully **five years** of the successful completion of Part II of the Qualifying Examination.

Exceptions to any of these requirements may be requested only one time (per each requirement) by petition from the student and the associated Ph.D. Dissertation Advisor. Approval of these petitions (including modifications or alterations) are made both by the MAE Department Graduate Committee and by the MAE Department Chair.

**Master’s Programs in Mechanical and Aerospace Engineering**

- Aerospace Systems Engineering, MSASE (p. 925)
- Mechanical Engineering, MSE (p. 926)

**Doctoral Programs in Mechanical and Aerospace Engineering**

- Aerospace Systems Engineering, PhD (p. 924)
- Mechanical Engineering, PhD (p. 925)

**MAE 520 - COMPRESSIBLE AERODYNAMICS**

Semester Hours: 3

Principles of compressible flow including area change, friction, and heat transfer. Fundamentals of acoustic waves, one and two-dimensional shock and expansion waves, shock-expansion theory, and linearized flow with applications to inlets, nozzles, wind tunnels, and supersonic flow over aerodynamic bodies and wings. (Same as MAE 420.).

**MAE 530 - FUNDAMENTALS OF AERODYNAMICS**

Semester Hours: 3

Application of the principles of fluid mechanics and thermodynamics to the prediction of aerodynamic performance of aircraft, missiles and other flight vehicles. Topics include lift and drag, thrust and power, and the influence of wing loading, power loading, zero-lift drag, wing geometry, high lift devices Mach number, etc., on the performance and design trades of flight vehicles. (Same as MAE 430.).

**MAE 531 - INTRO TO PLASMA DYNAMICS**

Semester Hours: 3

**MAE 540 - ROCKET PROPULSION I**

Semester Hours: 3

Introduction to the operation, analysis and design of liquid and solid rockets. The course incorporates an experience in design and realization of a thermal system in which students work in teams to design a rocket motor or component.
MAE 541 - AIRBREATHING PROPULSION
Semester Hours: 3
Survey of airbreathing propulsion systems with special emphasis on gas turbine engines for aircraft and rotorcraft. Thermodynamic power cycles, design of components, and overall engine performance analysis. Discussion of practical design and operations considerations including engine controls, reliability, and durability. The course incorporates an experience in design and realization of a thermal system in which students work in teams to design a turbine engine. Students majoring in Aerospace Engineering must take either MAE 440 or MAE 441 to satisfy the Aerospace propulsion elective.

MAE 544 - INTRO TO ELECTRIC PROPULSION
Semester Hours: 3
Elements of electrically-driven rocket propulsion for applications from low earth orbit to the outer planets. The physics of ionizing and heating gases and plasmas for electrothermal, electrostatic and electromagnetic acceleration. Characteristics of Resistojet, Arcjet, Magnetoplasmodynamic thrusters, Electrothermal, Pulsed plasma, Electrostatic, and Hall thrusters. Review thruster system performance, power requirements, and selection for space missions. Overview of current research efforts, including thruster systems, physics, and performance.

MAE 545 - HEAT DISTRIB SYS DESIGN
Semester Hours: 3
Design of hydronic and air distribution systems used in heating and air conditioning. Piping design, pump selection, heat coils, room air distribution, ducting design, fan selection, controls, and complete systems.

MAE 548 - ENERGY CONVERSION & POWER GEN
Semester Hours: 3
Application of principles of thermodynamics, heat transfer, and fluid mechanics to combustion engines and turbines. Basic engine types, engine components, idealized cycles, combustion, fuels, engine variables, testing, exhaust gas analysis, and air pollution as related to spark-ignition, compression-ignition, and turbine engines.

MAE 552 - COMPRESSIBLE AERODYNAMICS
Semester Hours: 3
Principles of compressible flow including area change, friction, and heat transfer. Fundamentals of acoustic waves, one and two-dimensional shock and expansion waves, shock-expansion theory, and linearized flow with applications to inlets, nozzles, wind tunnels, and supersonic flow over aerodynamic bodies and wings.

MAE 561 - VIBRATIONS ELASTIC SYS
Semester Hours: 3
Formulation of the equations of motion of discrete and continuous systems, analytical and numerical methods of solution, eigenvalue problems, and dynamic response. (Same as MAE 461 and CE 461/561.).

MAE 563 - INTERMEDIATE DYNAMICS
Semester Hours: 3
Kinematics and dynamics of particles, system of particles, and rigid-bodies. Variational principles and Lagrangian mechanics.

MAE 568 - ELEMENTS OF SPACECRAFT DESIGN
Semester Hours: 3
Fundamentals of spacecraft engineering and design. Topics include: orbital mechanics, space environment, attitude determination and control, communications, space structures, thermal control, propulsion and power, and systems and mission design. (Same as MAE 468.).

MAE 574 - APP MECHANICS OF SOLIDS
Semester Hours: 3
Stresses and strains at a point, theories of failures, stress concentration factors, thick-walled cylinders, torsion of noncircular members, curved beams, unsymmetrical bending, and shear center. (Same as MAE 474 and CE 474/574.).

MAE 576 - COMP MATLS: FABRIC/DES/ANALY
Semester Hours: 3
Introduction to the mechanics of advanced composite materials. Design and analysis of composite structures. Analysis of orthotropic and transversely isotropic materials and systems. Hands on fabrication of a composite structure. (Same as MAE 476.).

MAE 577 - EXP TECH SOLID MECHANICS
Semester Hours: 3
Experimental methods to determine stress, strain, displacement, velocity, and acceleration in various media. Theory and laboratory applications of electrical resistance strain gages, brittle coatings, and photoelasticity. Application of transducers and experimental analysis of engineering systems. (Same as MAE 477 and CE 477/577.).
MAE 580 - AIRCRAFT STABILITY & CONTROL
Semester Hours: 3
Stability and control of aerodynamic vehicles. Design of aircraft to obtain good flying characteristics. Complete governing equations and analog solutions of linearized equations. (Same as MAE 480.).

MAE 585 - NUM METH & ENGR COMPUTAT III
Semester Hours: 3
Advanced topics in numerical methods and engineering computation including: finite elements and finite differences in solving various engineering problems; Gaussian quadrature; interpolation, integration, and differentiation; and stability and convergence analysis of iterative methods. Numerical applications to fluid mechanics, heat transfer, structural mechanics, and machine design.

MAE 589 - COMPUTER AIDED ENGR
Semester Hours: 3
Application of computer methods in the analysis and design of structural, thermal, and dynamical systems. Use of state-of-the-art finite element and finite difference computer programs. Practical guidelines for discrete modeling; analysis of modeling errors. Comparison of exact and approximate solutions to boundary value problems. Use of microcomputers in engineering design and analysis. (Same as MAE 489.).

MAE 593 - ROCKET DESIGN
Semester Hours: 3
Design, build, test and fly a high-powered rocket with a payload to a specified altitude. Students work on multi-disciplinary teams to design payloads, avionics, recovery systems, structures and other sub-systems and then integrate them into the final vehicle. Course may be used for senior design credit.

MAE 594 - AIRCRAFT DESIGN
Semester Hours: 3
Design and build an unmanned aircraft to meet specified requirements, and then verify design through ground and flight tests. Students work on multi-disciplinary teams to address configuration aerodynamics, avionics, structures, propulsion/power and payloads. Systems engineering aspects including simulation, fabrication, integration, scheduling and cost estimation are also emphasized. Course may be used for senior design credit.

MAE 595 - SELECTED TOPICS MECH & AERO EG
Semester Hours: 1-6

MAE 610 - AERODYNAMICS
Semester Hours: 3
Fundamental concepts in aerodynamics including conservation laws, complex potential theory, thin airfoil theories, finite-wing lifting-line theory, boundary layers and Von Karman momentum integral equations.

MAE 620 - COMPRESSIBLE FLOW
Semester Hours: 3
Study of compressible subsonic, transonic and supersonic flows as described by the Euler equations. Linear and nonlinear theories of shockwaves, expansion waves, and their interactions. Applications to wind tunnels, nozzles, diffusers and aerodynamic bodies.

MAE 623 - COMPUTATIONAL FLUID DYNAMICS I
Semester Hours: 3
Formulations by finite difference, finite element, finite volume, and spectral element methods for incompressible and compressible flows. Explicit and implicit methods, Von Neumann error analysis, consistency, convergence, and accuracy.

MAE 631 - ROTORCRAFT DESIGN I
Semester Hours: 3
Conceptual design of rotorcraft systems with an emphasis on multidisciplinary design. Comprehensive methodologies for vehicle synthesis and sizing including consideration of aerodynamics, propulsion, materials and structures, flight performance and control, and operations. Integration of advanced technologies. Rotorcraft Design I and II are the capstone design courses for the MSE (Aerospace) program of study in Rotocraft Systems Engineering.

MAE 632 - ROTORCRAFT DESIGN II
Semester Hours: 3
Continuation of Rotorcraft Design I including higher fidelity simulations and trade studies. Consideration of maneuverability, structural dynamics, drive train and hub design, advanced flight control system design, sensors, weapons, component integration, packaging, and life-cycle cost. Rotorcraft Design I and II are the capstone design courses for the MSE (Aerospace) program of study in Rotocraft Systems Engineering.
MAE 633 - TACTICAL MISSILE DESIGN I  
Semester Hours: 3  
Conceptual design of missile systems with an emphasis on multi-disciplinary design. Comprehensive methodologies for vehicle synthesis and sizing including consideration of aerodynamics, propulsion, materials and structures, flight performance and control, and operations. Integration of advanced technologies. Tactical Missile Design I and II are the capstone design courses for the MSE (Aerospace) program of study in Missile Systems Engineering.

MAE 634 - TACTICAL MISSILE DESIGN II  
Semester Hours: 3  
Continuation of Tactical Missile Design I including higher fidelity simulations and trade studies. Consideration of trajectory modeling and simulation, open-loop flight control system design, sensors, component integration and packaging, and life-cycle cost. Tactical Missile Design I and II are the capstone design courses for the MSE (Aerospace) program of study in Missile Systems Engineering.

MAE 635 - AEROSPACE SYSTEMS ENGINEERING  
Semester Hours: 3  
Introduction to Integrated Product and Process Development (IPPD) and life cycle analysis with application to Aerospace Systems. Systems engineering and quality engineering methods and tools. Top-down design decision support process. Computer integrated environment and robust design simulation will be addressed.

MAE 639 - SYSTEM SAFETY  
Semester Hours: 3  
The process of system safety?from the creation and management of a safety program on a system under development to the analysis that must be performed as this system is designed and produced to assure acceptable risk in its operation. Full discussion of the management and analysis processes and procedures. Incorporates the safety procedures used by the Department of Defense and NASA. Basic statistical methods and network analysis methods which provide an understanding of the engineering analysis methods that follow are covered.

MAE 640 - ROCKET PROPULSION II  
Semester Hours: 3  
MAE 641 - ADV THERMODYNAMICS  
Semester Hours: 3  
Application of classical thermodynamics. Treatment of problems involving nonideal gases and liquids, phase equilibrium, and chemical equilibrium. (Same as CHE 641.)

MAE 643 - ADVANCED HEAT & MASS TRANSFER  
Semester Hours: 3  
Continuation of MAE 450 in the study of conductive, convective, and radiative heat transfer and mass transfer. Emphasis is placed on heat transfer in turbulent flows and high speed flows, combined mode heat transfer, and mass transfer in reacting flows.

MAE 644 - ADVANCED SOLID ROCKET PROPUL  
Semester Hours: 3  
Overview of the design, manufacture and testing of solid rocket propulsion systems. Specific topics include propellant ballistics and combustion, grain design, motor case and nozzle design, thermal protection, motor performance, and reliability and failure. Prerequisite: MAE 540.

MAE 645 - COMBUSTION I  
Semester Hours: 3  
Combustion chemistry, introduction to mass transfer, chemical kinetics, reactors, simplified governing equations for chemically reacting flow, laminar diffusion and premixed flames.

MAE 646 - COMBUSTION I  
Semester Hours: 3  
Combustion chemistry, introduction to mass transfer, chemical kinetics, reactors, simplified governing equations for chemically reacting flow, laminar diffusion and premixed flames.

MAE 647 - UNCERTAINTY ANAL IN EXPER  
Semester Hours: 3  
Uncertainty analysis concepts and techniques; application in planning, design, construction, debugging, execution, data analysis and reporting phases of experimental programs. Discussion of national and international standards and current engineering uncertainty analysis literature.
MAE 649 - TRANSPORT PHENOMENA  
Semester Hours: 3 
Mass, energy, and momentum transport in steady and transient motions in real and rheological substances. (Same as CHE 649.).

MAE 651 - VISCous FLUID MECHANICS  
Semester Hours: 3 
Fundamentals of incompressible viscous fluid motion, including development of Navier Stokes equation. Exact and approximate solutions for both large and small Reynolds number. Laminar and turbulent boundary layers.

MAE 657 - HELICOPTER THEORY  
Semester Hours: 3 
Vertical flight, forward flight, performance, design, mathematics of rotating systems, rotary wing dynamics, rotary wing aerodynamics, helicopter aeroelasticity, stability and control, stall, and noise.

MAE 658 - ROTORDYNAMICS  
Semester Hours: 3 
Torsional and transverse rotor vibration, critical speed and stability analysis, response to unbalance, rotor balancing. Rotordynamic phenomena including: gyroscopic effects, fluid film bearings, annular seals, stiffness asymmetry.

MAE 660 - STRUCTURAL DYNAMICS  
Semester Hours: 3 
Application of the theory of vibrations to discrete and continuous models of structures. Numerical methods of analysis for both spatial and temporal variables. Modal synthesis and step-by-step time integration methods. Finite element applications; substructuring techniques. (Same as CE 660.).

MAE 661 - ADVANCED DYNAMICS  
Semester Hours: 3 
Variational methods, optimization, and dynamic stability. Lagrangian and Hamiltonian formulation for dynamical systems and Hamilton-Jacobi methods to orbital mechanics.

MAE 662 - NONLINEAR DYNAM & CHAOS  
Semester Hours: 3 
Nonlinear and chaotic dynamical systems, phase plane, periodic and strange attractors, stability analysis, critical points, Piaunov exponents, bifurcation points, solitons, logistic maps, Poincare and Henon iterative maps, factals, Mandelbrot and Julia sets, chaos in complex dynamical systems.

MAE 663 - ASTRODYNAMICS  
Semester Hours: 3 
Astronomical coordinates and time systems; the many-body problems and disturbing functions. General perturbation methods, and application of classical mechanics and Hamilton-Jacobi methods to orbital mechanics.

MAE 671 - CONTINUUM MECHANICS  
Semester Hours: 3 
Kinematics and kinetics, various coordinate systems, constitutive equations for continuous media; governing partial differential equations from first and second laws of thermodynamics; applications to solids, liquids, and gases. (Same as CE 671.).

MAE 672 - ELASTICITY  
Semester Hours: 3 
Formulation of boundary-value problems of classical elasticity. Application to plane problems, prismatic members, and axisymmetric problems. Introduction to three-dimensional problems. (Same as CE 672.).

MAE 673 - PLASTICITY  
Semester Hours: 3 
Fundamentals of mechanical behavior of metals and nonmetals for stress states greater than the yield stress state. Deformation and flow theories. Stress-strain relations and yield criteria. Solution of boundary value problems with plastic bodies. Limit analysis of structures. (Same as CE 673.).

MAE 674 - FINITE ELEMENT ANALY S I  
Semester Hours: 3 
Finite element theory, variational methods, weighted residuals; applications to linear partial differential equations in continuous media; solution of boundary-value and initial-value problems. (Same as CE 674.).
MAE 676 - VISCOELASTICITY  
Semester Hours: 3

MAE 677 - OPTICAL TECH IN SOLID MECH  
Semester Hours: 3

Overview of conventional methods for experimental stress analysis. Introduction to applied optics with emphasis on non-destructive, laser-based testing methods, fiber optic recording systems, photomechanical-numerical data acquisition, and computer aided analysis. (Same as CE 677.).

MAE 678 - MECH COMPOSITE MATERIALS  
Semester Hours: 3

Introduction to composite materials, micro- and macro-mechanical behavior of laminae; bending, buckling and vibration of laminated plates. (Same as CE 678.).

MAE 680 - PERFORMANCE FLIGHT TESTING  
Semester Hours: 3

Fundamentals of rotorcraft test and evaluation. Topics include: test planning, requirements analysis, helicopter performance evaluation, fundamentals of propulsion testing, aviation safety, use of modeling and simulation in flight testing, Department of Defense and Federal Aviation Administration requirements and procedures.

MAE 681 - MISSILE TRAJECTORY ANALYSIS  
Semester Hours: 3

Methods for generating trajectories of missiles and projectiles are studied as well as control mechanisms. Point mass approximations are developed using approximations and exact representations of drag and atmospheric conditions. Full six degree-of-freedom models are developed and solved numerically. Aerodynamic models are developed for both slowly spinning missiles and spin stabilized projectiles. Projectile linear theory is developed and used to discuss gyroscope and dynamic stability and introduce rapid trajectory generation.

MAE 683 - GRAD SEMINAR MECH ENGR  
Semester Hour: 1

Professional activities designed to promote the skills required to organize and deliver oral technical presentations and to broaden the individual's awareness of technical issues. Required for all students pursuing a graduate degree. Students will be graded 'S' (satisfactory) or 'U' (unsatisfactory) based upon their performance and attendance. Students who do not receive an 'S' grade must register for the course until an 'S' is obtained.

MAE 684 - AEROSPACE SYSTEMS SEMINAR  
Semester Hour: 1

Seminar course for students in the MSE (Aerospace) Rotorcraft Systems Engineering and Missile Systems Engineering programs of study. Students participate in seminars on specific aspects of rotorcraft and missile systems engineering including system integration, modeling and simulation, operations, and advanced technologies.

MAE 692 - GRAD ENGR ANALYSIS I  
Semester Hours: 3

Ordinary differential equations (ODEs), Legendre polynomials, Laplace transformations, simultaneous differential equations, application of ODEs to mechanical systems, partial differential equations (PDEs) and boundary-value problems, application of PDEs to mechanical systems.

MAE 693 - GRAD ENGR ANALYSIS II  
Semester Hours: 3

Green's functions, Fourier series and integrals, linear algebra, vectors, vector analysis and integral theorems, introduction to tensor analysis, analytical functions of a complex variable, Taylor and Laurent expansions, the residue theorem, stability criteria, and Calculus of Variations.

MAE 695 - SELECTED TOPICS MECH & AERO EG  
Semester Hours: 1-9

MAE 696 - GRAD INTERN MECH & AERO ENGR  
Semester Hours: 1-9

Active involvement in an engineering project in an engineering enterprise, professional organization, or government agency that has particular interest and relevance to the graduate student. Permission of MAE faculty member required.
MAE 698 - PLAN II MASTER'S PAPER
Semester Hours: 3

Required Plan II paper for a Plan II Masters degree. Completion of 18 semester hours of graduate course work required.

MAE 699 - MASTER'S THESIS
Semester Hours: 1-9

Required each semester in which a student is working and receiving direction on a master's thesis. Minimum of two semesters and 6 hours required for M.S.E. students. A maximum of 9 hours of credit is awarded upon successful completion of master's thesis. Requires thesis advisor permission. The 1 hour option is only available to students who have successfully defended their thesis and submitted it for approval, but do not meet the deadlines for graduation in the semester submitted. Students may only use the 1 hour option once in their career.

MAE 723 - COMPUTATIONAL FLUID DYNAMICS II
Semester Hours: 3

Continuation of Computational Fluid Dynamics I, advanced topics in finite difference, finite element, finite volume, and spectral element methods.

MAE 724 - COMPUTATIONAL FLUID DYNAMICS III
Semester Hours: 3

Grid generation techniques with structured and unstructured meshes, adaptive meshes, domain decompositions, and parallel processing. Applications of generated meshes to any one of the following problems: turbulence, combustion, acoustics, radiation, multiphase flows, or magnetohydrodynamics.

MAE 726 - ROTORCRAFT COMPUT FLUID DYNAMICS
Semester Hours: 3

Full potential, Euler, Navier-Stokes approaches, structural and unstructured grids, wake capturing, turbulence, and acoustics.

MAE 740 - AEROTHERMODYNAMICS
Semester Hours: 3

Description of the dynamic and thermal fluid flow environments associated with hypervelocity vehicles and propulsion systems with emphasis on thermochemical nonequilibrium behavior. Topics include thermostatistical basis for internal energies, specific heats and shock strengths in dissociated and ionized gases; formulation of reacting flow conservation equations; and recent experimental advances in aerothermodynamics.

MAE 741 - STATISTICAL THERMODYNAMICS
Semester Hours: 3

MAE 745 - COMBUSTION II
Semester Hours: 3

Droplet evaporation and burning, introduction to turbulent flow, turbulent diffusion and premixed flames, burning of solids, pollutant emissions, and detonation.

MAE 746 - CONVECTIVE HEAT TRANSFER
Semester Hours: 3

Advanced theory of convective transport processes in fluids, including transport of momentum and energy in laminar flow, boundary layers and turbulent transport in shear flow. Engineering applications include boiling and two phase processes.

MAE 748 - RADIATIVE TRANSFER
Semester Hours: 3

Physics and modeling of radiative transfer. Scattering, remote sensing, and absorption in participating media. Infrared through optical wave lengths. Computational methods in radiative transfer.

MAE 749 - MASS TRANSPORT
Semester Hours: 3

Mass transfer in solid and fluid systems under steady and transient conditions. Integration of momentum, heat and mass transfer equations with application to reactive, rheological and multicomponent systems.

MAE 751 - BOUNDARY LAYER THEORY
Semester Hours: 3

Development of boundary layers using singular perturbation theory. Curvature and compressible effects and the order of their importance. Modern applications and computational approaches.
MAE 752 - MECH OF RARIFIED GASES
Semester Hours: 3

Application of kinetic theory to rarefied gas-flow problems. Boltzmann statistical distribution; gas-surface interaction, transport properties, free molecule flow; heat-free molecule flow; procedures for non-equilibrium flows. Offered upon demand.

MAE 753 - MAGNETO-GAS DYNAMICS
Semester Hours: 3

Equations of motion for ionized gases with critical analysis of transport properties in steady and varying electric and magnetic fields. MHD shock waves and radiation effects.

MAE 754 - HYPersonic FLOW
Semester Hours: 3

Theories for treating the laminar and turbulent boundary layers of reacting fluids, mixtures, related chemical, thermodynamic, and physical phenomena in hypersonic flows. Leading edge bluntness, shock wave interactions, and vorticity effects.

MAE 755 - ADVANCED AERODYNAMICS
Semester Hours: 3

Transonic, supersonic, and hypersonic flows. Application of compressible potential theory, similarity rules, slender body theory and Newtonian flow theory to the analysis of aerodynamics of aircraft, missiles, re-entry vehicles, and other flight vehicles.

MAE 756 - NUM SIM OF MAGNETOHYDRODYNAMIC
Semester Hours: 3

Finite difference methods for simulation of MHD flows. Methods include explicit scheme, FICE methods, LBL, ADI, artificial damping and projected characteristics for multidimensional time-dependent flow.

MAE 757 - OPT TECH/FLUID MECHANICS
Semester Hours: 3

Laser sources, molecular interactions with light and diatomic spectroscopy needed fluorescence, Brillouin scattering, four wave mixing, CARS and other applications in optical fluid diagnostics. (Same as CHE 757.).

MAE 758 - TURBULENCE
Semester Hours: 3

Turbulence in gases and liquids; boundary layers, atmospheric phenomena.

MAE 760 - ANALY METH NONLIN DYNAM
Semester Hours: 3

Application of averaging methods and perturbation methods to vibrations of nonlinear systems. Analysis of linear systems with periodic coefficients (Floquet theory). Elements of stability theory, Liapunov functions, and Liapunov’s direct method.

MAE 762 - WAVE MOT/CONT ELAS BODIES
Semester Hours: 3

Elements of stress wave propagation in bounded elastic media. Propagation of elastic waves in infinite and semi-infinite bodies, cylinders, rods and beams. (Same as CE 762.).

MAE 765 - RANDOM VIBR/ELASTIC SYSTEMS
Semester Hours: 3

MAE 768 - DYN AEROSPACE VEHICLES
Semester Hours: 3

Elements of advanced rotational kinematics of rigid bodies. Attitude motion of space vehicles in circular and elliptic orbits. Methods of gravitation and spin stabilization of gyrostat.

MAE 772 - THEORY STRUCT STABILITY
Semester Hours: 3

MAE 773 - THEORY OF SHELLS  
Semester Hours: 3  
Analysis of thin plates and shells including higher order approximation theories and transverseshear deformations. Illustration of theories by selected problems. (Same as CE 773.).

MAE 774 - FINITE ELEM ANALY II  
Semester Hours: 3  
Advanced topics in finite element analysis; application to nonlinear partial differential equations in continuum mechanics; theoretical studies of convergence and stability of solutions. (Same as CE 774.).

MAE 776 - TH FIN ELAST FIN VISCOEL  
Semester Hours: 3  
Theory of finite deformation analysis for elastic and viscoelastic materials. Constitute models are developed for a functional analysis approach leading to models based on the Cauchy-Green Deformation Tensor and the Strain Energy Density Function. Models discussed include: Mooney-Rivlin and Bernstein-Kearsley-Zappas.

MAE 778 - FRACTURE MECHANICS  
Semester Hours: 3  
Theory of crack propagation, stress intensity factors, mapping techniques, series expansion, asymptotic approximations, field singularities, integral transforms, numerical solutions. (Same as CE 778.).

MAE 780 - THEORY OF ACOUSTICS  
Semester Hours: 3  
Simple harmonic oscillators, damped and forced oscillators, 1-D wave equation, vibration of a string, 2-D wave equation, vibration of membranes, the acoustic wave equation, plane waves, cylindrical and spherical waves, reflection and transmission, radiation and reception of acoustic waves, absorption and attenuation of sound, cavities and wave guides, and architectural acoustics.

MAE 781 - NONLINEAR EFFECTS/PLASMA  
Semester Hours: 3  
Fundamental physical concepts and methods of estimating various nonlinear interactions in plasmas. Analytical and numerical methods to deal with these problems.

MAE 782 - PLASMA TURBULENCE  
Semester Hours: 3  
Methodology that deals with plasma turbulence together with current numerical techniques to solve these problems approximately, via super-computing.

MAE 795 - SELECTED TOPICS MECH & AERO EG  
Semester Hours: 1-9

MAE 799 - DOCTORAL DISSERTATION  
Semester Hours: 3-9  
Required each semester student is enrolled and receiving direction on doctoral dissertation.

Aerospace Systems Engineering, PhD

The MAE Department offers a PhD program in Mechanical Engineering.

The following table is an outline of the program of study requirements. Students should consult their dissertation advisor and supervisory committee to develop their program of study.

**Program of Study**

**Engineering Major**

Minimum of 27 semester hours of graduate coursework from MAE or related departments  
27

With approval, a Master's Thesis may be counted 6 semester hours towards this total.

**First Minor**

ISE 627  
ENGINEERING SYSTEMS  
3

9 semester hours of graduate courses in an approved engineering area of specialization  
9

**Second Minor**

MAE 692  
GRAD ENGR ANALYSIS I  
3
6 semester hours of graduate coursework in mathematics (Typically MAE 693 and ISE 690)  

**Doctoral Dissertation**  
18 hours (minimum) of MAE 799 - Doctoral Dissertation  

**Graduate Seminar**  
MAE 684 AEROSPACE SYSTEMS SEMINAR  

**Total Semester Hours**  
67

1 Any PhD candidate who has not completed MAE 684 during their MSE degree at UAH must take MAE 684.

With prior approval, up to 12 semester hours of 500 level courses may be taken in fulfillment of the Basic and specific program requirements.

**Aerospace Systems Engineering, MSASE**

The MAE Department offers two options leading to the Master of Science degree in Aerospace Systems Engineering (MSASE). These are designated:

- **Plan I (Thesis),**
- **Plan II (Non-thesis)**

The following sections describe the requirements for each of these options. For both options, the majority of coursework, not including MAE 699, must be from MAE. With prior approval, up to 12 semester hours of 500 level courses may be taken in fulfillment of the Basic and specific program requirements.

**Basic MSASE Program of Study**

The Basic Program of Study, common to both the Plan I and Plan II (Non-thesis) MSASE options, contains a minimum of 24 semester hours of graduate-level course work that must include:

**Engineering Major**

Select an engineering major consisting of 12 semester hours of graduate courses including supporting engineering courses

**First Minor**

ISE 627 ENGINEERING SYSTEMS  
3 semester hour graduate course in an approved engineering area of specialization  
3

**Second Minor**

MAE 692 GRAD ENGR ANALYSIS I  
3 semester hour approved graduate mathematics or engineering mathematics course  
3

**Total Semester Hours**  
24

**Plan I, Thesis Option**

Students selecting this option must:

Complete Basic Program of Study as described above  

MAE 684 AEROSPACE SYSTEMS SEMINAR  
1

MAE 699 MASTER'S THESIS  
6

Complete an acceptable thesis including a public defense and submit a journal manuscript to the research advisor

**Total Semester Hours**  
31

**Plan II, Non-Thesis Option**

Students selecting this option must:

Complete Basic Program of Study as described above  

Select 6 semester hours of graduate courses to complete an approved extended program of study  

MAE 684 AEROSPACE SYSTEMS SEMINAR  
1

**Total Semester Hours**  
31

**Mechanical Engineering, PhD**

The MAE Department offers a PhD program in Mechanical Engineering.
The following table is an outline of the program of study requirements. Students should consult their dissertation advisor and supervisory committee to develop their program of study.

**Program of Study**

**Engineering Major**
Minimum of 27 semester hours of graduate coursework from MAE or related departments  
With approval, a Master's Thesis may be counted 6 semester hours towards this total.

**First Minor**
12 semester hours of graduate courses in an approved engineering area of specialization

**Second Minor**
- MAE 692 GRAD ENGR ANALYSIS I  
- MAE 671 CONTINUUM MECHANICS  
- 3 semester hours of graduate coursework in mathematics (Typically MAE 693)

**Doctoral Dissertation**
18 hours (minimum) of MAE 799 - Doctoral Dissertation

**Graduate Seminar**
- MAE 683

**Total Semester Hours**
67

---

Any PhD candidate who has not completed MAE 683 during their MSE degree at UAH must take MAE 683.

*With prior approval, up to 12 semester hours of 500 level courses may be taken in fulfillment of the Basic and specific program requirements.*

**Mechanical Engineering, MSE**

The MAE Department offers two plans leading to the MSE degree for the Mechanical Engineering option. These are designated:

- Plan I (Thesis),
- Plan II (Non-thesis)

The following sections describe the requirements for each of these options. For both options, the majority of coursework, not including MAE 699, must be from MAE. With prior approval, up to 12 semester hours of 500 level courses may be taken in fulfillment of the Basic and specific program requirements.

**Basic Program of Study**

The Basic Program of Study, common to both the Plan I and Plan II (non-thesis) MSE options, contains a minimum of 24 semester hours of graduate-level course work that must include:

**Engineering Major**
Select an engineering major consisting of 12 semester hours of graduate courses including supporting engineering courses

**First Minor**
Select a first minor of 6 semester hours of graduate courses in an approved engineering area of specialization

**Second Minor**
- MAE 692 GRAD ENGR ANALYSIS I  
- Select 3 additional semester hours of graduate courses in Mathematics or Graduate Engineering Analysis

**Total Semester Hours**
24

6 semester hours of graduate coursework in mathematics (MAE 693 and MAE 671 are typical selections)

**Plan I, Thesis Option**

Students selecting this option must:

- Complete Basic Program of Study including MAE 671 as described above
- MAE 683 GRAD SEMINAR MECH ENGR
- MAE 699 MASTER'S THESIS

---

24
Complete an acceptable thesis including a public defense

256.824.3192

**Adjunct Faculty**

More than 10 scientists from NASA's Marshall Space Flight Center (Space Science Laboratory) and local biotechnology companies in Huntsville serve as adjunct faculty to the program and have expertise in at least one of the thrust areas of Biotechnology Science and Engineering.

**Mission**

The Biotechnology Science and Engineering Graduate Program (B.S.E.) is an interdisciplinary program of the University of Alabama in Huntsville concerned with research and scholarly activity in the diverse areas of biotechnology. The program's mission is to provide Ph.D. level graduates who are broadly trained in the areas of science and engineering pertinent to biotechnology and who will benefit the economic, educational, and cultural development of Alabama. Graduates of the program are expected to be able to make significant contributions to biotechnology in academic, governmental, and business settings.

Biotechnology is not a single area of study itself, but is a multidisciplinary field concerned with the practical application of biological organisms and their subcellular components to industrial or service manufacturing, to environmental management and health and medicine. It is, in essence, a series of enabling technologies drawn from the fields of microbiology, cellular biology, molecular biology, genetics, biochemistry, immunology, fermentation technology, environmental science and engineering which allow one to synthesize, breakdown or transform materials to suit human needs. Biotechnology ("Current Trends in Chemical Technology, Business, and Employment," American Chemical Society, Washington, DC. 1998) can therefore be defined as the safe study and manipulation of biological molecules for development of products or techniques for medical and
industrial application. Although biotechnology in the broadest sense is not new, the current ability and demand for manipulating living organisms or their subcellular components to provide useful products, processes or services has reached new heights. Modern biotechnology has resulted from scientific scrutiny of old and familiar processes and from new advances in molecular biology, genetic engineering and fermentation technologies.

The future industrial landscape will continue to include research, development and the manufacturing of products such as proteins and nucleic acids that will be based wholly or in large part on biological processes. The interdisciplinary program in Biotechnology Science and Engineering will provide broad training in sciences and engineering dealing with the handling and the processing of macromolecules and living systems. Students will receive advanced training in one of three specializations:

1. Structural Biology,
2. Biomolecular Sciences or

The principal core of instructors and research advisors are drawn from the Departments of Biological Sciences, Chemistry, and Chemical and Materials Engineering. The program includes significant involvement from local biotechnology companies as well as NASA’s Marshall Space Flight Center.

In addition to a set of core courses, the Ph.D. program requires the successful completion of a comprehensive exam, seminar attendance, the preparation of a U.S. National Institutes of Health (NIH) or National Science Foundation style research proposal, oral presentations and defense of a dissertation describing original research. It is the intent of the program to produce internationally competitive graduates who will make significant contributions to the field of biotechnology.

**Admission Requirements**

Applicants may be unconditionally admitted to the program if they have:

1. A bachelor's degree in science or engineering from an approved college or university;
2. A minimum grade point average (GPA) of 3.0 overall;
3. A combined score of 300 on the verbal, quantitative and analytical sections and at least 3.0 in the writing section of the Graduate Record Examination (GRE).
4. A TOEFL (iBT) score of: all sub-scores equal to or greater than 18 OR IELTS score of: all sub-scores equal to or greater than 6.0 for international students.

Applicants may be admitted conditionally if they do not meet these requirements but indicate the potential for success in the Biotechnology Science and Engineering program. Applicants must have knowledge from coursework in the areas of general biology, cell biology, genetics and molecular biology, general and organic chemistry, physics and calculus to satisfy the prerequisites of calculus-based physical or biophysical chemistry. Students with deficiencies in any of these areas may be admitted only conditionally pending remedy of the deficiencies.

To obtain a Ph.D. in Biotechnology Science and Engineering, the student must satisfy all requirements of the School of Graduate Studies as well as those of the Biotechnology Science and Engineering Program.

The requirements are as follows:

1. Successfully complete the core courses:

<table>

**Total Semester Hours** 15

2. Pass the Preliminary Examination

Each student must pass the preliminary examination which has to be taken at the end of the first summer of residence, and will cover materials from the core courses in the areas of Biochemistry, Cellular and Molecular Genetics and Bioprocessing/Bioseparations. Students will take examinations in all three areas during the first attempt. Students are required to repeat only the part of the exams that they did not pass. Students will have a maximum of two attempts to pass the preliminary examination. Appeals to this policy must be filed with the Director of the Biotechnology Program who will consult with the Graduate Dean and the Deans of the Colleges of Engineering and Science.

3. Choose a dissertation advisor and committee
Students who qualify for the Ph.D. program by passing the preliminary examination will choose a dissertation advisor and a Supervisory Committee during the fall semester of their second year. The committee will meet for the first time with the student to review the initial research goals (Research Start Meeting).

4. Write and defend a research proposal

In consultation with the dissertation advisor and committee, the student will begin working on a research project which will subsequently lead to an NIH or NSF style proposal. This written proposal will be submitted to the committee by the middle of the second summer. By the first semester of the third year, the student will defend this proposal in a seminar, followed by questions from committee members (Annual Research Appraisal I) (ARA-I). Successful completion of the written and oral presentation of the dissertation proposal constitutes the School of Graduate Studies Qualifying Examination.

5. Complete an acceptable program of study

The program of study will consist of at least 48 semester hours of coursework at the graduate level including the core courses required to prepare for the preliminary examinations and courses required to prepare the student to conduct original research in their area of study. Students must register for a total of three semester hours of seminar. A maximum of three seminar semester hours may be considered towards fulfillment of the graduate course requirements. A minimum of 18 semester hours of BSE 799 must be included in the program of study.

6. Complete and defend a research dissertation

During the fall semesters of the next two years, students will meet with their advisors and committee for research appraisals (ARA). Following these annual evaluations, the student will begin writing the dissertation and plan to defend it before the fifth year after passing the preliminary examination. The primary dissertation advisor and the committee have the discretion to allow students to defend the dissertation earlier if the work is of high quality and sufficient progress has been made toward the goals stated in the research proposal.

All requirements for the Ph.D. must be completed in no more than five years after the approval of the Research Proposal (ARA-I).

Mission

The mission of the Optical Science and Engineering Program is to develop and maintain a world class graduate education and research program in the rapidly advancing and expanding fields of optical science and engineering, to provide our students with exciting opportunities to learn and to do forefront research, and to prepare these students for productive and fulfilling careers.

Overview of the OSE Program

At the dawn of the 21st century, Optics stands today as an area of major scientific and technological importance. With considerable foresight, the Optical Science and Engineering (OSE) doctoral program was formally approved at UAH in 1992. Since then the program has grown steadily. Graduates of the program have little difficulty finding employment in rewarding careers. In 2000 the OSE core curriculum was redesigned to provide students more flexibility and to accommodate those coming into the program from various disciplines.

The OSE core consists of two major parts. The first part contains the following seven courses:

1. Geometrical Optics
2. Physical Optics
3. Fourier Optics
4. Optical Testing
5. Radiometry, Detectors and Sources
6. Lasers
7. Optical Testing Laboratory
This material is normally covered in the first year of graduate study, and is the basis for the Preliminary Examination given in the fall term of the second year of study. The second part consists of three focus areas, each of which contains three courses. The student is expected to select one of these areas, and is responsible for the material contained therein. The focus areas are:

1. Optical Communications
   a. Communications Theory
   b. Optical Fiber Communications
   c. Optical Communications
2. Quantum Physics and Devices
   a. Introduction to Quantum Mechanics
   b. Quantum Mechanics II
   c. Quantum Devices
3. Optical Engineering
   a. Lens Design
   b. Opto-Mechanical Design and Fabrication
   c. Optical System Design

This unique program is highly multi-disciplinary and is followed by a wide variety of advanced coursework and research in both fundamental and applied subjects. This diversity is reflected by the OSE faculty, which is drawn from the expertise of optical scientists and engineers from the departments of Physics, Electrical and Computer Engineering, and Mechanical and Aerospace Engineering, and from the Center for Applied Optics.

Admission Requirements
In order to be unconditionally admitted to the doctoral program, a student must have satisfied the following set of requirements:

1. A bachelor's degree, or its equivalent, from an approved college or university, in one of the physical sciences or engineering, with an overall grade point average of 3.0 or better;
2. A minimum score of 1600 on the combined verbal, quantitative, and analytical sections of the Graduate Record Examination;
3. TOEFL score greater than 550 (213) computer-based in the case of international students whose native language is not English; and

For GRE tests taken after October 1, 2002 the score on the analytical portion is obtained by taking the (raw score + 2) X 100

All entering students will be administered a background evaluation at admission conducted by the Optics Coordinating Committee. An applicant whose scholastic record reveals a deficiency in one or more of the first two categories above, may, upon recommendation of the Program Coordinator and the approval of the Graduate Dean, be admitted on a conditional basis, as provided by Graduate School regulations. However, that student must follow the Graduate School's policies in achieving unconditional admission status prior to taking the Preliminary Examination.

Purpose
The MS-CBS degree is a unique program in that it is an interdisciplinary program of study among three colleges: Business, Engineering, and Science. Due to this collaboration between the colleges, students will be exposed to a diversified core curriculum with a choice of 3 different elective tracks; having in-depth curriculum in their track while gaining familiarity in the other two. Upon graduation students will be able to perform: Cybersecurity Analysis of vulnerabilities and threats to network environments, Network Penetration Testing, Auditing for Certification & Accreditation, and Technical Project Management in Information Technology. Students will also be able to integrate the business and scientific underpinnings of information technology trends related to the System Development Life Cycle and understand the federal, state & local statutory requirements associated with Information and cybersecurity through the Information Assurance Technical Framework (IATF).

Program prerequisites are kept to a minimum and the program is designed to meet the needs of students with a wide variety of educational backgrounds. The admission and program requirements for those pursuing the Management track are described below.

Degree Requirements
Prerequisites
Program prerequisites include a bachelor's degree in any field and demonstration of competency in each of the following three areas:

1. Computer Applications Competency. Students must demonstrate this competency by passing an on-line computer applications competency exam or by successful completion of the IS 146 or its equivalent. IS 146 or its equivalent will not count towards the requirements of the MS-CBS degree.
2. Computer Programming Competency. Students must demonstrate this competency by passing an on-line computer programming competency exam or by successful completion of the IS 210 or its equivalent. IS 210 or its equivalent will not count towards the requirements of the MS-CBS degree.
3. Computer Science and Networks competencies. Students must be competent to be enrolled in graduate level core courses including those in computer science and networks. If a student does not have these competencies, s/he may be required to either self-prepare by reviewing online tutorials and passing a competency exam or to register for additional courses which will not count towards the 30 credit hours required for this degree.

The MS-CBS program consists of 30 semester hours of graduate coursework. The coursework includes a five-course core that is required of all students, 9 credit hours of management track required courses, and 6 credit hours of electives. The directed elective choices are designed to provide students a broader understanding of multiple cybersecurity functions normally expected in an organization.

IS 692 (http://catalog.uah.edu/search/?P=IS%20692)/CPE 692 (http://catalog.uah.edu/search/?P=CPE%20692)/CS 692 (http://catalog.uah.edu/search/?P=CS%20692) is the capstone course and should be taken toward the end of the student’s program. Students must earn a grade of B or better in the capstone course.

**Total Semester Hours**: 30

1. MS-CBS students whose previous studies include the undergraduate equivalents of IS 560 (http://catalog.uah.edu/search/?P=IS%20560) and IS 577 (http://catalog.uah.edu/search/?P=IS%20577) must substitute a 3-credit-hour graduate-level IS course for each of the latter.

2. Students are required to satisfy the prerequisites for any elective they choose. Students who wish to substitute some other courses as directed electives may seek prior approval for such a substitution by contacting the Director of Graduate Programs in UAH College of Business Administration.

### Additional Information

#### Thesis Option

A thesis option is available. Students interested in this option should contact the both the faculty member who the student wants to serve as the thesis advisor and the Director of Graduate Programs in the College of Business before completing 12 hours of graduate study. If selected, the student will register for the IS 699 (http://catalog.uah.edu/search/?P=IS%20699) Master’s Thesis course for 6 credit hours in lieu of 6 credit hours of electives.

#### Transfer Credit

Up to 12 semester hours of graduate credit taken at other universities may be transferred to meet MS-CBS degree requirement. Inquiries about the transferability of specific courses should be directed to the College of Business Director of Graduate Programs, who will consult with the IS faculty to determine whether the content of the class will be accepted for transfer credit.

### Cybersecurity, MS Interdisciplinary - Computer Engineering Track

#### Purpose

The MS degree is a unique program in that it is an interdisciplinary program of study among three colleges, Business, Engineering, and Science. Due to this collaboration between the colleges, students will be exposed to a diversified core curriculum with a choice of 3 different elective tracks; having in-depth curriculum in their track while gaining familiarity in the other two. Upon graduation students will be able to perform: Cybersecurity Analysis of vulnerabilities and threats to network environments, Network Penetration Testing, Auditing for Certification & Accreditation, and Technical Project Management in Information Technology. Students will also be able to integrate the business and scientific underpinnings of information technology trends related to the System Development Life Cycle and understand the federal, state & local statutory requirements associated with Information and cybersecurity through the Information Assurance Technical Framework (IATF).

Program prerequisites are kept to a minimum and the program is designed to meet the needs of students with a wide variety of educational backgrounds. The admission and program requirements for those pursuing the Management track are described below.

#### Admission Requirements

Individuals who are interested in obtaining application forms and information concerning admission procedures should contact the College’s Director of Graduate Programs, Room 102, Business Administration Building. The telephone number is 256.824.6681. The email address is gradbiz@uah.edu. The College’s home page can be accessed at [http://uah.edu/cba](http://uah.edu/cba).
Admission is granted to students who show high promise for success in graduate study and who hold baccalaureate degrees from approved institutions. Individuals with baccalaureate degrees in any field of study are eligible to apply. Students may have backgrounds in such diverse fields as engineering, science, business, liberal arts, education, and healthcare. Admission to the computer engineering or computer science tracks may require that a student hold a degree in one of the following disciplines:

- Management Information Systems
- Computer Science
- Electrical Engineering, Computer Engineering
- Information Systems Security Engineering

Admission to the program is competitive. It is based on an applicant’s undergraduate academic performance and scores on the Graduate Management Admission Test (GMAT) or the Graduate Records Examination (GRE). Scores on the Test of English as a Foreign Language (TOEFL) are required for the applicant whose native language is not English.

The GMAT measures general verbal, mathematical and analytical writing skills that are developed over a long period of time and are associated with success in the first year of study at graduate schools of management. The GMAT does not presuppose any specific knowledge of business areas. The GMAT is a Computer Adaptive Test (CAT) given throughout North America and at many international sites. The test is administered through individually scheduled appointments. Applicants may arrange to take the GMAT by applying on the web at http://www.mba.com.

The information on the GRE can be found at http://www.ets.org.

In order for applicants to receive full consideration from the admissions committee, all applications materials (graduate application, official copies of all transcripts, and official GMAT or GRE score report) should be received in a timely manner. Use the following dates as a guideline: The deadline for international students is earlier.

<table>
<thead>
<tr>
<th>For admission in</th>
<th>Preferred date for all materials</th>
<th>The latest date for all materials</th>
</tr>
</thead>
<tbody>
<tr>
<td>Fall semester</td>
<td>June 1</td>
<td>July 15</td>
</tr>
<tr>
<td>Spring Semester</td>
<td>October 1</td>
<td>November 30</td>
</tr>
<tr>
<td>Summer term</td>
<td>March 1</td>
<td>April 30</td>
</tr>
</tbody>
</table>

There is no guarantee that materials received after the latest guideline dates will be processed in time for enrollment in the next semester. Incomplete applications that cannot be processed will be considered for the following semester. Applicants should allow about three weeks from the date the GMAT is administered for official scores to reach Graduate Admissions. Adequate lead time should also be allowed for the receipt of official transcripts from other universities.

**International Students**

International applicants who are not native speakers of English are required to submit TOEFL scores or IELTS scores. Students who have received a score of: TOEFL (iBT): all sub-scores equal or greater than 18 OR IELTS score of: all sub-scores equal or greater than 6.0 are eligible for full admission with no language testing and/or Intensive Language/Culture coursework required. Any English language deficiencies must be remedied through required English as a Second Language (ESL) courses which must be taken beginning in the first semester. For exceptions to this requirement, see the section on Graduate Admissions Information.

International students must submit all application materials to the graduate admissions office by the following deadlines:

<table>
<thead>
<tr>
<th>Students currently outside of the United States</th>
<th>Students currently inside the United States</th>
</tr>
</thead>
<tbody>
<tr>
<td>Fall semester</td>
<td>April 1</td>
</tr>
<tr>
<td>Spring semester</td>
<td>September 1</td>
</tr>
<tr>
<td>Summer term</td>
<td>February 1</td>
</tr>
</tbody>
</table>

**Tracks**

The program is offered in three different disciplines (tracks). Additional requirements for each track are as follows:

**Business**

Bachelor's degree in a business or related field; students with a bachelor's in an unrelated field will be required to take the following prerequisites - Computer Applications, Computer Programming, and Computer Science and Networks.

**Computer Science**

Bachelor's degree in computer science or a related field; student's with a bachelor's in an unrelated field will be required to take the following prerequisites: Data Structure, Operating Systems, Algorithm Design and Analysis, Computer Architecture and Probability and Statistics.
Engineering

Bachelor's degree in engineering from an ABET accredited program; students with a bachelor's in an unrelated field will be required to take the following prerequisites: Data Structure, Operating Systems, Algorithm Design and Analysis, Computer Architecture, Probability and Statistics.

MSCBS is a 33 semester hour graduate level credit program. 18 semester hours of the credits are part of the core classes while the other 15 are focused on the specific track.

The MS-CBS program consists of 30 semester hours of graduate coursework. The coursework includes a five-course core that is required of all students, 9 credit hours of management track required courses, and 6 credit hours of electives. The directed elective choices are designed to provide students a broader understanding of multiple cybersecurity functions normally expected in an organization.

### Restrictions on Elective Courses

1. Computer Science track students should take two elective courses from CS courses.
2. Computer Engineering track students should take at least one elective course from CPE courses.

1. Students can take only one course between these courses.
   a. CS 570 (http://catalog.uah.edu/search/?P=CS%20570), CPE 548 (http://catalog.uah.edu/search/?P=CPE%20548), and IS 560 (http://catalog.uah.edu/search/?P=IS%20560)
   b. CS 685 (http://catalog.uah.edu/search/?P=CS%20685) and CPE 645 (http://catalog.uah.edu/search/?P=CPE%20645)
   c. CS 670 (http://catalog.uah.edu/search/?P=CS%20670) and CPE 646 (http://catalog.uah.edu/search/?P=CPE%20646)
   d. CS 687 (http://catalog.uah.edu/search/?P=CS%20687) and IS 640 (http://catalog.uah.edu/search/?P=IS%20640)

2. At least half of the hours must be completed in courses numbered 600.

### Cybersecurity, MS Interdisciplinary - Computer Science Track

#### Purpose

The MS degree is a unique program in that it is an interdisciplinary program of study among three colleges, Business, Engineering, and Science. Due to this collaboration between the colleges, students will be exposed to a diversified core curriculum with a choice of 3 different elective tracks; having in-depth curriculum in their track while gaining familiarity in the other two. Total Semester Hours  21

Restrictions on Elective Courses

1. Computer Science track students should take two elective courses from CS courses.
2. Computer Engineering track students should take at least one elective course from CPE courses.

1. Students can take only one course between these courses.
   a. CS 570 (http://catalog.uah.edu/search/?P=CS%20570), CPE 548 (http://catalog.uah.edu/search/?P=CPE%20548), and IS 560 (http://catalog.uah.edu/search/?P=IS%20560)
   b. CS 685 (http://catalog.uah.edu/search/?P=CS%20685) and CPE 645 (http://catalog.uah.edu/search/?P=CPE%20645)
   c. CS 670 (http://catalog.uah.edu/search/?P=CS%20670) and CPE 646 (http://catalog.uah.edu/search/?P=CPE%20646)
   d. CS 687 (http://catalog.uah.edu/search/?P=CS%20687) and IS 640 (http://catalog.uah.edu/search/?P=IS%20640)

2. At least half of the hours must be completed in courses numbered 600.

Cybersecurity, MS Interdisciplinary - Management Track

Purpose

The MS-CBS degree is a unique program in that it is an interdisciplinary program of study among three colleges: Business, Engineering, and Science. Due to this collaboration between the colleges, students will be exposed to a diversified core curriculum with a choice of 3 different elective tracks; having in-depth curriculum in their track while gaining familiarity in the other two. Upon graduation students will be able to perform: Cybersecurity Analysis of vulnerabilities and threats to network environments, Network Penetration Testing, Auditing for Certification & Accreditation, and Technical Project Management in Information Technology. Students will also be able to integrate the business and scientific underpinnings of information
technology trends related to the System Development Life Cycle and understand the federal, state & local statutory requirements associated with Information and cybersecurity through the Information Assurance Technical Framework (IATF).

Program prerequisites are kept to a minimum and the program is designed to meet the needs of students with a wide variety of educational backgrounds. The admission and program requirements for those pursuing the Management track are described below.

**Degree Requirements**

**Prerequisites**

Program prerequisites include a bachelor’s degree in any field and demonstration of competency in each of the following three areas:

1. **Computer Applications Competency.** Students must demonstrate this competency by passing an online computer applications competency exam or by successful completion of the IS 146 or its equivalent. IS 146 or its equivalent will not count towards the requirements of the MS-CBS degree.

2. **Computer Programming Competency.** Students must demonstrate this competency by passing an online computer programming competency exam or by successful completion of the IS 210 or its equivalent. IS 210 or its equivalent will not count towards the requirements of the MS-CBS degree.

3. **Computer Science and Networks competencies.** Students must be competent to be enrolled in graduate level core courses including those in computer science and networks. If a student does not have these competencies, s/he may be required to either self-prepare by reviewing online tutorials and passing a competency exam or to register for additional courses which will not count towards the 30 credit hours required for this degree.

The MS-CBS program consists of 30 semester hours of graduate coursework. The coursework includes a five-course core that is required of all students, 9 credit hours of management track required courses, and 6 credit hours of electives. The directed elective choices are designed to provide students a broader understanding of multiple cybersecurity functions normally expected in an organization.

IS 692 is the capstone course and should be taken toward the end of the student’s program. Students must earn a grade of B or better in the capstone course.

Materials Science, MS

Total Semester Hours 30

1 MS-CBS students whose previous studies include the undergraduate equivalents of IS 560 (http://catalog.uah.edu/search/?P=IS%20560) and IS 577 (http://catalog.uah.edu/search/?P=IS%20577) must substitute a 3-credit-hour graduate-level IS course for each of the latter.

2 Students are required to satisfy the prerequisites for any elective they choose. Students who wish to substitute some other courses as directed electives may seek prior approval for such a substitution by contacting the Director of Graduate Programs in UAH College of Business Administration.

Additional Information

Thesis Option

A thesis option is available. Students interested in this option should contact the both the faculty member who the student wants to serve as the thesis advisor and the Director of Graduate Programs in the College of Business before completing 12 hours of graduate study. If selected, the student will register for the IS 699 (http://catalog.uah.edu/search/?P=IS%20699) Master’s Thesis course for 6 credit hours in lieu of 6 credit hours of electives.

Transfer Credit

Up to 12 semester hours of graduate credit taken at other universities may be transferred to meet MS-CBS degree requirement. Inquiries about the transferability of specific courses should be directed to the College of Business Director of Graduate Programs, who will consult with the IS faculty to determine whether the content of the class will be accepted for transfer credit.

Materials Science, MS

Degree: Master of Science
Telephone: 256.824.2596
Admission Requirements
General requirements of the Graduate School (see Admissions Information section of this catalog) must be satisfied. In addition, students admitted to the graduate Materials Science Program are assumed to have background training in chemistry, mathematics, physics, and possibly biology and engineering, depending upon the student's research interests. Students should realize that if deficiencies exist, some additional undergraduate courses may be required. The time required to complete the degree may then be proportionately increased.

Program Objective
The program objective of the Materials Science program is to educate students in the classroom and laboratory so that their technical skill set and knowledge is enhanced through laboratory research and didactic courses such that graduates have the ability to contribute to organizations that perform research or contribute to the research enterprise through education, policy or manufacturing.

The Materials Science MS Program at the The University of Alabama in Huntsville is an interdisciplinary masters program that “focuses on the general application of mathematical and scientific principles to the analysis and evaluation of the characteristics and behavior of solids, including internal structure, chemical properties, transport and energy flow properties, thermodynamics of solids, stress and failure factors, chemical transformation states and processes, compound materials, and research on industrial applications of specific materials.” The University of Alabama in Huntsville MS in Materials Science is not part of the tri-campus program. Students receiving a masters in materials science may be based in one of several departments including chemistry, physics, chemical engineering and mechanical engineering. In the majority of cases, students receive their masters in materials science as part of their doctoral program. Students are encouraged to pursue the thesis option as it enhances the student’s technical skill set, exposes them to new research opportunities and makes them more attractive to employers.

Learning Outcomes
Materials Science students will

• Acquire a comprehensive knowledge of materials science at an introductory graduate level
• Perform semi-independent research (M.S. Plan I students)
• Develop project management skills

Research
Research in Materials Science focuses on the fundamental relations that exist between the structure of materials on the one hand, and properties and the methods for synthesizing and processing these materials on the other; otherwise known as the materials triangle. The material may be a metal, a ceramic, or a polymer, and it may be dispersed in the solid, liquid or gaseous state. Depending upon the desired application, the structure of the material may have to be investigated at the nuclear, atomic, molecular, granular, or larger length scales. The property that is determined by the structure may be mechanical, electrical, magnetic, optical, thermal, chemical, or biological. Synthesizing may be done by thermal, mechanical, photochemical, electrochemical, or biological processes. Many basic academic disciplines can be fruitfully applied to the solution of materials science problems. Among them, we note particularly chemistry, physics, biology, and engineering. Faculty members guiding students in the Materials Science Program represent all four of these areas.

Master of Science Degree Requirements
General requirements of the Graduate School under Plan I or Plan II must be satisfied. The M.S. degree is a general degree in materials science. As such, it is based upon a core sequence of courses emphasizing areas of materials science.

Plan I
This plan requires 24 semester hours of graduate coursework, which must include a core consisting of:

<table>
<thead>
<tr>
<th>Course</th>

<td>CHEMICAL INSTRUMENTATION</td>
<td></td>
</tr>
</tbody>
</table>
MTS 601  NATURE OF MATERIALS
Select a minimum of 6 additional semester hours of graduate coursework in Materials Science 6
MTS 699  MASTER'S THESIS 6
MTS 780  MATERIALS SCIENCE SEMINAR 1 1

Total Semester Hours 28

1 Students should also register for MTS 780 during every semester they are in residence at UAH.

Additional Information
At least 50% of the coursework must be at the 600-level or above. A program of study must be planned in consultation with a member of the materials science faculty serving as a temporary advisor assigned by the program director. After a student following Plan I selects a thesis topic and thesis supervisor, a supervisory committee will be appointed. This committee should consist of three members of the materials science faculty including the thesis supervisor as chair. A student must complete a written thesis and successfully defend it by an oral presentation before the supervisory committee.

Plan II
This plan requires 33 or more semester hours of graduate coursework in Materials Science or a related discipline to include the 15 semester hour Materials Science core:

MTS 601  NATURE OF MATERIALS 3
MTS 602  PROPERTIES OF MATERIALS 3
MTS 660  INTRO SOLID ST PHY I 3
CH 640  ADV CHEMICAL THERMODYNAMICS 3
CH 642  ADV CHEMICAL DYNAMICS 3

Total Semester Hours 15

Students must also register for MTS 780 during every semester in which they are in residence at UAH. Half of any graduate coursework taken must be at the 600-level or above. A program of study must be planned in consultation with a member of the materials science faculty serving as an advisor assigned by the program director. To fulfill the requirement of a final comprehensive exam, the student must pass one of the three sections of the Materials Science Ph.D. Program Exam I. This plan is typically followed, but not unique to, by students who are in the Ph.D. program.

Materials Science, PhD
The Materials Science Ph.D. program is novel in that the three University of Alabama System (UAS) campuses offer a joint doctoral degree without the existence of a separate Materials Science Department on any campus of the system. Under this program, faculty members from the various departments on each campus constitute the Materials Science faculty. Participating faculty come from the Departments of Chemical & Materials Engineering, Chemistry, Engineering Mechanics, Metallurgical Engineering, Mineral Engineering, and Physics at UA; from the Departments of Biochemistry, Biomedical Engineering, Biomaterials, Chemistry, Materials Engineering, Optometry, Physics, and the School of Medicine at UAB; and from the Departments of Chemical Engineering, Chemistry, Mechanical and Aerospace Engineering, and Physics at UAH. The program is governed by a Tricampus Coordinating Committee consisting of faculty members representing each of the three campuses. The UAH faculty contingent is led by the UAH Materials Science Coordinator. Students successfully completing the program will receive a Ph.D. diploma issued jointly by all three universities. Although both science and engineering faculty participate, the curriculum stresses the science of materials, placing special emphasis on materials processing, the production of new materials, and on the application of materials to the needs of technology.

Owing to the differences in undergraduate concentration, students will have differing background knowledge in the field of materials science. The multidisciplinary curriculum has been structured to correct for these differences and to provide depth in a specialty area. In providing options for students to pursue, the faculties of each campus build on their individual research strengths. These strengths currently fall into the following general curricular areas which we designate as options for specialization:

1. Materials structure and properties
2. Macromolecular materials
3. Electronic, optical, and magnetic materials
4. Materials processing
5. Biomaterials
6. Mechanical behavior of materials
Admission Requirements

General requirements of the School of Graduate Studies (see Admissions Information section of this catalog) must be satisfied. Students entering the program are expected to have strong, but diverse, undergraduate training. They will typically have bachelor’s degrees in chemistry, chemical engineering, materials science, materials engineering, mechanical engineering, or physics. In order to be successful in this program it is recommended that a student have:

1. A bachelor's degree or its equivalent from an approved college or university in engineering or one of the physical sciences;
2. A minimum B level scholarship overall or over the last 60 semester hours of undergraduate credit;
3. A minimum score of 300 on the Graduate Record Examination.

An applicant whose scholastic record reveals a deficiency may be admitted on a conditional basis as provided in the Graduate School regulations. The student must then follow the Graduate School's policies in achieving unconditional admission status before completing Program Examination I.

Program Objective

Materials Science objective is to have our Graduate students attain successful careers and recognition as leaders in industry, government, or academia and in the community within a few years of graduation. Our graduates will demonstrate the ability to create innovative solutions through application of their knowledge base and capacity for critical thinking.

Learning Outcomes

Materials Science students will:

- Acquire comprehensive knowledge, skills, and vision for successful careers in materials science and related fields
- Demonstrate the ability to carry out original scholarly research and to defend the scientific concepts in their research specialty
- Lecture their findings of their work

Program Examination Requirements

Program Examination I is a three-part written examination covering the program's core material and qualifies the student to begin research. The three parts are:

1. Structure and Properties of Materials
2. Characterization and Testing
3. Thermodynamics and Processing

The examination is administered by the Tri Campus Coordinating Committee and is offered simultaneously on all three campuses on pre-announced dates. Students must pass all parts of the examination according to a schedule which is available from the Materials Science Coordinator.

After Program Examination I has been successfully completed, the student ordinarily chooses a faculty member to supervise the research for the dissertation. The supervisor chairs a dissertation supervisory committee consisting of no fewer than four additional members. The committee members will be selected based on the student's academic interest and area of research. At least one of the committee members will be from the student's research area at one of the other cooperating universities and another will be a UAH materials science faculty member from a department other than that of the dissertation supervisor. The dissertation committee is charged with supervision and approval of the student's research and progress toward the completion of all requirements leading to the awarding of the degree.

Program Examination II is a comprehensive examination covering the subject of the student's proposed dissertation and consists of two parts. In part one, the student answers written questions submitted by the members of the supervisory committee. In part two, the student describes the plan of his dissertation in an oral presentation before the members of the committee.

Program Examination III is administered by the supervisory committee and consists of an oral presentation and defense of the results of the dissertation. Grading of student performance in Program Examinations II and III is the responsibility of dissertation supervisory committee.

Coursework Requirements

A minimum of 48 semester hours of graduate-level coursework plus at least 18 semester hours of MTS 799 are required. A student may transfer up to 24 semester hours of approved graduate coursework toward the 48 semester hour requirement. The student and the dissertation supervisor select courses appropriate to the student's dissertation area and complete a Program of Study. Frequently included in the Program of Study are the five core courses listed under the requirements for the Materials Science M.S. degree that is described above. The Materials Science Ph.D. Program otherwise
has no further specific course requirements. Students take courses to prepare for the Program Examination I or to complete their Program of Study as approved by their dissertation advisor.

**Candidacy and Dissertation Requirements**

Admission to candidacy for the doctoral degree will be contingent upon the successful completion of the qualifying exam, called Program Examination II. Normally, a student will be considered eligible to take Program Examination II when all of the required coursework has been completed. After being admitted to candidacy, the student must then complete the remaining requirements for the degree, with the principal remaining requirement involving the doctoral research and dissertation.

**Residence Requirement**

The minimum period in which the doctoral degree can be earned is three full academic years of graduate study. The student must spend the last or penultimate academic year in continuous residence as a full-time graduate student at one of the campuses.

**Time Limits**

The Program Examination I is to be taken at the first September offering immediately after the student enters the program. The Program Examination I is generally to be completed by all full-time students within two years after first entering the program, with exceptions being made for part-time students.

The Program Examination II is to be attempted within a reasonable time after the Program Examination I. In general, it is to be taken no later than one year prior to submitting an application for graduation.

All requirements for the doctoral degree must be completed within a period of five years after the completion of Program Exam II. Credits earned towards an M.S. or Ed.S. degree may be applied to the doctoral degree provided that they are applicable to the area of specialization or to the core. Dated credits may be accepted if recommended by a student’s supervisory committee, the UAH Materials Science Coordinator, and approved by the Graduate School. For application toward this degree, the student may be required to demonstrate competence in the dated coursework.

**Advisement**

Students admitted into the program without having already communicated with a dissertation supervisor will initially be assisted in program planning and other academic matters by a temporary faculty advisor appointed by the Materials Science Coordinator. Also, upon being accepted into the program, students will be assigned to one of the participating departments as their temporary “home” department. They may apply for an assistantship and, if awarded, the teaching or research duties associated with the assistantship will normally be assigned in that department by the department chair. A student may select a dissertation research project in a participating department other than the temporary home department. If the research project is acceptable to the UAH Materials Science Program Committee, a permanent advisor (normally the research supervisor selected by the student) will be assigned.

**Optical Science and Engineering, PhD**

**Optical Science and Engineering, PhD Degree**

400-A Optics Building
Telephone: 256.824.2525
Program Coordinator: Robert Lindquist (robert.lindquist@uah.edu), Electrical and Computer Engineering

**Mission**

The mission of the Optical Science and Engineering Program is to develop and maintain a world class graduate education and research program in the rapidly advancing and expanding fields of optical science and engineering, to provide our students with exciting opportunities to learn and to do forefront research, and to prepare these students for productive and fulfilling careers.

**OSE Program**

Optics is an area of major scientific and technological importance. With cooperation of the College of Engineering and the College of Science, the Optical Science and Engineering (OSE) doctoral program was formally approved at UAH in 1992. This unique program is highly multi-disciplinary and is followed by a wide variety of advanced coursework and research in both fundamental and applied subjects. This diversity is reflected by the OSE faculty, which is drawn from the expertise of optical scientists and engineers from the departments of Physics, Electrical and Computer Engineering, and Mechanical and Aerospace Engineering, and from the Center for Applied Optics.
Degree Requirements

Because students will come into this program with strong, but diverse undergraduate and graduate training, the multidisciplinary curriculum has been structured on a common basis for all entering students, but will compensate for individual differences and provide depth in specific areas. A total of 48 semester hours of graduate coursework are required, of which 28 semester hours are in designated optics courses. An additional 18 semester hours must be in dissertation research. Students are also required to satisfy the Seminar requirements of their home departments, as required. In addition, all requirements of the School of Graduate Studies must be met in order to remain in good standing.

Admissions Requirement

Applicants may be unconditionally admitted to the program if they have:

1. A bachelor's degree in science or engineering from an approved college or university;
2. A minimum grade point average (GPA) of 3.0 overall;
3. A combined score of 300 on the verbal, quantitative and analytical sections and at least 3.0 in the writing section of the Graduate Record Examination (GRE);
4. A TOEFL (iBT) score of: all sub-scores equal to or greater than 18 OR IELTS score of: all sub-scores equal to or greater than 6.0 for international students and
5. Three letters of reference.

All entering students will be administered a background evaluation at admission conducted by the Optics Coordinating Committee. An applicant whose scholastic record reveals a deficiency in one or more of the first two categories above, may, upon recommendation of the Program Coordinator and the approval of the Graduate Dean, be admitted on a conditional basis, as provided by Graduate School regulations. However, that student must follow the Graduate School's policies in achieving unconditional admission status prior to taking the Preliminary Examination.

The student will complete three study phases, punctuated by three program examinations.

Phase I

(The core phase) will consist of 19 semester hours of coursework. To complete this phase and become eligible for continuation in a focus area, the student must pass the Preliminary Examination (only two attempts will be permitted). After successful completion of this phase, the student should have acquired the common optics background that the program faculty believes is necessary for the doctoral program. Full-time students will normally select a dissertation advisor during their first year. Once an advisor has been chosen and the Preliminary Examination passed, a graduate committee will be appointed and a Program of Study completed.

Phase II

Consists of coursework in the Program of Study (which includes a Focus Area). Much of this coursework will support the dissertation research to be conducted in Phase III. This phase will be completed when the student has completed most of the formal course work as prescribed in the Program of Study and has passed the Qualifying Examination which is prepared and administered by the student's graduate committee. It will contain both written and oral parts. Questions can be drawn from part of the Program of Study (with special emphasis on the student's Focus Area). This exam will also include a proposal for dissertation research prepared by the student and distributed to the graduate committee. The proposal will demonstrate that the student is intimately familiar with the proposed research, that published research related to the proposal has been reviewed, and that the student has a clear understanding of how to proceed and can set realistic goals. If the student fails the Qualifying Examination, a second attempt will be scheduled. Students who fail in two attempts will be dropped from the program.

Phase III

Consists of all experimental and/or theoretical work needed to complete the student's dissertation. These activities will be directly supervised by the student's advisor. Since the Ph.D. is a research degree, recipients must demonstrate both the ability to perform independent and original research, and to clearly communicate this work both in written and oral formats. The Final Examination will consist of a public, oral presentation and defense of the dissertation.

Advisement

A student admitted to the program will have a member of the OSE Program Committee as an advisor. The student will be encouraged to consult with all faculty members in the intended area of specialization in order to develop an appropriate program of study and topic for dissertation research.

A graduate committee will be appointed for the student as soon as the student passes the Preliminary Examination and selects a research project. The committee will include an advisor and at least four other members. At least one of the committee members will be from a department other than the student's "home department." Otherwise, the composition of the committee will follow the rules governing such committees set forth by the School of Graduate Studies. The graduate committee is charged with supervision and approval of the student's research and course of study toward the completion of all requirements for the degree.

The following optics courses are also available to students in the OSE program. See listings under indicated departments.
Nursing

1610 Ben Graves Drive
Telephone: 256.824.6345
Email: nursing@uah.edu

Dean:
Marsha Howell Adams, PhD, RN, CNE, ANEF, FAAN, Professor

Mission

Educate and inspire individuals to become nurse leaders who act with integrity, discover through scientific methods, and advocate for the best health care experiences of people and communities in a complex and evolving health care environment. In collaboration with our university colleagues and community partners, we are committed to excellence through our teaching, scholarship, practice, and service.

Vision

To have a global reputation for transforming health care through innovative nursing practice, education, and research.

Core Values

- Integrity - Resolutely adhering to moral, ethical, and professional standards.
- Inspiration - Encouraging, role-modeling, and mentoring others to pursue their professional dreams.
- Caring - Acting with compassion and respecting all persons by embracing cultural humility, diversity, and person-centered care.
- Excellence - Pursuing and achieving goals of the highest caliber.
- Wellness - Maximizing well-being in different states of health.

Accreditation

The UAH College of Nursing is accredited by the Commission on Collegiate Nursing Education (CCNE). The College of Nursing maintains approval status by the Alabama Board of Nursing.

Degrees and Certificates Offered

The College of Nursing offers Doctor of Nursing Practice, Master of Science in Nursing, Post-Master’s Family Nurse Practitioner Certificate Program, and a Graduate Certificate in Nursing Education.

Doctor of Nursing Practice (DNP)

The University of Alabama in Huntsville, College of Nursing offers both the Post-Master’s of Science in Nursing (MSN) to DNP and the Post-Baccalaureate of Science in Nursing (BSN) to DNP pathways. The added content in the post-baccalaureate to DNP pathway will allow a seamless
progression from the completion of a baccalaureate degree to advanced practice. Advanced practice specialty training at the doctoral level is needed to address the growing complexity of patient care and health care systems. In addition, expanding accountability of clinical expert nurses in advanced practice roles requires competencies in population-based care, leadership, health policy, health system improvement, research and evidence-based practice.

The existing Joint DNP program will continue until existing students have completed requirements for the DNP degree.

The purpose of the DNP program is:

1. To prepare graduates at the highest level of nursing practice to provide complex hospital and community-based care for patients and families.
2. To redesign and evaluate nursing and health care systems.
3. To address dire shortages of clinical nursing faculty to mentor and educate new nurses.

The DNP focus is to prepare expert practitioners who can also serve as clinical faculty.

**DNP Program Objectives**

Upon successful completion of the DNP program, the graduate will be able to:

1. Synthesize scientific evidence for the development of clinical interventions for practice.
2. Evaluate policy, care delivery, and organizational systems for current and future health care needs.
3. Demonstrate intra- and inter-professional collaboration to address health disparities and to improve health care quality across diverse populations and cultures.
4. Incorporate knowledge of current and emerging health technologies to improve care delivery and organizational systems.
5. Translate scientific, theoretical, and ethical principles into health care for individuals, families and populations.
6. Assume complex leadership roles to advance clinical practice and the health care delivery at the organizational and systems level and to improve health outcomes of individuals and populations.
7. Advocate for social justice, equity, and ethical policies in health care.
8. Deliver evidence-based care using clinical reasoning and analysis of complex healthcare issues to improve patient outcomes.

**DNP Admission Requirements**

1. Graduation from a Commission for Collegiate Nursing Education (CCNE), Accreditation Commission of Nursing Education (ACEN) or Commission on Nursing Education Accreditation (CNEA) accredited baccalaureate program with a major in nursing (for BSN to DNP).
2. Hold a master's degree in advanced practice nursing from an accredited institution (for MSN to DNP).
3. Submit a UAH Application for Graduate Admission.
4. Submit official transcripts from all higher education programs attempted.
5. Submit proof of current/active unencumbered licensure and advanced specialty certification.
6. Submit CV/resume with cover letter describing career goals and identified area of clinical practice interest.
7. Meet health and background clearance requirements.
8. Interview by the DNP Admissions Committee (arranged by the UAH CON).

**DNP Progression Requirements**

1. Any student who receives a "C" in any DNP course and the student's graduate GPA falls below a 3.0, the student will be placed on academic probation by the University. The student has an additional 12 semester hours to bring the GPA up to 3.0 in accordance with the UAH School of Graduate Studies policy.
2. Any student who receives a "C" in a DNP course (regardless of graduate GPA) will be reviewed for progression by the DNP Coordinator and faculty of record. These individuals will make a recommendation to the Associate Dean of Graduate Programs for either continuation in the program with repeat of the course or dismissal from the nursing program. The Associate Dean of Graduate Programs will review the recommendation and deliver a final decision.
3. If the recommendation is for the student to continue in the program and repeat the course, he/she may retake the course at the next time the course is offered.
4. If the student obtains a "C" in a nursing course and is allowed to continue, receives a "C" in the retake of the original course, or makes a "C" in a second nursing course, this student will not be allowed to progress regardless of graduate GPA, and the student will be dismissed from the DNP program in the College of Nursing. No student will be able to record a grade "C," "D," or "F" on their program of study for the DNP program.
5. Courses taken at other universities will be considered for transfer credit only if a grade of "B" or higher is obtained in the course.
Master of Science in Nursing (MSN)

Graduate tracks offered through the College are focused on preparing advanced practice nurses in direct care provider roles as a family nurse practitioner, adult-gerontology acute care nurse practitioner, or in an indirect care provider role in nursing administration. The Master of Science degree is awarded upon successful completion of one of the three tracks.

Advanced practice nursing is distinguished by autonomy of practice and characterized by both increased complexity in clinical decision making and skills in managing organizations and health care environments.

Comprehensive health assessment skills provide a foundation for the critical thinking used in diagnostic decision making and treatments of complex human responses of diverse individuals, families, and communities to health problems. Advanced practice nursing students are guided in classroom and clinical experiences to formulate clinical decisions to manage common health problems, acute and chronic illnesses, and promotion of wellness.

Theory and research form a central core of knowledge for all tracks in the master's program. Building on content in these areas, all students integrate education, management, leadership, and consultation into their clinical experiences as they practice in a variety of settings. Practice sites for clinical courses are individually arranged with the student. Classes are usually offered one day per week and may be offered on campus, or through web-based courses.

Students who successfully complete their program of study are eligible to sit for the national certification examination in their area of expertise in the nurse practitioner program and after work requirements are met in the nursing administration program.

MSN Program Objectives

Upon successful completion of the MSN program, the graduate will be able to:

1. Implement clinical decision-making skills in the delivery and management of diverse populations in a variety of settings.
2. Synthesize theoretical foundations, knowledge of science and humanities, and scholarly inquiry to provide clinical prevention, patient therapy, and system improvement to improve patient outcomes in diverse populations.
3. Analyze healthcare policies and information management systems to affect patient outcomes in diverse populations through organization and systems leadership and inter-professional collaboration.
4. Incorporate human, fiscal, and technological resources in providing and managing advanced care for improvement of patient and population outcomes.
5. Demonstrate an understanding of ethical principles, quality, safety, and equality in healthcare.

MSN Admission Requirements

1. Graduation from a Commission for Collegiate Nursing Education (CCNE), Accreditation Commission of Nursing Education (ACEN) or Commission on Nursing Education Accreditation (CNEA) accredited baccalaureate program with a major in nursing.
2. Overall grade-point average of 3.0 on a 4.0 scale in all baccalaureate coursework or on the last 60 semester hours of baccalaureate coursework completed.
3. Acceptable score on either the Graduate Record Examination (GRE) or the Miller Analogies Test (MAT) taken within the last five years. The minimum score on the MAT is 410. The minimum scores for the GRE are 150 Verbal, 150 Quantitative, and 3.0 Analytical Writing. (Students with an overall GPA of 3.0 may waive #3).
4. Submit a UAH Application for Graduate Admission.
5. Submit official transcripts from all higher education programs attempted.
7. Three completed College of Nursing Graduate Recommendation Forms from individuals familiar with applicant's academic and clinical abilities. Forms are available in the College of Nursing Office of Graduate Programs.
8. Satisfactory completion of an elementary statistics course.
9. Current unencumbered registered nurse license. If a student is permitted to meet course clinical requirements in a state other than Alabama, the student must be licensed in that state. Students will not be allowed to continue in the track if any license is placed on probation, suspended, or revoked. Licensure must be maintained throughout the program.

MSN Degree Requirements

In addition to the graduate degree requirements of the School of Graduate Studies, a student is required to complete a minimum of 39-42 semester hours of graduate coursework in one of the following:

- Acute-Gerontology Acute Care Nurse Practitioner Track
- Family Nurse Practitioner Track
- Nursing Administration Track
Please note that curricular changes may be made in the coming year. Please contact the College of Nursing Office of Graduate Programs for the most current information.

**MSN Synthesis Requirement**

The MSN student is expected to complete a synthesis requirement as part of the graduate program in nursing. The purpose of this synthesis requirement is to demonstrate development of the knowledge base, values, and skills related to the particular program of study as a prerequisite for graduation. There are two options in which the MSN student may meet the synthesis requirement:

Completion of a capstone course and one of the following:

1. Completion of a traditional research thesis under the guidance of a committee of graduate nursing faculty within the College of Nursing. This option requires that the students enroll in a minimum of 6 semester hours of thesis credit (not necessarily in the same semester). Oral defense serves as the final comprehensive examination for students completing the thesis or scholarly project option. This oral examination must follow policies outlined in the UAH Graduate Catalog.
2. Completion of two graduate level electives. Graduate level electives are designed to offer in depth study of areas on interest to graduate level nursing students. Examples include:
   - Transplantation
   - Forensic Nursing
   - Death and Dying
   - Budgeting, etc.

**MSN Progression Requirements**

1. Any student who receives a "C" in any MSN clinical nursing courses will be reviewed for progression by the NP Coordinator and faculty of record. These individuals will make a recommendation to the Associate Dean of Graduate Programs for either continuation in the program with repeat of the course or dismissal from the nursing program. The Associate Dean of Graduate Programs will review the recommendation and deliver a final decision. **Courses Requiring a Grade of "B" or Higher:**
   - ACNP I, II, III, IV
   - FNP I, II, III, IV
   - Nursing Administration NUR 633, NUR 634
   - Advanced Health Assessment, Pathophysiology, Pharmacology

2. If a recommendation is made for the student to continue in the program and repeat the course, he/she may retake the course at the next time the course is offered.
3. If the student obtains a "C" in a second clinical nursing course, or if the student receives a "C" in the retake of the original course, this student may not be allowed to progress independent of GPA, and will be dismissed from the College of Nursing. The student may petition for readmission to the Associate Dean for Graduate Programs.
4. If the student makes a "C" in any graduate course and the student's GPA falls below a 3.0, the student will be placed on academic probation by the University. The student has an additional twelve semester hours to bring the GPA up to 3.0 in accordance with the UAH School of Graduate Studies policy.
5. No student will be able to record a grade less than a "C" on their program of study for the preferred graduate track.
6. Courses taken at other universities will be considered for transfer credit only if a grade of "B" or higher is obtained in the course.

**Nurse Practitioner**

The nurse practitioner is a skilled health care provider who uses expert clinical judgment and decision making in conducting comprehensive health assessments, making differential diagnoses, and prescribing of pharmacologic and non-pharmacologic interventions in the direct treatment of health problems. Nurse practitioners function as care providers, case managers, researchers, consultants, and educators. Two nurse practitioner tracks are offered at the college:

- Family Nurse Practitioner
- Adult-Gerontology Acute Care Nurse Practitioner

Although both are advanced practice nurses, family nurse practitioners function as primary care providers focusing on common health care problems. Family nurse practitioners establish collaborative practices with primary care physicians to deliver culturally sensitive care to clients. Adult-gerontology acute care nurse practitioners focus on the acute care of adults with acute illnesses and may practice in the hospital, home, or clinic setting. Adult gerontology acute care nurse practitioners provide expert interventions focused on health promotion, illness prevention, and health care management.
Nursing Administration

This track prepares nurses who will influence the future of health care through visionary nursing leadership. Competencies include communication, financial skills, information technology, leading and managing change, policy analysis, and empowerment for professional practice. Graduates are prepared to assume positions in education, administration, management, or specialty area roles in a variety of care delivery sites.

Post-Master’s Family Nurse Practitioner Certificate

Students already possessing a master's degree in nursing have the opportunity to pursue a family nurse practitioner certificate. Students are admitted to the family nurse practitioner certificate program on a full-time basis to complete the requirements in one year.

Graduate Certificate Program in Nursing Education

Students who are currently enrolled in graduate education or those possessing a master's degree have the opportunity to continue their education and obtain a certificate in nursing education. Classes for this program are arranged in a manner to allow for full time employment or continued study in the master's program. The program is composed of six courses and requirements for the certificate program may be completed in one calendar year.

More detailed information about opportunities for students seeking graduate degrees and certification may be obtained from the College of Nursing Office of Graduate Programs 256.824.6669.

Online Learning

Online courses are offered by the College of Nursing to improve access to higher education. The College of Nursing offers the DNP program and the MSN in Nursing Administration program completely online. The nurse practitioner programs include hybrid courses allowing the student maximum flexibility. All courses contain web-based enhancement.

Courses offered completely online or those with a hybrid of on-campus/online are delivered in Canvas, the official course management system for UAH. Faculty in the College of Nursing use a common template to organize courses for student ease of navigation. Other educational technologies such as Panopto, Turnitin, wiki pages, chats, etc. are used to enhance student interaction, learning, and enjoyment.

Facilities

The College of Nursing utilizes the facilities and resources of the entire university, the community, and affiliated health care agencies. The college is housed in a four-story building centrally located on the UAH campus. Classrooms equipped with current educational technology as well as the Learning and Technology Resource Center (LTRC) with a state-of-the-art simulation lab known as Charger Hospital assist students to learn in multiple ways.

The College of Nursing maintains contracts with over 800 health related agencies to offer a wide range of clinical sites for student educational experiences. Agencies in the local area include the Huntsville Hospital Health System, Crestwood Medical Center, local Public Health Departments, skilled nursing homes, home health agencies, and the University of Alabama at Birmingham Medical Clinics-Huntsville Campus also partner with the College to provide clinical sites. Other hospitals, clinics, physicians' offices, and rural health clinics across Alabama and southern Tennessee are also used for student experiences.

Transportation

Clinical learning experiences are varied in settings and are located within Huntsville and surrounding communities. Students are expected to travel to and from all clinical experiences. Students are responsible for providing their own transportation and carrying appropriate insurance. The College of Nursing is not liable for any traffic violations or auto mishaps during student commutes.

Advising and Assistance

The focus of advising in the College of Nursing is to assist students to successfully progress toward their educational objectives. Advising is designed to provide assistance where desired and appropriate. All pre-admission graduate students are advised in the College of Nursing Office of Graduate Programs located on the second floor of the Nursing Building.

Students admitted to the graduate program are assigned a faculty advisor who assists them throughout the remainder of the academic program. Faculty advisors assist students in completing a program of study for the track to which they have been admitted as well as providing guidance for future employment or educational endeavors.

Requirements for Enrollment and Admitted Students

1. Documentation of professional liability insurance must be provided to the College of Nursing Office of Graduate Programs prior to enrollment in a nursing class. Professional liability insurance must be maintained throughout the program.

2. Documentation of cardiopulmonary resuscitation (CPR) training must be provided to the College of Nursing Office of Graduate Programs prior to enrolling in a nursing class. CPR certification must be maintained throughout the program. Students entering the adult gerontology acute care nurse practitioner tracks must obtain and maintain Advanced Cardiac Life Support certification (ACLS) prior to enrolling in a clinical nursing class.
3. Students are required to undergo drug testing and a criminal background check prior to enrollment in nursing courses, annually and for cause at other points. Information and procedures are provided upon admission and prior to each academic year. If the College deems the drug testing and/or background check information to be unsatisfactory, acceptance or enrollment into the College may be denied or an offer of acceptance rescinded. If a student’s acceptance or enrollment is denied or rescinded based on the information obtained from a criminal background check report, the student will be advised of the name and address of the consumer reporting agency that furnished the report, and of the right to dispute the accuracy and completeness of any information contained in the report by contacting the consumer reporting agency directly. If the College decides, based upon the individual’s written description, explanation and documentation about information obtained in the criminal background check, that the results of the check are deemed to be satisfactory, the individual shall be informed that the College’s positive decision is not a guarantee that every clinical facility will permit the student to participate in educational clinical experiences at that facility or that any state will accept the individual as a candidate for registration, permit or licensure. Convictions of pleas of guilty of, pleas of nolo contendere (no contest) to, any criminal charges, or any pending criminal charges are ground for dismissal form the College of Nursing. Any crimes involving violence against the person including but not limited to murder, manslaughter, use of deadly force, assault and battery (other than simple), sex crimes, abuse of children or the elderly, abduction, or robbery at any time prohibit a student form admission or progression in the Nursing Program. The Associate Dean will inform any disqualified student, and the student will not be allowed to continue in any Nursing Program.

4. Students may also be required to have additional drug screens and/or criminal background checks prior to attending selected clinical agencies.

5. Documentation of current license to practice as a registered nurse must be provided to the College of Nursing Office of Graduate Programs prior to enrollment in a nursing class. Registered nurse students must submit proof of an unencumbered current license. If a student is permitted to meet course clinical requirements in a state other than Alabama, the student must be licensed in that state. Registered nurse students will not be allowed to continue in the program if any nursing license is placed on probation, suspended, or revoked. Licensure must be maintained throughout the program.

6. Essential functions define selected attributes and behaviors necessary for students to demonstrate in order to successfully complete their education and subsequently enter nursing practice. These essential functions are determined to be required for initial and continued enrollment in the College of Nursing. Students must be able to perform each of the following essential functions with or without reasonable accommodations:
   a. Critical thinking ability sufficient for clinical judgment. Examples (not all inclusive) of necessary activities include identifying cause-effect relationships in clinical and classroom situations; and developing nursing care plans.
   b. Interpersonal abilities sufficient to interact with individuals, families, and groups from various social, emotional, cultural and intellectual backgrounds. Examples (not all inclusive) include the ability to establish rapport with patients/clients and colleagues.
   c. Communication abilities sufficient for verbal and written interaction with others. Examples (not all inclusive) include explaining treatment procedures, initiating health teaching, and documenting and interpreting nursing actions and patient/client responses.
   d. Mobility abilities sufficient to move from room to room and maneuver in small spaces. Examples (not all inclusive) include moving around in clients’ rooms, work spaces and treatment areas; and administering cardiopulmonary procedures.
   e. Gross and fine motor abilities sufficient for providing safe, effective nursing care. Examples (not all inclusive) include completing examinations/evaluations by writing, typing or demonstration; calibrating and using equipment; and positioning clients.
   f. Auditory ability sufficient to monitor and assess health needs. Examples (not all inclusive) include hearing basic conversation; monitoring alarms, emergency signals and auscultatory sounds; and hearing cries for help.
   g. Visual abilities sufficient for observation and assessment necessary in nursing care. Examples (not all inclusive) include reading documents such as patient charts and laboratory reports; reading calibrations on syringes, sphygmomanometers, and thermometers, and equipment outputs such as waves, printouts, and digital readings; and accurately observing client behaviors such as color changes and nonverbal communication.
   h. Tactile abilities sufficient for physical assessment. Examples (not all inclusive) include performing palpation, percussion, temperature changes, complete physical examinations and other activities related to therapeutic interventions.
   i. Behavioral/Social abilities sufficient to demonstrate emotional stability, maintenance of composure under stress, development of mature, empathetic and effective nurse-patient relationships and use of sound and unimpaired judgment in classroom and clinical activities.

These essential functions are not intended to be a complete listing of all nursing behaviors, but they are a sampling of the types of abilities needed by nursing students to meet program objectives and requirements. The College or its affiliated agencies may identify additional critical behaviors or abilities. The identified essential functions are adopted from the Americans with Disabilities Act: Implications for Nursing Education (re approved 2004) by the Southern Regional Education Board and the Council on Collegiate Education.

**Health Requirements**

The clinical experiences of nursing students require a health screening program. The following steps are required as part of admission to and enrollment in the graduate program:

1. Each student is required to have a health examination by a physician or a certified nurse practitioner. Reports of the results of this examination must be submitted on forms provided by the College of Nursing and must be received by the College of Nursing Office of Graduate Programs by published deadlines. Individual clinical agencies may require additional documentation for specific health requirements which must be met by students;

2. Each student must be immunized for Hepatitis B. For initial enrollment, certification that the series of injections has begun or results of a recent titer must be received by the College of Nursing Office of Graduate Programs by published deadlines. Documentation of the completed series is required for continued enrollment and must be received by the College by published deadlines. Immunizations and titers are at the expense of the student;
3. Each student is required to be immunized against measles, mumps, rubella, rubeola, and varicella. Annual influenza vaccinations are required. Documentation of current immunization, physician’s statement, or copy of recent titer results must be received by the College of Nursing Office of Graduate Programs by the published deadlines. Immunizations and titers are at the expense of the student;

4. Each student is required to have a 2-step PPD (Tuberculosis/TB) skin test or equivalent less than one year old by published deadlines. Evidence of the annual testing or results of a recent chest x-ray are required. Testing expenses are the responsibility of the student. Documentation of the test results must be received by the College of Nursing Office of Graduate Programs by published deadlines;

5. Documentation of current health insurance must be received by the College of Nursing Office of Graduate Programs by published deadlines. Hospitals and health agencies provide emergency treatment to students for injury or illness occurring in the course of program requirements in their agencies. Such treatment will be at the expense of the student. Students are required to maintain health insurance throughout the program.

6. Each student must complete a certified background check and a drug screen before starting the program.

**Student Financial Services**

Student Financial Services, located in the University Center, provides financial aid information and assists students in meeting individual needs. Financial aid for graduate students in the College of Nursing comes primarily from the following sources:

1. Alabama Board of Nursing Scholarships. Fifteen scholarships are granted each year to graduate students attending schools in Alabama. Funding is $3,800 for full-time study for one year. Students must make application directly to the Alabama Board of Nursing. Contact the Alabama Board of Nursing for further information.

2. Federal Nurse Training Grants. The College of Nursing applies for a limited number of traineeships for graduate students. These funds are granted to admitted students enrolled for full-time study and admitted students enrolled for part-time study who will graduate within 12 months. Application forms may be obtained through the College of Nursing Office of Graduate Programs.

3. Elizabeth M. Fisher Memorial Scholarship.

4. Joan Williamson NANPA Scholarship.

5. Graduate Teaching Assistantships.

7. Graduate Tuition Scholarships.

8. Nurse Faculty Loan Program

**Course Load**

The usual course load for a full-time graduate student in nursing is from 9 to 12 semester hours. Students may choose to complete a degree in full-time or part-time study with the exception of the post-master’s students. Students admitted to the postmaster’s program are required to complete the program in full-time study.

**Master’s Program in Nursing**

- Nursing, MSN - Adult-Gerontology Acute Care Nursing Practitioner Track (p. 961)
- Nursing, MSN - Family Nurse Practitioner Track (p. 961)
- Nursing, MSN - Nursing Administration Track (p. 962)

**Doctoral Program in Nursing**

- Nursing, DNP (p. 960)

**Certificates in Nursing**

- Nursing Education (p. 962)
- Post-Master’s Family Nurse Practitioner Program (p. 963)

**NUR 500 - SPECIAL TOPICS**

Semester Hours: 2-4

Advanced study of selected area of interest in nursing.

**NUR 518 - GLOBAL HEALTH: INTERN’L STUDY**

Semester Hours: 3

This course will focus on a selected international health care system. The international system will be compared with the US Health Care System in relation to economic, social, cultural, policy, and environmental influences. Culmination of the course will center on international experiences with health care facilities, policy making bodies, historical, and cultural introductions in another country.
NUR 524 - HEALTH CARE AND THE LAW
Semester Hours: 3

Introduction to basic health law in the context of application to nursing practice. Content relates to involvement with legal principles in nursing and healthcare. Federal, state and local aspects of law are included. (Cross listed with NUR 424).

NUR 525 - HUMAN SEXUALITY
Semester Hours: 3

Theory and issues related to human sexuality in health and illness. Emphasis on theory and values, clarification of human sexuality needs. Elective, open to all university students. (Cross listed with NUR 425).

NUR 526 - CONS:WKG W/IND & GRP COMM APPR
Semester Hours: 3

This course presents consultation as a process of interacting with individuals and groups to resolve issues related to clients and/or the delivery of health care. Students explore the consultation process, group dynamics, application-oriented approaches and strategies, and professional issues. The focus is on communication as the key to developing successful relationships.

NUR 527 - INTRO TO FORENSICS IN NURSING
Semester Hours: 3

This course is designed to provide basic theoretical knowledge related to nursing care of the donor/transplantation client and their families. Course content focuses on historical and current issues in donor/transplantation nursing including the impact of legal, ethical, political, economic, and socio-cultural issues. Students will examine the roles of the professional nurse and the interdisciplinary team in the management of care for the donor/transplant client and their families. Topics of future research and critical thinking will be discussed.

NUR 528 - GERONTOLOGICAL NURSING
Semester Hours: 3

Nursing care of older adults in multiple settings. Issues and trends are incorporated.

NUR 530 - HLTH CARE WKF:ISS/LDERSH STRAT
Semester Hours: 3

Description and analysis of contemporary issues regarding the health care workforce. Particular focus will be placed on the multifaceted nature of health care workforce shortages. Various models for analysis of workforce issues will be used and strategies being used will be examined. An evaluation of the nurse leader role in creating positive work environments and implementing solutions conclude the student experience.

NUR 534 - PALLIATIVE CARE
Semester Hours: 3

Palliative care is when there is no longer a medical treatment or cure for a physical problem. This palliative care course includes meeting the physical, emotional, social, cultural, and spiritual needs of individual and their families. A course focus will be on coping, grief, bereavement, pain relief and managing living implications for individuals with life-threatening illnesses. There will be recognition of the importance of individuality, vulnerability, and resilience in the quality of living during the dying process.

NUR 537 - NURSING AS A POLITICAL FORCE
Semester Hours: 3

The course explores the historical, current, and future impact of nursing on the political process. Local, state, national, and international aspects of nursing as a political force are analyzed. Emphasis is on political systems, regulatory processes, and organizational issues influencing health care delivery. Elective, open to all university students.

NUR 540 - ONCOLOGY NURSING
Semester Hours: 3

This course provides a holistic approach to the nursing care of people with cancer. The nursing process is used as the basis for promoting health and facilitating adaptation in the person with cancer. The course includes clinical experiences in selected agencies.

NUR 550 - ISSUES IN TRANSPLANTATION
Semester Hours: 3

This course is designed to provide basic theoretical knowledge related to nursing care of the donor/transplantation client and their families. Course content focuses on historical and current issues in donor/transplantation nursing including the impact of legal, ethical, political, economic, and socio-cultural issues. Students will examine the roles of the professional nurse and the interdisciplinary team in the management of care for the donor/transplant client and their families. Topics of future research and critical thinking will be discussed.

NUR 601 - THEORETICAL PERS ADV NUR PRAC
Semester Hours: 3
NUR 602 - SCHOLARLY INQ ADV NUR PRAC  
Semester Hours: 3  
Includes discussion of philosophical and theoretical bases of nursing research and the application of research findings to practice. Development of a research problem, including problem identification, evaluation of current knowledge, and the selection of an appropriate research approach. Focuses on research methodologies, both quantitative and qualitative, as they relate to data collection, data analysis including both interpretive and statistical strategies, and discussion of findings. Proposal generation and research funding mechanisms are included.

NUR 604 - HEALTH POLICY  
Semester Hours: 3  
Local, state, and national health care policies, with emphasis on political systems, regulatory processes, and organizational issues influencing health care delivery. Elective; open to university students.

NUR 605 - ADVANCED HLTH ASSESSMENT  
Semester Hours: 3  
This course provides an opportunity for the advanced practice nurse to utilize theoretical and evidence-based clinical practice guidelines to conduct a comprehensive and systematic assessment as a foundation for decision making in caring for clients across the lifespan.

NUR 605L - CLINICAL  
Semester Hours: 0

NUR 606 - PATHOPHYSIOLOGY  
Semester Hours: 3  
Expands upon previous knowledge of anatomy, physiology, and developmental disease processes. Anticipated physiological alterations are discussed as they affect individuals throughout the lifespan.

NUR 607 - PHARMACOLOGY IN ADV PRAC  
Semester Hours: 3  
This course is designed to provide the advanced practice nursing student with clinical reasoning skills necessary to analyze data obtained from findings of the patient health history, advanced physical and pharmacological assessment of patients across the lifespan. The student will utilize the findings to determine the appropriate treatment regimen based on the individual needs of the patient.

NUR 610 - FAMILY NURSE PRACTITIONER I  
Semester Hours: 6  
This clinical course introduces the roles of the advanced practice nurse in direct and indirect health services for assessment, health promotion, illness prevention, and health management of patients across the lifespan. Prerequisite: NUR 605 and NUR 606 (concurrently).

NUR 610L - CLINICAL EXPERIENCE  
Semester Hours: 0

NUR 611 - FAM NURS PRACTITIONER II  
Semester Hours: 6  
This course encourages the advanced practice nurse to integrate principles of advanced practice nursing into broad organized, culturally appropriate planning, delivery, management, and evaluation in prevention and services of health through the lifespan/identified populations.

NUR 611L - CLINICAL  
Semester Hours: 0

NUR 612 - FAMILY NUR PRACTITIONER III  
Semester Hours: 6  
This course encourages the advanced practice nurse to define principles of advanced practice nursing including interventions that influence favorable health outcomes for common conditions through the lifespan/identified populations in collaboration with other health professionals. Prerequisites with concurrency: NUR 606 and NUR 607.

NUR 612L - CLINICAL EXPERIENCE  
Semester Hours: 0

NUR 613 - FAM NURS PRACTITIONER IV  
Semester Hours: 6  
This is the culminating primary care clinical course in which the advanced practice student initiates and maintains effective working relationships, appraise policy development and systems organization, establishes respectful communication within inter-professional groups with skills and care coordination, delegation and initiation of conflict resolution strategies. Prerequisites: NUR 610, 611, & 612.
NUR 613L - CLINICAL EXPERIENCE
Semester Hours: 0

NUR 614 - FAMILY NURSE PRACTITIONER V
Semester Hours: 3
First of two culminating courses/seminar/clinical practicum in the family nurse practitioner certificate program. The clinical practicum will be completed in a primary care setting. Classroom seminar focuses on the role, trends, and health policy issues facing the family nurse practitioner.

NUR 614L - CLINICAL EXPERIENCE
Semester Hours: 0

NUR 615 - FAMILY NURSE PRACTITIONER VI
Semester Hours: 3
The culminating course/seminar/clinical practicum in the family nurse practitioner certificate. The clinical practicum will be completed in a primary care setting. Classroom seminar focuses on the role, trends, and issues facing the family nurse practitioner.

NUR 615L - CLINICAL EXPERIENCE
Semester Hours: 0

NUR 620 - ADLT GER ACUTE CR NUR PRACT I
Semester Hours: 6
This is the culminating adult gerontology acute care clinical course in which the advanced practice student initiates and maintains effective working relationships, establishes respectful communication within inter-professional groups with skills and care coordination delegation, and initiation of conflict resolution strategies.

NUR 620L - CLINICAL EXPERIENCE
Semester Hours: 0

NUR 621 - ADLT GER ACUTE CR NUR PRACT II
Semester Hours: 6
This course allows the advanced practice nurse to refine principles of advanced practice nursing into the delivery of broad, organized, culturally appropriate planning, delivery, management, and evaluation of evidence based care of complex, acute critically and chronically ill diverse patients across the entire spectrum of adulthood. Prerequisites w/ concurrency: NUR 606 or NUR 607 or NUR 620.

NUR 621L - CLINICAL EXPERIENCE
Semester Hours: 0

NUR 622 - ADLT GER ACUTE CR NUR PRAC III
Semester Hours: 6
Clinical course in care of adult patients with acute alterations in health in the hospital, home, or clinic setting focusing on the concept of managed care. Within a selected product line, the practitioner will develop protocols, care for and evaluate care for patients and practice consulting with client groups.

NUR 622L - CLINICAL EXPERIENCE
Semester Hours: 0

NUR 623 - ADLT GER ACUTE CR NUR PRAC IV
Semester Hours: 6
Culminating course in the acute care nurse practitioner track. Student will complete a clinical residency in a selected acute care area/specialty. Classroom theory will focus on the role and legal trends and issues facing the acute care nurse practitioner.

NUR 623L - CLINICAL EXPERIENCE
Semester Hours: 0

NUR 630 - THEOR FOUND NUR LDSH HLT CA SY
Semester Hours: 3
This course focuses on the nurse leader's relationships in a variety of health care systems. Theories of management and organization from the perspective of structure, dynamics, trends, technology, and strategic planning in health care delivery are included.
NUR 631 - LEADERSHIP IN RESOURCE MGMT
Semester Hours: 3
This course focuses on the role of the nurse leader in resource allocation and management in health care systems and related organizations. Content related to human resource management includes workforce development, the healthcare workforce, recruitment, selection, retention, development, and labor relations.

NUR 632 - ECONOMIC AND POLICY IMPLICATIONS FOR LEADERS IN HEALTH CARE SYSTEMS
Semester Hours: 3
This course focuses on economic and policy factors impacting cost, quality and access to health care. The role of the nurse leader in fiscal management and in influencing policy will be emphasized.

NUR 633 - APPLI LEADERSHIP HLTH CARE SYS
Semester Hours: 6
This is a clinical course based upon the application of organizational theory, resource management and basic budgeting in nursing. Clinical experiences focus on nursing leadership functions and roles in a variety of health care systems.

NUR 633L - CLINICAL EXPERIENCE
Semester Hours: 0

NUR 634 - INTERNSHIP IN NURS LEADERSHIP
Semester Hours: 5
This is the culminating course that provides opportunities to synthesize leadership learning, administrative theory, operational skills in budgeting and finance, and resource management. This knowledge is applied through the identified nurse executive competencies in selected health care related organizations.

NUR 634L - CLINICAL EXPERIENCE
Semester Hours: 0

NUR 635 - RESIDENCY IN LEADERSHIP I
Semester Hour: 1
This course focuses on introduction to health care leadership concepts and beginning role development. Introduction of leadership systems in clinical management, administration, education, and research will be completed. Students will explore capabilities of electronic communications as compared to didactic interactions. Emphasis is placed on strategies and communication. Admission to Leadership in Health Care Systems Track required.

NUR 636 - BUDGETING IN HEALTH CARE SYS
Semester Hours: 3
This course is designed to assist nurse leaders in gaining conceptual knowledge regarding budgeting in health systems. The focus is on planning and controlling budgets. Topics include knowledge related to executive level budget management and business planning.

NUR 637 - CASE MGMT IN HEALTH CARE SYS
Semester Hours: 2
This course is designed as an introduction to health care delivery through case management model. The course focuses upon basic foundational information targeting the professional nurse's role in case management. Various types of case management are discussed and analyzed. The impact of managed care to case management and other care delivery methods is explored for a changing health care delivery system. Fiscal, ethical/legal and clinical implications of case management are considered.

NUR 638 - HEALTH CARE INFORMATICS
Semester Hours: 1-6
This course focuses on information system concepts and technologies used in the structuring and processing of nursing information to arrive at clinical decision-making for healthcare. Analysis of information systems in clinical management, administration, education, and research will be completed. Students will explore capabilities, benefits, barriers, and related information and technologies comprising current state of informatics design and use in health and nursing related systems. Emphasis is placed on strategies, issues and technologies of information collection, analysis and communication.

NUR 639 - RESIDENCY IN LEADERSHIP II
Semester Hour: 1
This course focuses on leadership concepts and application in the clinical decision making arena for health care. Analysis of leadership systems in clinical management, administration, education, and research will be completed. Students will explore capabilities, benefits, barriers, and related information to current states of health care delivery design and functions. Emphasis is placed on strategies and communication.
NUR 640 - CURRICULUM DEV IN NURSING  
Semester Hours: 3

Principles and concepts of curriculum development are examined with respect to their application to development of both the theoretical and clinical components of nursing programs. Includes principle regarding theories of learning, the changing nature of knowledge and societal needs as basic considerations directing curricular planning and revision.

NUR 641 - TEACHING/LEARNING IN NURSING  
Semester Hours: 3

Emphasis is on the development of classroom and clinical laboratory teaching skills and includes a critical appraisal of specific teaching strategies. The student is provided the opportunity to acquire knowledge in the use and design of common and innovative teaching methods including web-based and interactive delivery systems.

NUR 642 - TESTING & EVALUATION IN NURS  
Semester Hours: 3

Major emphasis on the development of classroom and clinical skills in appraisal and evaluation methods of student performance. The student is provided with the opportunity to acquire skills in constructing various types of testing and evaluation (formative and summative) procedures as they relate to nursing education.

NUR 643 - FACULTY ROLE DEV IN NURSING  
Semester Hours: 3

Role theory serves as the basis for the discussion and practice in developing teaching, service and research role of a faculty member in a nursing program. Discussion on legislative and professional agencies issues and policies impinging on the teaching role.

NUR 644 - PRACTICUM IN TEACHING  
Semester Hours: 3

Opportunities to do practice teaching with nursing students in various phases of their basic educational programs. Learning activities will be planned on an individual basis and based on the specific teaching responsibilities of their primary course assignment. Selected baccalaureate degree and/or associate degree programs will be used as practice sites.

NUR 645 - CAPSTONE NURS EDUC CERTIF CRS  
Semester Hours: 3

The major emphasis of this capstone education course is the development of the professional teaching role within an institutional setting. The focus is on the student's ability to function as a professional leader utilizing knowledge gained to promote change, engage in professional actives; promote continuous improvement; and serve as a mentor in an educational environment.

NUR 650 - INDEPENDENT STUDY  
Semester Hours: 2-4

Planning, implementation, and evaluation of related phenomena of special interest observed in nursing practice.

NUR 660 - ADLT GERONT CNS I  
Semester Hours: 6

Primary focus is on nursing care of adults and families with long-term alterations in health. Subroles of the advanced practice nurse are introduced and reinforced. Theory concerning adult development, health promotion, and disease prevention practices, identifying populations at risk, cultural and environmental diversity issues, provides the background knowledge used by the student in giving care to patients/families in a variety of settings. Patient and caregiver needs and care interventions are central as the student practices the role of clinician caring for adults with chronic problems.

NUR 660L - CLINICAL EXPERIENCE  
Semester Hours: 0

NUR 661 - ADLT GERONT CNS II  
Semester Hours: 6

Care management of the adult patient in the hospital or community setting. Rural and other vulnerable populations are of major concern. Health policy, fiscal regulations, and differing health delivery systems serve as points of discussion. Clinical experiences with vulnerable and underserved populations primarily in rural settings.

NUR 661L - CLINICAL EXPERIENCE  
Semester Hours: 0
NUR 662 - ADLT GERONT CNS 111
Semester Hours: 6

Advanced nursing care of adults of diverse populations in secondary or tertiary settings. Emphasis on special needs and advanced nursing care of adults with acute health alterations. Student clinical experiences are therapeutic nursing interventions with acutely ill patients with complex health problems.

NUR 662L - CLINICAL EXPERIENCE
Semester Hours: 0

NUR 663 - ADLT GERONT CNS IV
Semester Hours: 6

Culminating residency course where the student uses the sub-roles of the advanced practice nurse?clinician, teacher, manager, researcher, consultant, in providing direct and indirect care to the adult patient. Legal, ethical, and licensing issues affecting the role of the advanced practice nurse are points of classroom discussion, along with current issues and trends. Theories concerning ethical decision making, consultation, leadership, and methods of research utilization enhance the student?s practice. The clinical placement should strengthen the student?s area of concentration developed with the faculty advisor.

NUR 663L - CLINICAL EXPERIENCE
Semester Hours: 0

NUR 670 - HUMAN FACTORS HEALTHCARE COMPU
Semester Hours: 3

Overview of epidemiologic methods with discussion of application to diagnosis and choice of therapy. Concepts and mechanisms related to transmission, acquisition of disease, trends and distribution of patterns of disease discussed. The application of epidemiology to human health problems and rural settings is emphasized.

NUR 671 - USABILITY EVAL HEALTHCARE I.T.
Semester Hours: 3

This course examines usability methods for the design and testing of healthcare information technology including health information websites, electronic health records, clinical decision support systems, and medical equipment with an emphasis on the user experience. The iterative nature of user-centered design and usability testing of health IT will be emphasized. Prerequisite: NUR 679.

NUR 672 - EBP ADVANCED NURSING PRACTICE
Semester Hours: 3

This course focuses on developing the advanced practice nurse to critique and synthesize evidence for nursing for the purpose of improving healthcare outcomes. Emphasis is on the critical analysis of evidence to be used in formulating of information technology, data from practice, databases and research methods to appropriately generate evidence for advanced nursing practice.

NUR 680 - CLINICAL NURSE LEADER I
Semester Hours: 6

This course will introduce key concepts that impact today?s healthcare environment and patient population as well as relevant quality management tools that improve patient care delivery and outcomes. In addition, the role of the clinical nurse leader will be explored.

NUR 680L - CLINICAL EXPERIENCE
Semester Hours: 0

NUR 681 - CLINICAL NURSE LEADER II
Semester Hours: 6

NUR 681L - CLINICAL EXPERIENCE
Semester Hours: 0

NUR 682 - CLINICAL NURSE LEADER III
Semester Hours: 6

Advancing nursing care of adults of diverse populations in secondary or tertiary settings. Emphasis on special needs and advanced nursing care of adults with acute health alterations. Student clinical experiences are therapeutic nursing interventions with acutely ill patients with complex health problems.

NUR 682L - CLINICAL EXPERIENCE
Semester Hours: 0
NUR 683 - CLINICAL NURSE LEADER IV  
Semester Hours: 6

NUR 683L - CLINICAL EXPERIENCE  
Semester Hours: 0

NUR 698 - PLAN II: OTHER RES ACTIVITIES  
Semester Hours: 1-4

Application of activities appropriate to student program of study. Intended to expand student knowledge and enhance track specific content.

NUR 699 - PLAN I: THESIS  
Semester Hours: 1-4

Independent research investigation related to practice of nursing under faculty guidance. Minimum of six hours required.

NUR 700 - CLINICAL DATA MGT & ANALYSIS  
Semester Hours: 3

This required course provides students with the knowledge base to understand, collect, manage, and measure clinical data. Students will explore data collection and management processes, levels of measurement, basic statistics, and measurement for improvement in order to effectively use clinical data. Data entry exercises employed through analytical tools and statistical software packages will allow the students practice and apply the basic data management and analysis skills needed for the evaluation of clinical data and evidence-based practice.

NUR 701 - WRITING FOR PUBLICATION  
Semester Hours: 3

This course concerns the development of skills in writing, editing, and preparing manuscripts for publication from initial idea to submission of a publishable manuscript. The course emphasizes a writing process that encourages productivity and collegial peer review. Legal and ethical aspects of authorship prepare students for responsible practices expected of scholars. Students should have mastered basic writing skills, e.g. grammar, syntax, and computer skills, prior to enrolling in this course.

NUR 729 - EVID BASED PRACT DESGN & TRANS  
Semester Hours: 3

The purpose of this course is to provide students with models for evidence-based practice (EBP) design and improvement translation. Students learn to formulate clinical questions in answerable format, and search for and identify best research evidence. The focus of the course is to evaluate and critically appraise evidence for rigor and applicability to the clinical problem and is designed to improve clinical outcomes. Students will translate evidence into practice environments for safe, quality care. Students will gain access to information that will support optimal clinical decision-making. Improvement translation sciences will also be introduced.

NUR 731 - PHIL/THEOR/CONC FOUN FOR APN  
Semester Hours: 3

This required core course in the Doctor of Nursing Practice program provides an understanding of the use of theory and conceptual foundation to guide the complexity of specialty nursing practice at the doctoral level. The content is derived from the philosophical and scientific underpinnings of nursing, natural, and psycho-social sciences.

NUR 733 - INFORMATICS FOR APN  
Semester Hours: 3

This required core course in the Doctor of Nursing Practice program focuses on the collection, organization, analysis, and dissemination of information in nursing and health care. Students are introduced to the speciality of nursing informatics, the information system life-cycle telemedicine, and the use of technology to enhance nursing care delivery and patient safety. Also, students learn how to design, use, and manipulate large and small patient databases for the analysis of patient outcomes.

NUR 734 - ADVANCED EXPERIENTIAL CLINICAL  
Semester Hours: 1-7

This course is designed to validate Master's level competencies in clinical and organizational leadership. The course is required for post-master's DNP students who are graduates of programs in nursing with less than 500 clinical hours. The course is a pre-requisite to NUR 739 Scholarly Project.

NUR 735 - POPULATION HEALTH IN APN  
Semester Hours: 3

This required core course in the Doctor of Nursing Practice program prepares the student to implement specialty population-based disease prevention and health promotion activities to achieve national and international goals of improving worldwide health status. The course focuses on a spectrum of issues affecting health which includes emerging infectious diseases, emergency preparedness, disparities in health and healthcare services, and the impact of behavior and lifestyle choices.
NUR 737 - INTDIS LDRSHP/ROLE DEV PRA EXC  
Semester Hours: 3  
This course is a required core course in the Doctor of Nursing Practice program that focuses on organizational and systems leadership and knowledge and skills critical to role development in independent and inter and intra-disciplinary practice. Content includes communication, conflict resolution, collaboration and negotiation, leadership, and team-functioning to maximize success in the establishment of safe, effective patient-centered care in complex environments.

NUR 738 - SCHOLARLY PROJECT DEVELOPMENT  
Semester Hours: 3  
This course is a 2-hour seminar designed to assist the student in selecting an area of interest within a practice specialization and in demonstrating professional competencies related to that area of interest. The student will document previously acquired abilities and competencies in a professional portfolio. Students will participate in the seminar to obtain guidance and receive peer suggestions about the portfolio and project plans.

NUR 739 - SCHOLARLY PRACTICE PROJECT  
Semester Hours: 1-7  
This is the capstone clinical course in all advanced practice tracks. The student presents evidence of achievements and competencies in a professional portfolio. The practice residency is completed in a specialty area of the student’s choice. This course focuses on aspects of the final practice project and interventions that promote health, prevent illness and disability, and alleviate health disparities. The final project selected and planned by the student and advisor is implemented during this course. The student completes the project, evaluates the outcomes, disseminates findings, and makes a formal, scholarly presentation to peers and faculty. Prerequisite: NUR 738.

NUR 740 - HLH POLIC/POLIT:IMPLICATION HC  
Semester Hours: 3  
This course prepares students to assume complex leadership roles in order to advance specialty practice and health. This course focuses on the unique challenges of engaging and influencing health care policy in the U.S. and internationally. It is designed to develop skills, techniques, and approaches to the critical analysis of health policy proposals, health policies and related stakeholder in policy and public forums. The health policy framework is analyzed from a governmental, institutional and organizational perspective.

NUR 742 - PROGRAM EVAL & METHODS  
Semester Hours: 3  
The purpose of this course is to synthesize knowledge related to translation/implementation science models and strategies to improve health outcomes. The emphasis in the course is the use of program evaluation as a strategic planning tool to achieve positive changes in health status, to initiate quality improvement, to engage in risk anticipation, management and to facilitate organizational and system level changes.

NUR 743 - EVID BASED PRACT STRATEGIES  
Semester Hours: 3  
Is a required course in the Doctor of Nursing Practice program, which expands on evidence-based practice concepts to refine a problem statement and derive a searchable and answerable clinical question. Content includes conducting a systematic review of the literature to guide the selection of methods, strategies, tools and metrics needed to complete a successful scholarly project. The course also addresses targeted strategies for disseminating evidence associated with scholarly projects.

Nursing, DNP  
In addition to the graduate degree requirements of the School of Graduate Studies, a student is required to complete a minimum of 40 semester hours of coursework in the Doctor of Nursing Practice (DNP) program. The DNP degree is distinguished by the completion of a DNP Project that demonstrates synthesis of the student’s coursework and lays the groundwork for future scholarship. Because the DNP is focused on mastery of advanced practice in a specialty area, the DNP Project should demonstrate the achievement of that mastery. The practice doctorate focuses heavily on practice that is innovative and evidence-based, reflecting the application of credible research findings, through an integrative practice experience. The DNP Project is evidence that the student can independently identify a problem of contemporary significance through familiarity with the current literature in the major field, organize, design, implement, and evaluate a project that addresses the problem and present the project in cogent, well written exposition. The DNP Project documents the outcomes of the student’s doctoral education experience, providing a measurable medium for evaluating the mastery of and growth in knowledge and clinical expertise.

The project will be completed under the direction of a chair and supervising committee. The project has several approval points including a proposal review, Institutional Review Board (IRB) review, and final evaluation. The final evaluation of the DNP Project must be scheduled through the College of Nursing at least two weeks in advance of the proposed evaluation date taking into account the expected date of graduation and the deadlines set by the School of Graduate Studies. Results of the DNP Project are expected to be manuscript ready to be submitted as a refereed scholarly publication.

Total Semester Hours 42

Nursing Education, Graduate Certificate

The purpose of the 18 credit hour program is to:

- Prepare nurses with a master’s degree to teach in a variety of settings, i.e., associate degree-nursing programs, clinical faculty in baccalaureate programs and health care agency educational programs
- Prepare nurses with the theory and practice experiences to develop and implement educational offerings in a variety of settings for diverse populations
- Prepare nurses with a variety of teaching strategies and delivery systems for today’s new learning environment
- Prepare nurses with the necessary tools and strategies to effectively evaluate nursing performance in both clinical and classroom settings
- Prepare nurses with the skills necessary for role development as a faculty member.

The program of study is as follows:

### Post-Master’s Family Nurse Practitioner Program

The Post-Master’s Family Nurse Practitioner (FNP) Program is designed for individuals who have already earned a master’s degree in Nursing, but who desire additional preparation for FNP Certification. Students must be formally admitted to the program to enroll and must meet identical academic standards as students enrolled in the master’s program. Students admitted to this program must attend full-time. In order to facilitate this certificate of study, an "en block" format may be offered, meeting three times a semester for two-three days. Graduates from this program are eligible to sit for the FNP national certification examination. There are two required prerequisite or co-requisite courses for the Post-Master’s FNP Program. Students must have completed advanced health assessment and pathophysiology at UAH or another institution prior to enrolling in any course. Students enrolling in this program will complete the requirements for the FNP in three-four semesters of study.

### Science

C207 and C206 Materials Science Building  
Telephone: 256.824.6605

#### Mission

The College of Science provides quality education with leading-edge research opportunities through interdisciplinary programs administered by seven departments and vibrant collaborations across campus and community. Faculty bring their innovative research into the classroom, equipping students with advanced knowledge, skills and abilities, and preparing leaders for this generation and beyond.

#### Departments

The College of Science consists of seven academic departments:

- Atmospheric Science (Earth System Science)
- Biological Sciences
- Chemistry
- Computer Science
- Mathematical Sciences
- Physics
- Space Science

Faculty in the College collaborate with several UAH research centers including the Center for Applied Optics, Earth System Science Center, Information Technology and Systems Center, Center for Microgravity and Materials Research, and the Center for Space Plasma and Aeronomic Research. The College benefits from its strategic location in the midst of high technology-oriented companies and federal organizations such as NASA and NOAA. Unique opportunities are available for original research at the forefront of science and technology, including projects that are of direct interest to industry and academia.
Degrees and Programs

The College of Science offers the following graduate degree programs:

<table>
<thead>
<tr>
<th>Field</th>
<th>Degree(s)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Applied Mathematics</td>
<td>Ph.D.</td>
</tr>
<tr>
<td>Atmospheric Science</td>
<td>M.S., Ph.D.</td>

<td>M.A., M.S.</td>
</tr>
<tr>
<td>Physics</td>
<td>M.S., Ph.D.</td>
</tr>
<tr>
<td>Space Science</td>
<td>M.S., Ph.D.</td>
</tr>
<tr>
<td>Software Engineering</td>
<td>M.S.</td>
</tr>
</tbody>
</table>

*Interdisciplinary programs include:

<table>
<thead>
<tr>
<th>Field</th>
<th>Degree(s)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Biotechnology Science and Engineering</td>
<td>Ph.D.</td>
</tr>
<tr>
<td>Cybersecurity</td>
<td>M.S.</td>
</tr>
<tr>
<td>Materials Science</td>
<td>M.S., Ph.D.</td>
</tr>
<tr>
<td>Optical Science and Engineering</td>
<td>Ph.D.</td>
</tr>
</tbody>
</table>

These programs are described in the Interdisciplinary Programs (p. 927).

In addition, certificate programs are available in Software Engineering and Information Assurance.

All first time graduate students should consult with a departmental advisor before registration.

Master's Degrees in Science

- Atmospheric Science, MS (p. 973)
- Biological Sciences, MS (p. 980)
- Chemistry, MS (p. 986)
- Computer Science, MS (p. 1001)
- Computer Science, MSSE (p. 1004)
- Earth System Science, MS (p. 1012)
- Mathematical Sciences, MA (p. 1022)
- Mathematical Sciences, MS (p. 1023)
- Physics, MS (p. 1034)
- Space Science, MS (p. 1043)

Doctoral Degrees in Science

- Applied Mathematics, PhD (p. 1021)
- Atmospheric Science, PhD (p. 972)
- Computer Science, PhD (p. 999)
- Physics, PhD (p. 1032)
- Space Science, PhD (p. 1048)

Certificates in Science

- Information Assurance (p. 1007)
- Software Engineering (p. 1007)

Atmospheric Science

National Space Science and Technology Center
Room 4044
Telephone: 256.961.7877
Email: ats@uah.edu
The Atmospheric Science department offers the following graduate degree programs:

- Master of Science - Atmospheric Science
- Master of Science - Earth Systems Science
- Doctor of Philosophy - Atmospheric Science

**Admission Requirements**

Refer to the appropriate section of the Graduate Catalog for general admission and degree requirements. The applicant should have training through a calculus sequence (including the calculus of vector-valued functions), a course in linear algebra, and courses in ordinary and partial differential equations. He or she should also have completed at least two semesters of chemistry, two semesters of calculus-based physics, and have demonstrable computer proficiency in at least one high-level programming language.

**Program Objective**

The Atmospheric Science Department's first objective is to produce graduates who are successful in writing scientific research papers in peer-reviewed scientific journals and in making presentations at national or international scientific conferences and workshops. Our second objective is to produce graduates who successfully obtain employment as research scientists in a research center, government lab, or corporation, or in academic positions at a university.

**Learning Outcomes**

Students will demonstrate:

- Knowledge of the reviewed literature in the atmospheric science that is relevant to their specific research
- Proficiency in scientific methodology, while successfully carrying out a research project from concept to completion
- Effective oral communication skills in reporting the results of their scientific research

**Master's Program in Atmospheric Science**

http://nsstc.uah.edu/ats/ats_ms.html

- To obtain the M.S. degree in Atmospheric Science, each student must satisfy all requirements of the School of Graduate Studies, as well as those of the Atmospheric Science Program.
- Students must formulate an appropriate Program of Study (POS), in consultation with a faculty advisor and chair, before the end of the second semester.
- Students must maintain a cumulative GPA of at least 3.0.

**Option 1 - Thesis**

Minimum degree requirements under this plan include completion of at least 24 credit hours of graduate course work and at least 6 credit hours of thesis research. At least 50% of the required 24 semester hours must be from 600 level (or higher) courses. Students are also required to take 6 credit hours of supporting courses. The supporting courses do not count toward the minimum degree requirements.

**Required Core Courses**

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>ATS 541</td>
<td>ATM THERMODYN &amp; CLOUD PHYSICS</td>
<td>3</td>

<td>PROFESSIONAL DEVELOPMENT</td>
<td>1</td>
</tr>
</tbody>
</table>

**Thesis Credits**
Students must earn a B or above in core courses.

Students who have earned a B or better in the undergraduate equivalent ATS 541, ATS 551, ATS 561 at UAH do not have to re-take the course at the graduate level. However, their Program of Study must include alternative semester hours at the appropriate level approved by their advisor and chair of the department.

Students who have earned a B or better in the undergraduate equivalent of ATS 509 at UAH have fulfilled the requirement.

### Additional Information

In Option 1, the student must write and defend a thesis. The thesis must show evidence of the student’s capability for research, independent thought, and analysis in Atmospheric Science and must be written in fluent, acceptable English. During the second semester, the student, with the guidance of their advisor, should form a supervisory committee. Students must submit a 5 page thesis proposal to be approved by the advisor and committee by the end of the third full semester.

### Option 2 - Non-Thesis

Minimum degree requirements under this plan include completion of at least 33 credit hours of graduate course work. At least 50% of the required 33 semester hours must be from 600 level (or higher) courses. In addition, all M.S. students are required to take 6 credit hours of supporting courses. The supporting courses do not count toward the minimum degree requirements.

### Comprehensive Examination/Thesis Defense

A final comprehensive examination is required of all candidates for a master’s degree; this examination may be written or oral, or both. In accordance with the Graduate Studies Dates & Deadlines, a written notice of the time and place of the examination/defense must be sent to the Graduate Dean. After approval by the Graduate Dean, the Department Chair sends a copy of the written Notification of Oral Examination/Defense to the candidate and each member of the committee. A student may take the Comprehensive Examination only twice.

- **Thesis** candidates will be examined primarily on the thesis by a committee of at least three faculty members appointed by the Department Chair and approved by the Graduate Dean.

- **Non-Thesis** candidates will be examined on course work. Three weeks before the exam, the advisor/chair will email two “lead-in” questions about the student’s course work from each committee member. This will be the starting point for the oral exam. The committee members may also question further during the exam. Students who pass all sections of the Ph.D. Preliminary Exam are not required to take the M.S. Comprehensive Exam.
M.S. Supervisory Committee

The committee must consist of a minimum of three members and be approved by the Department Chair. Two of the three members, including the Committee Chair, must be full-time, tenured, or tenure-earning faculty members in the department. The other member may be nominated to the Affiliate Graduate Faculty or be a current faculty member from another UAH department.

Paperwork

- Students must formulate an appropriate Program of Study (POS), in consultation with a faculty advisor and chair, before the end of the second semester.
- Application for graduate degree according to the Graduate Studies Dates & Deadlines.
- Notification of Oral Examination/Defense according to the Graduate Studies Dates & Deadlines.

Doctoral Program in Atmospheric Sciences

http://nsstc.uah.edu/ats/ats_phd.html

The doctor of philosophy degree is a research-oriented degree awarded upon the demonstration of scholarly competence. To obtain the Ph.D. degree in Atmospheric Science, each student must satisfy all requirements of the School of Graduate Studies, as well as those of the Atmospheric Science Program. Admission to the Ph.D. program in Atmospheric Science is dependent upon satisfactory performance on the Preliminary Examination, which is administered twice a year. Students entering UAH with an M.S. degree or previous graduate training in Atmospheric Science must pass the Preliminary Examination at an early opportunity. Students are permitted two attempts to pass the Preliminary Examination.

In summary, the five major requirements for the Ph.D. degree in Atmospheric Science are the following:

1. Take the core courses and pass the preliminary examination

Each student must pass the Preliminary Examination covering material in the three core courses plus three other ATS courses as outlined in the Ph.D. Preliminary Exam policies. The core courses are:

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Title</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>ATS 541</td>
<td>ATM THERMODYN &amp; CLOUD PHYSICS</td>
<td>3</td>
</tr>
<tr>
<td>ATS 551</td>
<td>ATMOS FLUID DYNAMICS I</td>
<td>3</td>
</tr>
<tr>
<td>ATS 561</td>
<td>ATMOSPHERIC RADIATION I</td>
<td>3</td>
</tr>
</tbody>
</table>

It is anticipated that a student will take the exam during the second year of graduate study, but those with a strong background in Atmospheric Science may take the exam within the first year. The Preliminary Examination may be taken only twice. The student must pass all six sections in order to continue toward Ph.D. candidacy.

Supervisory Committee

After a student has passed the Preliminary Examination, a Supervisory Committee will be formed. The committee will consist of the student’s academic advisor plus at least four other members. Three of the Committee Members, including the Committee Chair, must be tenured or tenure-track members of the ATS faculty. The committee must be approved by the Graduate Dean. The committee will later administer the Qualifying Examination, and with consent of the Graduate Dean, give approval to all aspects of requirements 2-5.

2. Satisfy the residence requirement

According to graduate school policy, residence may be established through either:

1. being enrolled as a full-time student (at least 9 graduate semester hours) either for one continuous academic year, or for Spring and Fall semesters in the same calendar year, or
2. being enrolled in at least 6 semester hours of graduate course work in at least three of four consecutive semesters.

3. Complete an acceptable Program of Study (POS).

Students must formulate an appropriate Program of Study, in consultation with a faculty advisor and chair, before the end of the second semester. Each Program of Study, individualized to meet the student’s needs and requirements of the program, will stress breadth, depth, and research competence, and relate the major area to its applications. Any prerequisites for courses on the POS must be fulfilled before attempting the courses.

- Minimum degree requirements of this Program of Study will include at least 48 semester hours of graduate level course work. These include the core courses needed to prepare for the Preliminary Examination and courses required in a major area of concentration that will prepare the student to conduct original research. While required, supporting courses, ATS 509 (http://catalog.uah.edu/search/?P=ATS%20509), ATS 780 (http://catalog.uah.edu/search/?P=ATS%20780), ATS 781 (http://catalog.uah.edu/search/?P=ATS%20781), ATS 782 (http://catalog.uah.edu/search/?P=ATS%20782), are not included in the minimum degree requirements of 48 semester hours.
- Students can transfer up to 24 semester hours of course work from their M.S. program.
• Students can transfer an additional 6 semester hours of course work, including, with approval, special topics courses, but not including thesis semester hours.
• 50% of the minimum degree requirements (48 semester hours) must be from 600 level or higher courses.
• A minimum of 18 semester hours of doctoral dissertation (ATS 799) is required.
• Students must register for a total of 3 semester hours of Seminar and Professional Development. (ATS 780, ATS 781, ATS 782)
• Students must maintain a cumulative GPA of at least 3.0.

4. Pass the Qualifying Examination

Once the Program of Study has been submitted and the Ph.D. Student Advisory Committee (SAC) has been formed, the next steps are to submit a written dissertation proposal to the SAC and then make an oral presentation (usually 2-3 weeks later). This will be followed by the Qualifying Examination, which will cover the major areas of study and the student’s proposal for the dissertation topic. It will have both written and oral components and will be prepared and graded by the SAC. This examination may be taken at most twice.

5. Complete and defend a research dissertation

Each student must complete and successfully defend a research dissertation, the results of which are publishable in a nationally recognized journal. The dissertation, which must comply with the regulations set forth in the School of Graduate Studies’ Thesis and Dissertation Manual, must be approved by the student’s supervisory committee, the chair of the Atmospheric Science Department, the Dean of the College of Science, and the Dean of the School of Graduate Studies. A significant portion of the dissertation must be submitted for publication in an approved journal.

Additional Information

All requirements for the Ph.D. must be completed in no more than five years after the student has passed the qualifying examination.

The atmospheric science program does not require knowledge of a foreign language, but it does require proficiency in both spoken and written English.

ATS 501 - SURVEY OF ATMOSPHERIC SCIENCE
Semester Hours: 3
General survey of the field of atmospheric science includes thermodynamics, atmospheric dynamics, cloud physics, and atmospheric radition. Quantitative examination of atmospheric properties including atmospheric composition, structure and dynamics.

ATS 509 - APPL COMPUTERS IN METEOROLOGY
Semester Hours: 3
Survey of scientific programming techniques used in atmospheric sciences. Various data types, control statements, and programming design using object oriented techniques are discussed, emphasizing efficient programming. Course prepares students for graduate work and research in atmospheric science.

ATS 510 - OPERATIONAL WEATHER FORECASTING
Semester Hours: 3
Subjective & objective methods of atmospheric prognosis. Forecasting critical weather elements. Interpretation, use & systematic errors of computer-generated products, human factors, & application of meteorological theory in an operational setting.

ATS 513 - GIS & REMOTE SENSING
Semester Hours: 3
Hands-on approach to GIS and satellite remote sensing. Popular satellite data sets such as LANDSAT and AVHRR are coupled with GIS data sets to increase understanding of the earth system. Topics include satellite sensors, basic radiative transfer, orbits, raster formats, atmospheric correction, distortion, image corrections, rotations and mapping, spatial resolution, image interpretation, radiometric and geometric enhancement, multispectral transformations, and classifications. (Same as ATS 413, ES 413, ES 513.) Spring.

ATS 515 - ADVANCED TOPICS IN GIS
Semester Hours: 3
Advanced special topics: visualization of GIS and remote sensing data, landscape characterization (pattern vs. process), multitemporal analysis, aggregation of data types, developing an integrated GIS environment for performing complex space-time modeling analyses, and land-atmosphere interactions. (Same as ATS 415, ES 415, ES 515.) Spring.

ATS 520 - INTRO ATMOS CHEM & AIR POLLUTION
Semester Hours: 3
An introduction designed to provide students with the basics of atmospheric chemistry and air pollution concepts. Topics include air polluantants, air-pollution meteorology, atmospheric gases and aerosols, and atmospheric processes.
ATS 522 - AIR POLLUTION/METEOROLOGY CONCEPTS  
Semester Hours: 3

ATS 541 - ATM THERMODYN & CLOUD PHYSICS  
Semester Hours: 3

Thermodynamic & cloud physical processes in the atmosphere. Atmospheric statics & stability. Role of aerosols in nucleation of cloud and ice particles. Physical processes that produce the growth of hydrometeors in cold and warm clouds. Applicable measurement techniques.

ATS 551 - ATMOS FLUID DYNAMICS I  
Semester Hours: 3

Fluid dynamics in the atmosphere. Coriolis acceleration, scale analysis and appropriate approximations of the complete governing equations. Numerical analysis and interpretation of weather phenomena.

ATS 553 - ATS RADIATION/REMOTE SENSING  
Semester Hours: 3

ATS 554 - FORECASTING MESOSCALE PROC  
Semester Hours: 3

Detection and forecasting of atmospheric mesoscale phenomena including the structure and evolution of clouds, precipitation (including floods) thunderstorms and severe weather. Includes basics of instruments used to detect mesoscale phenomena, most notably satellite and radar. Prerequisite: ATS 551.

ATS 561 - ATMOSPHERIC RADIATION I  
Semester Hours: 3

Fundamentals of terrestrial atmospheric radiation. Topics include: basic concepts, radiative transfer equation, gaseous absorption, scattering by molecules and particles, band models, transmittance along an inhomogeneous path.

ATS 571 - INTRO TO RADAR METEOROLOGY  
Semester Hours: 3

Introduction to principles of radar meteorology, including radar operations, hardware, interpretation and analysis. Doppler, dual-polarization and dual-wavelength radar theory, methods and applications are covered. Prerequisite: ATS 541.

ATS 581 - ATS THERMODYNAMICS & CHEM  
Semester Hours: 3

ATS 590 - SPECIAL TOPICS  
Semester Hours: 1-3

Selected topics of interest not included in other courses.

ATS 603 - CLIMATE DYNAMICS  
Semester Hours: 3

Origin and evolution of the climate system including underlying causes for past climates such as occurred during the ice ages. Statistical processing of various time series to extract climactic signals in the data. Determination of global-scale forcing mechanisms, which impact climate. Prerequisites: ATS 541 and ATS 551.

ATS 606 - DATA ANALYSIS ATMOSPHERIC SCINTS  
Semester Hours: 3

A theoretical and practical introduction to various data analysis methods commonly used in atmospheric science. Topics include forecasting techniques to generate models to fit data, assess models using parametric tests, probability theory and Monte Carlo methods to solve a variety of problems. Prerequisites: ATS 509.

ATS 620 - ATMOSPHERIC CHEMISTRY & AEROSOL  
Semester Hours: 3

Primary processes, thermodynamics, photochemistry, kinetics, models, and measurements applied to troposphere and stratosphere; natural and anthropogenic; chlorine, nitrogen, hydrogen, and oxygen catalytic cycles; ground- and satellite-based observations of trace species. Prerequisites: ATS 520.
ATS 622 - AIR POLLUTION MODELING
Semester Hours: 3

Air pollution Langrangian and Eulerian modeling concepts and methods from micro to synoptic scales; plume, large eddy simulations and urban-regional models in research and regulatory applications; transport, dispersion, chemistry, clouds, aerosols, and wet/dry deposition. Prerequisites: ATS 520 and ATS 551.

ATS 630 - PHYSICAL CLIMATOLOGY
Semester Hours: 3

This course examines the physical aspects of the global climate system, including the global energy balance, surface energy balance, hydrologic cycle, climate classification, ocean change and other selected topics such as climate sensitivity. Prerequisites: ATS 501 or 541.

ATS 635 - GENERAL CIRCULATION
Semester Hours: 3

Detailed examination of the observed dynamic, thermodynamic and chemical structure of the atmosphere, including mid-latitude baroclinic systems, tropical systems, global-scale energy, mass and momentum budgets and the fundamental climatology of the atmosphere. Prerequisites: ATS 541 and ATS 551.

ATS 642 - PRECIP PHYSICS FOR RADAR
Semester Hours: 3

Cloud microphysics theory, models, in-situ and radar observations of hydrometers will be utilized together to explore advanced concepts in precipitation physics and their connection to radar meteorology, including coalescence, break-up, freezing, size sorting, aggregation, riming and melting.

ATS 651 - ATMOS FLUID DYNAMICS II
Semester Hours: 3

Wave motions in the atmosphere with emphasis of Rossby, Kelvin and gravity waves. Systematic scaling of primitive equations to develop quasi-geostrophic and Elkmann-layer theory. Shallow water theory, stratified flows, and barotropic and baroclinic instability. Prerequisites: ATS 541.

ATS 652 - ADV SYNOPtic METEOROLOGY
Semester Hours: 3

Analysis, interpretation and forecasting synoptic-scale and mesoscale phenomena, including air masses, frontal systems, cyclones, anti-cyclones and waves toward understanding process dynamics. Emphasize the use of observational, satellite and numerical model data, including radars and profilers. Prerequisites: ATS 541 and ATS 551.

ATS 654 - FORECASTING MESOSCALE PROCESSES
Semester Hours: 3

ATS 655 - BOUNDARY LAYER METEOROLOGY
Semester Hours: 3

Survey of atmospheric boundary layer (ABL) properties. Review of turbulence, convective and stable boundary layers, surface forcing, boundary layer discontinuities, and singular phenomena within the ABL. Atmospheric field measurements are used to enhance understanding of ABL process. Prerequisites: ATS 541 and ATS 551.

ATS 656 - TROPICAL METEOROLOGY
Semester Hours: 3

Overview concepts of the dynamics and climatology of the tropics and of significant tropical precipitation systems. Topics also include Kelvin waves, equatorial flows, convective scale dynamics, island meteorology, tropical cyclones, ENSO, radiative-convective equilibrium, gregarious cloud systems. Prerequisites: ATS 541 and ATS 551.

ATS 657 - NOWCASTING THEORY METHODS
Semester Hours: 3

Theory, methods and applications of 0-6 hour weather and ecological prediction, which is a forecast time period when numerical prediction models have low skill. Topics include predictability, data assimilation, statistical methods, and algorithms using Earth and atmospheric science observations.

ATS 670 - SATELLITE REMOTE SENSING I
Semester Hours: 3

Using a hands-on approach, this course covers a broad range of topics concerning digital image processing applied to the remote sensing of atmospheric, cloud and surface properties using various satellite data sets. Prerequisites: ATS 509.
ATS 671 - GROUND BASED REMOTE SENSING  
Semester Hours: 3  
Principles and measurement capabilities of active and passive ground-based remote sensing systems: radar, wind profiler, lidar, sodar, and passive radiometer systems. Integration of remote sensing measurements to retrieve properties of atmospheric phenomena. Hands on usage and field measurements. Prerequisites: ATS 541.

ATS 672 - DUAL POLARIZATION RADAR MTRLGY  
Semester Hours: 3  
Theory, analysis and interpretation of dual polarization radar for meteorological applications. Course covers dual polarization radar system hardware; the basic theory underlying polarimetric radar data and methodology; analysis, interpretation and application of polarimetric radar variables; and dual meteorological and convective weather applications; specifically, precipitation measurement and hyrometeor identification. Example applications include rain rate estimation, drop size determination, hail identification, tornado detection, snow vs rain delineation, and cloud electrification studies. Prerequisites: ATS 571.

ATS 673 - LIGHTNING  
Semester Hours: 3  
An introduction to lightning. Topics include qualitative and quantitative description of lightning discharges; electrification of thunderstorms; temporal and spatial variation of lightning on multiple scales; various types of lightning; basic lightning models; current methods of measuring lightning. Prerequisites: ATS 509.

ATS 675 - ATMOSPHERIC DATA ASSIMILATION  
Semester Hours: 3  
Data assimilation methods and concepts including objective analysis and initialization as relevant to numerical weather prediction. Emphasis on variational methods, successive correction, optimal interpolation, adjoint and gradient concepts, singular vectors, Kalman filters and nudging. Prerequisites: ATS 541 and ATS 551.

ATS 681 - NUMERICAL ATMOS MODELING  
Semester Hours: 3  
Introduction to numerical methods applied to simulation of the atmosphere. Basic numerical solution techniques, along with filtering, radiative parameterizations, thermodynamics, turbulent parameterization, initialization and coordinate transformation. Prerequisites: ATS 551.

ATS 690 - SEL TOPICS IN ATMOS SCI  
Semester Hours: 1-4  
Selected topics of interest not included under other courses.

ATS 699 - MASTER'S THESIS  
Semester Hours: 1-6  
Required each semester a student is enrolled and receiving direction on a master's thesis.

ATS 740 - CLOUD PROCESSES  
Semester Hours: 3  
Theory and observations of the bulk microphysics and kinematic structures of clouds. Topics include: interactions among dynamical, microphysical and thermodynamic processes within cloud systems, the dynamics of organized convective systems, and remote sensing of clouds and precipitation features. Prerequisites: ATS 541 and ATS 551.

ATS 761 - ATMOSPHERIC RADIATION II  
Semester Hours: 3  
Advanced topics in atmospheric radiative transfer. Specific topics include Maxwell equations, Mie theory, polarization and radiative transfer in a scattering atmosphere. Prerequisites: ATS 561.

ATS 762 - MICROPARTICLE OPT & RADIOMETRY  
Semester Hours: 3  

ATS 770 - SATELLITE REMOTE SENSING  
Semester Hours: 3  
Using various satellite data sets and radiative transfer models, this course will train students to calculate and study cloud, aerosol, ocean and land surface properties to assess the radiative energy budget of the earth-atmosphere system. Prerequisites: ATS 670.
ATS 780 - ATMOSPHERIC SCIENCE SEMINAR
Semester Hour: 1

Speakers are invited to report on research relevant to the field of atmospheric science. Students are expected to attend at least twelve seminars and to write short descriptions of the presentations.

ATS 781 - STUDENT SEMINAR
Semester Hour: 1

Guest speakers report on research relevant to the fields of Atmospheric and Earth System Science. Students are expected to attend weekly seminars, submit a paper based on at least ten talks, and make a 15-minute conference type presentation on a research topic in atmospheric science selected in agreement with their advisor. Prerequisites: ATS/ESS 780.

ATS 782 - PROFESSIONAL DEVELOPMENT
Semester Hour: 1

Topics concerning professional ethics, writing scientific journal articles, proposals and resumes, preparing budgets, networking, time management, conference presentations, research administration, funding agencies, stress and burnout will be discussed. Selected topics of interest not included under other courses.

ATS 790 - SEL TOPICS IN ATMOS SCI
Semester Hours: 1-4

Selected topics of interest not included under other courses.

ATS 799 - DOCTORAL DISSERTATION
Semester Hours: 3-9

Required each semester student is enrolled and receiving direction on a doctoral dissertation.

Atmospheric Science, PhD

The Doctor of Philosophy degree is a research-oriented degree awarded upon the demonstration of scholarly competence. To obtain the Ph.D. degree in Atmospheric Science, each student must satisfy all requirements of the School of Graduate Studies, as well as those of the Atmospheric Science Program. Admission to the Ph.D. program in Atmospheric Science is dependent upon satisfactory performance on the Preliminary Examination which is administered twice a year. Students entering UAH with an M.S. degree or previous graduate training in Atmospheric Science must pass the Preliminary Examination at an early opportunity. Students are permitted two attempts to pass the Preliminary Examination.

In summary, the five major requirements for the Ph.D. degree in Atmospheric Science are the following:

1. Take the core courses and pass the preliminary examination

Each student must pass the Preliminary Examination covering material in the three core courses plus three other ATS courses as outlined in the Ph.D. Preliminary Exam policies. The core courses are:

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
<th>Hours</th>
</tr>
</thead>
<tbody>
<tr>
<td>ATS 541</td>
<td>ATM THERMODYN &amp; CLOUD PHYSICS</td>
<td>3</td>
</tr>
<tr>
<td>ATS 551</td>
<td>ATMOS FLUID DYNAMICS I</td>
<td>3</td>
</tr>
<tr>
<td>ATS 561</td>
<td>ATMOSPHERIC RADIATION I</td>
<td>3</td>
</tr>
</tbody>
</table>

It is anticipated that a student will take the exam during the second year of graduate study, but those with a strong background in Atmospheric Science may take the exam within the first year. The Preliminary Examination may be taken only twice. The student must pass all six sections in order to continue toward Ph.D. candidacy.

Supervisory Committee

After a student has passed the Preliminary Examination, a Supervisory Committee will be formed. The committee will consist of the student’s academic advisor plus at least four other members. Three of the Committee Members, including the Committee Chair, must be tenured or tenure-track members of the ATS faculty. The committee must be approved by the Graduate Dean. The committee will later administer the Qualifying Examination, and with consent of the Graduate Dean, give approval to all aspects of requirements 2-5.

2. Satisfy the residence requirement

According to graduate school policy, residence may be established through either:

1. being enrolled as a full-time student (at least 9 graduate semester hours) either for one continuous academic year, or for Spring and Fall semesters in the same calendar year, or
2. being enrolled in at least 6 semester hours of graduate course work in at least three of four consecutive semesters.
3. Complete an acceptable Program of Study (POS).

Students must formulate an appropriate Program of Study, in consultation with a faculty advisor and chair, before the end of the second semester. Each Program of Study, individualized to meet the student’s needs and requirements of the program, will stress breadth, depth, and research competence, and relate the major area to its applications. Any prerequisites for courses on the POS must be fulfilled before attempting the courses.

- Minimum degree requirements of this Program of Study will include at least 48 semester hours of graduate level course work. These include the core courses needed to prepare for the Preliminary Examination and courses required in a major area of concentration that will prepare the student to conduct original research. While required, supporting courses, ATS 509, ATS 780, ATS 781, ATS 782, are not included in the minimum degree requirements of 48 semester hours.
- Students can transfer up to 24 semester hours of course work from their M.S. program.
- Students can transfer an additional 6 semester hours of course work, including, with approval, special topics courses but not including thesis semester hours.
- 50% of the minimum degree requirements (48 semester hours) must be from 600 level or higher courses.
- A minimum of 18 semester hours of doctoral dissertation (ATS 799) is required.
- Students must register for a total of 3 semester hours of Seminar and Professional Development. (ATS 780, ATS 781, ATS 782)
- Students must maintain a cumulative GPA of at least 3.0.

4. Pass the Qualifying Examination

Once the Program of Study has been submitted and the Ph.D. Student Advisory Committee (SAC) has been formed, the next steps are to submit a written dissertation proposal to the SAC and then make an oral presentation (usually 2-3 weeks later). This will be followed by the Qualifying Examination, which will cover the major areas of study and the student’s proposal for the dissertation topic. It will have both written and oral components and will be prepared and graded by the SAC. This examination may be taken at most twice.

5. Complete and defend a research dissertation

Each student must complete and successfully defend a research dissertation, the results of which are publishable in a nationally recognized journal. The dissertation, which must comply with the regulations set forth in the School of Graduate Studies’ Thesis and Dissertation Manual, must be approved by the student’s supervisory committee, the chair of the Atmospheric Science Department, the Dean of the College of Science, and the Dean of the School of Graduate Studies. A significant portion of the dissertation must be submitted for publication in an approved journal.

Additional Information

All requirements for the Ph.D. must be completed in no more than five years after the student has passed the qualifying examination.

The atmospheric science program does not require knowledge of a foreign language, but it does require proficiency in both spoken and written English.

**Atmospheric Science, MS**

- To obtain the M.S. degree in Atmospheric Science, each student must satisfy all requirements of the School of Graduate Studies as well as those of the Atmospheric Science Program.
- Students must formulate an appropriate Program of Study (POS), in consultation with a faculty advisor and chair, before the end of the second semester.
- Students must maintain a cumulative GPA of at least 3.0.

**Option 1 - Thesis**

Minimum degree requirements under this plan include completion of at least 24 credit hours of graduate course work and at least 6 credit hours of thesis research. At least 50% of the required 24 semester hours must be from 600 level (or higher) courses. Students are also required to take 6 credit hours of supporting courses. The supporting courses do not count toward the minimum degree requirements.

ATS 780  ATMOSPHERIC SCIENCE SEMINAR  1
ATS 781  STUDENT SEMINAR  1
ATS 782  PROFESSIONAL DEVELOPMENT  1

Thesis Credits
ATS 699  MASTER'S THESIS  6

Total Semester Hours 36

1. Students must earn a B or above in core courses.
2. Students who have earned a B or better in the undergraduate equivalent ATS 541, ATS 551, ATS 561 at UAH do not have to re-take the course at the graduate level. However, their Program of Study must include alternative semester hours at the appropriate level approved by their advisor and chair of the department.
3. Students who have earned a B or better in the undergraduate equivalent of ATS 509 at UAH have fulfilled the requirement.

Additional Information

In Option 1, the student must write and defend a thesis. The thesis must show evidence of the student's capability for research, independent thought and analysis in atmospheric science and must be written in fluent, acceptable English. During the second semester, the student, with the guidance of their advisor, should form a supervisory committee. Student must submit a 5 page thesis proposal to be approved by the advisor and committee by the end of the third full semester.

Option 2 - Non-Thesis

Minimum degree requirements under this plan include completion of at least 33 credit hours of graduate course work. At least 50% of the required 33 semester hours must be from 600 level (or higher) courses. In addition, all M.S. students are required to take 6 credit hours of supporting courses. The supporting courses do not count toward the minimum degree requirements.

Required Core Courses 1,2
ATS 541  ATM THERMODYN & CLOUD PHYSICS  3
ATS 551  ATMOS FLUID DYNAMICS I  3
ATS 561  ATMOSPHERIC RADIATION I  3

Elective Courses
Select 18 semester hours from 600 level (or higher) courses  18
Select 6 semester hours from 500 or 600 level courses and may be outside of ATS only with advisor's approval  6

Required Supporting Courses
ATS 509  APPL COMPUTERS IN METEOROLOGY  3
ATS 780  ATMOSPHERIC SCIENCE SEMINAR  1
ATS 781  STUDENT SEMINAR  1
ATS 782  PROFESSIONAL DEVELOPMENT  1

Total Semester Hours 39

1. Students must earn a B or above in core courses.
2. Students who have earned a B or better in the undergraduate equivalent ATS 541, ATS 551, ATS 561 at UAH do not have to re-take the course at the graduate level. However, their Program of Study must include alternative semester hours at the appropriate level approved by their advisor and chair of the department.
3. Students who have earned a B or better in the undergraduate equivalent of ATS 509 at UAH have fulfilled the requirement.

Comprehensive Examination/Thesis Defense

A final comprehensive examination is required of all candidates for a master's degree; this examination may be written or oral, or both. In accordance with the Graduate Studies Dates & Deadlines, a written notice of the time and place of the examination/defense must be sent to the Graduate Dean. After approval by the Graduate Dean, the Department Chair sends a copy of the written Notification of Oral Examination/Defense to the candidate and each member of the committee. A student may take the Comprehensive Examination only twice.

• Thesis candidates will be examined primarily on the thesis by a committee of at least three faculty members appointed by the Department Chair and approved by the Graduate Dean.

• Non-Thesis candidates will be examined on course work. Three weeks before the exam, the advisor/chair will email two "lead-in" questions about the student's course work from each committee member. This will be the starting point for the oral exam. The committee members may also
question further during the exam. Students who pass all sections of the Ph.D. Preliminary Exam are not required to take the M.S. Comprehensive Exam.

M.S. Supervisory Committee

The committee must consist of a minimum of three members and be approved by the Department Chair. Two of the three members, including the Committee Chair, must be full-time, tenured or tenure-earning faculty members in the department. The other member may be nominated to the Affiliate Graduate Faculty or be a current faculty member from another UAH department.

Paperwork

- Students must formulate an appropriate Program of Study (POS), in consultation with a faculty advisor and chair, before the end of the second semester.
- Application for graduate degree according to the Graduate Studies Dates & Deadlines.
- Notification of Oral Examination/Defense according to the Graduate Studies Dates & Deadlines.

Biological Sciences

369A Shelby Center
Telephone: 256.824.6260
Email: biology@uah.edu (biology.grad@uah.edu)

Chair: Debra M. Moriarity, Professor

The Biological Sciences department offers the following graduate degree program:

- Master of Science

Admission Requirements

In addition to fulfilling admission requirements set by the School of Graduate Studies, applicants must also:

1. Take the general GRE exam and TOEFL when applicable
2. Have a Biology degree or related course work
3. Show competence in an area of life science related to the proposed area of study
4. Complete one year of undergraduate chemistry, including at least one semester each of organic chemistry and biochemistry
5. Complete at least one advanced (upper division) class in any of the following: biochemistry, cell biology, ecology, evolution, genetics, molecular biology, or physiology course
6. Have a minimum cumulative GPA of 3.0 as well as in the major area of concentration
7. A course in statistics is also recommended

Applicants demonstrating potential for graduate study in the biological sciences, but having some deficiencies in their previous academic work, may be admitted on a conditional basis. See the Biological Sciences (http://www.uah.edu/science/departments/biology) webpage for application information.

Program Objective

The UAH Department of Biological Sciences aspires to provide one of the best programs in the Southeast through undergraduate and graduate education and research. Our objective is to educate and train students for the critical analysis, problem solving, and independent thinking skills required in scientific research. Through our M.S programs and the interdisciplinary Biotechnology Ph.D. degree, we aspire thorough training and mentoring, to cultivate future scientists who are trained to serve national needs in education, government, and industry.

Learning Outcomes

Students will demonstrate their ability to

- Utilize the scientific method to resolve biological problems
- Write a scholarly document
- Prepare and deliver an effective oral scientific presentation
Master's Program in Biological Sciences

Program Requirements
A minimum of 25 percent of biological sciences course requirements must be met at the cooperating institution. A minimum of 50 percent of the graduate program must be taken at the 600-level. The graduate program of study cannot include more than 6 semester hours each of BYS 691 (http://catalog.uah.edu/search/?P=BYS%20691) or BYS 692 (http://catalog.uah.edu/search/?P=BYS%20692). Three semester hours of graduate seminar can be counted toward fulfillment of the graduate program. Titled BYS 691 (http://catalog.uah.edu/search/?P=BYS%20691) courses offered on an ad hoc basis and instructed as part of the didactic curriculum are exempt from the 6 semester hour maximum.

Students may elect one of the following three plans for the Master's degree:

Plan I – Master of Science with Thesis
Students will complete coursework (minimum of 24 semester hours) and perform original research that will be described in their thesis (minimum of 6 semester hours of BYS 699 (http://catalog.uah.edu/search/?P=BYS%20699)), for a total of 30 semester hours. Students will complete a comprehensive written examination, and final oral examination (seminar presentation of thesis work and master’s committee examination of thesis work).

Plan II – Master of Science without Thesis
Students will complete an approved program of study (minimum of 33 semester hours), complete a written comprehensive final examination, and write and present a master's report for the supervisory committee. The report is usually in the form of a literature review, survey, and/or experimentation about some pertinent topic.

Plan III – Master of Science with Education
Alternative Class A
Students with an accredited baccalaureate degree other than teacher education, seeking initial certification (those that do not have a Class B – baccalaureate level teaching certification) will complete coursework in the Department of Education (21 semester hours, including an internship) and the Department of Biological Sciences (24 semester hours) as well as complete a written comprehensive final examination and write a master's report. The master's report is usually in the form of a literature review, survey, and/or experimentation about some pertinent topic.

BYS 500 - CURRENT CONCEPTS IN BYS/AL A&M
Semester Hours: 3
BYS 505 - PSYCHOPHARMACOLOGY
Semester Hours: 3
Introduction to drug classification and action with emphasis on physiological and psychological interactions. Same as PY 505.
BYS 508 - FOOD ANALYSIS/A&M
Semester Hours: 4
BYS 510 - RADIATION BIOLOGY/A&M
Semester Hours: 3
Course offered jointly by Alabama A&M University and UAH but which is taught on the A&M campus. Characteristics of radioisotopes, detection and counting techniques and instrumentation, tracer techniques, health and safety system.
BYS 519 - GENE STRUCTURE & FUNCTION
Semester Hours: 3
Advanced studies of macromolecular structure and biological function of proteins and nucleic acids involved in the passage of genetic information and cellular response. Structural significance of viruses and molecular evolution included.
BYS 523 - PRINCIPLES OF VIROLOGY/A&M
Semester Hours: 3
Course offered jointly by Alabama A&M University and UAH but which is taught on the A&M campus. Principles of viral infectivity, multiplication, and chemical constitution; laboratory techniques for their isolation, cultivation, identification, and enumeration.
BYS 524 - MYCOLOGY/A&M  
Semester Hours: 4

Course offered jointly by Alabama A&M University and UAH but which is taught on the A&M campus. Lines of phycomycetes using representative species; various series of actinomycetes; representative pathogenic (crop and vegetative pathogens) and nonpathogenic heterobasidiomycetidiae organisms; order and families of homobasidiomycetidae. Ontogenetics, cellular, and structural study applied to all divisions, classes, series, orders and families.

BYS 524L - MYCOLOGY LAB/A&M  
Semester Hour: 1

BYS 526 - MICROBIAL ECOLOGY  
Semester Hours: 4

Course offered jointly by Alabama A&M University and UAH but which is taught on the A&M campus. Relationship of soil and aquatic microorganisms and their importance in ammonification, nitrification, and other biological processes.

BYS 528 - PHYSIOLOGY OF REPRODUCTION/A&M  
Semester Hours: 4

BYS 529 - STATISTICS/AL A&M  
Semester Hours: 4

BYS 530 - APP. OF GEOSTATISTICS/AL A&M  
Semester Hours: 3

BYS 532 - MEDICAL PHYSIOLOGY  
Semester Hours: 4

Detailed study of physiology, covering membrane transport, muscle, nerve, heart, lung, gastrointestinal and renal function. Emphasis will be on homeostasis, genetic disease and pharmacological therapy.

BYS 532L - LABORATORY  
Semester Hours: 0

BYS 533 - ADVANCED PHYSIOLOGY I/A&M  
Semester Hours: 3

Course offered jointly by Alabama A&M University and UAH but which is taught on the A&M campus. Nerve and muscle cell function, fluid and electrolyte environment of body tissues, blood, heart, circulatory, and nervous systems.

BYS 534 - MEDICAL PHYSIOLOGY II  
Semester Hours: 3

Course offered jointly by Alabama A&M University and UAH but which is taught on the A&M campus. Continuation of mammalian physiology with consideration of kidney function, respiratory, digestive, reproductive, and endocrine systems.

BYS 535 - ADVANCED MICROBIOLOGY  
Semester Hours: 3

Aspects of microbial behavior, development, morphogenesis or physiology.

BYS 537 - PSYCHOBIOLOGY STRESS & ILLNESS  
Semester Hours: 3

Overview of physiological stress responses and their influence on health, behavior, and illness. Same as PY 536.

BYS 538 - NEUROANATOMY/A&M  
Semester Hours: 3

BYS 542 - NUTRITIONAL PHYSIOLOGY  
Semester Hours: 3

Course offered jointly by Alabama A&M University and UAH but which is taught on the A&M campus. Advanced laboratory dealing with modern techniques of molecular biology and biochemistry.

BYS 543 - MOLECULAR BIOLOGY OF THE CELL  
Semester Hours: 3

Advanced study of cell structure and function of macromolecules (lipids, proteins, carbohydrates and nucleotides). In depth literature readings on subcellular organelles, metabolic pathways, cell cycle, cancer, and cell differentiation.
BYS 547 - BIOCHEMISTRY I  
Semester Hours: 3  
Structural chemistry and function of biomolecules, mechanisms of biochemical reactions, and enzyme kinetics. Same as: CH 561.

BYS 548 - BIOCHEMISTRY II  
Semester Hours: 3  
Energy transduction, metabolism, biosynthesis of macromolecular precursors, storage, transmission, and expression of genetic information. Same as CH 562. Prerequisites: BYS 547 or CH 561.

BYS 555 - ENVIRONMENTAL PLANNING/URP@A&M  
Semester Hours: 3  

BYS 556 - ADV MOLECULAR TECHNIQUES  
Semester Hours: 3  
Laboratory techniques in molecular biology including current methodology in genomics, proteomics and RNA analysis. Prerequisites: BYS 519 with concurrency.

BYS 560 - ENVIRONMENTAL BIOLOGY/A&M  
Semester Hours: 3  
Course offered jointly by Alabama A&M University and UAH but which is taught on the A&M campus. Principles of interaction between living systems and their resources. Current problems in management of natural resources including new approaches in management of pest populations.

BYS 562 - COMMUNITY ECOLOGY  
Semester Hours: 4  
Detailed consideration of ecological principles and concepts, as well as biotic and abiotic factors relevant to development of communities and ecosystems. Field trips required.

BYS 563 - POPULATION ECOLOGY  
Semester Hours: 4  
Distribution, population dynamics and behavior of populations in relation to environmental factors. Field trips required.

BYS 564 - LIMNOLOGY  
Semester Hours: 3  
Fresh-water environments and organisms exemplified by lakes, ponds, and streams in North Alabama.

BYS 567 - PLANT VIROLOGY/A&M  
Semester Hours: 3  

BYS 572 - SOIL & WATER POLLUTION/A&M  
Semester Hours: 3  
Course offered jointly by Alabama A&M University and UAH but which is taught on the A&M campus. Principles of classifying, naming, and identifying vascular plants with emphasis on flowering plants. Ecologic factors influencing vegetational distribution.

BYS 576 - REMOTE SENSING ENVIRONMENT/A&M  
Semester Hours: 4  

BYS 580 - NATURAL RESOURCES POLICIES/A&M  
Semester Hours: 3  

BYS 584 - ECOLOGICAL PROCESSES/AL A&M  
Semester Hours: 3-4  

BYS 590 - PROBLEMS IN BIOLOGICAL SCI/A&m  
Semester Hours: 3  

BYS 600 - NEUROSCIENCE  
Semester Hours: 3  
An advanced survey of the field of neuroscience, from basic neuroanatomy and physiology, to current topics, such as neurodegenerative disease, learning and memory, consciousness, cognitive theory and neurocomputing.
BYS 601 - BIOINFORMATICS I  
Semester Hours: 3
Practical use in Bioinformatics and X-ray crystallography.

BYS 602 - BIOINFORMATICS II  
Semester Hours: 3
Practical use in Bioinformatics and applied Genomics.

BYS 619 - MICROBIAL GENETICS  
Semester Hours: 3

BYS 620 - APPLIED PHYCOLOGY/A&M  
Semester Hours: 3
Course offered jointly by Alabama A&M University and UAH but which is taught on the A&M campus. Examine by microbiological assay sewage disposal and wastewater treatment plants. Microorganisms of industrial importance in biological production of antibiotics, vitamins, organic acids, and alcohols.

BYS 622 - APPL & INDUSTRIAL MICROB/A&M  
Semester Hours: 3

BYS 624 - IMMUNOLOGY/A&M  
Semester Hours: 4

BYS 625 - MEDICAL MYCOLOGY/A&M  
Semester Hours: 3

BYS 630 - IMMUNOLOGY  
Semester Hours: 4
Innate, humoral and cell-mediated immunity. Immune deficiencies and hyper sensitivities. Autoimmunity, transplantation and tumor immunology.

BYS 631 - MEDICAL PHARMACOLOGY/A&M  
Semester Hours: 3
Course offered jointly by Alabama A&M University and UAH but which is taught on the A&M campus. Drug-receptor interaction, kinetics of drug absorption, distribution and elimination, and discussion of drugs affecting different systems. Pharmacogenetics, toxicity, mutagenesis, teratogenesis, carcinogenesis, and drug interactions. Mechanism of action of drugs, in relation to their use as therapeutic agents in medicine.

BYS 632 - CARDIOVASCULAR PHYSIOLOG/A&M  
Semester Hours: 3

BYS 633 - ENDOCRINOLOGY/A&M  
Semester Hours: 3

BYS 645 - HUMAN CYTOGENETICS CL APP/A&M  
Semester Hours: 3
Course offered jointly by Alabama A&M University and UAH but which is taught on the A&M campus. Review of normal human chromosome structure and normal chromosome segregation and morphology with clinical consideration.

BYS 646 - MOLECULAR GENETICS/A&M  
Semester Hours: 3

BYS 649 - ADVANCED GENETICS I/A&M  
Semester Hours: 3-4

BYS 663 - ADV MOLECULAR GENETICS/A&M  
Semester Hours: 3

BYS 671 - INTRO TO BIOTECH/A&M  
Semester Hours: 3
BYS 690 - SEMINAR  
Semester Hour: 1  
Student reports on current journal articles, research, or assigned readings. Graduate students should attend whether enrolled for credit or not. May be taken up to three times for credit.

BYS 691 - SPECIAL TOPICS  
Semester Hours: 1-4  
Directed readings and/or written reports on topics of individual student interest carried out under the supervision of an instructor. Prerequisite: permission of instructor required before registration.

BYS 692 - RESEARCH  
Semester Hours: 2-4  
Individual investigations of biological problems under supervision of a graduate faculty member. Permission of instructor required before registration.

BYS 699 - MASTER'S THESIS  
Semester Hours: 1-6  
Required each semester student is working on and receiving direction on master's thesis. Minimum of six hours required for M.S. thesis students.

BYS 730 - APPLD MULTIVARIATE ANLYS/A&M  
Semester Hours: 3

BYS ADD - ANATOMY & PHY I LAB/OAKWOOD  
Semester Hours: 0

**Biological Sciences, MS**

Biological Sciences Department (http://www.uah.edu/science/departments/biology)  
369A Shelby Center for Science and Technology  
256-824-6260  
biology@uah.edu (biology@uah.edu)  
Department Chair: Debra M. Moriarity, PhD

The graduate faculty, in cooperation with the graduate faculty of Alabama A&M University, offers an M.S. in Biological Sciences with emphasis in cell biology, environmental biology, genetics and molecular biology, biotechnology, bioinformatics, microbiology, or physiology.

**Admissions Requirements**

In addition to fulfilling admission requirements set by the School of Graduate Studies, applicants must also have:

- Taken the general GRE exam and TOEFL when applicable
- Biology degree or related course work
- At least one advanced (upper division) class in any of the following: biochemistry, cell biology, ecology, evolution, genetics, molecular biology, or physiology course
- A minimum cumulative GPA of 3.0 as well as in the major area of concentration

Applicants demonstrating potential for graduate study in the Biological Sciences, but having some deficiencies in their previous academic work may be admitted on a conditional basis. See the Biological Sciences (http://www.uah.edu/science/departments/biology) webpage for application information.

**Program Requirements**

A minimum of 25 percent of Biological Sciences course requirements must be met at the cooperating institution. A minimum of 50 percent of the graduate program must be taken at the 600-level. The graduate program of study cannot include more than 6 semester hours each of BYS 691 or BYS 692. Three semester hours of graduate seminar can be counted toward fulfillment of the graduate program. Titled BYS 691 courses offered on an ad hoc basis and instructed as part of the didactic curriculum are exempt from the 6 semester hour maximum.

Students may elect one of the following three plans for the Master’s degree:

**Plan I – Master of Science with Thesis**

Students will complete coursework (minimum of 24 semester hours) and perform original research that will be described in their thesis (minimum of 6 semester hours of BYS 699), for a total of 30 semester hours. Students will complete a comprehensive written examination, and final oral examination (seminar presentation of thesis work and master’s committee examination of thesis work).
Plan II – Master of Science without Thesis

Students will complete an approved program of study (minimum of 33 semester hours), complete a written comprehensive final examination, and write and present a master’s report for the supervisory committee. The report is usually in the form of a literature review, survey, and/or experimentation about some pertinent topic.

Plan III – Master of Science with Education (Two Choices)

Traditional Program

Students with Alabama Class B certification will complete coursework without specialization in the Department of Biological Sciences (24 semester hours), and in the Department of Education (12 semester hours), complete a written comprehensive final examination, and write and present a master’s report for the supervisory committee. The report is usually in the form of a literature review, survey, and/or experimentation about some pertinent topic. Graduates will be recommended for Alabama Class A teaching certification.

Non-traditional Fifth Year Program

Students with an accredited baccalaureate degree other than teacher education, seeking initial certification (those that do not have a Class B – baccalaureate level teaching certification) will complete coursework in the Department of Education (21 semester hours, including an internship) and the Department of Biological Sciences (24 semester hours) as well as complete a written comprehensive final examination and write a master’s report. The master’s report is usually in the form of a literature review, survey, and/or experimentation about some pertinent topic.

Chemistry

203-C Materials Science Building
Telephone: 256.824.6153
Email: j (chem@uah.edu) jeffrey.champoux@uah.edu (jeffrey.champoux@uah.edu)
Chair: Carmen Scholz, Professor and Interim Chair

The Chemistry department offers the following graduate degree program:

- Masters of Science

Admission Requirements

General requirements of the School of Graduate Studies under Plan I or Plan II must be satisfied. In addition, students admitted to the graduate chemistry program are assumed to have training equivalent to the chemistry B.S. degree recommended by the American Chemical Society. The degree includes lecture and laboratory work in organic chemistry, physical chemistry, inorganic chemistry, analytical chemistry, biochemistry, polymer chemistry, and materials chemistry. Graduation from an undergraduate program not adhering to ACS standards does not preclude entrance into the UAH program. Students should realize, however, that if deficiencies exist, some additional undergraduate courses might be required. The time required to complete the M.S. degree may then be proportionately increased.

Program Objective

The Department of Chemistry is to provide high quality education in all aspects of chemistry. Graduates of the Master of Science program will present their work in well-respected journals with significant impact. Our second objective is to educate our students in chemistry to obtain either satisfactory employment or enrollment in a graduate or professional degree program.

Learning Outcomes

Students will demonstrate:

- Ability to effectively present chemical knowledge in writing
- Ability to deliver an effective oral presentation of their research
- An excellent understanding of the basic concepts, methods, terminology, and theories of modern chemistry related to their research interests

Master’s Program in Chemistry

General requirements of the School of Graduate Studies under Plan I or Plan II must be satisfied.
Plan I – Master of Science with Thesis

Up to 12 semester hours of the course requirements may be accepted as transfer credits from graduate work done in other chemistry programs.

Plan II – Master of Science without Thesis

Graduate students entering Plan II must qualify by meeting one of the following preliminary examination requirements:

1. Passing ACS exams in biochemistry, inorganic chemistry, organic chemistry, or physical chemistry.
2. Having previously passed at least two sections of the Materials Science Program Exam I.
3. Having previously passed the Biotechnology Science and Engineering Preliminary Exam.

Select at least 18 semester hours in graduate coursework in chemistry or related fields 18

Total Semester Hours 33

¹ CH 633 can only be applied to one area: Organic or Analytical Chemistry

At least 18 semester hours out of the 33 total semester hours must be in Chemistry.

Plan II requires a program of study drawn up by the student and the Chemistry M.S. degree program advisor. Students must also complete two credit hours of CH 780 (http://catalog.uah.edu/search/?P=CH%20780). Plan II is not recommended for students seeking employment as industrial laboratory chemists because it does not require any experimental work.

**Non-Traditional Fifth-Year Program Leading to the M.S. in Chemistry Plus a Class A Alabama High School Teacher’s Certificate**

Those who have a B.A. or B.S. degree with a major or its equivalent in chemistry as determined by the Department of Chemistry, who have not taken more than 12 semester hours in teacher education (graduate or undergraduate), and who are interested in obtaining Class A (master’s level) certification for secondary school teaching, should consider the Non-Traditional Fifth Year Program. Contact the College of Education for preliminary advisement on admission and general program requirements. See the description in the Education (http://catalog.uah.edu/search/?P=Education) section for more details.

CH 500 - TOPICS IN CHEMISTRY
Semester Hours: 1-3

Advanced laboratory research in one of the departmental research groups. The student works on an independent or group research project. Completion of the course requires an appropriate written and oral report. Prerequisites: Approval of instructor.

CH 521 - CHEMICAL INSTRUMENTATION
Semester Hours: 4

Use of basic instrumentation in NMR, mass spectrometric, chromatographic, and spectrophotometric analysis.

CH 540 - POLYMER SYNTHESIS & CHARACTERI
Semester Hours: 3

Same as MTS 649.

CH 549 - SPECTROSCOPY & MOLEC STR
Semester Hours: 3

Intermediate level treatment of principles of spectroscopy and their application to determination of molecular structure.
CH 553 - INTRO QUANTUM MECH I  
Semester Hours: 3  
Waves and particles; Bohr's model; de Broglie waves, wave-packets, uncertainty principle; quantum mechanics postulates; Schroedinger equation; systems in 1, 2 & 3 dimensions; hydrogen atom. Same as PH 551, OSE 555, and MTS 651.

CH 554 - INTRO QUANTUM MECH II  
Semester Hours: 3  
Angular momentum and spin; atomic structure and spectrum; time-independent perturbation theory, variational methods; time-dependent perturbation theory and interactions of light with matter; scattering theory; electronic structure of solids; relativistic quantum mechanics. Same as: PH 552, MTS 652.

CH 556 - BIOCHEMISTRY I  
Semester Hours: 3  
Structural chemistry and function of biomolecules, mechanisms of biochemical reactions, enzyme kinetics, and energy transfer. Same as: BYS 547.

CH 556 - BIOCHEMISTRY II  
Semester Hours: 3  
Metabolism, biosynthesis of macromolecular precursors, storage, transmission, and expression of genetic information, and molecular physiology. Same as BYS 548. Prerequisites: CH 561 or BYS 547.

CH 600 - ADV INORGANIC CHEMISTRY  
Semester Hours: 3  
Survey with emphasis on structure and reactivity of inorganic compounds.

CH 602 - CHEM COORD COMPOUNDS  
Semester Hours: 3  
Modern bonding theory and stereo chemistry of coordination compounds.

CH 621 - METHODS OF CHEMICAL ANALYSIS  
Semester Hours: 3  
Literature, seminar course. Theory and methodology of various techniques of chemical analysis.

CH 631 - SYNTHETIC ORGANIC CHEMISTRY  
Semester Hours: 3  
Survey of certain reactions that enjoy widespread application to the synthesis of organic compounds.

CH 632 - PHYSICAL ORGANIC CHEMISTRY  
Semester Hours: 3  
Reactive intermediates, structure-activity relationships, reaction mechanisms and techniques used to determine them.

CH 633 - ORGANIC STRUCTURE DETERMINAT'N  
Semester Hours: 3  
Structure determination of organic molecules using spectroscopic methods, especially NMR, IR, and MS. Emphasis on the theory and interpretation of many NMR methods useful in chemistry research.

CH 634 - MOLECULAR MODELING  
Semester Hours: 4  
Molecular modeling methods, including molecular mechanics, molecular docking, molecular orbital theory, and density functional theory, will be used to investigate conformational properties of organic compounds, molecular interactions between biological macromolecules and organic ligands, electronic structure of organic and inorganic compounds, frontier molecular orbitals, pericyclic reactions, and reactive intermediates. Extensive computational laboratory work included.

CH 635 - CHEMICAL TOXICOLOGY  
Semester Hours: 3  
An introduction to the principles of chemical toxicology, including the effects of drugs, environmental pollutants, natural toxins and venoms and other potentially hazardous chemicals at the physiological, cellular, and molecular level.

CH 640 - ADV CHEMICAL THERMODYNAMICS  
Semester Hours: 3  
CH 641 - STATIST THERMODYNAMICS  
Semester Hours: 3

Principles leading to the development of Maxwell-Boltzmann, Bose-Einstein, and Fermi-Dirac statistics. Thermodynamic properties calculated from partition functions.

CH 642 - ADV CHEMICAL DYNAMICS  
Semester Hours: 3

Non-equilibrium thermodynamics, macroscopic and microscopic theories of diffusion, chemical reaction rate laws and mechanisms, transition state theory, gas phase molecular dynamics, electrical conduction in electrolyte solutions, electrode kinetics.

CH 643 - QUANTUM CHEMISTRY  
Semester Hours: 3

Application of quantum theory to the chemical bond.

CH 644 - CHEM ELECTRODYNAMICS  
Semester Hours: 3

Maxwell's equations applied to electrodynamic problems in chemistry. Theory of dielectrics, dipole moments, Beer's law, Landolt's rule, light scattering, magnetic properties, quantum theory of radiation.

CH 645 - POLYMER PHYSICAL CHEMISTRY  
Semester Hours: 3

Introduction to structure, properties and processing of polymers. Physical behavior of polymers, structure-property relationships, polymer characterization, thermodynamics of polymer solutions and melts, mechanical evaluation of polymers. Same as MTS 747. Prerequisite: CH 540.

CH 646 - THERMODYNAMICS OF MATRLS  
Semester Hours: 3

Fundamental thermodynamic review, phase equilibrium, chemical reaction equilibrium, free energy, binary and ternary phase transformations, solution models and selected topics. Same as CHE 646 and MTS 646.

CH 647 - ADV BIOPHYSICAL CHEMISTRY I  
Semester Hours: 3

Topics include: computer data analysis & simulation, first & second laws of thermodynamics, free energy & equilibrium, calorimetry, protein stability, binding & interactions, solution thermodynamics, electrolytes. Students who have completed CH 347 cannot earn credit for CH 647.

CH 648 - ADV BIOPHYSICAL CHEMISTRY II  
Semester Hours: 3

Advanced biophysical chemistry, including biochemical reaction kinetics, enzyme catalysis, quantum mechanics, statistical thermodynamics, spectroscopy, including UV-VIS, fluorescence, circular dichroism, NMR, and Structure determinations. An emphasis is placed on the current research literature. Prerequisite: CH 647 Students who have completed CH 348 cannot earn credit for CH 648.

CH 650 - PRINC LIQUID/SOLID INTER  
Semester Hours: 3

Applies principles in thermodynamics & kinetics to characterize surfaces & surface phenomena. Fundamental properties of gas-liquid, liquid-liquid, solid-liquid and solid-gas interfaces and phenomena at these interfaces. Same as MTS 650 and CHE 650.

CH 699 - MASTER'S THESIS  
Semester Hours: 3-6

Required each semester a student is enrolled and receiving direction on a masters thesis. Minimum of two terms is required. (A maximum of six hours may be applied towards the degree).

CH 700 - CURRENT TOPICS IN CHEMISTRY  
Semester Hours: 1-3

Advanced laboratory research in one of the departmental research groups. The student works on an independent or group research project. Completion of the course requires a written and an oral report. Prerequisite: approval of instructor.

CH 705 - SEL TOP IN INORGANIC CHEM  
Semester Hours: 3

Prerequisites: CH 600 and approval of instructor.
CH 721 - SP TOP IN ANALYTICAL CHEMISTRY  
Semester Hours: 3  
Prerequisites: CH 621 and approval of instructor.

CH 735 - SEL TOP IN ORGANIC CHEM  
Semester Hours: 3  
Prerequisites: CH 632 and approval of instructor.

CH 745 - SEL TOP IN PHYSICAL CHEM  
Semester Hours: 3

CH 746 - SOLID STATE CHEMISTRY  
Semester Hours: 3  
Chemical properties of solids. Includes phase equilibria, chemical bonding in ionic and covalent crystals, thermodynamics of atomic defects, ionic conductivity in solids, corrosion, & introduction to surfaces and adsorption.

CH 765 - SEL TOPICS IN BIOCHEM  
Semester Hours: 3  
Prerequisites: CH 560 and approval of instructor.

CH 780 - CHEMISTRY SEMINAR  
Semester Hour: 1  
Required during each semester of residence.

CH 799 - DOCTORAL DISSERTATION  
Semester Hours: 3-9

CH ADD - PHYSICAL CHEMISTRY/A&M  
Semester Hours: 3

Chemistry, MS

General requirements of the School of Graduate Studies under Plan I or Plan II must be satisfied.

Plan I – Master of Science with Thesis

Up to 12 semester hours of the course requirements may be accepted as transfer credits from graduate work done in other Chemistry programs.

Fields

Select one course from each of the following fields:  

| Analytical: |  
| CH 521 | CHEMICAL INSTRUMENTATION  
| CH 549 | SPECTROSCOPY & MOLEC STR  
| CH 621 | METHODS OF CHEMICAL ANALYSIS  
| Inorganic: |  
| CH 600 | ADV INORGANIC CHEMISTRY  
| Organic: |  
| CH 631 | SYNTHETIC ORGANIC CHEMISTRY  
| CH 632 | PHYSICAL ORGANIC CHEMISTRY  
| CH 633 | ORGANIC STRUCTURE DETERMINATN  
| CH 634 | MOLECULAR MODELING  
| Physical Chemistry: |  
| CH 640 | ADV CHEMICAL THERMODYNAMICS  
| CH 641 | STATIST THERMODYNAMICS  
| CH 642 | ADV CHEMICAL DYNAMICS  
| CH 643 | QUANTUM CHEMISTRY  
| CH 646 | THERMODYNAMICS OF MATRLS  
| CH 647 | ADV BIOPHYSICAL CHEMISTRY I  
| CH 648 | ADV BIOPHYSICAL CHEMISTRY II  

Select one course from one of the following fields:  

Biochemistry:  
CH 561 BIOCHEMISTRY I  
CH 562 BIOCHEMISTRY II  

Polymer:  
CH 540 POLYMER SYNTHESIS & CHARACTERI  
CH 645 POLYMER PHYSICAL CHEMISTRY  

Select one course from your field of study  

Select two additional courses of choice  

Total Semester Hours  

**Plan II – Master of Science without Thesis**

Graduate students entering Plan II must qualify by meeting one of the following preliminary examination requirements:

a. Passing ACS exams in biochemistry, inorganic chemistry, organic chemistry and physical chemistry.

b. Having previously passed at least two sections of the Materials Science Program Exam I.

c. Having previously passed the Biotechnology Science and Engineering Preliminary Exam.

**Fields**

Select one course from each of the following fields:  

Analytical:  
CH 521 CHEMICAL INSTRUMENTATION  
CH 549 SPECTROSCOPY & MOLEC STR  
CH 621 METHODS OF CHEMICAL ANALYSIS  

Inorganic:  
CH 600 ADV INORGANIC CHEMISTRY  

Organic:  
CH 631 SYNTHETIC ORGANIC CHEMISTRY  
CH 632 PHYSICAL ORGANIC CHEMISTRY  
CH 633 ORGANIC STRUCTURE DETERMINATN  
CH 634 MOLECULAR MODELING  

Physical Chemistry:  
CH 640 ADV CHEMICAL THERMODYNAMICS  
CH 641 STATIST THERMODYNAMICS  
CH 642 ADV CHEMICAL DYNAMICS  
CH 643 QUANTUM CHEMISTRY  
CH 646 THERMODYNAMICS OF MATRLS  
CH 647 ADV BIOPHYSICAL CHEMISTRY I  
CH 648 ADV BIOPHYSICAL CHEMISTRY II  

Select one course from one of the following fields:  

Biochemistry:  
CH 561 BIOCHEMISTRY I  
CH 562 BIOCHEMISTRY II  

Polymer:  
CH 540 POLYMER SYNTHESIS & CHARACTERI  
CH 645 POLYMER PHYSICAL CHEMISTRY  

Select at least 18 semester hours in graduate coursework in chemistry or related fields  

Total Semester Hours  

Of the total of 33 semester hours of course work required under Plan II, at least 18 semester hours must be in Chemistry.

Plan II requires a program of study drawn up by the student and the Chemistry M.S. degree program advisor. Students must also register for CH 780 (http://catalog.uah.edu/search/?P=CH%20780) during at least four semesters. Plan II is not recommended for students seeking employment as industrial laboratory chemists because it does not require any experimental work.
Non-Traditional Fifth-Year Program Leading to the M.S. in Chemistry Plus a Class A Alabama High School Teacher’s Certificate

Those who have a B.A. or B.S. degree with a major or its equivalent in Chemistry as determined by the Department of Chemistry, who have not taken more than twelve semester hours in teacher education (graduate or undergraduate), and who are interested in obtaining Class A (master’s level) certification for secondary school teaching, should consider the Non-Traditional Fifth-Year Program. Contact the Education Department for preliminary advisement on admission and general program requirements. See the description in the Education (http://catalog.uah.edu/search/?P=Education) section for more details.

Computer Science

300 Technology Hall
Telephone: 256.824.6088
Email: info@cs.uah.edu

Chair: Heggere S. Ranganath, Professor

The Computer Science department offers the following graduate degree programs:

• Master of Science in Computer Science
• Master of Science in Software Engineering
• Doctor of Philosophy in Computer Science

The Computer Science department offers the following certificate programs:

• Software Engineering

Admission Requirements

Requirements for admission to the computer science graduate degree program are in addition to those of the School of Graduate Studies. Scores from the GRE basic test are required for admission to the program. Transcripts will be reviewed and deficiencies in computer science background may result in the need to take one or more broadening courses. The MAT or GMAT is not an acceptable substitute for the GRE.

Requirements for admission to a graduate certificate program are the same as requirements for admission to the Computer Science M.S. program. Students must also satisfy the breadth requirements described below. Students in a certificate program are required to maintain a 3.0 GPA.

Students applying for the master’s program are expected to have an undergraduate background in Computer Science. Those students who do not have such a background must satisfy the breadth requirements described below. In particular, students who have not had an undergraduate course in programming languages must take CS 424 (http://catalog.uah.edu/search/?P=CS%20424) or CS 524 (http://catalog.uah.edu/search/?P=CS%20524) as a prerequisite to the MSSE program.

The admission policies for the Ph.D. program in computer science follow the general policies of the School of Graduate Studies and Computer Science Department as described above. An applicant’s admission request will be reviewed in light of preparatory coursework, GRE scores, any supporting information, and general expectation of completing the degree. Students requiring a large amount of prerequisite coursework will not normally be admitted to the program until the courses have been completed. Graduate admission requests for the Ph.D. program will be reviewed once per semester by a departmental admissions committee. Applicants are required to submit supporting recommendation letters and an indication of research interests and study plans. Specific requirements are available from the Computer Science Department office. Requests for admission will be evaluated according to the following guidelines.

Unconditional Admission

Students applying to the M.S. program will be given unconditional admission if they meet all the requirements of the School of Graduate Studies and of the Computer Science Department including the breadth requirements listed below.

Unconditional admission to the Ph.D. program will be given to applicants who meet all of the requirements of the School of Graduate Studies and Computer Science Department. Students showing exceptional promise who desire to pursue the Ph.D. full-time may be admitted to the program after completing a bachelor’s degree in Computer Science.

Conditional Admission

Conditional admission will be recommended for applicants who do not meet all of the requirements of the School of Graduate Studies and the Computer Science Department, but show high potential for completing the degree requirements.
Breadth Requirements

Applicants to graduate programs in Computer Science must satisfy the following breadth requirements before admission to the program.

Mathematics

Total Semester Hours: 38

1. An introductory sequence covering Object-Oriented Programming and Data Structures in C/C++/Java.

The breadth requirements can be satisfied in one of the following ways:

1. Completion of the course at UAH with a grade of B or better;
2. Completion of an equivalent course at another institution with a grade of B or better;
3. Testing out of the course, where permitted by departmental policy.

Consult a departmental advisor for additional information.

Program Objective

The objective of the Computer Science program is to prepare students to become contributors to the computer science profession, whether they find themselves in industrial, government, research, or university environments. Our second objective is to enable students to demonstrate leadership capabilities and work effectively with others of varying backgrounds in team environments.

Learning Outcomes

Students will demonstrate:

• Advanced knowledge of computer systems
• Proficient development and usage of software systems and development tools
• Ability to develop solutions based on advanced algorithmic principles

Master's Programs in Computer Science

Degree Requirements and Restrictions

The Master of Science degree or Master of Science in Software Engineering is conferred under Plan I or Plan II.

Transfer to Computer Science from Other UAH Graduate Programs

Students enrolled in other graduate programs at UAH who wish to obtain a degree in Computer Science should see a Computer Science advisor for evaluation. Such a student must fulfill the Computer Science breadth requirements. Taking CS graduate courses without first checking with a departmental advisor will not eliminate the need for completing the breadth requirements.
The Program of Study

A program of study should be completed as soon as the course content of the program has been selected. The plan must be made in consultation with an advisor from the Computer Science faculty. The student’s Faculty Advisor, Department Chair, and the Dean of the School of Graduate Studies approve the program of study. After approval, student requested changes must be agreed to by the student’s advisor and submitted for approval.

Cybersecurity

The MSCBS degree is a unique, interdisciplinary program involving three colleges: Business Administration, Engineering, and Science. The program prepares graduates with the skills to secure and defend networks, recover from security failures, use computer forensics, and manage data security -- leading to careers in the fast growing field of information security. The Computer Science track involves developing, documenting, and maintaining secure coding practices for scripts and applications. The design aspects of networks ensuring a risk mitigated network in relation to confidentiality, integrity, and the availability of data and devices are also included. A student must complete five core courses (IS 660, IS 663, CPE 549, CS 585 and CPE/CS/IS 692 (capstone course)), two courses from (CS 565, CS 570, and CS 685) and 9 hours of elective courses approved by the department to earn the MSCBS degree in the Computer Science track. The elective courses in this area include the following:

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Title</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>CS 553</td>
<td>CLIENT/SERVER ARCHITECTURES</td>
<td>3</td>
</tr>
<tr>
<td>CS 565</td>
<td>NETWORK SECURITY</td>
<td>3</td>
</tr>
<tr>
<td>CS 570</td>
<td>INTRO TO COMPUTER NETWORKS</td>
<td>3</td>
</tr>
<tr>
<td>CS 580</td>
<td>MOBILE DIGITAL FORENSICS</td>
<td>3</td>
</tr>
<tr>
<td>CS 585</td>
<td>INTRO TO COMPUTER SECURITY</td>
<td>3</td>
</tr>
<tr>
<td>CS 670</td>
<td>COMPUTER NETWORKS</td>
<td>3</td>
</tr>
<tr>
<td>CS 685</td>
<td>COMPUTER SECURITY</td>
<td>3</td>
</tr>
</tbody>
</table>

Other Elective Courses may be taken with Departmental Approval

Computer Architecture and Networking

The courses offered in the area of computer architecture cover the organization, architecture, and design of digital computer systems from high-level conceptual design to gate level implementation. The main concentration areas are: logic design and digital computer hardware design; parallel computer architectures; distributed processing; and networks. Courses in this area include:

<table>

Plan I – Master of Science with Thesis

A minimum of 24 semester hours of coursework and the writing of an acceptable thesis is required. At least six semester hours of thesis credit (CS 699) must be earned. A student must present his/her thesis and pass an oral examination based on the thesis and related coursework. Plan I students must register for CS 699 each term they receive supervision from their advisor.

Plan II – Master of Science without Thesis

A minimum of 33 semester hours of coursework is required. A student must pass a written comprehensive examination over three core courses as described below. Plan II students must complete at least 18 semester hours of coursework before taking the written comprehensive examination. The examination may only be taken twice.

The following requirements and restriction apply to a student in either plan.

Course Requirements

All M.S. students must take three core courses from the options below:

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Title</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>CS 617</td>

**Master of Science in Software Engineering**

**Overview Non-thesis Option:**
1. Complete 12 hours of core courses including one course in systems architecture
2. Complete 3 hours in cyber security (CS or CPE)
3. Complete 6 hours in one concentration
4. Complete 3 hours capstone
5. Complete 6 hours of electives (must include CS 524 if no prior course in program languages have been taken)
6. Total of 30 hours

**Overview Thesis Option:**
1. Complete 12 hours of core courses including one course in systems architecture
2. Complete 3 hours in cyber security (CS or CPE)
3. Complete 6 hours in one concentration
4. Complete 6 hours CS 699 or CPE 699
5. Complete 3 hours of electives (must include CS 524 if no prior course in program languages have been taken)
6. Total of 30 hours

**Course Requirements**

**Core Courses**
- CS 617 DES & ANALY OF ALGORITHM 3 credits
- CS 650 SOFTW ENGINEERING PROC 3 credits
- CS 652 OBJECT-ORIENTED DESIGN 3 credits

**Required Courses**
- CS 613 COMPUTER ARCHITECTURES 3 credits
  - or CS 690 ADVANCED OPERATING SYSTEMS
  - or CPE 536 INTERNALS OF MODERN OPER SYS
  - or CPE 631 ADV COMP SYSTEMS ARCHITECTURE
- CPE 549 INTRO TO CYBERSECURITY ENGINRG 3 credits
  - or CS 585 INTRO TO COMPUTER SECURITY
  - or CS 685 COMPUTER SECURITY

**Concentration Area - Pick two courses within any one concentration**

**Big Data and Data Mining**
- CS 554 INTRO TO CLOUD COMPUTING
- CS 696 SELECTED TOPICS IN CS (ST: BIG DATA ANALYTICS)
- CS 696 SELECTED TOPICS IN CS (ST: MACHINE LEARNING)
- CS 696 SELECTED TOPICS IN CS (ST: DATA VISUALIZATION)
- CS 641 DATA MINING

**Project Management (ISE 690 Required)**
- EM 660 ENGR MGMT THEORY
- MGT 601 TECH & INNOVATION MGMT
- MKT 604 NEW PRODUCT DEVELOPMENT
- ISE 690 STATISTICAL METHODS FOR ENGR

**Parallel Programming**
- CPE 512 INTRO PARALLEL PROGRAMMING
- CPE 612 PARALLEL ALGORITHMS
- CPE 613 GEN PURPOSE GPU COMPUTING

**Embedded Systems**
CPE 538  REAL TIME & EMBEDDED SYSTEMS  
CPE 523  HARDWARE/SOFTWARE CO-DESIGN  
CPE 621  ADVANCED EMBEDDED SYSTEMS  

**Advanced Cybersecurity**  
CPE 649  ADV CYBERSECURITY ENGINEERING  
CPE 645  COMPUTER NETWORK SECURITY  
IS 663  COMPUTER FORENSICS  

**Non-Thesis and Thesis Options:**

</tr>
</tbody>
</table>

**Total Semester Hours**: 30

Note: There will be NO comprehensive examination for either CS or CPE students

### Additional Information

If a student has not had an undergraduate course in programming languages, CS 524 (http://catalog.uah.edu/search/?P=CS%20524) must be included in the program of study. No more than 50% of the semester hours in the program of study may be 500-level courses. No more than three semester hours of selected topics or independent study courses may be included in a program of study. Exceptions must be recommended by the student’s advisor and approved by the department chair.

### Grade Requirements

A grade of B or better must be earned in each of the core courses. No grade lower than C can be counted toward a graduate degree. A 3.0 average must be maintained in all graduate work at UAH and in all work to be counted toward the degree.

### Time Limit

The degree must be completed within six years. Courses older than six years may be validated according to Graduate School policy. Courses older than ten years may not be applied to the degree.

### Transfer Credit

Graduate work may be transferred from another institution according to Graduate School policy.

### Doctoral Program in Computer Science

### Degree Requirements

The general requirements for the Ph.D. degree comply with those of the School of Graduate Studies. The requirements include a preliminary examination, completion of coursework, a Qualifying Examination, completion of significant research documented in a dissertation, and the dissertation defense.

### Major/Minor Subjects

A minimum of 54 semester hours of graduate course credit plus a minimum of 18 dissertation semester hours is required for the Ph.D. in Computer Science. The program of study will be approved by the student’s Supervisory Committee. Coursework grade requirements are the same as for the M.S. degree. Coursework taken as part of a graduate degree program at another institution may be applied to the degree with permission of the student’s Supervisory Committee. At least 9 semester hours of graduate level mathematics or statistics must also be included in the program.

The program must include:
It also must have a coherent area of emphasis, of which at least 6 semester hours must be at the 700 level.

**Additional Information**

**Preliminary Examination**

Ph.D. students will be required to take a preliminary examination, consisting of:

1. a written test covering fundamental concepts in Computer Science, and
2. an evaluation by the graduate faculty of the student’s overall academic potential.

The examination must be taken within a year after admission to the Ph.D. program, or at the earliest opportunity upon completion of the core coursework. Successful completion of the examination will provide evidence of the student’s ability to continue in pursuit of the Ph.D. degree. The examination can be taken no more than twice.

**Admission to Candidacy**

To be admitted to candidacy for the Ph.D. degree, students must first pass the Qualifying Examination. The Qualifying Examination can cover any aspect of the student’s program and is taken after completion of the student’s coursework and upon recommendation of the student’s Supervisory Committee. It is designed to test students’ fitness for pursuing research projects in their chosen areas and to test their general knowledge of Computer Science. As part of the Qualifying Examination, each student will present a research proposal to the Supervisory Committee.

**Ph.D. Residency Requirements**

According to graduate school policy, residence may be established through either:

1. being enrolled as a full-time student (at least 9 graduate semester hours) either for one continuous academic year, or for Spring and Fall semesters in the same calendar year, or
2. being enrolled in at least 6 semester hours of graduate course work in at least three of four consecutive semesters.

**Other Requirements for the Ph.D. Degree**

- The program must be completed within five years after admission to candidacy.
- The Qualifying Examination may be taken no more than twice.
- CS 799 (http://catalog.uah.edu/search/?P=CS%20799) is required each semester a student is receiving direction on the doctoral dissertation.

For additional requirements, consult the Academic Information (p. 821) Section of this Graduate Catalog.

**Dissertation**

The research described in the dissertation must be accepted for publication in an approved journal or three conference proceedings prior to defense of the dissertation. A public defense of the dissertation is required.

**Certificates in Computer Science**

**Software Engineering Certificate**

The Software Engineering Program is designed for those students who want to broaden their knowledge in this area, but do not necessarily desire to pursue a graduate degree in Computer Science.

Select 1 course from the following:  

- CS 503 - UNIX & C PROGRAMMING/A&M  
  Semester Hours: 3  
- CS 513 - INTRO TO COMP ARCHITECT  
  Semester Hours: 3  
- MGT 601  
- MGT 622

**Total Semester Hours**: 18

Students desiring to complete the certificate program should have either industrial experience in software development or have undergraduate courses in software development. Students pursuing an MSSE degree are not eligible for the Software Engineering Certificate.

- **CS 503 - UNIX & C PROGRAMMING/A&M**  
  Semester Hours: 3
- **CS 513 - INTRO TO COMP ARCHITECT**  
  Semester Hours: 3
- Review of combinational and sequential logic design, register transfer concept, logic design of memory, arithmetic unit, control unit, and I/O system of simple computer. Review of Machine and Assembler language programming. Architectural trade-offs.
- **CS 517 - DATA ORG ANALYSIS OF ALGORIT**  
  Semester Hours: 3
- Review of basic data structures such as stacks, queues, lists, B-Trees, and binary trees. Overview of file structures and access methods. Introduction to complexity analysis of algorithms. Basic algorithm design techniques such as divide & conquer, dynamic programming, and backtracking. Introduction to the classification of problems by class; i.e., tractable, NP, intractable, and unsolvable.
- **CS 524 - PROGRAMMING LANGUAGES**  
  Semester Hours: 3
- **CS 526 - PROG TRANS & COMPILER CONSTR**  
  Semester Hours: 3
- Language representation; grammar classification; lexical analysis technique and tools; parsing technique and tools; compile-time and run-time symbol table design; code generation and optimization; error diagnostics. Compiler writing tools.
- **CS 530 - EXP SYS/HEURISTIC PROGRAMMING**  
  Semester Hours: 3
- Expert systems concepts and architectures. Languages and tools for knowledge engineering. Heuristic versus algorithmic methods, heuristics as used in expert systems, and heuristic programming techniques. Class and individual projects. Background in algorithms and programming languages assumed.
- **CS 537 - INTRO TO NEURAL NETWORKS**  
  Semester Hours: 3
- Introduction to artificial neural networks, covering the most prominent models. Neural networks solutions to classification, clustering, data compression, and constrained optimization applications. Experience with neural networks through projects.
- **CS 543 - INTRO TO MULTIMEDIA SYSTEMS**  
  Semester Hours: 3
- Multimedia authoring, color models for image and video, introduction to image and video compression, digital audio, multimedia networks, multimedia synchronization, multimedia retrieval. Students may not receive credit for both CS 443 and CS 543. Courses numbered at the 500-level may be taken for undergraduate credit with prior approval, except as otherwise noted. Courses at 600-level or above are reserved for graduate students. They may be taken by other students only by approval. Consult Seniors Taking Graduate Courses in the Graduate Admissions section of this catalog for specific policies and approval procedures. Taught as CS 443/543. Course completion and/or grade requirements for graduate credit will differ from those for undergraduate credit. Prerequisite: CS 617.
- **CS 545 - INTRO COMPUTER GRAPHICS**  
  Semester Hours: 3
- Introduces underlying theory and mechanics of interactive computer graphics. Basic modeling, raterization, 2D/3D transformations, and viewing. 3D graphics rudiments. Some hardware and historical perspectives. Many programs.
CS 546 - ADVANCED COMPUTER GRAPHICS
Semester Hours: 3

High resolution 3D graphics, including advanced topics in viewing, vertex processing, fragment processing, local and global illumination and shading, 3D modeling (including curve and surface representation), texture mapping, and some coverage of solid modeling and color theory. Game production pipeline. Hierarchical issues, visibility, and 3D processing algorithms may also be covered. A significant number of programming projects are involved, with some different program requirements and additional theoretical expectations for CS 546 students. (Same as CS 456; no credit for both).
Prerequisite: CS 545.

CS 547 - GAME ENGINES & LEVEL DEV
Semester Hours: 3

(Same as CS 447) This course provides the opportunity for students to produce fully functional games from beginning to end with team members. Along the way, students work on homework/projects involving design document creation, prototyping and gameplay/implementation. Also, game software as artistic content has led to collaborations between engineers and artists. In this course, students focus on not only game engineering development but also art asset generation and management. Considers a 3D game design and development using game engines focusing on the fundamental components for developing cross-platform games. The course focus includes design, development, and distribution of computer games. Emphasis also is on user interface and menus, scripting for game programming, game physics, terrain generation, asset management, animation management, special effects, and cross platform game development. Students may not receive credit for both CS 447 and CS 547.

CS 548 - HUMAN-COMPUTER INTERACTION
Semester Hours: 3

Introduces underlying theory and mechanics of interactive computer graphics. Basic modeling, raterization, 2D/3D transformations, and viewing. 3D graphics rudiments. Some hardware and historical perspectives. Many programs. Introduction to human-computer interaction and principles of graphical user interface design. Includes examination of interactive environments including windowing systems development tools, multimedia, and visual programming interfaces. Prerequisite: CS 545.

CS 553 - CLIENT/SERVER ARCHITECTURES
Semester Hours: 3

Aspects of client/server distributed computing, a paradigm that includes technologies addressing web services (such as AJAX using Javascript/PHP, ASP.NET) as well as distributed object (such as .NET remoting, CORBA). Students will apply the concepts in practical distributed programs.

CS 554 - INTRO TO CLOUD COMPUTING
Semester Hours: 3

Different cloud computing paradigms: IaaS, SaaS, PaaS. Open Source cloud software (for ex., OpenStack, CloudStack). RESTful interfaces, AWS interface. Cloud security. Students may not receive credit for both CS 454 and CS 554.

CS 565 - NETWORK SECURITY
Semester Hours: 3

CS 570 - INTRO TO COMPUTER NETWORKS
Semester Hours: 3

Organization and operation of computer networks. Physical, Data Link, Network, Transport, and Application-layer protocols and algorithms; LAN and WAN systems; TCP/IP; Wired and wireless organizations; security approaches. Prerequisite: CS 513.

CS 571 - MOBILE COMPUTING SFTWR ARC&DEV
Semester Hours: 3

Considers application design for the mobile space, focusing on the fundamental requirements for mobile applications that target mobile devices. The course focus includes development, testing, distribution of mobile applications in a cross-platform environment. Emphasis also is on multimedia and entertainment computing and games. This course will also cover various issues in mobile computing from the readings from research literature such as software engineering practices, analysis of social media and general mobile analytics.

CS 580 - MOBILE DIGITAL FORENSICS
Semester Hours: 3

This course examines digital forensics of mobile devices such as smart phones and tablets in a law enforcement context. Mobile device characteristics that make forensics examinations difficult are discussed. Various forensics tools are critically examined with an eye toward improved tool development.
CS 581 - MODELING & SIMULATION I  
Semester Hours: 3  
Discrete event simulation from a computer science perspective. Mathematics of probability distributions applied to simulation. Design, implementation, and application of discrete event simulation software. Application to computer and network system design.

CS 582 - MODELING & SIMULATION II  
Semester Hours: 3  
Advanced application of computer science methods to modeling and simulation software development. Design, development, and integration of software for real-time distributed simulations using standard network interoperability protocols. Team development of modeling and simulation software. Prerequisites: CS 581 or MOD 501.

CS 585 - INTRO TO COMPUTER SECURITY  
Semester Hours: 3  
This course examines the issues related to security policies, models and mechanisms applicable to providing security for computer-based systems including operating systems, database management systems, and networks.

CS 590 - PROGRAMMING ENVIRON W/UNIX  
Semester Hours: 3  
Strategies for design and development of systems and programs in the UNIX environment. Emphasis: automated tool and system development using UNIX tools. Advanced shell concepts including control flow and interrupt handling. Process and inter-process communication.

CS 595 - INDEPENDENT STUDY  
Semester Hours: 3  
Individual directed study under the supervision of an instructor. Must have approval of the instructor.

CS 596 - SPECIAL TOPICS  
Semester Hours: 3  
Individual directed study under the supervision of an instructor. Must have approval of the instructor.

CS 597 - SPECIAL TOPICS  
Semester Hours: 3  
Course offered by an instructor in a specialized area of computer science. Must have approval of instructor.

CS 598 - SPECIAL TOPICS  
Semester Hours: 3  
Course offered by an instructor in a specialized area of computer science. Must have approval of instructor.

CS 600 - INTERNSHIP IN COMPUTER SCIENCE  
Semester Hour: 1  
Work experience in Computer Science or a related field in a business or government agency; conducted under the direction of the agency supervisor and approved by a member of the CS faculty. A substantial report must be produced and approved by the supervisor and the faculty member.

CS 603 - FORMAL LANG/AUTOMAT THRY  
Semester Hours: 3  

CS 613 - COMPUTER ARCHITECTURES  
Semester Hours: 3  
Organization, operation, and analysis of advanced computer architectures. Topics include advanced pipelining approaches, multi-processor architectures, instruction set architectures, memory hierarchy design, hardware and software-based performance optimization, and system performance measurement. Prerequisite: CS 513.

CS 617 - DES & ANALY OF ALGORITHM  
Semester Hours: 3  
Strategies of algorithm synthesis and analysis. Classical algorithm categories such as: divide-and-conquer, greedy method, dynamic programming, search and traversal. Computational complexity; theoretical results from lower- and upper-bound studies, NP-hard, and NP-complete problems. Prerequisite: CS 517.
CS 630 - ARTIFICIAL INTELLIGENCE I
Semester Hours: 3

All concepts and methods for problem solving, heuristic search, planning, hypothesis formation, modeling and knowledge representation, knowledge acquisition and learning. Applications of AI in various areas. Background in algorithms and programming languages assumed. CS 530 recommended.

CS 635 - COMPUTATIONAL MODELS OF COGNITION
Semester Hours: 3

Computational models of human information processing covering topics of current interest to both artificial intelligence and cognitive psychology. Use of computer simulations to test psychological theories. Application of psychological research to building AI systems. Prerequisite: CS 630.

CS 640 - AUTOMATIC PATTERN RECOGNITION
Semester Hours: 3

Discriminant analysis, maximum likelihood decisions, deterministic and nondeterministic approaches for trainable classifiers, preprocessing and feature extraction, clustering, syntactic pattern recognition. Pattern recognition in image analysis.

CS 641 - DATA MINING
Semester Hours: 3

Data preprocessing, distance measures, classification with decision trees, Bayesian classifiers, neural networks, support vector machines, frequent item set analysis, association rule generation, clustering methods.

CS 642 - COMPUTER GEOMETRY MODELING
Semester Hours: 3

Introduction to image processing systems; sensing, sampling and quantization; image transforms; image enhancement and restoration; image segmentation, and description; image correlation; image sequence analysis; practical applications of image processing.

CS 643 - MULTIMEDIA SYSTEMS
Semester Hours: 3

Lossless and lossy compression algorithms, Huffman coding, Arithmetic coding, Dictionary-based compression, quantization techniques, differential encoding, transform coding, wavelet-based coding; image compression, video compression, audio compression, applications of compression algorithms to audio, image, and video compression standards. Prerequisite: CS 617.

CS 650 - SOFTWARE ENGINEERING PROC
Semester Hours: 3

The process of developing complex software products. Includes software life cycles, phases of development and disciplines such as CM, QA, V&V, and T&I. Issues of professionalism and the ethical use of computers. Background in algorithms and programming languages assumed.

CS 652 - OBJECT-ORIENTED DESIGN
Semester Hours: 3

A survey of formal and informal techniques and methodologies for software analysis, requirements, architecture and design. Emphasis is on effective development processes. Comparison of different approaches, considering their advantages and disadvantages. Prerequisite: CS 650.

CS 655 - FORMAL METHODS IN SOFTWARE ENG
Semester Hours: 3

Formal mechanisms to specify, validate, and verify software systems. Propositional and predicate calculi. Program verification through Dijkstra's weakest preconditions and Hoare's method. Formal specification via algebraic specifications and abstract model specifications. Prerequisites: CS 617 and CS 650.

CS 656 - SOFTWARE TESTING
Semester Hours: 3

Advanced software testing techniques, including white box, black box, integration testing, and system testing. Other topics may include test data adequacy, test data selection, and output oracle, including functional, structural, and fault-based testing methods. Prerequisite: CS 650.
CS 658 - SOFTWARE PROC & PROD IMPROVEMENT
Semester Hours: 3

Software quality assurance as an umbrella activity. Use of process, project, quality and product metrics to gain insight into the software development activity. Use of metrics to drive incremental process improvement techniques. Examination of CASE tools and how they affect the software process. Prerequisite: CS 650.

CS 666 - SOFTWARE STUDIO I
Semester Hours: 3

Students work in teams on medium-sized software projects to analyze and document software requirements, produce a project plan, design and build a prototype, and present the project for evaluation. The design-evaluation phases are repeated twice to generate a more mature design. Prerequisites: CS 650 and either CS 652, 656, or 658.

CS 668 - SOFTWARE STUDIO II
Semester Hours: 3

A continuation of CS 666. Students work in teams to continue the software engineering cycle with emphasis on software management, evolution, maintenance, quality analysis, testing, integration, validation, and security auditing. Prerequisite: CS 666.

CS 670 - COMPUTER NETWORKS
Semester Hours: 3

Detailed analysis of the organization and operation of computer networks, focusing on algorithms and organizations for the Transport Layer, Network Layer and Data Link Layer protocols of wired and wireless systems. Prerequisite: CS 570.

CS 685 - COMPUTER SECURITY
Semester Hours: 3

Advanced topics in security policies, models and mechanisms applicable to providing security for computer based systems, including operating systems, database management systems, and networks.

CS 687 - DATA BASE SYSTEMS
Semester Hours: 3

Basic concepts of database systems. Use of semantic models in database design. Data models with an major focus on the relational and object-oriented models. Relational query languages and normal forms. Database management system design issues. Security and integrity issues.

CS 690 - ADVANCED OPERATING SYSTEMS
Semester Hours: 3

Issues related to shared memory multiprocessors, multicore computers, clusters, grids and clouds. Concurrency and distributed process coordination. Introduction to network communication issues and systems such as client-server, peer-to-peer, transaction based. Prerequisite: CS 513.

CS 692 - COMPUTER SECURITY
Semester Hours: 3

CS 695 - INDEPENDENT STUDY
Semester Hours: 3

Individual directed study under the supervision of an instructor. Must have instructor approval.

CS 696 - SELECTED TOPICS IN CS
Semester Hours: 3

Course offered by an instructor in a specialized area of computer science. Must have instructor approval.

CS 699 - MASTER'S THESIS
Semester Hours: 3-6

Course offered by an instructor in a specialized area of computer science. Must have instructor approval. Required each semester a student is working and receiving direction on master's thesis. Prerequisite: instructor approval.

CS 703 - THEORY OF PROG LANGUAGES
Semester Hours: 3

Syntactic analysis and semantic interpretation of programming languages based on research and results in formal languages and associated compiler techniques. Identification of research directions and potential research projects in programming languages.
CS 717 - ADV ALGORITHM DES/ANALYSIS
Semester Hours: 3

Parallel algorithms, combinatorial algorithms, approximation algorithms for NP-complete problems, computational complexity. Distribution of algorithms across complex architectures. Prerequisite: CS 617.

CS 730 - ARTIFICIAL INTELLIGENCE II
Semester Hours: 3

Rigorous treatment of special topics in artificial intelligence. Topics may include knowledge representation, automated deduction, search control, machine learning, or meta-level architectures. Prerequisite: CS 630.

CS 742 - IMAGE PROC ALGO/ARCHITEC
Semester Hours: 3

Algorithms and data structures for image enhancement, segmentation, object recognition and image sequence analysis; real-time versus non real-time image processing; computer architectures for fast image processing; cellular logic array processors, distributed, systolic and binary array processors. Prerequisite: CS 613 and CS 642.

CS 790 - OPERATING SYSTEMS SEMINAR
Semester Hours: 3

Advanced research topics in operating system theory and practice. Students will read and discuss classic and current papers in the literature. Each student will present reports in class and prepare a substantial research paper. Prerequisite: CS 690.

CS 795 - ADVANCED SELECTED TOPICS
Semester Hours: 3

Individual directed study under the supervision of an instructor. Must have instructor approval.

CS 796 - ADVANCED SELECTED TOPICS
Semester Hours: 3

Course offered by an instructor in a specialized area of computer science. Must have instructor approval.

CS 799 - DOCTORAL DISSERTATION
Semester Hours: 3-9

Required each semester student is enrolled and receiving direction on doctoral dissertation. Maximum of 18 hours credit toward degree.

CS ADD - COMPUTER ORG & ARCHITEC/ATHENS
Semester Hours: 3

Computer Science, PhD

Admission Requirements

The admission policies for the Ph.D. program in computer science follow the general policies of the School of Graduate Studies and Computer Science Department as described above. An applicant's admission request will be reviewed in light of preparatory coursework, GRE scores, any supporting information, and general expectation of completing the degree. Students requiring a large amount of prerequisite coursework will not normally be admitted to the program until the courses have been completed. Graduate admission requests for the Ph.D. program will be reviewed once per semester by a departmental admissions committee. Applicants are required to submit supporting recommendation letters and an indication of research interests and study plans. Specific requirements are available from the Computer Science Department office. Requests for admission will be evaluated according to the following guidelines.

Unconditional Admission

Unconditional admission will be given to applicants who meet all of the requirements of the School of Graduate Studies and Computer Science Department. Students showing exceptional promise who desire to pursue the Ph.D. full-time may be admitted to the program after completing a bachelor's degree in Computer Science.

Conditional Admission

Conditional admission will be recommended for applicants who do not meet all of the requirements of the School of Graduate Studies and the Computer Science Department, but show high potential for completing the degree requirements.
Degree Requirements
The general requirements for the Ph.D. degree comply with those of the School of Graduate Studies. The requirements include a preliminary examination, completion of coursework, a Qualifying Examination, completion of significant research documented in a dissertation, and the dissertation defense.

Major/Minor Subjects
A minimum of 54 semester hours of graduate course credit plus a minimum of 18 dissertation semester hours is required for the Ph.D. in Computer Science. The program of study will be approved by the student’s Supervisory Committee. Coursework grade requirements are the same as for the M.S. degree. Coursework taken as part of a graduate degree program at another institution may be applied to the degree with permission of the student’s Supervisory Committee. At least 9 semester hours of graduate level mathematics must also be included in the program.

The program must include:

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
<th>Semester Hours</th>
</tr>
</thead>
<tbody>
<tr>
<td>CS 524</td>
<td>PROGRAMMING LANGUAGES</td>
<td>3</td>
</tr>

<td>3</td>
</tr>
<tr>
<td>CS 690</td>
<td>ADVANCED OPERATING SYSTEMS</td>
<td>3</td>
</tr>
</tbody>
</table>

Total Semester Hours: 18

It also must have a coherent area of emphasis, of which at least 6 semester hours must be at the 700 level.

Additional Information

Preliminary Examination
Ph.D. students will be required to take a preliminary examination, consisting of:

1. a written test covering fundamental concepts in Computer Science, and
2. an evaluation by the graduate faculty of the student’s overall academic potential.

The examination must be taken within a year after admission to the Ph.D. program, or at the earliest opportunity upon completion of the core coursework. Successful completion of the examination will provide evidence of the student’s ability to continue in pursuit of the Ph.D. degree. The examination can be taken no more than twice.

Admission to Candidacy
To be admitted to candidacy for the Ph.D. degree, students must first pass the Qualifying Examination. The Qualifying Examination can cover any aspect of the student’s program and is taken after completion of the student’s coursework and upon recommendation of the student’s Supervisory Committee. It is designed to test students’ fitness for pursuing research projects in their chosen areas and to test their general knowledge of computer science. As part of the Qualifying Examination, each student will present a research proposal to the Supervisory Committee.

Ph.D. Residency Requirements
According to graduate school policy, residence may be established through either:

1. being enrolled as a full-time student (at least 9 graduate semester hours) either for one continuous academic year, or for Spring and Fall semesters in the same calendar year, or
2. being enrolled in at least 6 semester hours of graduate course work in at least three of four consecutive semesters.

Other Requirements for the Ph.D. Degree

- The program must be completed within five years after admission to candidacy.
- The Qualifying Examination may be taken no more than twice.
- CS 799 is required each semester a student is receiving direction on the doctoral dissertation.

For additional requirements, consult the Academic Information (p. 821) Section of this Graduate Catalog.

Dissertation
The research described in the dissertation must be accepted for publication in an approved journal or three conference proceedings prior to defense of the dissertation. A public defense of the dissertation is required.
Computer Science, MS

Students applying for the master's program are expected to have an undergraduate background in CS. Those students who do not have such a background must satisfy the breadth requirements described below.

Unconditional Admission

Students applying to the M.S. program will be given unconditional admission if they meet all the requirements of the School of Graduate Studies and of the Computer Science Department including the breadth requirements listed below.

Conditional Admission

Conditional admission will be recommended for students who, in the judgment of the department, have the potential for successfully completing graduate work but who do not meet all of the requirements for admission.

Degree Requirements and Restrictions

The Master of Science degree is conferred under Plan I or Plan II.

Breadth Requirements

Applicants to graduate programs in Computer Science must satisfy the following breadth requirements before admission to the program.

| Mathematics | | | |
|-------------|-------------|-----|
| MA 171      | CALCULUS A  | 4   |
| MA 172      | CALCULUS B  | 4   |
| MA 244      | INTRO TO LINEAR ALGEBRA | 3   |
| MA 385      | INTRO TO PROBABILITY & STATIST | 3   |

| Computer Science | | |
|------------------|-------------|
| CS 121           | COMPUTER SCIENCE I \(^1\) | 3   |
| CS 221           | COMP SCI II: DATA STRUCTURES \(^1\) | 3   |
| CS 321           | INTRO OBJECT-ORIENTED PROG JAV \(^1\) | 3   |
| CS 214           | INTRO DISCRETE STRUCTURE | 3   |
| CS 317           | INTRO DESIGN/ANALYSIS OF ALG | 3   |
| CS 490           | INTRO TO OPERATING SYSTEMS | 3   |
| CS 309           | COMPUTER ORG & SWITCHING THRY | 3   |
| CS 413           | INTRO DIGITAL COMP ARCHITECTUR | 3   |

**Total Semester Hours** 38

\(^1\) An Introductory sequence covering Object-Oriented Programming and Data Structures in C/C++/Java.

The breadth requirements can be satisfied in one of the following ways:

1. Completion of the course at UAH with a grade of B or better;
2. Completion of an equivalent course at another institution with a grade of B or better;
3. Testing out of the course, where permitted by departmental policy.

Consult a departmental advisor for additional information.

Transfer to Computer Science from Other UAH Graduate Programs

Students enrolled in other graduate programs at UAH who wish to obtain a degree in Computer Science should see a Computer Science advisor for evaluation. Such a student must fulfill the Computer Science breadth requirements. Taking CS graduate courses without first checking with a departmental advisor will not eliminate the need for completing the breadth requirements.
The Program of Study

A program of study should be completed as soon as the course content of the program has been selected. The plan must be made in consultation with an advisor from the Computer Science faculty. The student’s faculty advisor, Department Chair, and the Dean of the School of Graduate Studies approve the program of study. After approval, student requested changes must be agreed to by the student’s advisor and submitted for approval.

Teaching Areas

The Computer Science Department offers an exceptionally broad spectrum of courses. For convenience, they are listed below by category. The teaching areas include software engineering, computer graphics and image processing, data and information technology, computer architecture and networking, artificial intelligence, languages and systems, and theoretical computer science. There is no requirement to stay within a particular area, and students may freely select from any of the areas when preparing the program of study with an advisor.

Software Engineering

Software engineering is a study of the process of large-scale software development. It includes a study of the phases of software development with emphasis on tools and practices for good software development. Any student who completes CS 650 two courses from (CS 553, CS 652, CS 655, CS 656), one statistics course (ISE 690), one management course from (MGT 601, MGT 622), and CS 585 will receive the software engineering certificate. The courses in this area include:

<table>

Computer Graphics and Image Processing

The creation of computer-generated graphic animations and photo-realistic images has a growing number of exciting and important applications. The inverse problem - the processing and extraction of information from visual and other patterns - also has many industrial, military, and space applications. Courses in this emphasis area include a sequence in computer graphics and a sequence in the theory, computational algorithms, and architecture for the design and development of pattern recognition and vision systems.

Data and Information Technology

As the amount of information and data used by organizations rapidly increases, the need for techniques to manage, retrieve, process, and protect this geographically distributed data becomes critical. For very large data collections, these techniques must include methods to help users discover and select relevant data from the mass of available data. The data and information technology area focuses on the technology required to utilize effectively this rapidly growing volume of data and information. The courses in this area include the following:

<table>

Cybersecurity

The MSCBS degree is a unique, interdisciplinary program involving three colleges: Business Administration, Engineering, and Science. The program prepares graduates with the skills to secure and defend networks, recover from security failures, use computer forensics, and manage data security -- leading to careers in the fast growing field of information security. The Computer Science track involves developing, documenting and maintaining secure coding practices for scripts and applications. Also the design aspects of networks ensuring a risk mitigated network in relation to confidentiality, integrity and the availability of data and devices are included. A student must complete five core courses (IS 660, IS 663, CPE 549, CS 585 and CPE/
CS/IS 692 (capstone course), two courses from (CS 565, CS 570, and CS 685) and 9 hours of elective courses approved by the department to earn the MSCBS degree in the computer science track. The courses in this area include the following:

<table>
<thead>
<tr>
<th>Course Code</th>

<td>COMPUTER SECURITY</td>
<td></td>
</tr>
</tbody>
</table>

**Computer Architecture and Networking**

The courses offered in the area of computer architecture cover the organization, architecture and design of digital computer systems from high-level conceptual design to gate level implementation. The main concentration areas are: logic design and digital computer hardware design; parallel computer architectures; distributed processing; and networks. Courses in this area include:

<table>
<thead>
<tr>

</tr>
</tbody>
</table>

**Plan I – Master of Science with Thesis**

A minimum of 24 semester hours of coursework and the writing of an acceptable thesis is required. At least six semester hours of thesis credit (CS 699) must be earned. A student must present his/her thesis and pass an oral examination based on the thesis and related coursework. Plan I students must register for CS 699 each term they receive supervision from their advisor.

**Plan II – Master of Science without Thesis**

A minimum of 33 semester hours of coursework is required. A student must pass a written comprehensive examination over three core courses as described below. Plan II students must complete at least 18 semester hours of coursework before taking the written comprehensive examination. The examination may only be taken twice.

The following requirements and restriction apply to a student in either plan.

**Course Requirements**

All M.S. students must take three core courses from the options below:

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Title</th>
<th>Hours</th>
</tr>
</thead>
<tbody>
<tr>
<td>CS 617</td>

</tbody>
</table>

**Additional Semester Hours**

9

**Additional Information**

If a student has not had an undergraduate course in programming languages, CS 524 must be included in the program of study. No more than 50% of the semester hours in the program of study may be 500-level courses. No more than three semester hours of selected topics or independent study courses may be included in a program of study. Exceptions must be recommended by the student’s advisor and approved by the department chair.

**Grade Requirements**

A grade of B or better must be earned in each of the core courses. No grade lower than C can be counted toward a graduate degree. A 3.0 average must be maintained in all graduate work at UAH and in all work to be counted toward the degree.

**Time Limit**

The degree must be completed within six years. Courses older than six years may be validated according to Graduate School policy. Courses older than ten years may not be applied to the degree.
Transfer Credit
Graduate work may be transferred from another institution according to Graduate School policy.

Computer Science, MSSE
Students applying for the master's program are expected to have an undergraduate background in Computer Science. Those students who do not have such a background must satisfy the breadth requirements described below. In particular, students who have not had an undergraduate course in programming languages must take CS 424 or CS 524 as a prerequisite to the MSSE program.

Unconditional Admission
Students applying to the M.S. program will be given unconditional admission if they meet all the requirements of the School of Graduate Studies and of the Computer Science Department including the breadth requirements listed below.

Conditional Admission
Conditional admission will be recommended for students who, in the judgment of the department, have the potential for successfully completing graduate work but who do not meet all of the requirements for admission.

Degree Requirements and Restrictions
The Master of Science in Software Engineering is conferred under Plan I or Plan II.

Breadth Requirements
Applicants to graduate programs in computer science must satisfy the following breadth requirements before admission to the program.

Total Semester Hours 38

¹ An Introductory sequence covering Object-Oriented Programming and Data Structures in C/C++/Java

The breadth requirements can be satisfied in one of the following ways:

1. Completion of the course at UAH with a grade of B or better;
2. Completion of an equivalent course at another institution with a grade of B or better;
3. Testing out of the course, where permitted by departmental policy.

Consult a departmental advisor for additional information.

Transfer to Computer Science from other UAH Graduate Programs
Students enrolled in other graduate programs at UAH who wish to obtain a degree in Computer Science should see a Computer Science advisor for evaluation. Such a student must fulfill the Computer Science breadth requirements. Taking CS graduate courses without first checking with a departmental advisor will not eliminate the need for completing the breadth requirements.
The Program of Study

A program of study should be completed as soon as the course content of the program has been selected. The plan must be made in consultation with an advisor from the Computer Science faculty. The student’s faculty advisor, department chair, and the Dean of the School of Graduate Studies approve the program of study. After approval, student requested changes must be agreed to by the student’s advisor and submitted for approval.

Teaching Areas

The Computer Science Department offers an exceptionally broad spectrum of courses. For convenience, they are listed below by category. The teaching areas include software engineering, computer graphics and image processing, data and information technology, computer architecture and networking, artificial intelligence, languages and systems, and theoretical computer science. There is no requirement to stay within a particular area, and students may freely select from any of the areas when preparing the program of study with an advisor.

Software Engineering

Software engineering is a study of the process of large-scale software development. It includes a study of the phases of software development with emphasis on tools and practices for good software development. Any student who completes CS 650, two courses from (CS 553, CS 652, CS 655, CS 656), one statistics course (ISE 690), one management course from (MGT 601, MGT 622), and CS 585 will receive the software engineering certificate. The courses in this area include:

</tr>
</tbody>
</table>

Computer Graphics and Image Processing

The creation of computer-generated graphic animations and photo-realistic images has a growing number of exciting and important applications. The inverse problem - the processing and extraction of information from visual and other patterns - also has many industrial, military, and space applications. Courses in this emphasis area include a sequence in computer graphics and a sequence in the theory, computational algorithms, and architecture for the design and development of pattern recognition and vision systems.

Data and Information Technology

As the amount of information and data used by organizations rapidly increases, the need for techniques to manage, retrieve, process, and protect this geographically distributed data becomes critical. For very large data collections, these techniques must include methods to help users discover and select relevant data from the mass of available data. The data and information technology area focuses on the technology required to utilize effectively this rapidly growing volume of data and information. The courses in this area include the following:

<table>

Computer Architecture and Networking

The courses offered in the area of computer architecture cover the organization, architecture and design of digital computer systems from high-level conceptual design to gate level implementation. The main concentration areas are: logic design and digital computer hardware design; parallel computer architectures; distributed processing; and networks. Courses in this area include:
Cybersecurity

The MSCBS degree is a unique, interdisciplinary program involving three colleges: Business Administration, Engineering, and Science. The program prepares graduates with the skills to secure and defend networks, recover from security failures, use computer forensics and manage data security -- leading to careers in the fast growing field of information security. The Computer Science track involves developing, documenting and maintaining secure coding practices for scripts and applications. Also the design aspects of networks ensuring a risk mitigated network in relation to confidentiality, integrity and the availability of data and devices are included. A student must complete five core courses (IS 660, IS 663, CPE 549, CS 585 and CPE/CS/IS 692 (capstone course)), two courses from (CS 565, CS 570, and CS 685) and 9 hours of elective courses approved by the department to earn MSCBS degree in computer science track. The courses in the area include the following:

- CS 553: CLIENT/SERVER ARCHITECTURES 3
- CS 565: NETWORK SECURITY 3
- CS 570: INTRO TO COMPUTER NETWORKS 3
- CS 585: INTRO TO COMPUTER SECURITY 3
- CS 670: COMPUTER NETWORKS 3
- CS 685: COMPUTER SECURITY 3

Plan I – Master of Science with Thesis

A minimum of 24 semester hours of coursework and the writing of an acceptable thesis is required. At least six semester hours of thesis credit (CS 699) must be earned. A student must present his/her thesis and pass an oral examination based on the thesis and related coursework. Plan I students must register for CS 699 each term they receive supervision from their advisor.

Plan II – Master of Science without Thesis

A minimum of 33 semester hours of coursework is required. A Plan II student must pass a written comprehensive examination over the core courses given below. Plan II students must complete at least 18 semester hours of coursework before taking the written comprehensive examination. The examination may only be taken twice.

The following requirements apply to a student in either plan. A Plan II student must take an additional 9 hours of elective courses approved by the department.

Course Requirements

Core Courses
- CS 617: DES & ANALY OF ALGORITHM 3
- CS 650: SOFTW ENGINEERING PROC 3
- CS 613: COMPUTER ARCHITECTURES 3
  or CS 690: ADVANCED OPERATING SYSTEMS

Required Courses
- CS 652: OBJECT-ORIENTED DESIGN 3
- CS 656: SOFTWARE TESTING 3

Total Semester Hours 15

Additional Information

Students completing the M.S.S.E. under Plan II (non-thesis) must take 9 additional semester hours of general elective courses. Students completing the M.S.S.E. under Plan I (thesis) must take 3 additional semester hours of a general elective course. A general elective can be any graduate-level course that is pre-approved by the advisor.

No more than 50% of the semester hours in the program of study may be 500-level courses. No more than three semester hours of selected topics or independent study courses may be included in a program of study. Exceptions must be recommended by the student’s advisor and approved by the department chair.
Grade Requirements
A grade of B or better must be earned in each of the core courses. No grade lower than C can be counted toward a graduate degree. A 3.0 average must be maintained in all graduate work at UAH and in all work to be counted toward the degree.

Time Limit
The degree must be completed within six years. Courses older than six years may be validated according to Graduate School policy. Courses older than ten years may not be applied to the degree.

Transfer Credit
Graduate work may be transferred from another institution according to Graduate School Rules.

Information Assurance Certificate
The Department of Computer Science collaborates with the Department of Electrical and Computer Engineering and the College of Administrative Science to offer an interdisciplinary graduate certificate program in Information Assurance. Contact the Department for further details.

Modeling and Simulation Certificate
The certificate in Modeling and Simulation will provide post-baccalaureate students with the opportunity to acquire knowledge and skill in the use of computational theories and skills for the development of software models and simulation. The courses in the certificate program may be applied to the M.S. in Computer Science. Students in the certificate program must be admitted to the graduate school, have a bachelor’s degree in science or engineering, have taken linear algebra, calculus, discrete math and probability, and be proficient in programming and data structures.

The certificate program consists of 5 courses, to include:

Core Courses
CS 581  MODELING & SIMULATION I  3
CS 582  MODELING & SIMULATION II  3

Groups
Select two courses from one of the following groups:  6

Object-Oriented Programming and Software Engineering:
MOD 501  SVY MODELING & SIMULATION
CS 650  SOFT’W ENGINEERING PROC

Visualization:
CS 545  INTRO COMPUTER GRAPHICS
CS 546  ADVANCED COMPUTER GRAPHICS
CS 548  HUMAN-COMPUTER INTERACTION
CS 646  COMPUTER GEOMETRY MODELING

Information Systems:
CS 530  EXP SYS/HEURISTIC PROGRAMMING
CS 553  CLIENT/SERVER ARCHITECTURES
CS 630  ARTIFICIAL INTELLIGENCE I
CS 670  COMPUTER NETWORKS
CS 687  DATA BASE SYSTEMS

Additional Course
Select one additional course from those listed above, or an approved domain course  3

Total Semester Hours  15

Software Engineering Certificate
The Software Engineering Program is designed for those students who want to broaden their knowledge in this area, but do not necessarily desire to pursue a graduate degree in computer science.

CS 650  SOFT’W ENGINEERING PROC  3
CS 585  INTRO TO COMPUTER SECURITY  3
ISE 690  STATISTICAL METHODS FOR ENGR  3
Select 2 courses from the following:

Total Semester Hours 15

Students desiring to complete the certificate program should have either industrial experience in software development or have undergraduate courses in software development. Students pursuing an MSSE degree are not eligible for the Software Engineering Certificate.

**Earth System Science**

National Space Science and Technology Center
Room 4044
Telephone: 256.961.7877
Email: ats@uah.edu

Chair: Larry Carey, Associate Professor

The Earth System Science department offers the following graduate degree programs:

- Master of Science - Atmospheric Science
- Master of Science - Earth Systems Science
- Doctor of Philosophy - Atmospheric Science

**The Earth System Science program is administered by the Department of Atmospheric Science.**

**Admission Requirements**

Refer to the appropriate section of the Graduate Catalog for general admission and degree requirements. Students should have an appropriate foundation with at least two semesters of calculus, two semesters of physics, an introductory course in computer programming, and preferably chemistry before entering the program. Please consult the department for guidance.

**Program Objective**

The M.S. in Earth System Science program specifically enables students to gain not only an understanding of the physics of the climate system and the environment but also a working hands-on knowledge of how data and information is used to aid decision makers. Our graduates will be successful in writing or presenting a scientific research paper in a peer-reviewed scientific journal, book chapter, or at a national or international scientific conference or workshop. Our final objective is to produce graduates who successfully obtain professional employment in the Earth System Science field within one year of graduation.

**Learning Outcomes**

Students will demonstrate

- Knowledge of the reviewed literature in the earth system sciences that is relevant to their specific research
- Effective use of remotely sensed environmental data, image processing and GIS toward decision making or policy related applications in the earth system sciences
- Effective oral communication skills in reporting the results of their scientific research

**Master's Program in Earth System Science**

http://nsstc.uah.edu/ess/ess_ms.html

**The Earth System Science program is administered by the Department of Atmospheric Science.**

Degree Requirements:
• To earn a master’s degree in Earth System Science, each student must satisfy all requirements of the School of Graduate Studies and of the Atmospheric Science Department.
• Students must formulate an appropriate Program of Study (POS), in consultation with a faculty advisor and chair, before the end of the second semester.
• Students must maintain a cumulative GPA of at least 3.0.

**Option 1 - Thesis**

Minimum degree requirements under this plan include completion of at least 24 credit hours of core (9 credit hours) and elective (15 credit hours) coursework and at least 6 credit hours of thesis research. At least 50% of the required 24 semester hours must be from 600 level (or higher) courses. In addition, all MS in ESS students are required to take 6 credit hours of supporting courses, which do not count toward minimum degree requirements.

**Required Core Courses**

**Elective Courses**

Select 15 semester hours of electives

**Thesis Credits**

ESS 699 Master’s Thesis 6

**Total Semester Hours** 36

1 Students must earn a B or above in core courses.
2 Students who have earned a B or better in the undergraduate equivalent of ESS 507, ESS 508 (or ESS 509) and ESS 514 at UAH do not have to re-take the course at the graduate level. However, their Program of Study must include alternative semester hours to replace ESS 507 and ESS 514 at an appropriate level approved by their advisor and chair of the department.
3 If a student has advanced GIS experience, the ESS 514 core may be replaced with an advanced course at the discretion of the Department Chair.
4 9 of these Elective semester hours must be from 600 level (or higher) courses.
5 Three Elective semester hours may be outside of the ESS/ATS only with advisor's approval.

**Additional Information**

One of the goals of this program is to train the student in transitioning research and observational products related to Earth System Science into public policy and decision-making arenas. Therefore, it is necessary that the student spend time working with a decision-making organization. The student must submit a 5 page thesis proposal to be approved by the advisor and committee by the end of the third full semester.

**Option 2 - Non-Thesis**

Minimum degree requirements under this plan include completion of at least 30 semester hours of graduate course work, which includes core (12 CH) and elective courses (18 CH). At least 50% of the required 30 credit hours must be from 600 level (or higher) courses. Students are also required to take 6 credit hours of supporting courses. The supporting courses do not count toward minimum degree requirements.

</tbody>
</table>

Total Semester Hours 36

1. Students must earn a B or above in core courses.
2. Students who have earned a B or better in the undergraduate equivalent ESS 507, ESS 508 (or ESS 509), and ESS 514 at UAH do not have to re-take the course at the graduate level. However, their Program of Study must include alternative semester hours at the appropriate level approved by their advisor and chair of the department.
3. If a student has advanced GIS experience, the ESS 514 core may be replaced with an advanced course at the discretion of the Department Chair.
4. Course selection from outside the department and colleges must be done with approval and guidance from faculty mentors and the department chair; faculty mentors will guide the student to pursue a coherent suite of complementary courses outside ESS.
5. ESS 690 Special Topics course will be replaced by ESS 690, Internship/MS Capstone course.

Additional Information

Non-thesis students will pursue approved external internship programs with the help of their mentor; in the event that a student does not receive an external internship, they will be required to do a capstone project with an ATS faculty member or approved ESSC scientist/researcher.

M.S. Supervisory Committee

The committee must consist of a minimum of three members and be approved by the Department Chair. Two of the three members must be full-time, tenured or tenure-earning, or emeritus faculty members in the department. The other member must be from a decision-making/end-user organization. The student must work closely with the advisor and the committee members to select a thesis topic. Advisors have the responsibility to shape the research and ensure that a thesis can be written and defended within the time needed for graduation.

Comprehensive Examination/Thesis Defense

A final comprehensive examination is required of all candidates for a master’s degree. In accordance with the Graduate Studies Dates and Deadlines, a written notice of the time and place of the examination/defense must be sent to the Graduate Dean. After approval by the Graduate Dean, the Department Chair sends a copy of the written Notification of Oral Examination/Defense to the candidate and each member of the committee. The candidate will be examined primarily on the thesis but they may also be tested on relevant course work. The examination is conducted by a committee of at least three faculty members appointed by the Department Chair and approved by the Graduate Dean. The examination must be given at least six weeks before the end of the semester in which degree requirements are expected to be completed, and the results reported within two working days to the Graduate Dean. A student may take the examination only twice.

- **Thesis** candidates will be examined *primarily* on the thesis by a committee of at least three faculty members appointed by the Department Chair and approved by the Graduate Dean.
- **Non-thesis** students will write up a Masters-level research capstone project, present their findings in a formal presentation, and respond to questions from their faculty mentor, other faculty, and the public; successful and approved completion of this, as determined by the faculty mentor and department chair, will result in a pass for the non-thesis option.

Paperwork

- Students must formulate an appropriate Program of Study (POS), in consultation with a faculty advisor and chair, before the end of the second semester.
- Application for Graduate Degree according to Graduate Studies *Dates & Deadlines*.
- Notification of Oral Examination/Defense according to Graduate Studies *Dates & Deadlines*.
ESS 501 - SURVEY ATMOSPHERIC SCIENCE
Semester Hours: 3

General survey of the field of atmospheric science includes thermodynamics, atmospheric dynamics, cloud physics, and atmospheric radiation. Quantitative examination of atmospheric properties including atmospheric composition, structure and dynamics.

ESS 502 - SCI & SOC ASPTS NATRL DISASTER
Semester Hours: 3

Examination of the physical causes of major natural geophysical hazards and their impact on the natural and built environment, society and the economy. Evaluation of the ability to forecast events, and develop sound mitigation and recovery measures. Specific case studies are considered.

ESS 507 - ENVIRONMENTAL THREATS PBL PY DEC MKG
Semester Hours: 3

Researchers, policymakers and environmental campaigners have identified 25 potential future threats to the global environment. This course examines the nature and consequences of these threats and their potential impacts for the survival of the human race.

ESS 508 - PYTHON FOR ID ESS APPLICATIONS
Semester Hours: 3

Introduction to GIS model building, Python programming, and automation of scripts for ArcGIS. Techniques in Model Builder, Python, and the methods for automation will be taught using data from numerous available data sources across the internet with heavy emphasis on the Earth Sciences.

ESS 509 - APPLIED COMPUTERS IN METEOROLOGY
Semester Hours: 3

Survey of data types and languages commonly used in the meteorological community along with practical application to meteorology. Course is designed to prepare students for graduate work and research in atmospheric science.

ESS 510 - OPERATIONAL WEATHER FORECASTING
Semester Hours: 3

Operational Meteorology covers subjective and objective methods of atmospheric prognosis, including techniques for forecasting operationally-important weather elements. Course explores interpretation, use and systematic errors of computer-generated products, human factors within forecasting, and application of meteorological theory in an operational setting. Course instruction is accomplished through analysis of various weather events from beginning to completion.

ESS 513 - GIS & IMAGE PROCESSING
Semester Hours: 3

Spatial data processing with focus on ESRI ArcGIS and ENVI software. Basic concepts in GIS data management and creation and scientific use of satellite imagery. Topics include image interpretation, classification, transformations, raster and vector data, projections, data query, and cartography.

ESS 514 - GEOSPATIAL APPLICATIONS
Semester Hours: 3

Advanced concepts in Earth science geospatial applications, primarily using ArcGIS. Topics can include geostatistical analysis, 3D terrain analysis, advanced data sources, raster manipulation, geodatabase design, suitability and network modeling.

ESS 515 - ADVANCED TOPICS IN GIS
Semester Hours: 3

Advanced concepts in Earth science geospatial applications, primarily using ArcGIS. Topics can include geostatistical analysis, 3D terrain analysis, advanced data sources, raster manipulation, geodatabase design, suitability and network modeling. Prerequisite: ESS 514 or consent of instructor.

ESS 561 - ATMOSPHERIC RADIATION I
Semester Hours: 3

ESS 590 - SPECIAL TOPICS IN ESS
Semester Hours: 3

Selected topics of interest not included under other courses.

ESS 610 - LAND USE APP & SUSTAINABILITY
Semester Hours: 3

Study of land use and sustainability issues using satellite image processing and GIS. International examples of urbanization, agriculture, transportation, water management, and natural resources exploitation. Discussions of current literature and quantitative analyses of satellite and situ data. Prerequisite: ESS 515 or consent of instructor.
ESS 612 - ADV GIS EARTH ATMOSPHERE PROBL
Semester Hours: 3
Advanced GIS and remote sensing/image processing. Discussion, guided readings, and group labs to interact with student peers and instructor to develop geospatial solutions to problems relevant to their thesis research including appropriate research design, data collection, and analysis. Prerequisites: ESS 515 and ESS 610.

ESS 625 - AIR POLL APP & DEC MAKG REMOTE
Semester Hours: 3
Course will review principles of air pollution, measurement methods, regulation, national and international standards and how research is used to make decisions regarding air quality. The coursework will use ground-based, satellite, and numerical modeling information through a case study approach. Prerequisites: ESS/ATS 501.

ESS 630 - PHYSICAL CLIMATOLOGY
Semester Hours: 3
This course examines the physical aspects of the global climate system, including the global energy balance, surface energy balance, hydrologic cycle, climate classification, ocean circulation, natural and anthropogenic climate change and other selected topics such as climate sensitivity. Prerequisites: ATS 501 or ATS 541.

ESS 632 - ENERGY, CLIMATE, ENVIRONMENT
Semester Hours: 3
This course focuses on energy and its impact on the environment including climate change and air pollution. Specific energy forms, such as fossil fuels, nuclear energy, solar energy, are discussed.

ESS 670 - SATELLITE REMOTE SENSING I
Semester Hours: 3
Using a hands on approach, this course covers a broad range of topics concerning digital image processing applied to the remote sensing of atmospheric, cloud and surface properties using various satellite data sets. Prerequisites: ESS 509.

ESS 680 - NUMERICAL MOD APPL ESS
Semester Hours: 3
This course will provide the physical basis for numerical model applications in the earth-atmosphere system including spatial and temporal scales. Prerequisites: ESS 501 and ESS 509.

ESS 690 - SPECIAL TOPICS IN ESS
Semester Hours: 3
Selected topics of interest not included under other courses.

ESS 699 - MASTER'S THESIS
Semester Hours: 3-6
A minimum of six thesis credit hours is required for MS degree.

ESS 780 - SEMINAR
Semester Hour: 1
Speakers are invited to report on research relevant to the field of Atmospheric and Earth System Science. Students are expected to attend at least twelve seminars and to write short descriptions of the presentations.

ESS 781 - STUDENT SEMINAR
Semester Hour: 1
Guest speakers reports on research relevant to the fields of Atmospheric and Earth System Science. Students are expected to attend weekly seminars, submit a paper based on at least ten talks, and make a 15 minute conference-type presentation on a research topic in atmospheric science selected in agreement with their advisor.

ESS 782 - PROFESSIONAL DEVELOPMENT
Semester Hour: 1
Topics concerning professional ethics, writing scientific journal articles, proposals and resumes, preparing budgets, networking, time management, conference presentations, research administration, funding agencies, stress and burnout will be discussed.
The Earth System Science program is administered by the Department of Atmospheric Science.

Degree Requirements

- To earn a master’s degree in Earth System Science, each student must satisfy all requirements of the School of Graduate Studies and of the Atmospheric Science Department.
- Students must formulate an appropriate Program of Study (POS), in consultation with a faculty advisor and chair, before the end of the second semester.
- Students must maintain a cumulative GPA of at least 3.0.

Option 1 - Thesis

Minimum degree requirements under this plan include completion of at least 24 credit hours of core (9 credit hours) and elective (15 credit hours) course work and at least 6 credit hours of thesis research. At least 50% of the required 24 semester hours must be from 600 level (or higher) courses. In addition, all MS in ESS students are required to take 6 credit hours of supporting courses, which do not count toward minimum degree requirements.

Elective Courses
Select 3 semester hours from 500 or 600 level courses within ESS/ATS 3
Select 3 semester hours from 600 level courses within ESS/ATS 3
Select 3 semester hours from 500 or 600 level courses and may be outside of ESS/ATS 4 3
Select 9 semester hours from 600 level courses and may be outside of ESS/ATS 4 9

Required Supporting Courses
ESS 780 SEMINAR 1
ESS 781 STUDENT SEMINAR 1
ESS 782 PROFESSIONAL DEVELOPMENT 1
ESS 690 SPECIAL TOPICS IN ESS 5 3

Total Semester Hours 36

1 Students must earn a B or above in core courses.
2 Students who have earned a B or better in the undergraduate equivalent ESS 507, ESS 508 (or ESS 509), and ESS 514 at UAH do not have to re-take the course at the graduate level. However, their Program of Study must include alternative semester hours at the appropriate level approved by their advisor and chair of the department.
3 If a student has advanced GIS experience, the ESS 514 core may be replaced with an advanced course at the discretion of the Department Chair.
4 Course selection from outside the department and colleges must be done with approval and guidance from faculty mentors and the department chair; faculty mentors will guide the student to pursue a coherent suite of complementary courses outside ESS.
5 ESS 690 Special Topics course will be replaced by ESS 690, Internship/MS Capstone course.

Additional Information
Non-thesis students will pursue approved external internship programs with the help of their mentor; in the event that a student does not receive an external internship, they will be required to do a capstone project with an ATS faculty member or approved ESSC scientist/researcher.

M.S. Supervisory Committee
The committee must consist of a minimum of three members and be approved by the Department Chair. Two of the three members must be full-time, tenured or tenure-earning, or emeritus faculty members in the department. The other member must be from a decision-making/end-user organization. The student must work closely with the advisor and committee members to select a thesis topic. Advisors have the responsibility to shape the research and ensure that a thesis can be written and defended within the time needed for graduation.

Comprehensive Examination/Thesis Defense
A final comprehensive examination is required of all candidates for a master’s degree. In accordance with the Graduate Studies Dates and Deadlines, a written notice of the time and place of the examination/defense must be sent to the Graduate Dean. After approval by the Graduate Dean, the Department Chair sends a copy of the written Notification of Oral Examination/Defense to the candidate and each member of the committee. The candidate will be examined primarily on the thesis but they may also be tested on relevant course work. The examination is conducted by a committee of at least three faculty members appointed by the Department Chair and approved by the Graduate Dean. The examination must be given at least six weeks before the end of the semester in which degree requirements are expected to be completed, and the results reported within two working days to the Graduate Dean. A student may take the examination only twice.

• Thesis candidates will be examined primarily on the thesis by a committee of at least three faculty members appointed by the Department Chair and approved by the Graduate Dean.
• Non-thesis students will write up a Masters-level research capstone project, present their findings in a formal presentation, and respond to questions from their faculty mentor, other faculty, and the public; successful and approved completion of this, as determined by the faculty mentor and department chair, will result in a pass for the non-thesis option.

Paperwork
• Students must formulate an appropriate Program of Study (POS), in consultation with a faculty advisor and chair, before the end of the second semester.
• Application for Graduate Degree according to Graduate Studies Dates & Deadlines.
• Notification of Oral Examination/Defense according to Graduate Studies Dates & Deadlines.
Mathematical Sciences

258A Shelby Center
Telephone: 256.824.6470
Email: mathgrad@uah.edu

Interim Chair: Boris Kunin, Associate Professor

The Mathematical Sciences department offers the following graduate degree programs:

• Master of Arts
• Master of Science
• Doctor of Philosophy

Admission Requirements

In addition to fulfilling School of Graduate Studies admission requirements, all applicants for graduate study in mathematics or applied mathematics should have completed the equivalent of

• a complete calculus sequence,
• courses in linear algebra,
• abstract algebra,
• introduction to real analysis, and
• six additional semester hours in upper-division undergraduate mathematics courses.

Students deficient in more than two undergraduate courses in mathematics must remove these deficiencies before admission to the mathematics graduate program. Such students should consult the graduate program director of the department on how best to remove these deficiencies.

For unconditional admission, applicants must satisfy requirements of the School of Graduate Studies. Only the aptitude portion of the Graduate Record Examination (GRE) is required by the department.

Program Objective

Our objective is to provide excellent instruction and resources for the mathematics education of our students and to help produce the new generations of well-educated mathematicians that are critical for the progress of mankind. Our second objective is to have graduates prepared for careers in government, industry, teaching at a secondary school level, or for graduate study in mathematics, and be admitted to graduate school or employed within one year of graduation.

Learning Outcomes

Students will demonstrate:

• Critical thinking skills to construct clear, valid, and succinct proofs
• Knowledge of a variety of technological tools, including computer algebra systems, probability, statistical packages, or computer programming languages
• Good mathematical communication skills, including the ability to convey mathematical knowledge in a variety of settings, both orally and in writing

Master's Programs in Mathematical Sciences

The Master of Science degree is conferred under Plan I (thesis) or Plan II (non-thesis). Students should explore with their faculty advisor which plan is better for their particular objectives. For the M.S. degree, a Program of Study must include a minor area in the College of Engineering (http://catalog.uah.edu/search/?P=College%20of%20Engineering) or the College of Science (http://catalog.uah.edu/search/?P=College%20of%20Science). All minors must be outside of the department and must include at least six semester hours of approved graduate coursework. Master’s programs that include a thesis (Plan I) require at least 18 semester hours of graduate coursework in mathematics and at least 24 semester hours of total graduate coursework, and programs without a thesis (Plan II) require at least 33 semester hours of graduate coursework and at least 24 semester hours of these should be in mathematics. At least 50 percent of the coursework semester hours must be completed in 600-level courses and 50 percent of mathematics courses should be numbered 609 or above. MA 538 (http://catalog.uah.edu/search/?P=MA%20538) and MA 544 (http://catalog.uah.edu/search/?P=MA%20544) should be included in every Program of Study.

Students should plan a Program of Study for the master’s degree with the help of a faculty advisor prior to the completion of 12 semester hours of coursework. Courses taken without an approved Program of Study may not apply toward a degree. Various areas of mathematics may be stressed in
the program of study depending on the student’s needs. For example, the coursework for a non-thesis Program of Study concentrating in probability and statistics might be:

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Title</th>
<th>Hours</th>
</tr>
</thead>
<tbody>
<tr>
<td>MA 538</td>

<td>3</td>
</tr>
</tbody>
</table>

**Total Semester Hours** 27

In addition, three approved graduate courses, including at least one mathematics course numbered 609 or above.

The coursework for a non-thesis program of study concentrating in numerical analysis might be:

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Title</th>
<th>Hours</th>
</tr>
</thead>
<tbody>
<tr>
<td>MA 515</td>

<td>Num Methods Part Diff Eq II</td>
<td>3</td>
</tr>
</tbody>
</table>

**Total Semester Hours** 24

In addition, three approved graduate courses, including at least two mathematics courses numbered 609 or above.

Other possible concentration areas include differential equations and discrete mathematics.

**Master’s Degree Final Examination**

A final comprehensive examination is required of all candidates for a master’s degree. The candidate will be examined on the coursework and thesis in Plan I and on the coursework in Plan II. In the Mathematical Sciences Department this examination is oral, except that Plan II students who have passed a joint program examination for the Ph.D. degree in applied mathematics may use that examination as their master’s degree final examination.

**Mathematical Sciences, MA**

**Additional Information**

**Master of Arts with Class A Teaching Certification**

Teachers who hold the Alabama Class B Middle/Junior High or High School Certificate may pursue a program of study in mathematics that leads to a Master of Arts degree with Alabama Class A certification. The coursework for such a Program of Study is as follows:

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Title</th>
<th>Hours</th>
</tr>
</thead>
<tbody>
<tr>
<td>MA 538</td>
<td>Metric Spaces w/Applica</td>

</tr>
<tr>
<td>ST 687</td>
<td>Theory of Statistics I</td>
<td>3</td>
</tr>
</tbody>
</table>

9 semester hours of appropriate graduate education courses

One approved MA or ST course numbered 609 or above

Individuals who are interested in obtaining a Master of Arts degree with Alabama Class A certification in mathematics, but who have not completed more than 12 semester hours in teacher education (graduate or undergraduate) courses, should consider the Non-Traditional Fifth Year Program. The
MA and ST courses given in the preceding paragraph would be appropriate for such a program. Students should contact the Education Department for preliminary advisement on admission, general program requirements, and more details on the Non-Traditional Fifth Year Program.

**Applied Mathematics, PhD**

The Ph.D. degree program in Applied Mathematics is designed to enable students to master a significant body of mathematics, including a specialty in Applied Mathematics; to relate this knowledge to a coherent area of science or engineering other than mathematics; and to carry on fundamental research in Applied Mathematics. Students who are interested in the program should contact the graduate program director of the department.

Each Program of Study requires at least 54 semester hours of graduate coursework, and must include a major area of concentration consisting of at least six courses in addition to the four common core courses, and a minor consisting of at least four related graduate courses in some area outside of the department. The major, minor, and other courses in the Program of Study must be selected so that the student will be prepared to conduct research in an area of Applied Mathematics.

Students must pass three examinations:

- Joint program examination
- Comprehensive qualifying examination
- Dissertation defense

The joint program examination is a written test of the student’s ability to successfully pursue a Ph.D. in Applied Mathematics. It covers a four course common core in real analysis (MA 653 [http://catalog.uah.edu/search/?P=MA%20653], MA 654 [http://catalog.uah.edu/search/?P=MA%20654]) and linear and numerical linear algebra (MA 544 [http://catalog.uah.edu/search/?P=MA%20544], MA 614 [http://catalog.uah.edu/search/?P=MA%20614]). The joint program examination cannot be taken more than twice.

The comprehensive qualifying examination covers the entire Program of Study and the student’s proposal for a dissertation topic, and is administered by the student’s graduate study supervisory committee on behalf of the School of Graduate Studies. The examination is part written and part oral. It cannot be taken more than twice. Upon successful completion of the comprehensive qualifying examination and dissertation proposal, the student is admitted to candidacy for the Ph.D. degree.

The dissertation defense is an oral presentation of the dissertation in the form of a seminar before the student’s graduate study supervisory committee. The dissertation is evidence that the student can independently identify a problem of contemporary significance through familiarity with the current literature in some area of Applied Mathematics, organize and execute a program of research, recognize and analyze the results, and present them in cogent, well-written exposition. It must include mathematical results suitable for publication in a nationally recognized journal.

The Ph.D. degree program in Applied Mathematics is a joint program with the other two campuses (Birmingham and Tuscaloosa) of the University of Alabama System. All requirements of the program can be completed at the University of Alabama in Huntsville.

**MA 502 - INTRO TO REAL ANALYSIS**
Semester Hours: 3

Individualized special projects in mathematics and its applications for inquisitive and well-prepared senior level undergraduate students. No credit allowed toward a major or minor in mathematics. S/U grading.

**MA 503 - INTRO COMPLEX ANALYSIS**
Semester Hours: 3

Complex algebra, analytic functions, Cauchy-Riemann equations, exponential, trigonometric, and logarithmic functions, integration, Cauchy integral theorem, Morera’s theorem, Liouville’s theorem, maximum modulus theorem, residue theory, Taylor and Laurent series, and applications.

**MA 506 - METHODS PARTIAL DIFF EQUA**
Semester Hours: 3

Survey of theory and methods for solving elementary partial differential equations. Topics include first-order equations and the method of characteristics, second-order equations, reduction to canonical form, the wave equation, the heat equation, Laplace’s equation, separation of variables, and Fourier series.

**MA 508 - APPLIED LINEAR ALGEBRA**
Semester Hours: 3

Fundamental concepts of linear algebra are developed with emphasis on real and complex vector spaces, linear transformations, and matrices. Solving systems of equations, finding inverses of matrices, determinants, vector spaces, linear transformations, eigenvalues and eigenvectors, normal matrices, canonical forms of matrices, applications to systems of linear differential equations, and use of computer software such as MATLAB.
MA 515 - INTRO NUMERICAL ANALYSIS
Semester Hours: 3
Rigorous analysis and derivation of numerical methods for the approximate solution of nonlinear equations; interpolation and integration of functions, and approximating solutions of ordinary differential equations.

MA 520 - INTERM DIFFERENTIAL EQUATIONS
Semester Hours: 3
This is a second course in differential equations. Course topics include series solutions for second order differential equations and the method of Frobenious; eigenvalue and eigenvector methods for solving systems of linear first order equations; the qualitative theory of nonlinear equations; boundary value problems and the Sturm-Liouville theory. No credit given to students who have successfully completed MA 524.

MA 524 - DYNAMICAL SYSTEMS I
Semester Hours: 3
Scalar autonomous equations; existence, uniqueness, stability, elementary bifurcations; planar autonomous equations; general properties and geometry, conservative systems, elementary bifurcations linear systems, reduction to canonical forms, stability and instability from linearization. Liapunov functions, center manifolds, Hopf bifurcation.

MA 526 - PARTIAL DIFF EQUA I
Semester Hours: 3
Introduction to the theory for solving partial differential equations. No graduate credit given to students who have completed MA 506 for graduate credit. Topics include second-order equations, reduction to canonical form, well-posedness, the classical equations (wave, heat, and Laplace?)s in one and several dimensions, separation of variables, Fourier series, general eigenfunction expansions, Sturm-Liouville theory, first-order linear and quasilinear equations, and shocks. Prerequisite: MA 502.

MA 538 - METRIC SPACES W/APPLICA
Semester Hours: 3

MA 540 - COMBINATORIAL ENUMERATION
Semester Hours: 3
Counting, pigeonhole principle, permutations and combinations, generating functions, principle of inclusion and exclusion, Polya's theory of counting.

MA 542 - ALGEBRA
Semester Hours: 3
Topics from group theory and ring theory: subgroups, normal subgroups, quotient groups, homomorphisms, isomorphism theorems, ideals, principal ideal domains, Euclidean domains, fields, extension fields, elements of Galois theory.

MA 544 - LINEAR ALGEBRA
Semester Hours: 3
Vector spaces over a field, bases, linear transformations, matrices, determinants, eigenvalues, similarity, Jordan canonical forms, dual spaces, orthogonal and unitary transformations.

MA 561 - INTRO TO FOURIER ANALYSIS
Semester Hours: 3
See MA 460. This course is taught as MA 460/561. Course completion and/or grade requirements for the MA 561 course will differ from those for the MA 460 course.

MA 562 - INTERMEDIATE FOURIER ANALYSIS
Semester Hours: 3
(Formerly MA 560). Brief review of classical Fourier analysis, Parseval?s equality, Gaussian test functions. Introduction to generalized functions, the generalized transform, the generalized derivative, sequences and series of generalized functions, regular periodic arrays of delta functions, sampling, the discrete transform, the fast Fourier transform (other topics as time and interest permit).

MA 565 - INTERM MATH MODELING
Semester Hours: 3
Designed for beginning graduate students. No prior experience in formal mathematical modeling is required. In-depth discussion of some types of models from physics, the life sciences, and/or the social sciences, with formulation, analysis, and criticism of the models. Process of and factors involved in formulating a model is of prime importance. Content is divided into approximately one-half deterministic modeling and one-half stochastic modeling.
MA 585 - PROBABILITY  
Semester Hours: 3  
Course topics include probability spaces, random variables, conditional probability, independence, modes of convergence, and an introduction to sigma-algebras and measurability; distributions, including discrete, continuous, joint and marginal distributions, transformations of random variable, distribution and quantile functions, and convergence in distribution; expected value, including properties of general expected value, mean, variance, covariance, generating functions, and conditional expected value; special models and distributions, including Bernoulli trials and the binomial and negative binomial distributions, the Poisson model and the Poisson and gamma distributions, the normal distribution, finite sampling models and the hypergeometric distribution; the law of large numbers and the central limit theorem.

MA 590 - SELECTED TOPICS IN MATH  
Semester Hours: 3  
Requested selected topics.

MA 607 - MATHEMATICAL METHODS I  
Semester Hours: 3  
Review of vector calculus and coordinate systems, introduction to tensors, matrices, infinite series, complex variables with applications to calculus of residues, partial differential equations, and Sturm-Liouville theory. Orthogonal functions, gamma functions, Bessel functions, Legendre functions, special functions, Fourier series, integral transform and equations. (Same as PH 607.).

MA 609 - MATHEMATICAL METHODS II  
Semester Hours: 3  
Continuation of MA 607. (Same as PH 609.).

MA 614 - NUM METHODS/LINEAR ALGEBRA  
Semester Hours: 3  
Norms and vector spaces, matrix factorizations and direct solution methods, stability and conditioning, iterative methods for large linear systems, the algebraic eigenvalue problem.

MA 615 - NUM METHODS PARTIAL DIFF EQ  
Semester Hours: 3  
Finite difference methods for parabolic, elliptic, and hyperbolic partial differential equations, error analysis, stability, and convergence of finite difference methods.

MA 624 - DYNAMICAL SYSTEMS II  
Semester Hours: 3  
Brief review of linear systems; local theory for nonlinear systems; existence, uniqueness, differentiability, asymptotic behavior, the stable manifold theorem, Hartman-Grobman theorem, Hamiltonian systems; global theory for nonlinear systems; limit sets and attractors, the Poincare map, the Poincare-Bendixson theorem; some aspects of bifurcation theory and chaos; bifurcations at nonhyperbolic fixed points and periodic orbits, homoclinic bifurcations, Melnikov's method, chaos.

MA 626 - PARTIAL DIFF EQUA II  
Semester Hours: 3  
Continuation of MA 526. Qualitative results for solutions to the classical equations (energy inequalities, propagation of discontinuities, maximum principles, smoothness of solutions, existence and uniqueness, etc.), non-homogeneous equations, Poisson's equation, Green's functions, and the Cauchy-Kowalewski theorem.

MA 633 - GEOMETRY  
Semester Hours: 3  
Axioms of incidence and order, affine and metric properties, isometries, similarities, transformation groups, projective planes.

MA 638 - GENERAL TOPOLOGY  
Semester Hours: 3  
Set theory, logic, well-ordering principle, axiom of choice, topological spaces, product spaces, quotient spaces, continuous functions, connectedness, path connectedness, local connectedness, compactness, local compactness, countability and separation, generalized products, Tychonoff theorem.

MA 640 - GRAPH THEORY  
Semester Hours: 3  
Graphs, subgraphs, trees, connectivity, Euler tours, Hamilton cycles, matchings, edge colorings, independent sets, vertex colorings, planar graphs, Kuratowski's theorem, four color theorem, directed graphs, networks, cycle and bond spaces.
MA 643 - GROUP THEORY  
Semester Hours: 3

MA 644 - MATRIX THEORY  
Semester Hours: 3

Functions of matrices, invariant polynomials, elementary divisors, similarity of matrices, normal forms of a matrix, matrix equations, generalized inverses, non-negative matrices, localization of eigenvalues.

MA 645 - COMBINATORIAL DESIGN  
Semester Hours: 3

Systems of distinct representatives, difference sets, coding theory, block designs, finite geometries, orthogonal Latin squares, and Hadamard matrices.

MA 653 - REAL ANALYSIS I  
Semester Hours: 3

MA 654 - REAL ANALYSIS II  
Semester Hours: 3

Differentiability of monotone functions, functions of bounded variation, absolute continuity, convex functions, Minkowski and Holder inequalities, Lp spaces, Riesz-Fischer representation theorem, Fubini's theorem and selected topics.

MA 656 - COMPLEX ANALYSIS I  
Semester Hours: 3

Topology of the complex plane, analytic functions of one complex variable, elementary functions and their mapping properties, power series, complex integration, Cauchy's theorem and its consequences, isolated singularities, Laurent series, residue theory.

MA 661 - SPECIAL FUNCTIONS  
Semester Hours: 3

Asymptotic series, regular and singular perturbation theory, asymptotic matching, Laplace's method, stationary phase, steepest descents, WKB theory.

MA 667 - CALC VAR/OPTIMAL CONTROL  
Semester Hours: 3

Euler necessary condition for local extremum, Euler-Lagrange equation, Weierstrass necessary condition, Jacobi's necessary condition, corner conditions, problems of optimal control, Pontryagin maximum principles, transversality conditions, applications.

MA 685 - STOCHASTIC PROC/APPLI I  
Semester Hours: 3

Discrete and continuous Markov chains, Poisson processes, counting and renewal processes, and applications.

MA 686 - STOCHASTIC PROC/APPLI II  
Semester Hours: 3

Gaussian and Wiener processes, general Markov processes, special types of processes from queueing and risk theory, and selected advanced topics.

MA 690 - SP TOPICS IN MATHEMATICS  
Semester Hours: 3

Offered upon demand. Advanced selected topics of interest in areas such as discrete mathematics, numerical analysis, differential equations, and stochastic processes.
MA 695 - GRADUATE SEMINAR
Semester Hour: 1

Selected topics in advanced mathematics, conducted as a research seminar.

MA 699 - MASTER'S THESIS
Semester Hours: 3-9

Required each semester a student is receiving direction on a master's thesis. A minimum of two terms is required. Maximum of nine hours credit awarded upon successful completion of the master's thesis.

MA 715 - NUM METHODS PART DIFF EQ II
Semester Hours: 3

Finite element methods for parabolic, elliptic, and hyperbolic partial differential equations; error analysis stability, and convergence. Prerequisites: MA 538 and MA 615.

MA 726 - THRY PART DIFFERNTL EQUA
Semester Hours: 3

Hilbert space theory of existence, uniqueness, and regularity for partial differential equations.

MA 740 - COMBINATORIAL ALGORITHMS
Semester Hours: 3

Linear, polynomial and exponential graph theoretic algorithms, generating combinatorial objects, and NP-completeness.

MA 756 - COMPLEX ANALYSIS II
Semester Hours: 3

Applications of residue theory, harmonic functions and their applications, Mittag-Leffler theorem, infinite products, Weierstrass product theorem, conformal mapping and Riemann mapping theorem, univalent functions, analytic continuation and Riemann surfaces, Picard's theorems, and selected topics.

MA 785 - ADV PROBABILITY THEORY
Semester Hours: 3

Measure and integration, probability spaces, convergence concepts, law of large numbers, random series, characteristic functions, central limit theorem, random walks, conditioning, Markov properties, conditional expectations, and elements of martingale theory.

MA 790 - SPECIAL TOPICS
Semester Hours: 3

Offered upon demand. Advanced selected topics of interest in areas such as discrete mathematics, numerical analysis, differential equations, and stochastic processes.

MA 795 - GRADUATE SEMINAR
Semester Hour: 1

Selected topics in advanced mathematics, conducted as a research seminar.

MA 799 - DOCTORAL DISSERTATION
Semester Hours: 3-9

Required each semester a student is receiving direction on a Ph.D. dissertation.

**Applied Mathematics, PhD**

The Ph.D. degree program in Applied Mathematics is designed to enable students to master a significant body of mathematics, including a specialty in Applied Mathematics; to relate this knowledge to a coherent area of science or engineering other than mathematics; and to carry on fundamental research in Applied Mathematics. Students who are interested in the program should contact the graduate program director of the department.

Each Program of Study requires at least 54 semester hours of graduate coursework, and must include a major area of concentration consisting of at least six courses in addition to the four common core courses, and a minor consisting of at least four related graduate courses in some area outside of the department. The major, minor, and other courses in the Program of Study must be selected so that the student will be prepared to conduct research in an area of applied mathematics.

Students must pass three examinations:
Mathematical Sciences, MA

- the joint program examination,
- the comprehensive qualifying examination, and
- the final examination.

The joint program examination is a written test of the student’s ability to successfully pursue a Ph.D. in Applied Mathematics. It covers a four course common core in real analysis (MA 653, MA 654) and linear and numerical linear algebra (MA 544, MA 614). The joint program examination cannot be taken more than twice.

The comprehensive qualifying examination covers the entire Program of Study and the student’s proposal for a dissertation topic, and is administered by the student’s graduate study supervisory committee on behalf of the School of Graduate Studies. The examination is part written and part oral. It cannot be taken more than twice. Upon successful completion of the comprehensive qualifying examination and dissertation proposal, the student is admitted to candidacy for the Ph.D. degree.

The final examination is an oral presentation of the dissertation in the form of a seminar before the student’s graduate study supervisory committee. The dissertation is evidence that the student can independently identify a problem of contemporary significance through familiarity with the current literature in some area of Applied Mathematics, organize and execute a program of research, recognize and analyze the results, and present them in cogent, well-written exposition. It must include mathematical results suitable for publication in a nationally recognized journal.

The Ph.D. degree program in Applied Mathematics is a joint program with the other two campuses (Birmingham and Tuscaloosa) of the University of Alabama System. All requirements of the program can be completed at the University of Alabama in Huntsville.

Mathematical Sciences, MA

The Master of Arts is conferred under Plan I (thesis) or Plan II (non-thesis). Students should explore with their faculty advisor which plan is better for their particular objectives. For the M.S. degree, a Program of Study must include a minor area in the College of Engineering or the College of Science. All minors must be outside of the department and must include at least six semester hours of approved graduate coursework. Master’s programs that include a thesis (Plan I) require at least 18 semester hours of graduate coursework in mathematics and at least 24 semester hours of total graduate coursework, and programs without a thesis (Plan II) require at least 33 semester hours of graduate coursework and at least 24 semester hours of these should be in mathematics. At least 50 percent of the coursework semester hours must be completed in courses numbered 609 or above. MA 538 and MA 544 should be included in every Program of Study.

Students should plan a Program of Study for the master’s degree with the help of a faculty advisor prior to the completion of 12 semester hours of coursework. Courses taken without an approved Program of Study may not apply toward a degree. Various areas of mathematics may be stressed in the program of study depending on the student’s needs. For example, the coursework for a non-thesis Program of Study concentrating in probability and statistics might be:

<table>
<thead>
<tr>
<th>Course</th>

In addition, three approved graduate courses, including at least two courses numbered 609 or above.
Other possible concentration areas include differential equations and discrete mathematics.

**Additional Information**

**Master of Arts with Class A Teaching Certification**

Teachers who hold the Alabama Class B Middle/Junior High or High School Certificate may pursue a program of study in mathematics that leads to a Master of Arts degree with Alabama Class A certification. The coursework for such a Program of Study is as follows:

- MA 538: METRIC SPACES W/APPLICA 3
- MA 542: ALGEBRA 3
- MA 544: LINEAR ALGEBRA 3
- MA 585: PROBABILITY 3
- MA 614: NUM METHODS/LINEAR ALGEBRA 3
- MA 633: GEOMETRY 3
- ST 687: THEORY OF STATISTICS I 3
- 9 semester hours of appropriate graduate education courses 9
- One approved MA or ST course numbered 609 or above 3

Individuals who are interested in obtaining a Master of Arts degree with Alabama Class A certification in mathematics, but who have not completed more than 12 semester hours in teacher education (graduate or undergraduate) courses, should consider the Non-Traditional Fifth Year Program. The MA and ST courses given in the preceding paragraph would be appropriate for such a program. Students should contact the Education Department for preliminary advisement on admission and general program requirements. More details on the Non-Traditional Fifth Year Program are given in the Education Department section.

**Master's Degree Final Examination**

A final comprehensive examination is required of all candidates for a master's degree. The candidate will be examined on the coursework and thesis in Plan I and on the coursework in Plan II. In the Mathematical Sciences Department this examination is oral, except that Plan II students who have passed a joint program examination for the Ph.D. degree in applied mathematics may use that examination as their master's degree final examination.

**Mathematical Sciences, MS**

The Master of Science degree is conferred under Plan I (thesis) or Plan II (non-thesis). Students should explore with their faculty advisor which plan is better for their particular objectives. For the M.S. degree, a Program of Study must include a minor area in the College of Engineering (http://catalog.uah.edu/search/?P=College%20of%20Engineering) or the College of Science (http://catalog.uah.edu/search/?P=College%20of%20Science).

All minors must be outside of the department and must include at least six semester hours of approved graduate coursework. Master’s programs that include a thesis (Plan I) require at least 18 semester hours of graduate coursework in mathematics and at least 24 semester hours of total graduate coursework, and programs without a thesis (Plan II) require at least 33 semester hours of graduate coursework and at least 24 semester hours of these should be in mathematics. At least 50 percent of the coursework semester hours must be completed in courses numbered 609 or above. MA 538 and MA 544 should be included in every Program of Study.

Students should plan a Program of Study for the master’s degree with the help of a faculty advisor prior to the completion of 12 semester hours of coursework. Courses taken without an approved Program of Study may not apply toward a degree. Various areas of mathematics may be stressed in the program of study depending on the student’s needs. For example, the coursework for a non-thesis Program of Study concentrating in probability and statistics might be:

- MA 538: METRIC SPACES W/APPLICA 3
- MA 544: LINEAR ALGEBRA 3
- MA 585: PROBABILITY 3
- MA 653: REAL ANALYSIS I 3
- MA 656: COMPLEX ANALYSIS I 3
- MA 685: STOCHASTIC PROC/APPLI I 3
- ST 687: THEORY OF STATISTICS I 3
- MA 686: STOCHASTIC PROC/APPLI II 3
- ST 787: THEORY OF STATISTICS II 3

**Total Semester Hours** 27

In addition, three approved graduate courses, including at least one numbered 609 or above.
The coursework for a non-thesis program of study concentrating in numerical analysis might be:

Other possible concentration areas include differential equations and discrete mathematics.

**Master’s Degree Final Examination**

A final comprehensive examination is required of all candidates for a master’s degree. The candidate will be examined on the coursework and thesis in Plan I and on the coursework in Plan II. In the Mathematical Sciences Department this examination is oral, except that Plan II students who have passed a joint program examination for the Ph.D. degree in applied mathematics may use that examination as their master’s degree final examination.

**Physics**

201C Optics Building  
Telephone: 256.824.2482  
Email: physics@uah.edu

**Chair:** Miller, J. A., Professor

The Physics department offers the following graduate degree programs:

- Master of Science  
- Doctor of Philosophy

**Admission Requirements**

Refer to the Graduate Studies section of the Graduate Catalog for general admission and degree requirements. Additional information on Graduate Teaching and Research Assistantships is available on the department web site http://physics.uah.edu. Undergraduate preparation should include courses typically required for a Physics major, such as modern physics, quantum mechanics, and upper level classical mechanics, electrodynamics, and thermal physics.

**Program Objective**

The primary objective of the Physics department is to educate and train the next generation of physicists, perform cutting-edge and internationally-recognized research, and support the education of students in allied areas such as engineering, chemistry, atmospheric science, and the biological sciences. Our second objective prepares Physics majors for employment in industrial research or for further graduate studies in physics or related fields, including astrophysics, optics, biophysics, engineering, or medicine.

**Learning Outcomes**

Students will:

- Exhibit a post-graduate level of knowledge in general physics topics  
- Conduct a focused and thorough investigation of a topic and effectively communicate the results in a timely manner  
- Possess the preliminary experience necessary for working in the private sector, academia, or industry

**Master's Program in Physics**

There are three M.S. options in Physics:
• Thesis
• Non-thesis
• Secondary Education Certification

Required core courses for each are:

<table>

Total Semester Hours 23

¹ All M.S. students are required to complete two semesters of PH 792 with a grade of "S"; these semester hours do not, however, count toward minimum degree requirements given below.

Students should complete a Program of Study with the help of their faculty advisor before the completion of 12 semester hours of graduate coursework. A Program of Study is a detailed list of courses that the student will take to satisfy the appropriate degree requirements.

M.S. with Thesis

A student must take at least 24 semester hours in graduate courses, plus at least 6 semester hours of PH 699 (http://catalog.uah.edu/search/?P=PH %20699), culminating in the successful defense of their thesis. Students writing a thesis do not need to take the Comprehensive Examination.

Optics and Photonics Technology Curriculum

The OPT (PH) M.S. degree program is comprised of a minimum of 27 semester hours of graduate coursework, plus a minimum of 6 semester hours of PH 699 (http://catalog.uah.edu/search/?P=PH%20699). The thesis option is the only available route to the OPT degree. Students may pursue the OPT option through either the Physics Department (PH) or the Electrical & Computer Engineering Department (ECE). The OPT (PH) program of study, available on the Department website http://physics.uah.edu, meets the Department of Physics M.S. degree requirements and is suggested for students coming from a Physics background. Students in this category, having a Physics Department faculty member as an advisor, will be designated as having Physics as their "home" department. Courses have been chosen such that little or no prior graduate work in physics is required. The OPT degree program does not prepare the student for taking the Physics Comprehensive Exam or the OSE Preliminary Exam. Requirements for students seeking the OPT degree through the Electrical Engineering department, OPT (ECE), may be significantly different.

M.S. without Thesis

A student must take at least 33 semester hours of graduate coursework, and achieve an M.S. passing grade on the Comprehensive Examination. This exam is offered every August, and also serves as the preliminary examination for the Ph.D. degree program. The Comprehensive Examination is on material covered in the core courses given above, and thus has sections dealing with quantum mechanics, electromagnetic theory and relativity and classical and statistical mechanics. Criteria for an M.S. or Ph.D. pass are given on the Department’s web site.

For students in the Optical Science and Engineering (OSE) Ph.D. program who desire an M.S. degree in Physics, a passing grade on the OSE Preliminary Examination is an acceptable substitute for the Comprehensive Examination.

A full-time course schedule leading to the Comprehensive Exam at the start of the Fall semester of the second year is listed below.

**Summer**

PH 621 STAT MECH KINETIC THRY I 3
Elective 3

**Term Semester Hours:** 6

**Total Semester Hours:** 26

**Nine (9) Remaining Semester Hours**

The remaining 9 semester hours of graduate coursework can be taken in the Physics Department (for advanced study in optics, space physics, astrophysics, or planetary science) or from another department such as Atmospheric Science. Students need to consult with their advisor regarding the selection of topical elective courses.

**M.S. with Certification**

With this option, also called the *Alternative Fifth-year Program* in the Education Department section of the Graduate Catalog, students are awarded an M.S. degree in Physics as well as Class A (Master’s level) Teaching Certification by the State of Alabama. **We strongly encourage students to investigate this rewarding career option.**

This program is available to students who do not already have a Class B (baccalaureate level) Teaching Certification. Requirements are 27 graduate semester hours in Education courses and 24 graduate semester hours in Physics courses. The Education courses are specified in the Education Department section of this catalog, and include a high school internship. The Physics courses include the core courses above, plus 9 additional semester hours. Three of the 9 additional hours will be PH 679 the required Capstone Course for this M.S. option. Neither the Comprehensive Exam nor a thesis is required for this option. However, a thesis can replace the Capstone Course, if desired.

**Doctoral Program in Physics**

To obtain the Ph.D. degree in physics, a student must satisfy all requirements of the Graduate School as well as those in the Department of Physics. The major steps toward a Ph.D. degree are as follows:

1. **Take the required core courses and pass the Comprehensive Exam at the Ph.D. Level.**

   Required core courses for the Ph.D. degree are:

   - PH 601 CLASSICAL DYNAMICS I 3
   - PH 607 MATHEMATICAL METHODS I 3
   - PH 609 MATHEMATICAL METHODS II 3
   - PH 621 STAT MECH KINETIC THRY I 3
   - PH 631 ELECTROMAGNETIC THEORY I 3
   - PH 651 QUANTUM MECHANICS I 3
   - PH 652 QUANTUM MECHANICS II 3
   - PH 732 ELECTROMAGNETIC TH II 3

   **Total Semester Hours** 24

   The Comprehensive Exam is offered every August, and covers the material in the core courses given above except PH 732 (http://catalog.uah.edu/search/?P=PH%20732), which is usually taken after the Exam. There are sections dealing with quantum mechanics, electromagnetic theory and relativity, and classical and statistical mechanics. A full-time course schedule leading to the Comprehensive Exam at the start of the Fall semester of the second year is listed below.

   Admission to the Ph.D. program in physics is granted upon passing the Comprehensive Examination at the Ph.D. level. Students are permitted two attempts to pass the Comprehensive Examination. A student who fails on the first attempt must retake the examination the following year. Full-time students are generally expected to take the exam for the first time at the start of their second year. Further details are found on the Department’s (http://uah.edu/physics) website.

Total Semester Hours: \[26\]

2. **Form a supervisory committee and a Program of Study.**

Once the Comprehensive Examination is passed, a student should proceed to form a supervisory committee and prepare a Program of Study. A Program of Study will consist of

- a minimum of 48 credit hours of graduate coursework. A maximum of 9 semester hours of PH 699 (http://catalog.uah.edu/search/?P=PH%20699) from a completed M.S. degree with thesis may be allowed to count toward this 48 semester hour requirement.
- three semesters of PH 792 (http://catalog.uah.edu/search/?P=PH%20792) with a grade of “S”. Seminar semester hours do not count toward the 48 credit hours above.
- at least 18 semester hours of PH 799 (http://catalog.uah.edu/search/?P=PH%20799). No more than 9 of these semester hours may be taken prior to passing the Qualifying Examination (see below), and PH 799 does not count toward the 48 credit hours of graduate coursework.

Courses in addition to those enumerated above can be selected in consultation with the student’s advisory committee. Transfer of credit from other institutions requires approval of the advisory committee, the Department Chair, and the Graduate Dean.

3. **Pass the Qualifying Examination.**

After preliminary work on their chosen Ph.D. dissertation topic, the student must then pass the Ph.D. Qualifying Examination. This examination is conducted under the auspices of the Graduate School, and tests the student’s general fitness for pursuing a research project in their chosen area and their general knowledge of Physics. There are written and oral components to this exam. The written part consists of the student's responses to questions submitted by their Committee; these questions can deal with the specific proposed research or the general area of research (such as optics or astrophysics, as covered, e.g., in the elective courses taken in this area). The oral part is a presentation and defense of the proposed research.

4. **Complete and defend a research dissertation.**

Each student must complete and successfully defend a research dissertation, which must be approved by the student’s supervisory committee, the Chair of the Physics Department, the Dean of the College of Science, and the Dean of the Graduate School. A significant portion of the dissertation should be submitted for publication in an approved journal with international circulation.

**PH 531 - INTRO TO PLASMA DYNAMICS**

Semester Hours: 3

Single-particle motion in magnetic fields; fluid equations and fluid theory wave modes; MHD theory, stability, and wave modes; introduction to kinetic theory and hot plasma wave modes. (Same as MAE 531).

**PH 541 - GEOMETRICAL OPTICS**

Semester Hours: 3

Foundations and physics of geometrical optics, Fermat’s principles and Huygen wavelets, refraction and reflection. The many forms of Snell’s Law. Optical path lengths, geometrical wavefronts and rays. Ray tracing, ynu-chart and matrix methods. Gaussian imagery and paraxial optics, conjugate elements, cardinal points, and image-object relations. Stops and pupils, chief and marginal rays, vignetting, and the optical or Lagrange invariant. The y-ybar diagram, design of common systems: objectives, magnifiers, microscopes, collimators and detectors. Optical glasses and chromatic aberrations, wavefront and transverse aberrations, spot diagrams and ray fan plots. (Same as OSE 541 and EE 541.) Fall.

**PH 542 - PHYSICAL OPTICS**

Semester Hours: 3

Scalar and electromagnetic waves, polarization, coherence, reflection and refraction; two beam and multiple beam interference, interferometers, Fabry-Perots, thin films, diffraction, and absorption and dispersion. (Same as OSE 542 and EE 542.) Fall, Spring.
PH 544 - OPTOELECTRONICS
Semester Hours: 3

Review of polarized light, the Jones and Mueller calculi. Propagation of light in birefringent material. Modulation of light using electro-optic effect, Kerr effect, acousto-optic effect, and Faraday effect. Elements of photodetection and detectors, signal processing, and signal-to-noise. Design and analysis of beam scanners, optical rf-spectrum analyzer, optical sensors, and optical communication systems. (Same as OPT 444 and OPE 451.) Fall even years.

PH 546 - RADIOMETRY, DETECTORS & SOURCE
Semester Hours: 3

Theory and practice of radiometry and photometry. Blackbody radiation and Lambertian sources. The propagation of radiant energy in free space and through optical systems. Detector classes, responsivity, bandwidth, and noise. Power spectral density, properties of sources, photon noise. (Same as OPT 446, OSE 546.) Spring even years.

PH 551 - QUANTUM MECHANICS I
Semester Hours: 3

Waves and particles; wave packets and the uncertainty principle; Schrodinger's equation and wave mechanics; postulates of quantum mechanics; simple systems in one, two and three dimensions; the hydrogen atom; angular momentum and spin; numerical solutions of the Schrodinger equation. Prerequisites require undergraduate quantum mechanics course(s).

PH 553 - INTRO TO PARTICLE PHYSICS
Semester Hours: 3

PH 560 - INTRO TO SOLID STATE PHYSICS I
Semester Hours: 3

Crystal binding and crystal structure. Crystal structure determination. Phonons and lattice vibrations. Free electron gas. Electronic energy band theory. Prerequisite with concurrency: PH 551. (Same as MTS 660.) Fall, even years.

PH 561 - INTRO TO SOLID STATE PHYSICS II
Semester Hours: 3

Thermal properties of solids. Electronic properties, optical properties, electronic properties in a magnetic field, semiconductor devices, magnetism, superconductivity, defects and alloys, dislocations and crystal growth, non-crystalline solids, surfaces and interfaces. (Same as MTS 661.) Spring, odd years.

PH 570 - OPT & PHOTONIC SYSTEMS DESIGN
Semester Hours: 3

Review of paraxial optics, ray tracing codes, aberration and diffraction calculations; acousto- and electro-optic modulators, spatial light modulators; fibers, fiber splicers and connectors; gratings and diffractive optical elements; laser and light emitting diodes, photodetectors and CCD arrays; correlator systems; optical communication networks; signal processing systems design. Fall, even years.

PH 571 - STELLAR ASTROPHYSICS
Semester Hours: 3

Structure and physical processes of stars from the interior to the atmosphere: energy production and transfer, atmospheric properties, and observed spectral features. Models for stellar structure. Star formation and evolution, including the effects of a companion. Prerequisites: upper level undergraduate astrophysics course, and upper level undergraduate E&M course.

PH 572 - GALAXIES & COSMOLOGY
Semester Hours: 3

Galactic structure; Oort's constants; rotation curves; galaxy types; structure formation and evolution; Hubble expansion; Friedmann equation; cosmic microwave background; radiation and matter eras; primordial nucleosynthesis; dark matter/energy issues; development of structure in the early universe; horizon & flatness problems; inflation. Prerequisite: PH 571 or advanced undergraduate Astrophysics course, suggested PH 553, PH 621. Spring, odd years.

PH 574 - INTRO TO GENERAL RELATIVITY
Semester Hours: 3

An introductory course on general relativity and gravitational physics. General relativistic phenomena as inferred from the behavior of particles and light rays for a selection of spacetimes. Major properties of such objects as black holes, wormholes, gravitational waves, and the universe as a whole. Prerequisites: Undergraduate level special relativity and classical mechanics.
PH 579 - OBSERVATIONAL ASTROPHYSICS
Semester Hours: 3
Astronomical coordinate systems and time; spherical astronomy; telescope designs; basic optics; CCDs; infrared arrays; observational calibration and noise; high resolution imaging techniques (e.g., adaptive optics); spectroscopy; and high and low energy observational techniques (e.g., X-ray telescopes, radio interferometry). Students will also conceive their own projects, write observing proposals, and convene as a Time Allocation Committee to review proposals and schedule telescope time. Students will acquire, reduce, analyze and interpret data from one of the allocated projects, and present the results in a short paper. Prerequisites: upper-level undergraduate astrophysics courses.

PH 589 - SELECTED TOPICS
Semester Hours: 3

PH 601 - CLASSICAL DYNAMICS I
Semester Hours: 3
Variational principles and Lagrangian mechanics, rigid body motion, Hamilton's equations, and theory of small oscillations. Aspects related to modern physics. Fall.

PH 607 - MATHEMATICAL METHODS I
Semester Hours: 3
Review of vector calculus and coordinate systems, introduction to tensors, matrices, infinite series, complex variables with applications to calculus of residues, partial differential equations, and Sturm-Liouville theory. Orthogonal functions, gamma functions, Bessel functions, Legendre functions, special functions, Fourier series, integral transforms and equations. Prerequisite: upper level undergraduate differential equations courses (s). (Same as MA 607.) Fall.

PH 609 - MATHEMATICAL METHODS II
Semester Hours: 3
Continuation of PH 607. (Same as MA 609.) Spring.

PH 615 - INTRO TO RADIOLOGICAL PHYSICS
Semester Hours: 3

PH 621 - STAT MECH KINETIC THRY I
Semester Hours: 3
Statistical methods, systems of particles, statistical thermodynamics, applications of thermodynamics, methods of statistical mechanics, applications of statistical mechanics, equilibrium between phases of chemical species. Summer.

PH 622 - STAT MECH KINETC THRY II
Semester Hours: 3
Addresses the statistical description of collective processes in gases, plasmas, and fields based on the use of transport theory. The course provides the basis for the mathematical description of the basic kinetic and continuum models used in all fields of solar, space and astrophysics. Addresses specifically the transport of gases and Chapman-Enskog theory, agnetohydrodynamics in a collisional description, energetic particle transport in collisionless plasma, the transport of low-frequency turbulence, and if time permits, the transport of radiation.

PH 631 - ELECTROMAGNETIC THEORY I
Semester Hours: 3
Electrostatic and magnetostatic fields in vacuum and materials, Maxwell's equations, electromagnetic waves. Prerequisites: upper level undergraduate E&M course(s), PH 607. Fall.

PH 632 - FOURIER OPTICS
Semester Hours: 3
Introducing the optical system as an invariant linear system, convolution, Sommerfield's diffraction integral, Fourier Transform, angular spectrum, coherent and incoherent imaging, optical transfer function. Prerequisite PH 542 (Same as OSE 632 and EE 632.) Spring.
PH 636 - INTRO TO SPACE PLASMA PHYSICS
Semester Hours: 3

Electromagnetic fields and particles in space; solar wind and solar energetic particles; currents and plasma waves in space; shocks and particle acceleration mechanisms; solar flares and coronal mass ejections. Spring, even years.

PH 642 - OPTICAL PHYSICS
Semester Hours: 3

Fundamental physics of optics and optical phenomena. Electromagnetic fields, sources and propagation. Coherence, interference, polarization, scattering, reflection, refraction, and diffraction. Optical properties of conductors and insulators. Introduction to quantum optics, lasers, and optical device physics. Offered Spring, even years.

PH 645 - LASERS I
Semester Hours: 3

Incoherent light sources; atomic and molecular energy levels; equation or motion for probability amplitudes using first-order time dependent perturbation theory; electric dipole interaction. Einstein rate equations and the Planck radiation law; induced dipole moments and frequency dependent susceptibility. Homogeneous and inhomogeneous line broadening mechanisms; laser cavities and modes, elementary laser theory, practical lasers. Prerequisite: upper level undergraduate E&M courses. (This course may be substituted for OSE 645.) Summer.

PH 651 - QUANTUM MECHANICS I
Semester Hours: 3

Free particle motion. Principles of wave mechanics. The Schrodinger equation and one-dimensional potentials. Approximation techniques: WKB, variational method, perturbation theory. Numerical methods. Prerequisites: undergraduate quantum mechanics or modern physics, some high-level programming (e.g., C++, Fortran, Mathematica) experience. Prerequisite with concurrency: PH 607.

PH 652 - QUANTUM MECHANICS II
Semester Hours: 3

PH 654 - OPTICAL TESTING
Semester Hours: 3

Spherometry; refractive index measurements; optical bench measurements of imaging systems via T-bar nodal slide (effective focal length, f-number, axial color, field curvature and distortion, transverse ray aberrations); illumination falloff; image resolution tests (finite object); modulation transfer function; star image testing; knife edge tests; Hartmann tests; Fizeau interferometer and testing configurations; null lens testing of aspheres; wavefront measurements (point diffraction interferometer, radial shear interferometer); (Same as OSE 654.) Spring.

PH 655 - APPLIED QUANTUM MECHANICS
Semester Hours: 3

Application of quantum mechanics in solid state, electronics, materials science, and optics. Topics to include: Hydrogen atom and molecule, excitons, phonons, Bloch’s theorem, periodic boundary conditions, electrons and holes, band structure of simple semiconductors, dipole transitions, optical constants, absorption and emission processes. Introduction to device physics. (Same as OSE 655).

PH 661 - DATA ANAL/STAT METH PH/ASTROPH
Semester Hours: 3

PH 670 - OPTOMECHANICAL DESIGN & MANUF
Semester Hours: 3

Practical aspects of optomechanical design, material selection, fabrication and integration of precision optical components and systems for commercial, space, and military applications. Topics include: fixture design, tolerance analysis, machining methods, thermal stabilization, integrated computer-aided design and analysis, diamond machining, finishing and plating techniques. (Same as OSE 670.) Fall, even years.

PH 671 - OPTICAL FABRIC & TESTING
Semester Hours: 3

Fabrication and testing techniques of optical components and systems. Component measurements: refractive index, curvature, focal lengths, cardinal points and field curvature. Wavefront aberration and transverse aberration function measurements: geometric tests, interferometric tests, null tests. Basics of grinding, figuring, polishing and optical coating. Laboratory experience in manufacturing, polishing, testing, and coating reflective or transmissive optics. Offered on demand.
PH 673 - HIGH ENERGY ASTROPHYSICS
Semester Hours: 3
Radiative Transfer: Blackbody, scattering and diffusion, bremsstrahlung, synchrotron emission, Compton scattering. Relativistic electromagnetism. Plasma effects and introduction to magnetohydrodynamics. Observational aspects of white dwarves, neutron stars and black holes. Accretion and astrophysical jets. Active galactic nuclei and gamma-ray bursts. Offered Fall of odd years.

PH 674 - GEN RELATIVITY & GRAVITATION I
Semester Hours: 3
Special and general relativity: vector and tensor calculus; curved manifolds; elements of differential geometry; physics in curved spacetime; the Einstein equations; simple solutions of the Einstein equations; Schwarzschild geometry and the Kerr spacetime; black holes; sources, propagation, and detection of gravitational waves; a variational approach to general relativity; special topics.

PH 679 - EDUCATION CAPSTONE COURSE
Semester Hours: 3
Capstone experience for student pursuing secondary education certification option for MS degree. Student develops 1 credit, 100 level physics course on instructor-approved topic. Development includes syllabus, textbook evaluation, representative homework assignments, midterm, final, lecture outline, and lecture notes.

PH 680 - SELECTED TOPICS
Semester Hours: 3
Offered upon demand. Topics include: optical surface characterization, superconductivity, aeronomy, properties of solids, laser propagation, collision theory, magnetohydrodynamics. Fall, Spring, Summer.

PH 681 - SELECTED TOPICS
Semester Hours: 3
Offered upon demand. Topics include: optical surface characterization, superconductivity, aeronomy, properties of solids, laser propagation, collision theory, magnetohydrodynamics. Fall, Spring, Summer.

PH 682 - SELECTED TOPICS
Semester Hours: 3
Offered upon demand. Topics include: optical surface characterization, superconductivity, aeronomy, properties of solids, laser propagation, collision theory, magnetohydrodynamics. Fall, Spring, Summer.

PH 683 - SELECTED TOPICS
Semester Hours: 3
Offered upon demand. Topics include: optical surface characterization, superconductivity, aeronomy, properties of solids, laser propagation, collision theory, magnetohydrodynamics. Fall, Spring, Summer.

PH 689 - SELECTED TOPICS
Semester Hours: 3
Offered upon demand. Topics include: optical surface characterization, superconductivity, aeronomy, properties of solids, laser propagation, collision theory, magnetohydrodynamics. Fall, Spring, Summer.

PH 699 - MASTER'S THESIS
Semester Hours: 3-6
Minimum of 6 credit hours required for Plan I M.S. students. Maximum of nine hours credit toward Ph.D. course requirements awarded upon successful completion of master's thesis. Fall, Spring, Summer.

PH 731 - ADVANCED PLASMA THEORY
Semester Hours: 3
Vlasov theory; electrostatic and electromagnetic waves in a hot plasma; wave damping processes; micro-instabilities; quasilinear theory; numerical simulation of plasmas; applications to space and astrophysics. Prerequisite: PH 531, experience with a high-level programming language. Spring, odd years.

PH 732 - ELECTROMAGNETIC TH II
Semester Hours: 3
Continuation of PH 631. Radiation from accelerated charges; Hamiltonian formulation of electrodynamics; covariant formulation of electrodynamics. Spring.
PH 733 - QUANTUM DEVICES  
Semester Hours: 3

Quantum aspects of optical, electronic, and semiconductor devices approached from a phenomenological/physical point of view. Topics will include: Quantum well devices, optical modulators, optical detectors, quantum Stark effects, electrooptic devices, high speed optical devices, frequency chirping in high speed devices and system applications. (Same as OSE 755.) Fall, odd years.

PH 745 - LASERS II  
Semester Hours: 3

The propagation of optical beams in homogeneous and lens-like media, optical resonators, interaction between radiation and atomic systems, laser oscillations and specific laser systems, switching and mode-locking of lasers, noise in laser amplifiers and oscillators, modulation of optical radiation. Fall, even years.

PH 746 - NON-LINEAR OPTICS  
Semester Hours: 3

PH 751 - COMPUTATIONAL QUANTUM MECH  
Semester Hours: 3

PH 752 - QUANTUM MECHANICS II  
Semester Hours: 3

PH 753 - QUANTUM FIELD THEORY  
Semester Hours: 3

Formalism of quantum field theory, construction and evaluation of Feynman diagrams for quantum electrodynamics and the weak interaction, first-order processes, renormalization, particle scattering and decay, nucleon structure, introduction to quantum chromodynamics, accelerator experiments, and astrophysical applications.

PH 789 - SELECTED TOPICS  
Semester Hours: 3

Topics include superconductivity, advanced plasma theory, properties of solids, laser propagation, collision theory, quantum electronics, gravitational theories. Fall, Spring, Summer.

PH 792 - PHYSICS SEMINAR  
Semester Hour: 1

Students attend seminars by invited speakers. Two semesters are required for all M.S. students and three semesters for Ph.D. students. Does not count toward minimum degree requirements. Fall, Spring.

PH 795 - ADV PHYSICS PROJECT LAB  
Semester Hours: 3-6

Advanced laboratory research in one of the departmental research groups. Student works on an independent or group project. Completion of the course requires a written report that becomes part of the student’s record. Fall, Spring, Summer.

PH 799 - DOCTORAL DISSERTATION  
Semester Hours: 3-9

Prerequisites: Students must have passed the comprehensive examination at Ph.D. level and have Ph.D. advisor’s approval. No more than 9 hours may be taken prior to passing the qualifying examination. Fall, Spring, Summer.

PH ADD - GEN PHYSICS II & LAB/AL A&M  
Semester Hours: 4

**Physics, PhD**

To obtain the Ph.D. degree in physics, a student must satisfy all requirements of the Graduate School as well as those in the Department of Physics. The major steps toward a Ph.D. degree are as follows:

1. Take the necessary core courses and pass the Comprehensive Exam at the Ph.D. Level.
Required core courses for the Ph.D. degree are:

- PH 601  CLASSICAL DYNAMICS I  3
- PH 607  MATHEMATICAL METHODS I  3
- PH 609  MATHEMATICAL METHODS II  3
- PH 621  STAT MECH KINETIC THRY I  3
- PH 622  STAT MECH KINETC THRY II  3
- PH 631  ELECTROMAGNETIC THEORY I  3
- PH 651  QUANTUM MECHANICS I  3
- PH 652  QUANTUM MECHANICS II  3
- PH 732  ELECTROMAGNETIC TH II  3

Total Semester Hours 27

The Comprehensive Exam is offered every August, and covers the material in the core courses given above except PH 622 and PH 732, which are usually taken after the Exam. There are sections dealing with quantum mechanics, electromagnetic theory and relativity, and classical and statistical mechanics. A full-time course schedule leading to the Comprehensive Exam at the start of the Fall semester of the second year is listed below.

Admission to the Ph.D. program in physics is granted upon passing the Comprehensive Examination at the Ph.D. level. Students are permitted two attempts to pass the Comprehensive Examination. A student who fails on the first attempt must retake the examination the following year. Full-time students are generally expected to take the exam for the first time at the start of their second year. Further details are found on the Department's (http://uah.edu/physics) website.

Year 1

</tr>
</tbody>
</table>

2. Form a supervisory committee and a Program of Study.

Once the Comprehensive Examination is passed, a student should proceed to form a supervisory committee and prepare a Program of Study. A Program of Study will consist of

- a minimum of 48 credit hours of graduate coursework. A maximum of 9 semester hours of PH 699 from a completed M.S. degree with thesis may be allowed to count toward this 48 semester hour requirement.
- three semesters of PH 792 with a grade of “S”. Seminar semester hours do not count toward the 48 credit hours above.
- at least 18 semester hours of PH 799. No more than 9 of these semester hours may be taken prior to passing the Qualifying Examination (see below).

Courses in addition to those enumerated above can be selected in consultation with the student’s advisory committee. Transfer of credit from other institutions requires approval of the advisory committee, the Department Chair, and the Graduate Dean.

3. Pass the Qualifying Examination.

After preliminary work on their chosen Ph.D. dissertation topic, the student must then pass the Ph.D. Qualifying Examination. This examination is conducted under the auspices of the Graduate School, and tests the student’s general fitness for pursuing a research project in their chosen area
and their general knowledge of physics. There are written and oral components to this exam. The written part consists of the student’s responses to questions submitted by their Committee; these questions can deal with the specific proposed research or the general area of research (such as optics or astrophysics, as covered, e.g., in the elective courses taken in this area). The oral part is a presentation and defense of the proposed research.

4. Complete and defend a research dissertation.

Each student must complete and successfully defend a research dissertation, which must be approved by the student’s supervisory committee, the Chair of the Physics Department, the Dean of the College of Science, and the Dean of the Graduate School. A significant portion of the dissertation should be submitted for publication in an approved journal with international circulation.

**Physics, MS**

There are three M.S. options in physics:

- thesis
- non-thesis
- secondary education certification

Required core courses for each are:

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
<th>Hours</th>
</tr>
</thead>
<tbody>
<tr>
<td>PH 601</td>
<td>CLASSICAL DYNAMICS I</td>

<td>PHYSICS SEMINAR (two semesters)</td>
<td>1</td>
</tr>
<tr>
<td>PH 792</td>
<td>PHYSICS SEMINAR</td>
<td>1</td>
</tr>
</tbody>
</table>

**Total Semester Hours** 23

1 All M.S. students are required to complete two semesters of PH 792 with a grade of “S”; these semester hours do not, however, count toward minimum degree requirements given below.

Students should complete a Program of Study with the help of their faculty advisor before the completion of 12 semester hours of graduate coursework. A Program of Study is a detailed list of courses that the student will take to satisfy the appropriate degree requirements.

**M.S. with Thesis**

A student must take at least 24 semester hours in graduate courses, plus at least 6 semester hours of PH 699, culminating in the successful defense of their thesis. Students writing a thesis do not need to take the Comprehensive Examination.

**Optics and Photonics Technology Curriculum**

The OPT (PH) M.S. degree program is comprised of a minimum of 27 semester hours of graduate coursework, plus a minimum of 6 semester hours of PH 699. The thesis option is the only available route to the OPT degree. Students may pursue the OPT option through either the Physics Department (PH) or the Electrical & Computer Engineering Department (ECE). The OPT (PH) program of study, available on the Department website http://physics.uah.edu, meets the Department of Physics M.S. degree requirements and is suggested for students coming from a physics background. Students in this category, having a Physics Department faculty member as an advisor, will be designated as having Physics as their “home” department. Courses have been chosen such that little or no prior graduate work in physics is required. The OPT degree program does not prepare the student for taking the Physics Comprehensive Exam or the OSE Preliminary Exam. Requirements for students seeking the OPT degree through the Electrical Engineering department, OPT (ECE), may be significantly different.

**M.S. without Thesis**

A student must take at least 33 semester hours of graduate coursework, and achieve an M.S. passing grade on the Comprehensive Examination. This exam is offered every August, and also serves as the preliminary examination for the Ph.D. degree program. The Comprehensive Examination is on material covered in the core courses given above, and thus has sections dealing with quantum mechanics, electromagnetic theory and relativity and classical and statistical mechanics. Criteria for an M.S. or Ph.D. pass are given on the Department’s web site.

For students in the Optical Science and Engineering (OSE) Ph.D. program who desire an M.S. degree in physics, a passing grade on the OSE Preliminary Examination is an acceptable substitute for the Comprehensive Examination.
A full-time course schedule leading to the Comprehensive Exam at the start of the Fall semester of the second year is listed below.

</tr>
</tbody>
</table>

Nine (9) Remaining Semester Hours

The remaining 9 semester hours of graduate coursework can be taken in the Physics Department (for advanced study in optics, space physics, astrophysics, or planetary science) or from another department such as Atmospheric Science. Students need to consult with their advisor regarding the selection of topical elective courses.

M.S. with Certification

With this option, also called the Alternative Fifth-year Program in the Education Department section of the Graduate Catalog, students are awarded an M.S. degree in physics as well as Class A (Master’s level) Teaching Certification by the State of Alabama. We strongly encourage students to investigate this rewarding career option.

This program is available to students who do not already have a Class B (baccalaureate level) Teaching Certification. Requirements are 27 graduate semester hours in education courses and 24 graduate semester hours in physics courses. The education courses are specified in the Education Department section of this catalog, and include a high school internship. The physics courses include the core courses above, plus 9 additional semester hours. Three of the 9 additional hours will be PH 679 the required Capstone Course for this M.S. option. Neither the Comprehensive Exam nor a thesis is required for this option. However, a thesis can replace the Capstone Course, if desired.

Space Science

Web Site: http://www.uah.edu/science/departments/space-science

Cramer Research Hall/NSSTC
Telephone: 256-961-7479
Email: space-science@uah.edu

Chair: Gary P. Zank, Eminent Scholar and Distinguished Professor

The Space Science department offers the following graduate degree programs:

• Master of Space Science
• Doctorate of Space Science

Program Objective

The Space Science department will provide opportunities through our graduate program for students to be introduced to and engage in cutting edge research in solar physics, heliospheric science, cosmic ray physics, and high-energy astrophysics with faculty from the Department of Space Science and with our research partners: The University of Alabama in Huntsville's (UAH's) Center for Space Plasma and Aeronomic Research (CSPAR) and
Marshall Space Flight Center (MSFC). Additionally, the department will provide a unique unified Space Science graduate program under the umbrella of a single university department.

**Learning Outcomes**

Students will demonstrate:

- Inculcated problem solving skills through introductory research in the field of space science for future use in science, engineering, teaching, and technology professions
- Ability to write a scholarly document
- Ability to prepare and deliver an effective oral scientific presentation

**Master's Program in Space Science**

http://www.uah.edu/science/departments/space-science

Information below is intended for prospective students who are considering a Master's degree in Space Science from UAH.

All questions about enrolling in our M.S. program should be directed to Dr. Jacob Heerikhuisen (jacob.heerikhuisen@uah.edu), Chair of the SPA Graduate Committee.

**Requirements for M.S. Degree - Thesis Option**

1. Complete the core coursework (15 credit hours), see Core Courses below.
2. Complete an additional 9 credit hours of elective courses. These are chosen from the Elective Courses list.
3. Complete SPA 582 and SPA 796 once.
5. Write and defend a Master's thesis.

**Requirements for M.S. Degree - Non Thesis Option**

1. Complete the core coursework (15 credit hours), see Core Courses below.
2. Complete an additional 15 credit hours of elective courses. These are chosen from the Elective Courses list.
3. Complete SPA 582 and SPA 796 once.
4. Pass a Comprehensive Examination ("Comps"). The Comps are offered annually during the summer semester and consist of three sections: (a) Electromagnetic Theory, (b) Classical and Quantum Statistics, and (c) Plasma Physics. A passing grade of 40% or above in all three sections is required for a M.S. pass.

Doctoral Program in Space Science

http://www.uah.edu/science/departments/space-science

Requirements for a Ph.D. degree

1. Complete the core coursework (18 credit hours), see Core Courses below.
2. Complete an additional 30 credit hours of elective courses. These are chosen from the Elective Courses list.
3. Complete SPA 796 four times (only 1 credit hour counts toward degree hours).
4. Complete SPA 582 once.
5. Pass a Comprehensive Examination (“Comps”). The Comps are offered annually during the summer semester and consist of three sections: (a) Electromagnetic Theory, (b) Classical and Quantum Statistics, and (c) Plasma Physics. A passing grade of 60% or above in all three sections is required for a Ph.D. pass.
6. Pass a Ph.D. qualifier exam. This step involves writing a dissertation proposal and forming a Ph.D. committee, that would normally consist of the student's faculty adviser and at least four other members from the UAH graduate faculty. We encourage students to invite at least one committee member external to the department.
7. Complete 18 credit hours of dissertation units SPA 799.
8. Write and defend a Ph.D. dissertation.

SPA 522 - INTRODUCTION TO PLASMA PHYSICS
Semester Hours: 3

Provides students with an introduction to the basic physical processes associated with plasmas, which permeate all space environments. Both particle and fluid approaches are introduced, and a variety of elementary drift and wave phenomena are derived. Applications of the theory to various plasma instabilities are explored, along with specific examples of where these may occur in space science. While the goal of this course is to prepare students for more advanced topics in space physics, many of the fundamentals covered are equally relevant for students interested in plasma confinement and its associated engineering challenges.

SPA 526 - SPACE WEATHER
Semester Hours: 3

Physics of solar active regions, physics of solar flares and coronal mass ejections (CMEs), the propagation of CMEs, the acceleration and propagation of solar energetic particles, CME interaction with earth’s magnetosphere.

SPA 532 - SPACE ORIENTATION EDUCATORS
Semester Hours: 3

A weeklong course at the U.S. Space and Rocket Center in Huntsville, Alabama for pre-service and in-service teachers. The inquiry based workshops are taught around the theme of space exploration include activities to be done across the curriculum. All activities are correlated to National Math, Science, Technology, Social Studies, and Reading Standards. Activities based on curriculum developed by NASA, CAP, NSATA, and the USSRC. Topics include moon, mars, rocketry, propulsion, hydroponics, math, biology, history and literature.

SPA 582 - SCIENCE CAREER PREP
Semester Hour: 1

This course will review many of the soft skills necessary to function as a successful scientist, whether in an academic career, in a federal laboratory, a for-profit research career in a company, or even a commercial career. Your career begins with graduate school, and learning the skills for a successful graduate career will carry over to your professional career. The goal of the course is impart wisdom from successful graduate students and career scientists, providing both a basis for a successful graduate career and your subsequent career. The course will help students reduce the learning things “the hard way” approach by providing guidance for your career path. Each week will focus on a different skill that a career scientist requires.
SPA 610 - ADV MATH METHODS FOR SPA SCI
Semester Hours: 3

This course will focus on analytical methods for a series of advanced topics with an emphasis on practical applications to space science, such as Vector and Fourier Analysis, ODEs/PDEs in space science, and Green's functions, Spherical Harmonics, Spectral Analysis, Wavelet Transforms, Fractals and Complexity, and Inverse Problems.

SPA 622 - CLASSICAL & QUANTUM STATISTICS
Semester Hours: 3

SPA 623 - TRANSPORT PROCESSES IN SPACE
Semester Hours: 3

Course presents a systematic treatment of classical and anomalous transport theory for gases, plasmas, energetic particles, and low frequency turbulence. The Chapman-Enskog approach is used to derive transport coefficients for neutral gases and collisional plasmas. The relationship between multi-fluid and MHD models is presented. Weak solutions and shock waves are discussed. The transport of energetic particles that experience scattering by magnetic field fluctuations is presented, together with basic models of the turbulence responsible for scattering turbulence transport in expanding flows such as the solar wind.

SPA 624 - SPACE PHYSICS I
Semester Hours: 3

A broad introduction to particle, MHD, and kinetic phenomena in space. This course is intended for all students interested in space, astro-, and plasma physics. Course covers fusion processes inside the Sun, solar neutrinos, solar atmosphere, coronal magnetic fields, physical mechanisms of magnetic field line reconnection and magnetic dynamo, the interaction between the solar wind with planets and the interstellar medium, corotating and merged interaction regions, collisional and collisionless shock waves in space. Includes an introduction to charged particle acceleration in the heliosphere. Examines differences between planetary magnetospheres, solar-terrestrial relationships, solar activity, climate, and culture. Prerequisite: SPA 522, SPA 631 (w/concurrency).

SPA 625 - SPACE PHYSICS II
Semester Hours: 3

The course develops a deeper understanding and knowledge of plasma instabilities, kinetic dispersion relations, microinstabilities, electrostatic and electromagnetic instabilities; advanced magnetohydrodynamics including MHD turbulence, reconnection; wave-particle interactions, including basic quasi-linear theory; weak and strong wave turbulence; nonlinear waves; collisionless shock waves. Prerequisite: SPA 624.

SPA 627 - HIGH ENERGY RADIATION DET&MSRM
Semester Hours: 3

This course will provide students with basic understanding of radiation detection for space-based missions. This course will cover the basic nuclear processes in radioactive sources and the interaction of radiation with matter. The statistical treatment of experimental data will be reviewed. General characteristics common to all types of detectors will be given. We will then cover specific classes of detectors focusing on ionization, scintillation and semiconductor detectors. Light collection and detection techniques will follow. The student will then be introduced to basic signal processing and timing techniques important to a successful instrument design. This course will be taught from a physicist point of view emphasizing the physical processes and interactions that make detection of radiation possible. This course is suitable for those students interested in detector development or astrophysical data analysis using state-of-the-art technology.

SPA 628 - SOLAR PHYSICS
Semester Hours: 3

The workings of the sun, from its interior to the outer reaches of the corona with emphasis on the observations. Energy release in core of the Sun and its transport to the solar atmosphere. Dynamo process and the 11 year solar activity cycle. Formation of active regions and structure of sunspots. The structure of corona, with particular details on the active region corona and its heating to several million kelvin. Energy release processes including solar flares and coronal mass ejections.

SPA 629 - ASTROPHYSICAL FLUID DYNAMICS
Semester Hours: 3

Covers astrophysical phenomena occurring outside the boundaries of the solar system. Subjects include stellar structure and rotation, waves and instabilities in astrophysical plasmas, the physics of spherical and disk accretion, supernova blast waves, and charged particle transport and acceleration in cosmic plasmas. Introduction to the principles of stellar formation, helioseismology, stellar dynamo, coronal heating, and astrophysical turbulence. Prerequisite: SPA 522.
SPA 630 - WAVES IN FLUIDS
Semester Hours: 3

Comprehensive introduction to the science of wave motions in fluids. Waves and first-order (hyperbolic) equations, wave hierarchies: gas dynamics and fluid equations; acoustics, nonlinear plane waves, simple waves, shock waves and structure, shock reflection, similarity solutions, supersonic flows in gas dynamics; the wave equation, including plane, spherical and cylindrical waves, geometrical optics, including far-field approximation, caustics, nonhomogeneous media, anisotropy; water waves, including shallow water theory; group velocity, dispersion; nonlinear waves, including Korteweg-de Vries, sine-Gordon, and nonlinear Schrödinger equations, solitons. Prerequisite: SPA 610.

SPA 631 - WAVES AND FIELDS
Semester Hours: 3

SPA 636 - ADV SPACE WEATHER
Semester Hours: 3

Advanced topics in Space Weather with emphasis on practical effects and impacts on human technology and society: interaction of solar disturbances with Earth's magnetosphere, Solar Energetic Particles, and their effects; Forecasting and Nowcasting of Space Weather; Space Weather at Mars and other planets. Prerequisite: SPA 522.

SPA 662 - COMPUTATIONAL PHYSICS
Semester Hours: 3

SPA 663 - COMPUTATIONAL FLUID DYNAMICS & MHD
Semester Hours: 3

Numerical simulations of various problems in space physics, astrophysics, engineering, and plasma dynamics. Finite-volume and finite-difference, shock-capturing and shock-fitting methods for hyperbolic equations, including gas dynamics, MHD, and shallow water equations. The hierarchy of numerical methods is introduced in a systematic way, starting from standard linear schemes and arriving at modern discontinuity-capturing non-linear methods. Exact and approximate Riemann solvers, characteristic analysis of underlying equations. Different implementations of boundary conditions are introduced in relation with the mathematical properties of quasilinear hyperbolic systems. Prerequisite: SPA 624, SPA 662.

SPA 689 - SELECTED TOPICS
Semester Hours: 3

Selected Topics in Space Science not covered in other courses.

SPA 699 - MASTER'S THESIS
Semester Hours: 1-6

SPA 741 - PHYSICS OF COSMIC RAYS
Semester Hours: 3

Covers two principal areas of cosmic ray physics: (i) cosmic ray origin and acceleration, and (ii) cosmic ray transport and detection. Includes galactic cosmic rays, anomalous cosmic rays, and solar energetic particles. Transport theory, acceleration mechanisms and observational signatures. Prerequisite: SPA 623.

SPA 742 - GAMMA-RAY BURSTS AND JETS
Semester Hours: 3

SPA 771 - COMPETITIVE GRANT WRITING WKSP
Semester Hour: 1

This course is designed for senior level graduate students who are about to graduate and start their professional career. It will introduce students to the real and complete process of competing for grant support. It is comprised of a series of lectures (workshops), case studies, and ends with a formal proposal from each participant and a mock review process.
SPA 789 - SELECTED TOPICS
Semester Hours: 3

Selected Topics in Space Science not covered in other courses.

SPA 796 - JOURNAL CLUB
Semester Hour: 1

This course requires graduate students to read, interpret and present literature critically to fellow students, researchers, and faculty. Students stay abreast of current knowledge in the field, develop presentation skills and promote department unity. Faculty instructor will lead, assign, and provide students feedback on their presentations.

SPA 799 - DOCTORAL DISSERTATION
Semester Hours: 1-9

Students must have passed the Comprehensive Examination at PhD level and have PhD advisor's approval. No more than 9 hours may be taken prior to passing the Qualifying Examination.

Space Science, MS

Mission

The Department of Space Science's primary objective is to prepare the next generation of space professionals and workforce by educating and providing opportunities for our graduate students to engage in cutting-edge research in solar physics, heliospheric science, cosmic ray physics, and high-energy astrophysics. Our graduate students will be afforded a unique unified Space Science graduate program under the umbrella of a single university department while introducing students to an academic discipline, solar and space physics, with global consequences that are both intellectually stimulating and relevant to society with faculty from the Department of Space Science and our research partners: The University of Alabama in Huntsville’s Center for Space Plasma and Aeronomic Research and Marshall Space Flight Center.

The Master's degree program in Space Science empowers our graduate students to think analytically on real science and technology problems to become part of a multi-talented, creative workforce for the future of the United States. The Department of Space Science strives to increase the diversification of the space professional and workforce population by encouraging the participation of women and underrepresented groups in the Space Science program.

Our secondary objective is to enhance and promote space subjects and disciplines locally at UAH, in the community of Huntsville, and within the state of Alabama through scientific research, outreach, and community partnerships with schools and other educational institutions. Our M.S. program teaches problem solving and communication skills for future science, engineering, and technology professionals through research in the field of Space Science in order to meet current and future technology needs and demands by training students to formulate and solve technical problems in general research, commercial, and industrial settings. We also provide teachers and educators with opportunities to develop and strengthen their knowledge and skills in space-related fields, as well as promote space science nationally and internationally through faculty and student research.

Admission Requirements

The Department of Space Science will follow the guidelines set by the Graduate School at The University of Alabama in Huntsville as the primary criteria for selecting students for admission into the program. In addition, the department faculty will carefully evaluate the past performance of each student, as documented in transcripts for all undergraduate and graduate courses. The GRE will be required for all students and TOEFL or IELTS is required for all international students. Letters of recommendation will be used to assess the student’s potential for graduate school. Finally, the student must demonstrate a strong interest in performing research in Space Science, as indicated in the personal statement on his or her application.

Expectations of the students:

- To be technically competent in space-related fields; able to work on diverse technical problems that typically arise in a technologically-based work and industry environment; able to communicate effectively the results of their work to the professional community through reports and presentations; or to present technical space-related material to students at the high school and junior college level, and to promote their science to the public with outreach activities.

- For those students desiring to enter a non-space science related field, we expect our students to have learned the technical and communications skills to meet the needs of a technologically-based society, and who can contribute to the broader research, industry, and commercial sectors, i.e., we do not just train our students to be future scientists but instead have the skills and training to contribute to a highly technological society throughout the world. The M.S. program will focus on the development and provision of technical skills to graduate students. M.S. graduates will fit more directly into technical/industry and educational workforce.

Information below is intended for prospective students who are considering a Master's degree in Space Science from UAH.

All questions about enrolling in our M.S. program should be directed to Dr. Robert Preece (rob.preece@nasa.gov), Chair of the SPA Graduate Committee.

Requirements for M.S. Degree - Thesis Option

1. Complete the core coursework (21 credit hours), see Core Courses below.
2. Complete an additional 9 credit hours of elective courses. These are chosen from the Elective Courses list.
4. Write and defend a Master's thesis.

Requirements for M.S. Degree - Non Thesis Option

1. Complete the core coursework (21 credit hours), see Core Courses below.
2. Complete an additional 15 credit hours of elective courses. These are chosen from the Elective Courses list.
3. Pass a Comprehensive Examination ("Comps"). The Comps are offered annually during the summer semester and consist of three sections: (a) Electromagnetic Theory, (b) Classical and Quantum Statistics, and (c) Plasma Physics. A passing grade of 40% or above in all three sections is required for a M.S. pass.

Semester Hours: 1-9

Students must have passed the Comprehensive Examination at PhD level and have PhD advisor’s approval. No more than 9 hours may be taken prior to passing the Qualifying Examination.

Space Science, PhD

Mission

The Department of Space Science’s primary objective is to prepare the next generation of space professionals and workforce by educating and providing opportunities for our graduate students to engage in cutting-edge research in solar physics, heliospheric science, cosmic ray physics and high-energy astrophysics. Our graduate students are afforded a unique unified Space Science graduate program under the umbrella of a single university department, while introducing students to an academic discipline, solar and space physics, with global consequences that are both intellectually stimulating and relevant to society with faculty from the Department of Space Science and our research partners: UAH’s Center for Space Plasma and Aeronomic Research and Marshall Space Flight Center.

The Doctoral degree program in Space Science empowers our graduate students to think analytically about real science and technology problems to become part of a multi-talented, creative workforce for the future of the United States. The Department of Space Science strives to increase the diversification of the space professional and workforce population by encouraging the participation of women and underrepresented groups on the Space Science program.

Our secondary objective is to enhance and promote space subjects and disciplines locally at UAH, in the community of Huntsville, and within the state of Alabama through scientific research, outreach, and community partnerships with schools and other educational institutions. Our Ph.D. program teaches problem solving and communication skills for future science, engineering, and technology professionals through research in the field of Space Science in order to meet current and future technology needs and demands by training students to formulate and solve technical problems in general research, commercial, and industrial settings.

Admission Requirements

The Department of Space Science will follow the guidelines set by the Graduate School at The University of Alabama in Huntsville as the primary criteria for selecting students for admission into the program. The Department Faculty will carefully evaluate the past performance of each student, as documented in transcripts for all undergraduate and graduate courses. The GRE will be required for all students and TOEFL or IELTS is required for all international students. Letters of recommendation will be used to assess the student’s potential for graduate school. Finally, the student must demonstrate a strong interest in performing research in Space Science, as indicated in the personal statement on his or her application.

Expectations of the students:

• Ph.D. degree recipients are expected to conduct original, independent research adhering to the principles of scientific rigor and research ethics. A person with a Ph.D. in Space Science will be able to communicate effectively the results of his or her work to the professional community through publications and conference presentations, and to promote science to the public with outreach activities. Graduates who choose to enter a research-oriented field will be ready to seek external funding and write research proposals, successfully competing with the nation’s top scientists in space related fields. They are also expected to serve the world's scientific community through peer review, panel service, meeting organizing, and mentoring activities.
• For those students desiring to enter a non-space science related field, we expect our students to have learned the technical and communications skills to meet the needs of a technologically-based society, and who can contribute to the broader research, industry, and commercial sectors – i.e., we do not just train our students to be future scientists but instead have the skills and training to contribute to a technologically-based society across the world. The Ph.D. program will focus on original research and the development and provision of technical skills, especially programming and analytic, to graduate students.

http://www.uah.edu/science/departments/space-science

Requirements for a Ph.D. degree

1. Complete the core coursework (24 credit hours), see Core Courses below.
2. Complete an additional 18 credit hours of elective courses. These are chosen from the Elective Courses list.
3. Pass a Comprehensive Examination (“Comps”). The Comps are offered annually during the summer semester and consist of three sections: (a) Electromagnetic Theory, (b) Classical and Quantum Statistics, and (c) Plasma Physics. A passing grade of 60% or above in all three sections is required for a Ph.D. pass.
4. Give at least two seminar (Journal Club) presentations. Students are encouraged to share the results of their research work with their peers and faculty members. Journal Club presentations are part of the regular Space Science seminar series.
5. Pass a Ph.D. qualifier exam. This step involves writing a dissertation proposal and forming a Ph.D. committee, that would normally consist of the student's faculty advisor and at least three other members from the UAH graduate faculty. We encourage students to invite at least one committee member from another department or research center.

6. Complete 18 credit hours of dissertation units (SPA 799).

7. Write and defend a Ph.D. dissertation.

8. Students must have a first authored peer reviewed paper published or accepted in a major international journal before their graduation date. Examples of acceptable journals include The Astrophysical Journal, Journal of Geophysical Research, Physics of Plasmas, Geophysical Research Letters, and Physical Review.

SPA 489 - SELECTED TOPICS
Semester Hours: 3
Selected topics in Space Science not covered in other courses.

SPA 522 - INTRODUCTION TO PLASMA PHYSICS
Semester Hours: 3
Provides students with an introduction to the basic physical processes associated with plasmas, which permeate all space environments. Both particle and fluid approaches are introduced, and a variety of elementary drift and wave phenomena are derived. Applications of the theory to various plasma instabilities are explored, along with specific examples of where these may occur in space science. While the goal of this course is to prepare students for more advanced topics in space physics, many of the fundamentals covered are equally relevant for students interested in plasma confinement and its associated engineering challenges.

SPA 526 - SPACE WEATHER
Semester Hours: 3
Physics of solar active regions, physics of solar flares and coronal mass ejections (CMEs), the propagation of CMEs, the acceleration and propagation of solar energetic particles, CME interaction with earth’s magnetosphere.

SPA 532 - SPACE ORIENTATION EDUCATORS
Semester Hours: 3
A weeklong course at the U.S. Space and Rocket Center in Huntsville, Alabama for pre-service and in-service teachers. The inquiry based workshops are taught around the theme of space exploration include activities to be done across the curriculum. All activities are correlated to National Math, Science, Technology, Social Studies, and Reading Standards. Activities based on curriculum developed by NASA, CAP, NSATA, and the USSRC. Topics include moon, mars, rocketry, propulsion, hydroponics, math, biology, history and literature.

SPA 582 - SCIENCE CAREER PREP
Semester Hour: 1
This course will review many of the soft skills necessary to function as a successful scientist, whether in an academic career, in a federal laboratory, a for-profit research career in a company, or even a commercial career. Your career begins with graduate school, and learning the skills for a successful graduate career will carry over to your professional career. The goal of the course is impart wisdom from successful graduate students and career scientists, providing both a basis for a successful graduate career and your subsequent career. The course will help students reduce the learning things “the hard way” approach by providing guidance for your career path. Each week will focus on a different skill that a career scientist requires.
SPA 610 - ADV MATH METHODS FOR SPA SCI  
Semester Hours: 3

This course will focus on analytical methods for a series of advanced topics with an emphasis on practical applications to space science, such as Vector and Fourier Analysis, ODEs/PDEs in space science, and Green's functions, Spherical Harmonics, Spectral Analysis, Wavelet Transforms, Fractals and Complexity, and Inverse Problems.

SPA 622 - CLASSICAL & QUANTUM STATISTICS  
Semester Hours: 3

SPA 623 - TRANSPORT PROCESSES IN SPACE  
Semester Hours: 3

Course presents a systematic treatment of classical and anomalous transport theory for gases, plasmas, energetic particles, and low frequency turbulence. The Chapman-Enskog approach is used to derive transport coefficients for neutral gases and collisional plasmas. The relationship between multi-fluid and MHD models is presented. Weak solutions and shock waves are discussed. The transport of energetic particles that experience scattering by magnetic field fluctuations is presented, together with basic models of the turbulence responsible for scattering turbulence transport in expanding flows such as the solar wind.

SPA 624 - SPACE PHYSICS I  
Semester Hours: 3

A broad introduction to particle, MHD, and kinetic phenomena in space. This course is intended for all students interested in space, astro-, and plasma physics. Course covers fusion processes inside the Sun, solar neutrinos, solar atmosphere, coronal magnetic fields, physical mechanisms of magnetic field line reconnection and magnetic dynamo, the interaction between the solar wind with planets and the interstellar medium, corotating and merged interaction regions, collisional and collisionless shock waves in space. Includes an introduction to charged particle acceleration in the heliosphere. Examines differences between planetary magnetospheres, solar-terrestrial relationships, solar activity, climate, and culture. Prerequisite: SPA 522, SPA 631 (w/concurrency).

SPA 625 - SPACE PHYSICS II  
Semester Hours: 3

The course develops a deeper understanding and knowledge of plasma instabilities, kinetic dispersion relations, microinstabilities, electrostatic and electromagnetic instabilities; advanced magnetohydrodynamics including MHD turbulence, reconnection; wave-particle interactions, including basic quasi-linear theory; weak and strong wave turbulence; nonlinear waves; collisionless shock waves. Prerequisite: SPA 624.

SPA 627 - HIGH ENERGY RADIATION DET&MSRM  
Semester Hours: 3

This course will provide students with basic understanding of radiation detection for space-based missions. This course will cover the basic nuclear processes in radioactive sources and the interaction of radiation with matter. The statistical treatment of experimental data will be reviewed. General characteristics common to all types of detectors will be given. We will then cover specific classes of detectors focusing on ionization, scintillation and semiconductor detectors. Light collection and detection techniques will follow. The student will then be introduced to basic signal processing and timing techniques important to a successful instrument design. This course will be taught from a physicist point of view emphasizing the physical processes and interactions that make detection of radiation possible. This course is suitable for those students interested in detector development or astrophysical data analysis using state-of-the-art technology.

SPA 628 - SOLAR PHYSICS  
Semester Hours: 3

The workings of the sun, from its interior to the outer reaches of the corona with emphasis on the observations. Energy release in core of the Sun and its transport to the solar atmosphere. Dynamo process and the 11 year solar activity cycle. Formation of active regions and structure of sunspots. The structure of corona, with particular details on the active region corona and its heating to several million kelvin. Energy release processes including solar flares and coronal mass ejections.

SPA 629 - ASTROPHYSICAL FLUID DYNAMICS  
Semester Hours: 3

Covers astrophysical phenomena occurring outside the boundaries of the solar system. Subjects include stellar structure and rotation, waves and instabilities in astrophysical plasmas, the physics of spherical and disk accretion, supernova blast waves, and charged particle transport and acceleration in cosmic plasmas. Introduction to the principles of stellar formation, helioseismology, stellar dynamo, coronal heating, and astrophysical turbulence. Prerequisite: SPA 522.
SPA 630 - WAVES IN FLUIDS
Semester Hours: 3

Comprehensive introduction to the science of wave motions in fluids. Waves and first-order (hyperbolic) equations, wave hierarchies; gas dynamics and fluid equations; acoustics, nonlinear plane waves, simple waves, shock waves and structure, shock reflection, similarity solutions, supersonic flows in gas dynamics; the wave equation, including plane, spherical and cylindrical waves, geometrical optics, including far-field approximation, caustics, nonhomogeneous media, anisotropy; water waves, including shallow water theory; group velocity, dispersion; nonlinear waves, including Korteweg-de Vries, sine-Gordon, and nonlinear Schroedinger equations, solitons. Prerequisite: SPA 610.

SPA 631 - WAVES AND FIELDS
Semester Hours: 3

SPA 636 - ADV SPACE WEATHER
Semester Hours: 3

Advanced topics in Space Weather with emphasis on practical effects and impacts on human technology and society: interaction of solar disturbances with Earth's magnetosphere, Solar Energetic Particles, and their effects; Forecasting and Nowcasting of Space Weather; Space Weather at Mars and other planets. Prerequisite: SPA 522.

SPA 662 - COMPUTATIONAL PHYSICS
Semester Hours: 3

SPA 663 - COMPUTATIONAL FLUID DYNAMICS & MHD
Semester Hours: 3

Numerical simulations of various problems in space physics, astrophysics, engineering, and plasma dynamics. Finite- volume and finite-difference, shock-capturing and shock-fitting methods for hyperbolic equations, including gas dynamics, MHD, and shallow water equations. The hierarchy of numerical methods is introduced in a systematic way, starting from standard linear schemes and arriving at modern discontinuity-capturing non-linear methods. Exact and approximate Riemann solvers, characteristic analysis of underlying equations. Different implementations of boundary conditions are introduced in relation with the mathematical properties of quasilinear hyperbolic systems. Prerequisite: SPA 624, SPA 662.

SPA 689 - SELECTED TOPICS
Semester Hours: 3

Selected Topics in Space Science not covered in other courses.

SPA 699 - MASTER'S THESIS
Semester Hours: 1-6

SPA 741 - PHYSICS OF COSMIC RAYS
Semester Hours: 3

Covers two principal areas of cosmic ray physics: (i) cosmic ray origin and acceleration, and (ii) cosmic ray transport and detection. Includes galactic cosmic rays, anomalous cosmic rays, and solar energetic particles. Transport theory, acceleration mechanisms and observational signatures. Prerequisite: SPA 623.

SPA 742 - GAMMA-RAY BURSTS AND JETS
Semester Hours: 3

SPA 771 - COMPETITIVE GRANT WRITING WORKSHOP
Semester Hour: 1

This course is designed for senior level graduate students who are about to graduate and start their professional career. It will introduce students to the real and complete process of competing for grant support. It is comprised of a series of lectures (workshops), case studies, and ends with a formal proposal from each participant and a mock review process.
SPA 789 - SELECTED TOPICS
Semester Hours: 3
Selected Topics in Space Science not covered in other courses.

SPA 796 - JOURNAL CLUB
Semester Hour: 1
This course requires graduate students to read, interpret and present literature critically to fellow students, researchers, and faculty. Students stay abreast of current knowledge in the field, develop presentation skills and promote department unity. Faculty instructor will lead, assign, and provide students feedback on their presentations.

SPA 799 - DOCTORAL DISSERTATION
Semester Hours: 1-9
Students must have passed the Comprehensive Examination at PhD level and have PhD advisor's approval. No more than 9 hours may be taken prior to passing the Qualifying Examination.

Accounting (ACC)

ACC 513 - CORP/PARTNERSHIP/ESTATE TAXES
Semester Hours: 3
Tax accounting for partnerships, corporations, Sub chapter S corporations, estates, and trusts. Tax administration and research are emphasized.

ACC 514 - COST ACCOUNTING
Semester Hours: 3
Development and use of cost data for external reporting and internal planning and control. Topics include cost modeling, job and process costing, standard costing, and budgeting. Development of relevant cost information for special purposes is also considered.

ACC 517 - ACC FOR STATE/LOCAL GOV/NON-PR
Semester Hours: 3
Fund accounting and local governments, hospitals, and universities. Special accounting principles, budgeting, accounting for various funds and account groups are emphasized.

ACC 520 - STATE AND LOCAL TAXATION
Semester Hours: 3
Principles of state income tax, sales, and other excise taxes and property tax. Taxation of interstate commerce will be examined along with US constitutional restrictions on the ability of states to tax interstate commerce.

ACC 532 - ADVANCED AUDITING
Semester Hours: 3
Practical application of auditing concepts and standards. An understanding of auditing principles is reinforced and expanded by exposure to problems and cases.

ACC 533 - FORENSIC ACCOUNTING
Semester Hours: 3
Study of the nature and types of fraud. The course covers the tools and techniques used to prevent, investigate, and detect fraud.

ACC 540 - BASIC GOVERNMENT CONTRACT ACCT
Semester Hours: 3
Basic coverage and principles of government contract accounting with an emphasis on the Federal Acquisition Regulation (FAR).

ACC 541 - ADV GOVERNMENT CONTRACT ACCTG
Semester Hours: 3
Advanced issues in government contract cost accounting with an emphasis on the Federal Acquisition Regulation (FAR) and Cost Accounting Standards (CAS) cost allocation guidelines. Prerequisite: ACC 540.

ACC 570 - SEMINAR/CONT ACCTG ISSUE
Semester Hours: 3
Current topics in professional accounting.

ACC 580 - PROFESSIONAL CERTIFICATION
Semester Hours: 3

ACC 590 - SPECIAL PROJECTS
Semester Hours: 3
Independent study in the field of accounting which is of interest to a student.

ACC 595 - INTERNSHIP IN ACCOUNTING
Semester Hours: 1-3
Internship with a business or government agency that has particular relevance to the educational goals of the program. Students must keep a log and submit a report on their internship.
ACC 600 - FOUNDATIONS ACC MANAGERS & ENG  
Semester Hours: 3

A graduate level introduction to the accounting framework and how it is used in evaluating economic conditions and success in decision making organizations. The course considers financial statements, accounting reports, and accounting terminology that constitutes the language of business. The course also introduces the use of accounting information for decision making, coordinating, motivating, and evaluating.

ACC 602 - MANAGERIAL ACCOUNTING  
Semester Hours: 3

Examines the managerial uses of accounting. The focus is on the students gaining a comprehensive understanding of accounting concepts in decision-making, planning, and control. Prerequisite: ACC 600.

ACC 603 - FINANCIAL STATEMENT ANALYSIS  
Semester Hours: 3

Concepts and techniques of financial statement analysis and decision-making. Topics include elements of financial statements, short and long term debt-paying ability, analysis of profitability, problems in specialized industries, forecasting, business valuation, and equity security analysis.

ACC 607 - ADV ACC INFORMAT SYSTEMS  
Semester Hours: 3

In-depth examination of accounting information systems. Emphasis on computer-oriented systems and current developments in systems.

ACC 614 - COST MANAGEMENT  
Semester Hours: 3

A study of various approaches to identifying and proactively managing the costs of providing services and products. Special attention is given to the development of cost data useful to managers for decision-making, current issues in cost management, and ethical considerations.

ACC 615 - ADV FINANCIAL ACCOUNTING  
Semester Hours: 3

Analysis of issues and alternatives in advanced problem areas including partnerships, intercorporate investments, business combinations, and foreign exchange.

ACC 642 - ADV INTERN/OPR AUDITING  
Semester Hours: 3

Introduction to the methodology of internal and operational auditing and to the utilization of results of the audit by management in decision making.

ACC 650 - SELECTED RESEARCH TOPICS  
Semester Hours: 3

ACC 680 - FINANCIAL ACCOUNTING THEORY  
Semester Hours: 3

A capstone course that includes a study of the historical development and theoretical structure of accounting followed by an appraisal of selected pronouncements of professional accounting organizations.

ACC 699 - MASTER'S THESIS  
Semester Hours: 1-3

Required each semester a student is working on and receiving direction on a masters thesis. A minimum of 2 semesters is required, but not more than six hours of credit is allowed.

Astronomy (AST)

AST 571 - STELLAR ATMOSP/INTERIORS  
Semester Hours: 3

AST 572 - GALACTIC STRUC/COSMOLOGY  
Semester Hours: 3

AST 573 - HIGH-ENERGY ASTROPHYSICS  
Semester Hours: 3

Atmospheric Science (ATS)
ATS 501 - SURVEY OF ATMOSPHERIC SCIENCE  
Semester Hours: 3  
General survey of the field of atmospheric science includes thermodynamics, atmospheric dynamics, cloud physics, and atmospheric radiation. Quantitative examination of atmospheric properties including atmospheric composition, structure and dynamics.

ATS 509 - APPL COMPUTERS IN METEOROLOGY  
Semester Hours: 3  
Survey of scientific programming techniques used in atmospheric sciences. Various data types, control statements, and programming design using object oriented techniques are discussed, emphasizing efficient programming. Course prepares students for graduate work and research in atmospheric science.

ATS 510 - OPERATIONAL WEATHER FORECAST'G  
Semester Hours: 3  
Subjective & objective methods of atmospheric prognosis. Forecasting critical weather elements. Interpretation, use & systematic errors of computer-generated products, human factors, & application of meteorological theory in an operational setting.

ATS 513 - GIS & REMOTE SENSING  
Semester Hours: 3  
Hands-on approach to GIS and satellite remote sensing. Popular satellite data sets such as LANDSAT and AVHRR are coupled with GIS data sets to increase understanding of the earth system. Topics include satellite sensors, basic radiative transfer, orbits, raster formats, atmospheric correction, distortion, image corrections, rotations and mapping, spatial resolution, image interpretation, radiometric and geometric enhancement, multispectral transformations, and classifications. (Same as ATS 413, ES 413, ES 513.) Spring.

ATS 515 - ADVANCED TOPICS IN GIS  
Semester Hours: 3  
Advanced special topics: visualization of GIS and remote sensing data, landscape characterization (pattern vs. process), multitemporal analysis, aggregation of data types, developing an integrated GIS environment for performing complex space-time modeling analyses, and land-atmosphere interactions. (Same as ATS 415, ES 415, ES 515.) Spring.

ATS 520 - INTRO ATMOS CHEM & AIR POLLUTI  
Semester Hours: 3  
An introduction designed to provide students with the basics of atmospheric chemistry and air pollution concepts. Topics include air pollutants, air-pollution meteorology, atmospheric gases and aerosols, and atmospheric processes.

ATS 522 - AIR POLLU:METEOROLOGY CONCEPTS  
Semester Hours: 3

ATS 541 - ATM THERMODYN & CLOUD PHYSICS  
Semester Hours: 3  
Thermodynamic & cloud physical processes in the atmosphere. Atmospheric statics & stability. Role of aerosols in nucleation of cloud and ice particles. Physical processes that produce the growth of hydrometeors in cold and warm clouds. Applicable measurement techniques.

ATS 551 - ATMOS FLUID DYNAMICS I  
Semester Hours: 3  
Fluid dynamics in the atmosphere. Coriolis acceleration, scale analysis and appropriate approximations of the complete governing equations. Numerical analysis and interpretation of weather phenomena.

ATS 553 - ATS RADIATN/REMOTE SENSING  
Semester Hours: 3

ATS 554 - FORECASTING MESOSCALE PROC  
Semester Hours: 3  
Detection and forecasting of atmospheric mesoscale phenomena including the structure and evolution of clouds, precipitation (including floods) thunderstorms and severe weather. Includes basics of instruments used to detect mesoscale phenomena, most notably satellite and radar. Prerequisites: ATS 551.

ATS 561 - ATMOSPHERIC RADIATION I  
Semester Hours: 3  
Fundamentals of terrestrial atmospheric radiation. Topics include: basic concepts, radiative transfer equation, gaseous absorption, scattering by molecules and particles, band models, transmittance along an inhomogeneous path.
ATS 571 - INTRO TO RADAR METEOROLOGY  
Semester Hours: 3

Introduction to principles of radar meteorology, including radar operations, hardware, interpretation and analysis. Doppler, dual-polarization and dual-wavelength radar theory, methods and applications are covered. Prerequisite: ATS 541.

ATS 581 - ATS THERMODYNAMICS & CHEM  
Semester Hours: 3

ATS 590 - SPECIAL TOPICS  
Semester Hours: 1-3

Selected topics of interest not included in other courses.

ATS 603 - CLIMATE DYNAMICS  
Semester Hours: 3

Origin and evolution of the climate system including underlying causes for past climates such as occurred during the ice ages. Statistical processing of various time series to extract climactic signals in the data. Determination of global-scale forcing mechanisms, which impact climate. Prerequisites: ATS 541 and ATS 551.

ATS 606 - DATA ANALY ATMOSPHERIC SCNTS  
Semester Hours: 3

A theoretical and practical introduction to various data analysis methods commonly used in atmospheric science. Topics include forecasting techniques to generate models to fit data, assess models using parametric tests, probability theory and Monte Carlo methods to solve a variety of problems. Prerequisites: ATS 509.

ATS 620 - ATMOSPHERIC CHEMISTRY & AEROSI  
Semester Hours: 3

Primary processes, thermodynamics, photochemistry, kinetics, models, and measurements applied to troposphere and stratosphere; natural and anthropogenic; chlorine, nitrogen, hydrogen, and oxygen catalytic cycles; ground- and satellite-based observations of trace species. Prerequisites: ATS 520.

ATS 622 - AIR POLLUTION MODELING  
Semester Hours: 3

Air pollution Langrangian and Eulerian modeling concepts and methods from micro to synoptic scales; plume, large eddy simulations and urban-regional models in research and regulatory applications; transport, dispersion, chemistry, clouds, aerosols, and wet/dry deposition. Prerequisites: ATS 520 and ATS 551.

ATS 630 - PHYSICAL CLIMATOLOGY  
Semester Hours: 3

This course examines the physical aspects of the global climate system, including the global energy balance, surface energy balance, hydrologic cycle, climate classification, ocean change and other selected topics such as climate sensitivity. Prerequisites: ATS 501 or 541.

ATS 635 - GENERAL CIRCULATION  
Semester Hours: 3

Detailed examination of the observed dynamic, thermodynamic and chemical structure of the atmosphere, including mid-latitude baroclinic systems, tropical systems, global-scale energy, mass and momentum budgets and the fundamental climatology of the atmosphere. Prerequisites: ATS 541 and ATS 551.

ATS 642 - PRECIP PHYSICS FOR RADAR  
Semester Hours: 3

Cloud microphysics theory, models, in-situ and radar observations of hydrometers will be utilized together to explore advanced concepts in precipitation physics and their connection to radar meteorology, including coalescence, break-up, freezing, size sorting, aggregation, riming and melting.

ATS 651 - ATMOS FLUID DYNAMICS II  
Semester Hours: 3

Wave motions in the atmosphere with emphasis of Rossby, Kelvin and gravity waves. Systematic scaling of primitive equations to develop quasigeostrophic and Ekman-layer theory. Shallow water theory, stratified flows, and barotropic and baroclinic instability. Prerequisites: ATS 551.
ATS 652 - ADV SYNOPTIC METEOROLOGY
Semester Hours: 3
Analysis, interpretation and forecasting synoptic-scale and mesoscale phenomena, including air masses, frontal systems, cyclones, anti-cyclones and waves toward understanding process dynamics. Emphasize the use of observational, satellite and numerical model data, including radars and profilers. Prerequisites: ATS 541 and ATS 551.

ATS 654 - FORECASTING MESOSCALE PROCESSES
Semester Hours: 3

ATS 655 - BOUNDARY LAYER METEOROLOGY
Semester Hours: 3
Survey of atmospheric boundary layer (ABL) properties. Review of turbulence, convective and stable boundary layers, surface forcing, boundary layer discontinuities, and singular phenomena within the ABL. Atmospheric field measurements are used to enhance understanding of ABL process. Prerequisites: ATS 541 and ATS 551.

ATS 656 - TROPICAL METEOROLOGY
Semester Hours: 3
Overview concepts of the dynamics and climatology of the tropics and of significant tropical precipitation systems. Topics also include Kelvin waves, equatorial flows, convective scale dynamics, island meteorology, tropical cyclones, ENSO, radiative-convective equilibrium, gregarious cloud systems. Prerequisites: ATS 541 and ATS 551.

ATS 657 - NOWCASTING THEORY METHODS
Semester Hours: 3
Theory, methods and applications of 0-6 hour weather and ecological prediction, which is a forecast time period when numerical prediction models have low skill. Topics include predictability, data assimilation, statistical methods, and algorithms using Earth and atmospheric science observations.

ATS 670 - SATELLITE REMOTE SENSING I
Semester Hours: 3
Using a hands-on approach, this course covers a broad range of topics concerning digital image processing applied to the remote sensing of atmospheric, cloud and surface properties using various satellite data sets. Prerequisites: ATS 509.

ATS 671 - GROUND BASED REMOTE SENSING
Semester Hours: 3
Principles and measurement capabilities of active and passive ground-based remote sensing systems: radar, wind profiler, lidar, sodar, and passive radiometer systems. Integration of remote sensing measurements to retrieve properties of atmospheric phenomena. Hands on usage and field measurements. Prerequisites: ATS 541.

ATS 672 - DUAL POLARIZATION RADAR METRMLGY
Semester Hours: 3
Theory, analysis and interpretation of dual polarization radar for meteorological applications. Course covers dual polarization radar system hardware; the basic theory underlying polarimetric radar data and methodology; analysis, interpretation and application of polarimetric radar variables; and dual meteorological and convective weather applications; specifically, precipitation measurement and hydrometeor identification. Example applications include rain rate estimation, drop size determination, hail identification, tornado detection, snow vs rain delineation, and cloud electrification studies. Prerequisites: ATS 571.

ATS 673 - LIGHTNING
Semester Hours: 3
An introduction to lightning. Topics include qualitative and quantitative description of lightning discharges; electrification of thunderstorms; temporal and spatial variation of lightning on multiple scales; various types of lightning; basic lightning models; current methods of measuring lightning. Prerequisites: ATS 509.

ATS 675 - ATMOSPHERIC DATA ASSIMILATION
Semester Hours: 3
Data assimilation methods and concepts including objective analysis and initialization as relevant to numerical weather prediction. Emphasis on variational methods, successive correction, optimal interpolation, adjoint and gradient concepts, singular vectors, Kalman filters and nudging. Prerequisites: ATS 541 and ATS 551.
ATS 681 - NUMERICAL ATMOS MODELING  
Semester Hours: 3  
Introduction to numerical methods applied to simulation of the atmosphere. Basic numerical solution techniques, along with filtering, radiative parameterizations, thermodynamics, turbulent parameterization, initialization and coordinate transformation. Prerequisites: ATS 551.

ATS 690 - SEL TOPICS IN ATMOS SCI  
Semester Hours: 1-4  
Selected topics of interest not included under other courses.

ATS 699 - MASTER'S THESIS  
Semester Hours: 1-6  
Required each semester a student is enrolled and receiving direction on a master's thesis.

ATS 740 - CLOUD PROCESSES  
Semester Hours: 3  
Theory and observations of the bulk microphysics and kinematic structures of clouds. Topics include: interactions among dynamical, microphysical and thermodynamic processes within cloud systems, the dynamics of organized convective systems, and remote sensing of clouds and precipitation features. Prerequisites: ATS 541 and ATS 551.

ATS 761 - ATMOSPHERIC RADIATION II  
Semester Hours: 3  
Advanced topics in atmospheric radiative transfer. Specific topics include Maxwell equations, Mie theory, polarization and radiative transfer in a scattering atmosphere. Prerequisites: ATS 561.

ATS 762 - MICROPARTICLE OPT & RADIOMETRY  
Semester Hours: 3  

ATS 770 - SATELLITE REMOTE SENSING  
Semester Hours: 3  
Using various satellite data sets and radiative transfer models, this course will train students to calculate and study cloud, aerosol, ocean and land surface properties to assess the radiative energy budget of the earth-atmosphere system. Prerequisites: ATS 670.

ATS 780 - ATMOSPHERIC SCIENCE SEMINAR  
Semester Hour: 1  
Speakers are invited to report on research relevant to the field of atmospheric science. Students are expected to attend at least twelve seminars and to write short descriptions of the presentations.

ATS 781 - STUDENT SEMINAR  
Semester Hour: 1  
Guest speakers report on research relevant to the fields of Atmospheric and Earth System Science. Students are expected to attend weekly seminars, submit a paper based on at least ten talks, and make a 15-minute conference type presentation on a research topic in atmospheric science selected in agreement with their advisor. Prerequisites: ATS/ESS 780.

ATS 782 - PROFESSIONAL DEVELOPMENT  
Semester Hour: 1  
Topics concerning professional ethics, writing scientific journal articles, proposals and resumes, preparing budgets, networking, time management, conference presentations, research administration, funding agencies, stress and burnout will be discussed. Selected topics of interest not included under other courses.

ATS 790 - SEL TOPICS IN ATMOS SCI  
Semester Hours: 1-4  
Selected topics of interest not included under other courses.

ATS 799 - DOCTORAL DISSERTATION  
Semester Hours: 3-9  
Required each semester student is enrolled and receiving direction on a doctoral dissertation.
**Biological Sciences (BYS)**

**BYS 500 - CURRENT CONCEPTS IN BYS/AL A&M**
Semester Hours: 3

**BYS 505 - PSYCHOPHARMACOLOGY**
Semester Hours: 3

Introduction to drug classification and action with emphasis on physiological and psychological interactions. Same as PY 505.

**BYS 508 - FOOD ANALYSIS/A&M**
Semester Hours: 4

**BYS 510 - RADIATION BIOLOGY/A&M**
Semester Hours: 3

Course offered jointly by Alabama A&M University and UAH but which is taught on the A&M campus. Characteristics of radioisotopes, detection and counting techniques and instrumentation, tracer techniques, health and safety system.

**BYS 519 - GENE STRUCTURE & FUNCTION**
Semester Hours: 3

Advanced studies of macromolecular structure and biological function of proteins and nucleic acids involved in the passage of genetic information and cellular response. Structural significance of viruses and molecular evolution included.

**BYS 523 - PRINCIPLES OF ViroLOGY/A&M**
Semester Hours: 3

Course offered jointly by Alabama A&M University and UAH but which is taught on the A&M campus. Principles of viral infectivity, multiplication, and chemical constitution; laboratory techniques for their isolation, cultivation, identification, and enumeration.

**BYS 524 - MYCOLOGY/A&M**
Semester Hours: 4

Course offered jointly by Alabama A&M University and UAH but which is taught on the A&M campus. Lines of phycymycetes using representative species; various series of actinomycetes; representative pathogenic (crop and vegetative pathogens) and nonpathogenic heterobasidiomycetideae organisms; order and families of homobasidiomycetidae. Ontogenetics, cellular, and structural study applied to all divisions, classes, series, orders and families.

**BYS 524L - MYCOLOGY LAB/A&M**
Semester Hour: 1

**BYS 526 - MICROBIAL ECOLOGY**
Semester Hours: 4

Course offered jointly by Alabama A&M University and UAH but which is taught on the A&M campus. Relationship of soil and aquatic microorganisms and their importance in ammonification, nitrification, and other biological processes.

**BYS 528 - PHYSIOLOGY OF REPRODUCTION/A&M**
Semester Hours: 4

**BYS 529 - STATISTICS/AL A&M**
Semester Hours: 4

**BYS 530 - APP. OF GEOSTATISTICS/AL A&M**
Semester Hours: 3

**BYS 532 - MEDICAL PHYSIOLOGY**
Semester Hours: 4

Detailed study of physiology, covering membrane transport, muscle, nerve, heart, lung, gastrointestinal and renal function. Emphasis will be on homeostasis, genetic disease and pharmacological therapy.

**BYS 532L - LABORATORY**
Semester Hours: 0
BYS 533 - ADVANCED PHYSIOLOGY I/A&M
Semester Hours: 3
Course offered jointly by Alabama A&M University and UAH but which is taught on the A&M campus. Nerve and muscle cell function, fluid and electrolyte environment of body tissues, blood, heart, circulatory, and nervous systems.

BYS 534 - MEDICAL PHYSIOLOGY II
Semester Hours: 3
Course offered jointly by Alabama A&M University and UAH but which is taught on the A&M campus. Continuation of mammalian physiology with consideration of kidney function, respiratory, digestive, reproductive, and endocrine systems.

BYS 535 - ADVANCED MICROBIOLOGY
Semester Hours: 3
Aspects of microbial behavior, development, morphogenesis or physiology.

BYS 537 - PSYCHOBIOLOGY STRESS & ILLNESS
Semester Hours: 3
Overview of physiological stress responses and their influence on health, behavior, and illness. Same as PY 536.

BYS 538 - NEUROANATOMY/A&M
Semester Hours: 3

BYS 542 - NUTRITIONAL PHYSIOLOGY
Semester Hours: 3
Course offered jointly by Alabama A&M University and UAH but which is taught on the A&M campus. Advanced laboratory dealing with modern techniques of molecular biology and biochemistry.

BYS 543 - MOLECULAR BIOLOGY OF THE CELL
Semester Hours: 3
Advanced study of cell structure and function of macromolecules (lipids, proteins, carbohydrates and nucleotides). In depth literature readings on subcellular organelles, metabolic pathways, cell cycle, cancer, and cell differentiation.

BYS 547 - BIOCHEMISTRY I
Semester Hours: 3
Structural chemistry and function of biomolecules, mechanisms of biochemical reactions, and enzyme kinetics. Same as: CH 561.

BYS 548 - BIOCHEMISTRY II
Semester Hours: 3
Energy transduction, metabolism, biosynthesis of macromolecular precursors, storage, transmission, and expression of genetic information. Same as CH 562. Prerequisites: BYS 547 or CH 561.

BYS 555 - ENVIRONMENTAL PLANNING/URP@A&M
Semester Hours: 3

BYS 556 - ADV MOLECULAR TECHNIQUES
Semester Hours: 3
Laboratory techniques in molecular biology including current methodology in genomics, proteomics and RNA analysis. Prerequisites: BYS 519 with concurrency.

BYS 560 - ENVIRONMENTAL BIOLOGY/A&M
Semester Hours: 3
Course offered jointly by Alabama A&M University and UAH but which is taught on the A&M campus. Principles of interaction between living systems and their resources. Current problems in management of natural resources including new approaches in management of pest populations.

BYS 562 - COMMUNITY ECOLOGY
Semester Hours: 4
Detailed consideration of ecological principles and concepts, as well as biotic and abiotic factors relevant to development of communities and ecosystems. Field trips required.
BYS 563 - POPULATION ECOLOGY
Semester Hours: 4
Distribution, population dynamics and behavior of populations in relation to environmental factors. Field trips required.

BYS 564 - LIMNOLOGY
Semester Hours: 3
Fresh-water environments and organisms exemplified by lakes, ponds, and streams in North Alabama.

BYS 567 - PLANT VIROLOGY/A&M
Semester Hours: 3

BYS 572 - SOIL & WATER POLLUTION/A&M
Semester Hours: 3
Course offered jointly by Alabama A&M University and UAH but which is taught on the A&M campus. Principles of classifying, naming, and identifying vascular plants with emphasis on flowering plants. Ecologic factors influencing vegetational distribution.

BYS 576 - REMOTE SENSING ENVIRONMENT/A&M
Semester Hours: 4

BYS 580 - NATURAL RESOURCES POLICIES/A&M
Semester Hours: 3

BYS 584 - ECOLOGICAL PROCESSES/AL A&M
Semester Hours: 3-4

BYS 590 - PROBLEMS IN BIOLOGICAL SCI/A&m
Semester Hours: 3

BYS 600 - NEUROSCIENCE
Semester Hours: 3
An advanced survey of the field of neuroscience, from basic neuroanatomy and physiology, to current topics, such as neurodegenerative disease, learning and memory, consciousness, cognitive theory and neurocomputing.

BYS 601 - BIOINFORMATICS I
Semester Hours: 3
Practical use in Bioinformatics and X-ray crystallography.

BYS 602 - BIOINFORMATICS II
Semester Hours: 3
Practical use in Bioinformatics and applied Genomics.

BYS 619 - MICROBIAL GENETICS
Semester Hours: 3

BYS 620 - APPLIED PHYCOLOGY/A&M
Semester Hours: 3

BYS 622 - APPL & INDUSTRIAL MICROB/A&M
Semester Hours: 3
Course offered jointly by Alabama A&M University and UAH but which is taught on the A&M campus. Examine by microbiological assay sewage disposal and wastewater treatment plants. Microorganisms of industrial importance in biological production of antibiotics, vitamins, organic acids, and alcohols.

BYS 624 - IMMUNOLOGY/A&M
Semester Hours: 4

BYS 625 - MEDICAL MYCOLOGY/A&M
Semester Hours: 3
BYS 630 - IMMUNOLOGY  
Semester Hours: 4  
Innate, humoral and cell-mediated immunity. Immune deficiencies and hyper sensitivities. Autoimmunity, transplantation and tumor immunology.

BYS 631 - MEDICAL PHARMACOLOGY/A&M  
Semester Hours: 3  
Course offered jointly by Alabama A&M University and UAH but which is taught on the A&M campus. Drug-receptor interaction, kinetics of drug absorption, distribution and elimination, and discussion of drugs affecting different systems. Pharmacogenetics, toxicity, mutagenesis, teratogenesis, carcinogenesis, and drug interactions. Mechanism of action of drugs, in relation to their use as therapeutic agents in medicine.

BYS 632 - CARDIOVASCULAR PHYSIOLOGY/A&M  
Semester Hours: 3

BYS 633 - ENDOCRINOLOGY/A&M  
Semester Hours: 3

BYS 645 - HUMAN CYTOGENETICS CL APP/A&M  
Semester Hours: 3  
Course offered jointly by Alabama A&M University and UAH but which is taught on the A&M campus. Review of normal human chromosome structure and normal chromosome segregation and morphology with clinical consideration.

BYS 646 - MOLECULAR GENETICS/A&M  
Semester Hours: 3

BYS 649 - ADVANCED GENETICS I/A&M  
Semester Hours: 3-4

BYS 663 - ADV MOLECULAR GENETICS/A&M  
Semester Hours: 3

BYS 671 - INTRO TO BIOTECH/A&M  
Semester Hours: 3

BYS 690 - SEMINAR  
Semester Hour: 1  
Student reports on current journal articles, research, or assigned readings. Graduate students should attend whether enrolled for credit or not. May be taken up to three times for credit.

BYS 691 - SPECIAL TOPICS  
Semester Hours: 1-4  
Directed readings and/or written reports on topics of individual student interest carried out under the supervision of an instructor. Prerequisite: permission of instructor required before registration.

BYS 692 - RESEARCH  
Semester Hours: 2-4  
Individual investigations of biological problems under supervision of a graduate faculty member. Permission of instructor required before registration.

BYS 699 - MASTER'S THESIS  
Semester Hours: 1-6  
Required each semester student is working on and receiving direction on master's thesis. Minimum of six hours required for M.S. thesis students.

BYS 730 - APPLIED MULTIVARIATE ANALYSIS/A&M  
Semester Hours: 3

BYS ADD - ANATOMY & PHYS I LAB/OAKWOOD  
Semester Hours: 0

Business Legal Studies (BLS)
BLS 500 - LAW, ETHICS & BUSINESS  
Semester Hours: 3  
An analytical review of corporate ethics addressed from a legal and business standpoint. Focus on codes of ethics, integration of integrity into corporate cultures, top management commitment to ethics, civic involvement, employer-employee relations, consumer protection, and international business.

BLS 506 - GOVMT CONTRACT LAW  
Semester Hours: 3  
Application of the legal principles governing government contracts as developed from common law, statutes, regulations, and court decisions. Includes requests for proposals, negotiation, inspection, acceptance, delivery, warranties, modification of contracts, equitable adjustment, and disputes.  
Prerequisite: MGT 501 or ACC 540.

BLS 511 - BUS LAW FOR ACCOUNTANTS  
Semester Hours: 3  
In-depth study of legal principles and problems encountered in practice by professional accountants. This course covers legal topics from a Uniform Commercial Code perspective.

BLS 625 - LEGAL ASPECTS OF ENGRS  
Semester Hours: 3  
Legal problems and principles relevant to the practice of professional engineers. The legal system, contracts, torts, business organizations, employment law, intellectual property law, and environmental law.

Chemical Engineering (CHE)

CHE 540 - PHYSICAL PROP OF FLUIDS  
Semester Hours: 3  
Theoretical, experimental, and correlation methods for determining and predicting the thermodynamic and transport properties of various fluids. Critical properties, equations of state, vapor pressure and latent heat, heat capacity. Viscosity, thermal conductivity, diffusion coefficient, phase equilibrium, heat and free energy for formation.

CHE 541 - CHEMICAL KINETICS & REACTOR DE  
Semester Hours: 3  
Fundamental principles of chemical kinetics and chemical reactor engineering along with the design of both thermal and catalytic reactors.

CHE 549 - INTRO ENVIRONMENTAL ENGR  
Semester Hours: 3  
Engineering aspects of air, water, and thermal pollution. Hydrologic cycle, water sources and uses; industrial and other sources of primary and secondary pollutants. Transport process in environmental problems and in their control.

CHE 552 - EXPER TECH IN FLUID MECH  
Semester Hours: 3  
CHE 559 - SELECTED TOPICS/CHE  
Semester Hours: 1-6  
Discussion of biocompatible polymers and their application in drug delivery systems. Polymers of natural and synthetic origin will be studied, special emphasis will be placed upon the synthesis of biocompatible polymers. The formation of polymeric micelles, hydrogels and liposomes will be studied. The process of extravasation as uptake mechanism for polymeric delivery systems will be discussed. Reading material will be based on the latest publications in the field.

CHE 560 - INTRO TO BIOPROCESS ENGR  
Semester Hours: 3  
Application of engineering principles to the analysis of and the development and design of processes using biological catalysts including enzymes, plant and animal cells, and genetically engineered cells. Other topics include fermentation and biological mass transport processes.

CHE 561 - BIOSEPARATIONS RECOMBI TECH/PR  
Semester Hours: 3  
General characteristics of separation processes used in the biotechnology industry, including removal of insolubles, isolation and purification of thermally sensitive products for final use by the customer. Application of unit operation principles for biological separations, recombinant DNA techniques, protein engineering.
CHE 594 - APPLIED MATERIALS PROCESSING
Semester Hours: 3

Synthesis and processing methods of materials for engineering applications. Selection and use of materials performance factors for design of structural and functional components. Use of computational methods in solving open-ended design problems that depend on an understanding of the nature and properties of materials will be emphasized. All classes of materials are covered.

CHE 595 - POLYMER ENGINEERING
Semester Hours: 3

CHE 641 - ADV THERMODYNAMICS
Semester Hours: 3

Application of classical thermodynamics. Treatment of problems involving nonideal gases and liquids, phase equilibrium, and chemical equilibrium.

CHE 642 - PHYSICOCHEMICAL HYDRODYNAMICS
Semester Hours: 3

Treatment of electrokinetic phenomena, axial dispersion, convective diffusion in liquids, Brownian motion, flows driven by surface tensions, capillary motion.

CHE 644 - INTRO ELECTROCHEM SYSTEM
Semester Hours: 3

Thermodynamics, transport, and kinetics of electrodes and cells. Systems analysis of batteries, fuel cells, porous electrodes, electroplating, electrowinning, and corrosion processes. Convective diffusion at high Schmidt numbers.

CHE 646 - THERMODYNAMICS OF MATRLS
Semester Hours: 3

Fundamental thermodynamic review, phase equilibrium, chemical reaction equilibrium, free energy, binary and ternary phase transformations, solution models and selected topics.

CHE 648 - TRANSPORT PHENOMENA I
Semester Hours: 3

CHE 649 - TRANSPORT PHENOMENA II
Semester Hours: 3

CHE 650 - PRINC LIQUID/SOLID INTER
Semester Hours: 3

Applies basic principles in thermodynamics and kinetics to characterize surfaces and surface phenomena. Fundamental properties of gas-liquid, liquid-liquid, solid-liquid, and solid-gas interfaces and phenomena occurring at these interfaces.

CHE 652 - INTRO TO AIR POLLU CONTROL
Semester Hours: 3

Technology of air pollution dealing with air pollutants, effects, sources, combustion processes, and abatement and control technology. Engineering contributions to both the problems and their solutions. Nature of air pollution problem and fundamental technological approaches to its solution.

CHE 657 - ADVANCED PROCESS CONTROL
Semester Hours: 3

Application of modern control theory to chemical processes; multivariable control; estimation and adaptive control, optimal control.

CHE 658 - CATALYSIS/REACTOR DESIGN
Semester Hours: 3

Treatment of homogeneous and heterogeneous reaction kinetics, transport in fluid-solid reactions, catalyst deactivation and their effects on the analysis and design of chemical reactors.
CHE 659 - SELECTED TOPICS/CHE  
Semester Hours: 1-6

CHE 696 - GRAD INTERNSHIP CHE ENGR  
Semester Hours: 1-9

Active involvement in an engineering project in an engineering enterprise, professional organization or government agency that has particular interest and relevance to the graduate student. Permission of CHE faculty member required.

CHE 699 - MASTER'S THESIS  
Semester Hours: 1-9

CHE 724 - INSTR METH/BIO-MTLS CHARACTERI  
Semester Hours: 3

CHE 725 - INSTR METH/BIO-MTLS CHARACTERI  
Semester Hours: 4

CHE 747 - ADV TOP/BIOENGINEERING  
Semester Hours: 3

Engineering aspects of microbial processes and the processing of biological materials. Integrating knowledge of governing biological properties and principles with chemical engineering methodology. Emphasis on current literature in the areas of purification and separation technology, bioprocess development and biomaterials.

CHE 749 - MASS TRANSPORT  
Semester Hours: 3

Mass transfer in solid and fluid systems under steady and transient conditions. Integration of momentum, heat and mass transfer equations with application to reactive, rheological and multicomponent systems.

CHE 757 - OPT TECH/FLUID MECHANICS  
Semester Hours: 3

Laser courses, molecular interactions with light and diatomic spectroscopy needed fluorescence, Brillouin scattering, four wave mixing, CARS and other applications in optical fluid diagnostics.

CHE 759 - ADV SELECTED TOPICS IN CHE  
Semester Hours: 1-3

CHE 799 - DOCTORAL DISSERTATION  
Semester Hours: 1-9

Required each semester student is enrolled and receiving direction on doctoral dissertation.

Chemistry (CH)

CH 500 - TOPICS IN CHEMISTRY  
Semester Hours: 1-3

Advanced laboratory research in one of the departmental research groups. The student works on an independent or group research project. Completion of the course requires an appropriate written and oral report. Prerequisites: Approval of instructor.

CH 521 - CHEMICAL INSTRUMENTATION  
Semester Hours: 4

Use of basic instrumentation in NMR, mass spectrometric, chromatographic, and spectrophotometric analysis.

CH 540 - POLYMER SYNTHESIS & CHARACTERI  
Semester Hours: 3

Same as MTS 649.

CH 549 - SPECTROSCOPY & MOLEC STR  
Semester Hours: 3

Intermediate level treatment of principles of spectroscopy and their application to determination of molecular structure.
CH 553 - INTRO QUANTUM MECH I
Semester Hours: 3
Waves and particles; Bohr's model; de Broglie waves, wave-packets, uncertainty principle; quantum mechanics postulates; Schroedinger equation; systems in 1, 2 & 3 dimensions; hydrogen atom. Same as PH 551, OSE 555, and MTS 651.

CH 554 - INTRO QUANTUM MECH II
Semester Hours: 3
Angular momentum and spin; atomic structure and spectrum; time-independent pertubation theory, variational methods; time-dependent pertubation theory and interactions of light with matter; scattering theory; electronic structure of solids; relativistic quantum mechanics. Same as: PH 552, MTS 652.

CH 561 - BIOCHEMISTRY I
Semester Hours: 3
Structural chemistry and function of biomolecules, mechanisms of biochemical reactions, enzyme kinetics, and energy transfer. Same as: BYS 547.

CH 562 - BIOCHEMISTRY II
Semester Hours: 3
Metabolism, biosynthesis of macromolecular precursors, storage, transmission, and expression of genetic information, and molecular physiology. Same as BYS 548. Prerequisites: CH 561 or BYS 547.

CH 600 - ADV INORGANIC CHEMISTRY
Semester Hours: 3
Survey with emphasis on structure and reactivity of inorganic compounds.

CH 602 - CHEM COORD COMPOUNDS
Semester Hours: 3
Modern bonding theory and stereo chemistry of coordination compounds.

CH 621 - METHODS OF CHEMICAL ANALYSIS
Semester Hours: 3
Literature, seminar course. Theory and methodology of various techniques of chemical analysis.

CH 631 - SYNTHETIC ORGANIC CHEMISTRY
Semester Hours: 3
Survey of certain reactions that enjoy widespread application to the synthesis of organic compounds.

CH 632 - PHYSICAL ORGANIC CHEMISTRY
Semester Hours: 3
Reactive intermediates, structure-activity relationships, reaction mechanisms and techniques used to determine them.

CH 633 - ORGANIC STRUCTURE DETERMINAT'N
Semester Hours: 3
Structure determination of organic molecules using spectroscopic methods, especially NMR, IR, and MS. Emphasis on the theory and interpretation of many NMR methods useful in chemistry research.

CH 634 - MOLECULAR MODELING
Semester Hours: 4
Molecular modeling methods, including molecular mechanics, molecular docking, molecular orbital theory, and density functional theory, will be used to investigate conformational properties of organic compounds, molecular interactions between biological macromolecules and organic ligands, electronic structure of organic and inorganic compounds, frontier molecular orbitals, pericyclic reactions, and reactive intermediates. Extensive computational laboratory work included.

CH 635 - CHEMICAL TOXICOLOGY
Semester Hours: 3
An introduction to the principles of chemical toxicology, including the effects of drugs, environmental pollutants, natural toxins and venoms and other potentially hazardous chemicals at the physiological, cellular, and molecular level.

CH 640 - ADV CHEMICAL THERMODYNAMICS
Semester Hours: 3
CH 641 - STATIST THERMODYNAMICS
Semester Hours: 3

Principles leading to the development of Maxwell-Boltzmann, Bose-Einstein, and Fermi-Dirac statistics. Thermodynamic properties calculated from partition functions.

CH 642 - ADV CHEMICAL DYNAMICS
Semester Hours: 3

Non-equilibrium thermodynamics, macroscopic and microscopic theories of diffusion, chemical reaction rate laws and mechanisms, transition state theory, gas phase molecular dynamics, electrical conduction in electrolyte solutions, electrode kinetics.

CH 643 - QUANTUM CHEMISTRY
Semester Hours: 3

Application of quantum theory to the chemical bond.

CH 644 - CHEM ELECTRODYNAMICS
Semester Hours: 3

Maxwell's equations applied to electrodynamic problems in chemistry. Theory of dielectrics, dipole moments, Beer's law, Landolt's rule, light scattering, magnetic properties, quantum theory of radiation.

CH 645 - POLYMER PHYSICAL CHEMISTRY
Semester Hours: 3

Introduction to structure, properties and processing of polymers. Physical behavior of polymers, structure-property relationships, polymer characterization, thermodynamics of polymer solutions and melts, mechanical evaluation of polymers. Same as MTS 747. Prerequisite: CH 540.

CH 646 - THERMODYNAMICS OF MATRLS
Semester Hours: 3

Fundamental thermodynamic review, phase equilibrium, chemical reaction equilibrium, free energy, binary and ternary phase transformations, solution models and selected topics. Same as CHE 646 and MTS 646.

CH 647 - ADV BIOPHYSICAL CHEMISTRY I
Semester Hours: 3

Topics include: computer data analysis & simulation, first & second laws of thermodynamics, free energy & equilibrium, calorimetry, protein stability, binding & interactions, solution thermodynamics, electrolytes. Students who have completed CH 347 cannot earn credit for CH 647.

CH 648 - ADV BIOPHYSICAL CHEMISTRY II
Semester Hours: 3

Advanced biophysical chemistry, including biochemical reaction kinetics, enzyme catalysis, quantum mechanics, statistical thermodynamics, spectroscopy, including UV-VIS, fluorescence, circular dichroism, NMR, and Structure determinations. An emphasis is placed on the current research literature. Prerequisite: CH 647 Students who have completed CH 348 cannot earn credit for CH 648.

CH 650 - PRINC LIQUID/SOLID INTER
Semester Hours: 3

Applies principles in thermodynamics & kinetics to characterize surfaces & surface phenomena. Fundamental properties of gas-liquid, liquid-liquid, solid-liquid and solid-gas interfaces and phenomena at these interfaces. Same as MTS 650 and CHE 650.

CH 699 - MASTER'S THESIS
Semester Hours: 3-6

Required each semester a student is enrolled and receiving direction on a masters thesis. Minimum of two terms is required. (A maximum of six hours may be applied towards the degree).

CH 700 - CURRENT TOPICS IN CHEMISTRY
Semester Hours: 1-3

Advanced laboratory research in one of the departmental research groups. The student works on an independent or group research project. Completion of the course requires a written and an oral report. Prerequisite: approval of instructor.

CH 705 - SEL TOP IN INORGANIC CHEM
Semester Hours: 3

Prerequisites: CH 600 and approval of instructor.
CH 721 - SP TOP IN ANALYTICAL CHEMISTRY  
Semester Hours: 3  
Prerequisites: CH 621 and approval of instructor.

CH 735 - SEL TOP IN ORGANIC CHEM  
Semester Hours: 3  
Prerequisites: CH 632 and approval of instructor.

CH 745 - SEL TOP IN PHYSICAL CHEM  
Semester Hours: 3

CH 746 - SOLID STATE CHEMISTRY  
Semester Hours: 3  
Chemical properties of solids. Includes phase equilibria, chemical bonding in ionic and covalent crystals, thermodynamics of atomic defects, ionic conductivity in solids, corrosion, & introduction to surfaces and adsorption.

CH 765 - SEL TOPICS IN BIOCHEM  
Semester Hours: 3  
Prerequisites: CH 560 and approval of instructor.

CH 780 - CHEMISTRY SEMINAR  
Semester Hour: 1  
Required during each semester of residence.

CH 799 - DOCTORAL DISSERTATION  
Semester Hours: 3-9

CH ADD - PHYSICAL CHEMISTRY/A&M  
Semester Hours: 3

Civil Engineering (CE)

CE 511 - INTRO GEOGRAPHICAL INFO SYS  
Semester Hours: 3  
Introduces vector, raster and tabular concepts, emphasizing the vector approach. Topics include: spatial relationships, map features, attributes, relational database, layers of data, data ingesting, digitizing from maps, projections, output, applications, and availability of public data sets.

CE 520 - URBAN TRANSPORTATION PLANNING  
Semester Hours: 3  
Planning of highway systems and terminals as part of a complete planning approach; public transportation system planning; transportation planning studies, projection analysis, plan formulation, and programming.

CE 541 - OPEN CHANNEL HYDRAULICS  
Semester Hours: 3  
Design and analysis of erodible and non-erodible channels. Uniform flow, channel roughness, gradually and spatially varied flow, rapidly varied flow, hydraulic jumps, gradually varied unsteady flow, flood routing, flow measurements, channel models, channel and culvert design.

CE 549 - INTRO ENVIRONMENTAL ENGR  
Semester Hours: 3  
Engineering aspects of air, water, and thermal pollution. Hydrologic cycle, water sources and uses; industrial and other sources of primary and secondary pollutants. Transport process in environmental problems and in their control.

CE 550 - ENVIRONMENTAL CONTROL  
Semester Hours: 3  
Engineering design and synthesis of environmental control systems. Control of multiphase systems with application to air and water pollution control.

CE 552 - INDUSTRIAL WASTE TREATMENT  
Semester Hours: 3  
Advanced topics in the area of hazardous waste management and water quality control. Emphasis on industrial waste, including hazardous waste management. Topics include: generation, storage, collection, transfer, disposal, recycling, economic, environmental, and regulatory considerations.
CE 554 - SOLID & HAZARDOUS WASTE MGMT  
Semester Hours: 3  
Waste characterization, minimization, collection, treatment, transport, and disposal. Landfill design and incineration options. Leachate characteristics and potential groundwater contamination.

CE 555 - WATER QUALITY LABORATORY  
Semester Hours: 3  
Properties of natural water sources and laboratory methods associated with water and wastewater treatment systems. Students design and demonstrate a water treatment system to bring a water sample into compliance with drinking water standards.

CE 556 - WATER QUALITY CONTROL PROC  
Semester Hours: 3  
Principles of public water supply design. Source selection, collection, purification, and distribution for municipal use. Collection of waste waters, their treatment, and disposal.

CE 557 - HYDROLOGY  
Semester Hours: 3  
Occurrence and movement of water over the earth’s surface for engineering planning and design. Relationship of precipitation to streamflow with frequency analysis, flood routing, and unit hydrograph theory.

CE 558 - ENVIRONMENTAL ENGR DSGN  
Semester Hours: 3  
Engineering design and project management of environmental quality/restorationsystems. Students will complete a design project focusing on one of the following systems: sanitary landfill, municipal incinerator, or groundwater/site remediation. Lectures will address skills for technical presentations and proposal writing, as well as process design and decision making.

CE 559 - SEL TOPICS CIVIL ENGINEERING  
Semester Hours: 1-6

CE 561 - VIBRATIONS ELASTIC SYS  
Semester Hours: 3  
Formulation of the equations of motion of discrete and continuous systems, analytical and numerical methods of solution, eigenvalue problems, and dynamic response.

CE 571 - ADVANCED SOIL MECHANICS  
Semester Hours: 3  
Continuum mechanics applied to soil behavior. Theoretical approaches to consolidation, shear strength, slope stability and soil stabilization.

CE 572 - SOIL DYNAMICS  
Semester Hours: 3  
Behavior of soils under dynamic, earthquake and blast loading. Analysis of foundation vibration and isolation.

CE 573 - EARTH STRUCTURES ENGINEERING  
Semester Hours: 3  
Principles of earth structure design. Theories of earth pressures and the design of retaining wall systems including gravity, cantilever, mechanically stabilized earth, flexible sheet pile, and anchored wall systems. Methods of stability analyses for retaining walls, earth slopes, and embankment design.

CE 574 - APP MECHANICS OF SOLIDS  
Semester Hours: 3  
Stresses and strains at a point, theories of failures, stress concentration factors, thick-walled cylinders, torsion of noncircular members, curved beams, unsymmetrical bending, and shear center.

CE 577 - EXP TECH SOLID MECHANICS  
Semester Hours: 3  
Experimental methods to determine stress, strain, displacement, velocity, and acceleration in various media. Theory and laboratory applications of electrical resistance strain gages, brittle coatings, and photoelasticity. Application of transducers and experimental analysis of engineering systems.

CE 578 - MATRIX METH STRUCT MECH  
Semester Hours: 3  
Matrix application to formulation and solution of linear problems in structural mechanics. Stresses, vibrations, and stability of engineering structures.
CE 581 - STRUCTURAL ANALYSIS II
Semester Hours: 3

Reactions, shears, moments and deformations in complex structural systems. Statically indeterminate systems, advanced geometric and energy methods.

CE 583 - REINFORCED CONCRETE DESIGN
Semester Hours: 3

Theory and practice of reinforced concrete design. Theory and design of high strength concrete mixtures. Design of reinforced concrete beams, slabs and columns using the ultimate strength design code of the American Concrete Institute.

CE 584 - STEEL DESIGN
Semester Hours: 3

Principles of the design of steel structures using ASD methods. Analysis and design of structural elements including beams, columns, connection details.

CE 585 - FOUNDATION ENGINEERING
Semester Hours: 3

Design of foundations with emphasis on reinforced concrete, footings, caissons, piles, retaining walls, and mat foundations. Effect of bearing pressure on foundations.

CE 586 - ADV CEMENTITIOUS & COMPOSITE
Semester Hours: 3

Concrete structures, rheology, mechanical properties, environmental durability, dimensional stability, advanced concrete technologies (such as high strength, fiber reinforced, and fracture mechanics), advanced fiber polymer composites, and repair/rehabilitation of concrete structures.

CE 587 - BRIDGE DESIGN
Semester Hours: 3

Bridge loads, load distribution, composite beam bridges, bridge bearings, reinforced and prestressed concrete slab and T-beam bridges, bridge evaluations and ratings, and upgrade methodology.

CE 603 - ADVANCED CONCRETE DESIGN
Semester Hours: 3

Design of concrete columns; bond, anchorage and reinforcing details; design of two-way slabs; design and analysis of multistory building frames; introduction to prestressed concrete; design of prestressed cross-sections for moment.

CE 611 - GIS IN CIVIL ENGINEERING
Semester Hours: 3

Advanced topics in geographical information systems (GIS) with civil engineering applications. Emphasis will be placed on spatial/temporal data analyses using digitized maps and database information in an area of CE specialization. Research project will be required.

CE 622 - ADVANCED TRAFFIC ENGRG DESIGN
Semester Hours: 3

In depth analysis of traffic engineering concepts related to intersection analysis (signalized and un-signalized) as well as arterial systems.

CE 646 - EROSION & SEDIMENTATION
Semester Hours: 3

River morphology and river response, incipient erosion and its prediction, bed form and roughness, degradation, aggradation, and local scour in alluvial rivers. Design of stable channels, computation of bed load.

CE 650 - ENVIRONMENTAL IMPACT ANAL
Semester Hours: 3

CE 651 - ENVIRONMENTAL REGULATIONS
Semester Hours: 3

Basic understanding of environmental law with an appreciation for the practical implementation of regulations for environmental engineers. Includes an overview of the major American environmental laws for protection of water and air resources, as well as permitting requirements and health/safety responsibilities.
CE 652 - INTRO TO AIR POLLUTION CONTROL  
Semester Hours: 3  
Technology of air pollution dealing with air pollutants, effects, sources, combustion processes, and abatement and control technology. Engineering contributions to both the problems and their solutions. Nature of air pollution problem and fundamental technological approaches to its solution.

CE 653 - GROUNDWATER ENGINEERING  
Semester Hours: 3  

CE 654 - ENVIRONMENTAL TRANSPORT  
Semester Hours: 3  
Fundamental principles of mass transport, chemical partitioning/transformations in environmental systems. Practical transport examples for surface water, ground water, and atmospheric systems will be presented and mathematical modeling will be utilized for solutions.

CE 655 - HAZARDOUS WASTE MGMT  
Semester Hours: 3  
Topics include definition of hazardous waste, regulatory considerations, risk assessments, and categories of waste. Current and emerging treatment and disposal technologies will be explored.

CE 656 - ENV SYSTEMS SAMPLING & ANAL  
Semester Hours: 3  

CE 657 - ADVANCED HYDROLOGY  
Semester Hours: 3  
Hydrologic cycle, including interrelationships between classical and statistical methods of hydrology. Evaluation of governing equations, linearizations, analytical approximations and numerical solution techniques for various boundary conditions. Stochastic hydrologic modeling in both temporal and spatial domains.

CE 658 - SUSTAINABLE DESIGN  
Semester Hours: 3  
The built environment has a substantial impact on energy and material resources as well as being a critical determinant of health and productivity. This course covers topics such as site planning and construction variables, energy and water alternatives, and current rating systems. Case studies and field trips of historic and contemporary projects exemplifying various sustainability features will be included.

CE 659 - SEL TOPICS CIVIL ENGINEERING  
Semester Hours: 1-6  

CE 660 - STRUCTURAL DYNAMICS  
Semester Hours: 3  

CE 662 - GEOTECHNICAL ENGINEERING  
Semester Hours: 3  
Shallow foundation's immediate and consolidated settlement, advanced deep foundations under lateral and axial loads, design of single and pile groups, soil-pile interaction, introduction to seismology, earthquake characteristics, dynamic soil properties and response, soil profile response spectra, soil liquefaction.

CE 666 - EARTHQUAKE ENGR & STRUCT DYNAM  
Semester Hours: 3  
This allows structural engineers to consolidate their knowledge on the effect of earthquake ground motions on civil engineering structures. The course will cover the analysis and the theories of structures made of various materials that are located in active seismic zones. Finally, the course will allow structural engineers to acquire new basic knowledge in earthquake engineering that will allow them to communicate better with scientists and engineers of other disciplines in earthquake engineering (e.g. seismologist, geotechnical engineers, etc.).

CE 671 - CONTINUUM MECHANICS  
Semester Hours: 3  
Kinematics and kinetics, various coordinate systems, constitutive equations for continuous media; governing partial differential equations from first and second laws of thermodynamics; applications to solids, liquids, and gases.
CE 672 - THEORY OF ELASTICITY
Semester Hours: 3

Formulation of boundary-value problems of classical elasticity. Application to plane problems, prismatic members, and axisymmetric problems. Introduction to three-dimensional problems.

CE 673 - PLASTICITY
Semester Hours: 3

CE 674 - FINITE ELEMENT ANALYSIS I
Semester Hours: 3

Finite element theory, variational methods, weighted residuals. Applications to linear partial differential equations in continuous media. Solution of boundary value and initial value problems.

CE 675 - ROCK MECHANICS
Semester Hours: 4

Principles of continuum mechanics applied to the design of structures in rock; tunnels, underground structures and foundations. Joint behavior; stresses; analysis of rock slopes; instrumentation.

CE 676 - VISCOELASTICITY
Semester Hours: 3

CE 677 - OPTICAL TECH IN SOLID MECH
Semester Hours: 3

Overview of conventional methods for experimental stress analysis. Introduction to applied optics with emphasis on non-destructive, laser-based testing methods, fiber optic recording systems, photoelectronic-numerical data acquisition, and computer aided analysis.

CE 678 - MECHANICS OF COMPOSITE MATRLS
Semester Hours: 3

Introduction to composite materials, micro- and macro-mechanical behavior of laminae; bending, buckling and vibration of laminated plates.

CE 679 - HYPERVELOCITY IMPACT PHENOMENA
Semester Hours: 3

Fundamental principles of penetration mechanics. Analytical and numerical approaches to perforation and penetration problems. Shock jump conditions, hugoniotst, and equations of state; low, high, and hypervelocity impacts of finite and thin targets.

CE 681 - ADVANCED STRUCTURAL ANALYSIS
Semester Hours: 3

Explores modern methods of structural analysis, matrix formulation of flexibility and stiffness methods, and analysis of structures with material and geometric nonlinearities. Also introduces energy methods for indeterminate structures.

CE 683 - GRADUATE SEMINAR
Semester Hour: 1

Professional activities designed to promote the skills required to organize and deliver oral technical presentations and to broaden the individual's awareness of technical issues. Required for all students pursuing a graduate degree. Students will be graded "S" (Satisfactory) or "U" (Unsatisfactory) based upon their performance and attendance. Students who do not receive an "S" grade must register for the course until an "S" is obtained.

CE 696 - GRAD INTERNSHIP CE ENGR
Semester Hours: 1-9

Active involvement in an engineering project in an engineering enterprise, professional organization or government agency that has particular interest and relevance to the graduate student. Permission of CEE faculty member required.

CE 697 - MASTER'S PLAN II PROJECT
Semester Hours: 3

Application-oriented student project designed to show competence in an area of civil engineering.
CE 699 - MASTER'S THESIS
Semester Hours: 1-9

Required each semester in which a student is working and receiving direction on a master's thesis. Minimum of two semesters and 6 hours required for M.S.E. students. A maximum of nine hours of credit is awarded upon successful completion of master's thesis. The 1 hour option is only available to students who have successfully defended their thesis and submitted it for approval, but do not meet the deadlines for graduation in the semester submitted. Students may only use the 1 hour option once in their career.

CE 722 - SLIDING MODE CONTROL
Semester Hours: 3

CE 756 - HAZARDOUS WASTE REMEDIAT
Semester Hours: 3

Engineering design skills applied to the solution of real world hazardous waste remediation problems. Remedy screening and selection; treatment train development for a Superfund facility.

CE 762 - WAVE MOTION CONT ELASTIC BODIE
Semester Hours: 3

Elements of stress wave propagation in bounded elastic media. Propagation of elastic waves in infinite and semi-infinite bodies, cylinders, rods and beams.

CE 765 - RAND VIBRAT ELASTIC SYSTEM
Semester Hours: 3

CE 772 - THEORY STRUCT STABILITY
Semester Hours: 3

CE 773 - THEORY OF SHELLS
Semester Hours: 3

Analysis of thin plates and shells, including higher approximations theories and transverse-shear deformations; illustration of theories by selected problems.

CE 774 - FINITE ELEMENT ANAL II
Semester Hours: 3

Advanced topics in finite element analysis: application to nonlinear partial differential equations in continuum mechanics: theoretical studies of convergence and stability of solutions.

CE 778 - FRACTURE MECHANICS
Semester Hours: 3

CE 779 - ADV PENETRATION MECHANIC
Semester Hours: 3

Advanced analytical modeling of penetration and perforation phenomena, hydrocode development and applications, and similitude analysis.

CE 799 - DOCTORAL DISSERTATION
Semester Hours: 3-9

Communication Arts (CM)

CM 508 - CLASSICAL RHETORICAL THEORY
Semester Hours: 3

This course surveys the early development of rhetorical theory in the Western world, from its sophistic origins in the 5th century BCE, through the Greek philosophers and educators, to the Romans and early Christians.
CM 509 - CONTEMPORARY RHETORICAL THEORY  
Semester Hours: 3  
This course surveys contemporary rhetorical thought, including modern and postmodern theories. The course requires rigorous academic analysis and critique as students explore historical and current rhetorical concepts.

CM 514 - CREATIVE NONFICTION WRITING  
Semester Hours: 3  
This course introduces students to the genre of creative non-fiction. Undergraduate students (CM 414) will write five essays and revise toward a final writing portfolio. Graduate students (CM 514) will write five essays and a collage assignment, revising toward a final portfolio.

CM 518 - LEGAL ARGUMENT  
Semester Hours: 3  
This course examines argumentation in legal communities, that is, the way lawyers and judges provide reasoned support for the positions they defend concerning what the law requires in a given case. It considers common forms of legal argument, sources and forms of evidence, and legal values that underlie legal argument. It provides students with a critical perspective from which to judge legal arguments and a basic set of tools for developing legal arguments. This course will not provide any in-depth consideration of the content of civil, criminal or constitutional law, but will use examples from various areas of law to illustrate how legal arguments are developed.

CM 526 - BURKEIAN THEORY & CRITICISM  
Semester Hours: 3  
This course surveys key concepts in the theory of Kenneth Burke and their discussion and application by rhetorical scholars. Through readings, lectures and class discussions students will gain insight into this, the most important rhetorical theorist of the 20th century.

CM 530 - MASS MEDIA IN AMERICA  
Semester Hours: 3  

CM 533 - DARK SIDE INTERPERSONAL COMM  
Semester Hours: 3  
Research from the dark side of communication has typically been studied from a single standpoint confined to a specific context. This course offers a more complete view of human communication by exploring a variety of topics related to the "darker" side of interactions situated in the contexts of Interpersonal Communication, Organizational Communication, Computer Mediated Communication, Health Communication, and Blended Communication. By merging theory and practical application, the different contexts provide students with an enhanced understanding of how dark side behaviors are experienced and communicated.

CM 544 - ADVERTISING  
Semester Hours: 3  
This course defines advertising and considers how it works, how it is developed, and some controversies surrounding its use.

CM 551 - ORGANIZATIONAL TRAIN & DEVELOP  
Semester Hours: 3  
Provides students with the opportunity to learn to design, and execute, professional organizational training programs. Students learn to design needs assessments, write training proposals and contracts, as well as design budgets, training scripts, presentations and post-evaluations for companies.

CM 552 - USER-CENTERED DESIGN  
Semester Hours: 3  
Introduces students to user-centered design principles that inform the practice of user experience design. Students will use visual thinking as they complete contextual inquiries and mapping exercises.

CM 554 - NEW MEDIA WRITING & RHETORIC  
Semester Hours: 3  
This course teaches students to consider and implement rhetorical principles across a variety of media and includes an examination of communication strategies used widely in academic and industry settings. The course focuses on new media through an exploration of digital technologies and the way digital culture and new media have dramatically impacted reading, writing and research practices.

CM 610 - COMMUNICATION PEDAGOGY  
Semester Hours: 3  
This course is designed to prepare students for teaching in the field of communication. Toward this end, students will explore a mix of theories, methods, and strategies related to communication pedagogy. Students will also have the opportunity to develop their teaching competency by engaging in various teaching assignments.
CM 631 - ADVANCED COMMUNICATION THEORY
Semester Hours: 3

This course surveys major theories that inform the scholarly study of human communication. Through readings, discussions, and research, students learn how communication theories are developed, analyzed, evaluated, and applied. More specifically, the course goals are: 1) to enhance students' ability to critically analyze current theories of human communication, and 2) to provide students with the opportunity to actively participate in research that tests major communication theories. Original works are read.

CM 662 - INFORMATION ARCHITECTURE
Semester Hours: 3

This class reviews research in technical communication, information science, cognitive science, semiotics, and computer science that helps students understand how communities represent, organize, retrieve, and ultimately use information.

CM 670 - ADVANCED COMMUNICATION METHODS
Semester Hours: 3

This course is concerned with the methods and philosophy of scientific communication research. Having taken a basic course that covers elements of research design is highly recommended.

CM 675 - RHETORICAL CRITICISM
Semester Hours: 3

This course examines how rhetorical scholars analyze persuasive discourse, providing hands-on opportunities for students to engage in such analyses. It examines significant variables in rhetorical processes, a number of methods employed to understand adaptations to rhetorical needs, and considers pragmatic, ethical, social and ideological dimensions of persuasive discourse.

Computer Engineering (CPE)

CPE 512 - INTRO PARALLEL PROGRAMMING
Semester Hours: 3

CPE 523 - HARDWARE/SOFTWARE CO-DESIGN
Semester Hours: 3

Study and design of Systems On a Chip (SOC). Emphasis on Field Programmable realizations of SOC systems.

CPE 526 - VLSI HARDWARE DESC LANG/MODL/S
Semester Hours: 3

Modern VLSI design techniques and tools, such as silicon compilers, (V)HDL modeling languages, placement and routing tools, synthesis tools, and simulators. Students will design, simulate, and layout using both programmable logic families and ASIC libraries.

CPE 527 - VLSI DESIGN I
Semester Hours: 3

Introduction to VLSI design using CAD tools, CMOS logic, switch level modeling, circuit characterization, logic design in CMOS, systems design methods, test subsystem design, design examples, student design project. Design project to be fabricated and tested in CPE 528. Students enrolling in CPE 527 must enroll concurrently in CPE 527L.

CPE 527L - LABORATORY
Semester Hours: 0

Students enrolling in CPE 527L must enroll concurrently in CPE 527.

CPE 528 - VLSI DESIGN II
Semester Hours: 3

Advanced experience with CAD tools for VLSI design, IC testing. Design project from CPE 527 will be fabricated and tested. Implementation and verification of test programs, IC testing and troubleshooting, legal, economic, and ethical design issues. Oral presentations and written reports are required. Students enrolling in CPE 528 must enroll concurrently in CPE 528L.
CPE 528L - LABORATORY
Semester Hours: 0

Students enrolling in CPE 528L must enroll concurrently in CPE 528.

CPE 531 - INTRO COMPUTER ARCHITECTURE
Semester Hours: 3

Existing computer structures. Computer organization with emphasis on busing systems, storage systems, and instruction sets. Special purpose architecture, performance models and measures, VLSI influence on architecture.

CPE 534 - OPERATING SYSTEMS
Semester Hours: 3

Study of the fundamentals of operating systems. Emphasis on processes, file management, interprocess communication, input-output, virtual memory, networking and security.

CPE 536 - INTERNALS OF MODERN OPER SYS
Semester Hours: 3

In depth study of the design of modern operating systems such as Unix, NT, and Linux. Emphasis on the internals and implementation details of interrupt processing, real-time clocks, device independent I/O, process management, memory management, file management.

CPE 538 - REAL TIME & EMBEDED SYSTEMS
Semester Hours: 3

Study of design methodologies for reliable real time systems.

CPE 548 - INTRO TO COMPUTER NETWORKS
Semester Hours: 3

Introduction to the concepts and architecture of computer networks. Review of communication protocols using the Internet and the TCP/IP model as major examples. High-speed networking, congestion control, data compression, security and distributed processing.

CPE 549 - INTRO TO CYBERSECURITY ENGINRG
Semester Hours: 3

Introduction to cryptography and computer security through hardware and physical security to a knowledge of audit methods, security management, and public law. The course will introduce security engineering skills such as business process analysis, software security, IAE evaluation, and IAE testing.

CPE 549L - INTRO INFORM ASSURANCE ENG LAB
Semester Hours: 0

Students enrolling in CPE 549 must enroll concurrently in CPE 549L.

CPE 561 - TRANSLATION SYSTEMS
Semester Hours: 3

Grammars, parsers, and lexical analyzers; implementation of translators via top-down and bottom up techniques; grammar analysis to identify ambiguities. Practical applications of translators including conversion of file formats and compilation of traditional computer languages.

CPE 590 - SPECIAL TOPICS IN COMP ENGR
Semester Hours: 1-3

CPE 590L - SELECTED TOPICS LABORATORY
Semester Hours: 0

CPE 601 - SURVEY INFORMATION ASSURANCE
Semester Hour: 1

CPE 610 - SELECTED TOPICS IN COMPUTER EN
Semester Hours: 1-6

CPE 612 - PARALLEL ALGORITHMS
Semester Hours: 3

Introduction to metrics describing the performance and scalability of parallel algorithms. Performance analysis of parallel algorithms for performing sorting, matrix multiplication, solving linear equations, and FFT.
CPE 613 - GEN PURPOSE GPU COMPUTING  
Semester Hours: 3  
The focus of this course is to introduce emerging techniques and programming paradigms that can be used to accelerate the processing speed of scientific and other high performance applications using Graphics Processing Units, GPUs. GPUs represent low-cost highly parallel video processing hardware that can be programmed for general purpose applications using CUDA/OpenCL software architecture. The course will survey the current state of research and industrial activity and will give student's hands-on experience implementing design applications on real-world GPU facilities for a wide range of scientific applications.

CPE 619 - MODELING & ANAL COMPU/COMMUN S  
Semester Hours: 3  

CPE 621 - ADVANCED EMBEDDED SYSTEMS  
Semester Hours: 3  
Deeply embedded low-power wireless sensors. Low-power microcontroller architectures, sensor platform architecture, wireless intelligent sensors, low power wireless communication standards, battery powered systems, resource constrained operating systems, data aggregation/sensor synergy, and collaborative signal processing.

CPE 625 - CMOS ANALOG CIRCUIT DESIGN  
Semester Hours: 3  

CPE 626 - ADVANCED VLSI DESIGN  
Semester Hours: 3  
Advanced VLSI Design. Case study of the VLSI design of a modern RISC processor using a Hardware Description Language.

CPE 628 - TESTING OF HARDWARE SYSTEMS  
Semester Hours: 3  
Introduction to testing of digital electronic circuits and systems. Topics include: fault modeling, testing problems, testing schemes, test generation for combinational and sequential circuits, the complexity of testing, design for testability, built-in self-testing and boundary scan.

CPE 631 - ADV COMP SYSTEMS ARCHITECTURE  
Semester Hours: 3  
Study of architectural features of modern processors, including cache memories and memory systems, pipeline designs, branch prediction techniques. Design of superscalar, multithreaded VLIW processors, code optimization for such systems will be studied. Quantitative evaluation of architectural features are emphasized throughout the course.

CPE 633 - FULT-TOLERANT COMPUTING SYSTEM  
Semester Hours: 3  
Analysis and design of very high reliability and availability systems. Fault types, reliability techniques, and maintenance techniques. Case studies of high-availability long-life, life-critical systems. Both hardware and software techniques for achieving fault-tolerance will be studied.

CPE 635 - SYSTOLIC ARRAY PROCESSING  
Semester Hours: 3  
Systolic structure of fast algorithms and switchable array realizations.

CPE 641 - DATA & DIGITAL COMMUNICATIONS  
Semester Hours: 3  
Introduction to digital and data communications; transmission channels; modulation and coding; telephone networks; data communication standards; noise and distortion; computer interfacing; protocols.

CPE 643 - OPTICAL COMMUNICATIONS  
Semester Hours: 3
CPE 645 - COMPUTER NETWORK SECURITY  
Semester Hours: 3  
Principles and concepts of computer network security. Introduction to cryptography, confidentiality, authentication, digital signatures, E-mail security, IP security, web security, intruders, malicious software, firewall, and other network security-related issues.

CPE 646 - MOBILE & WIRELESS NETWORKS  
Semester Hours: 3  
High-level issues in mobile and wireless networks. The main topics are mobile IP, mobile Ad hoc NETworks (MANETS) wireless sensor networks, wireless LAN, Bluetooth, cellular networks, satellite systems and security issues in mobiles and wireless networks.

CPE 647 - UBIQUITOUS COMPUTING  
Semester Hours: 3  
The course is based on the new "anytime, anywhere" computing paradigm, also known as ubiquitous computing. This course is project oriented, and explores issues of mobile, wireless, and distributed computing in Internet environment, advanced human-computer interfaces, and power efficient computing.

CPE 648 - ADVANCED COMPUTER NETWORKS  
Semester Hours: 3  
Advanced principles and concepts of general-purpose computer networks, with a special emphasis to internetworking and Internet. Transport and higher level protocols emphasis. Programming issues. High-speed networking, congestion control, data compression, security and distributed processing will be covered.

CPE 649 - ADV CYBERSECURITY ENGINEERING  
Semester Hours: 3  
Introduction to topics ranging from how to attack computer systems and networks to how to protect and recover from attacks on computer systems and networks. Basic process utilized by computer attackers in order to develop a complete understanding and appreciation of the threat to information assurance. Process of detecting, preventing, and recovering from information assurance attacks. Intrusion Detection and Prevention Systems, Auditing, Security Vulnerability Assessments, and the Incident Response process.

CPE 649L - ADV INFORM ASSURANCE ENG LAB  
Semester Hours: 0  
Students enrolling CPE 649 must enroll concurrently in CPE 649L.

CPE 656 - SOFTWARE ENGRG STUDIO I  
Semester Hours: 3  
This is the first course in a two course studio series required for the MSSE degree in the College of Engineering. Students will work in small design teams on medium sized software projects. Activities include developing requirements, designing and constructing system prototypes, developing and implementing test and verification plans, and presenting the project for evaluation. The practice of software design and evaluation will be conducted in an iterative cycle using best software engineering practices, so that design and execution can be refined over the lifecycle of the project.

CPE 658 - SOFTWARE ENGRG STUDIO II  
Semester Hours: 3  
This is the second course in a two course studio series required for the MSSE degree in the College of Engineering. Students will work in small design teams on medium sized software projects. Activities include developing requirements, designing and constructing system prototypes, developing and implementing test and verification plans, and presenting the project for evaluation. The practice of software design and evaluation will be conducted in an iterative cycle using best software engineering practices, so that design and execution can be refined over the lifecycle of the project.

CPE 690 - SELECTED TOPICS COMPUTER ENGRG  
Semester Hours: 1-6

CPE 692 - CYBERSECURITY CAPSTONE  
Semester Hours: 3  
A capstone course emphasizing the integration of various principles, theories, and techniques for developing, implementing and using cybersecurity strategies and applications in organizations. Includes readings, lectures, tours, situation analysis, cases, and the completion of a major practical project. Normally taken in the last semester of a student's program. Minimum grade B required. Prerequisites: CS, 585, CPE 549, IS 660, IS 663.

CPE 695 - PROJECTS IN COMPUTER ENGRG  
Semester Hours: 3
CPE 699 - MASTER'S THESIS
Semester Hours: 1-9

Required each semester student is working and receiving direction on a master's thesis. Minimum of two semesters and 6 hours required for M.S.E. students. A maximum of 9 hours credit is awarded upon successful completion of master's thesis. The 1 hour option is only available to students who have successfully defended their thesis and submitted it for approval, but do not meet the deadlines for graduation in the semester submitted. Students may only use the 1 hour option once in their career.

CPE 710 - SEL TOPICS IN PARALLEL PROC
Semester Hours: 3

CPE 715 - SELECTED TOPICS IN COMPUTAT TH
Semester Hours: 3

CPE 720 - SELECTED TOPICS IN VLSI DESIGN
Semester Hours: 3

CPE 726 - ALGORITHMS FOR VLSI DESIGN TOO
Semester Hours: 3

Tools for VLSI Design. This course is concerned with the algorithms found in VLSI design tools.

CPE 730 - SELECTED TOPICS IN COMPUTER SY
Semester Hours: 3

CPE 731 - DISTRIBUTED SHARED MEMORY SYS
Semester Hours: 3

Study issues related to performance, granularity of sharing, multithreading, cache coherence, memory consistency models, pull vs push cacheing, false sharing, thread migration. Case studies systems, including DASH, FLASH ThreadMarks, SHRIMP, Calypso, Alewife to understand these issues.

CPE 735 - SELECTED TOPICS IN OPERATING S
Semester Hours: 3

CPE 740 - SPEC TOPICS COMPUTER NETWORKS
Semester Hours: 3

CPE 742 - PARALLEL PROCESS DESIGN
Semester Hours: 3

CPE 748 - MOBILE & WIRELESS NETWORKS
Semester Hours: 3

High-level issues in mobile and wireless networks. The main topics are mobile IP, Mobile Ad hoc NETworks (MANETs), wireless sensor networks, wireless LAN, Bluetooth, cellular networks, satellite systems, and security issues in mobiles and wireless networks.

CPE 760 - SEL TOPICS COMPILER/TRANSLAT S
Semester Hours: 3

CPE 790 - SEL TOPICS COMPUTER ENGRG
Semester Hours: 1-6

CPE 795 - RESEARCH IN COMPUTER ENGRG
Semester Hours: 1-6

CPE 799 - DOCTORAL DISSERTATION
Semester Hours: 3-9

Required each semester student is enrolled and receiving direction on doctoral dissertation.

Computer Science (CS)

CS 503 - UNIX & C PROGRAMMING/A&M
Semester Hours: 3
CS 513 - INTRO TO COMP ARCHITECT  
Semester Hours: 3

Review of combinational and sequential logic design, register transfer concept, logic design of memory, arithmetic unit, control unit, and I/O system of simple computer. Review of Machine and Assembler language programming. Architectural trade-offs.

CS 517 - DATA ORG ANALYSIS OF ALGORITHMS  
Semester Hours: 3

Review of basic data structures such as stacks, queues, lists, B-Trees, and binary trees. Overview of file structures and access methods. Introduction to complexity analysis of algorithms. Basic algorithm design techniques such as divide & conquer, dynamic programming, and backtracking. Introduction to the classification of problems by class; i.e., tractable, NP, intractable, and unsolvable.

CS 524 - PROGRAMMING LANGUAGES  
Semester Hours: 3

CS 526 - PROG TRANS & COMPILER CONSTRUCTION  
Semester Hours: 3

Language representation; grammar classification; lexical analysis technique and tools; parsing technique and tools; compile-time and run-time symbol table design; code generation and optimization; error diagnostics. Compiler writing tools.

CS 530 - EXP SYS/HEURISTIC PROGRAMMING  
Semester Hours: 3

Expert systems concepts and architectures. Languages and tools for knowledge engineering. Heuristic versus algorithmic methods, heuristics as used in expert systems, and heuristic programming techniques. Class and individual projects. Background in algorithms and programming languages assumed.

CS 537 - INTRO TO NEURAL NETWORKS  
Semester Hours: 3

Introduction to artificial neural networks, covering the most prominent models. Neural networks solutions to classification, clustering, data compression, and constrained optimization applications. Experience with neural networks through projects.

CS 543 - INTRO TO MULTIMEDIA SYSTEMS  
Semester Hours: 3

Multimedia authoring, color models for image and video, introduction to image and video compression, digital audio, multimedia networks, multimedia synchronization, multimedia retrieval. Students may not receive credit for both CS 443 and CS 543. Courses numbered at the 500-level may be taken for undergraduate credit with prior approval, except as otherwise noted. Courses at 600-level or above are reserved for graduate students. They may be taken by other students only by approval. Consult Seniors Taking Graduate Courses in the Graduate Admissions section of this catalog for specific policies and approval procedures. Taught as CS 443/543. Course completion and/or grade requirements for graduate credit will differ from those for undergraduate credit. Prerequisite: CS 617.

CS 545 - INTRO COMPUTER GRAPHICS  
Semester Hours: 3

Introduces underlying theory and mechanics of interactive computer graphics. Basic modeling, rasterization, 2D/3D transformations, and viewing. 3D graphics rudiments. Some hardware and historical perspectives. Many programs.

CS 546 - ADVANCED COMPUTER GRAPHICS  
Semester Hours: 3

High resolution 3D graphics, including advanced topics in viewing, vertex processing, fragment processing, local and global illumination and shading, 3D modeling (including curve and surface representation), texture mapping, and some coverage of solid modeling and color theory. Game production pipeline. Hierarchical issues, visibility, and 3D processing algorithms may also be covered. A significant number of programming projects are involved, with some different program requirements and additional theoretical expectations for CS 546 students. (Same as CS 456; no credit for both). Prerequisite: CS 545.
CS 547 - GAME ENGINES & LEVEL DEV
Semester Hours: 3

(Same as CS 447) This course provides the opportunity for students to produce fully functional games from beginning to end with team members. Along the way, students work on homework/projects involving design document creation, prototyping and gameplay/implementation. Also, game software as artistic content has led to collaborations between engineers and artists. In this course, students focus on not only game engineering development but also art asset generation and management. Considers a 3D game design and development using game engines focusing on the fundamental components for developing cross-platform games. The course focus includes design, development, and distribution of computer games. Emphasis also is on user interface and menus, scripting for game programming, game physics, terrain generation, asset management, animation management, special effects, and cross platform game development. Students may not receive credit for both CS 447 and CS 547.

CS 548 - HUMAN-COMPUTER INTERACTION
Semester Hours: 3

Introduces underlying theory and mechanics of interactive computer graphics. Basic modeling, raterization, 2D/3D transformations, and viewing. 3D graphics rudiments. Some hardware and historical perspectives. Many programs. Introduction to human-computer interaction and principles of graphical user interface design. Includes examination of interactive environments including windowing systems development tools, multimedia, and visual programming interfaces. Prerequisite: CS 545.

CS 553 - CLIENT/SERVER ARCHITECTURES
Semester Hours: 3

Aspects of client/server distributed computing, a paradigm that includes technologies addressing web services (such as AJAX using Javascript/PHP, ASP.NET) as well as distributed object (such as .NET remoting, CORBA). Students will apply the concepts in practical distributed programs.

CS 554 - INTRO TO CLOUD COMPUTING
Semester Hours: 3

Different cloud computing paradigms: IaaS, SaaS, PaaS. Open Source cloud software (for ex., OpenStack, CloudStack). RESTful interfaces, AWS interface. Cloud security. Students may not receive credit for both CS 454 and CS 554.

CS 555 - NETWORK SECURITY
Semester Hours: 3

CS 570 - INTRO TO COMPUTER NETWORKS
Semester Hours: 3

Organization and operation of computer networks. Physical, Data Link, Network, Transport, and Application-layer protocols and algorithms; LAN and WAN systems; TCP/IP; Wired and wireless organizations; security approaches. Prerequisite: CS 513.

CS 571 - MOBILE COMPUTING SFTWR ARC&DEV
Semester Hours: 3

Considers application design for the mobile space, focusing on the fundamental requirements for mobile applications that target mobile devices. The course focus includes development, testing, distribution of mobile applications in a cross-platform environment. Emphasis also is on multimedia and entertainment computing and games. This course will also cover various issues in mobile computing from the readings from research literature such as software engineering practices, analysis of social media and general mobile analytics.

CS 580 - MOBILE DIGITAL FORENSICS
Semester Hours: 3

This course examines digital forensics of mobile devices such as smart phones and tablets in a law enforcement context. Mobile device characteristics that make forensics examinations difficult are discussed. Various forensics tools are critically examined with an eye toward improved tool development.

CS 581 - MODELING & SIMULATION I
Semester Hours: 3

Discrete event simulation from a computer science perspective. Mathematics of probability distributions applied to simulation. Design, implementation, and application of discrete event simulation software. Application to computer and network system design.

CS 582 - MODELING & SIMULATION II
Semester Hours: 3

Advanced application of computer science methods to modeling and simulation software development. Design, development, and integration of software for real-time distributed simulations using standard network interoperability protocols. Team development of modeling and simulation software. Prerequisites: CS 581 or MOD 501.
CS 585 - INTRO TO COMPUTER SECURITY
Semester Hours: 3

This course examines the issues related to security policies, models and mechanisms applicable to providing security for computer-based systems including operating systems, database management systems, and networks.

CS 590 - PROGRAMMING ENVIRON W/UNIX
Semester Hours: 3

Strategies for design and development of systems and programs in the UNIX environment. Emphasis: automated tool and system development using UNIX tools. Advanced shell concepts including control flow and interrupt handling. Process and inter-process communication.

CS 595 - INDEPENDENT STUDY
Semester Hours: 3

Individual directed study under the supervision of an instructor. Must have approval of the instructor.

CS 596 - SPECIAL TOPICS
Semester Hours: 3

Individual directed study under the supervision of an instructor. Must have approval of the instructor.

CS 597 - SPECIAL TOPICS
Semester Hours: 3

Course offered by an instructor in a specialized area of computer science. Must have approval of instructor.

CS 598 - SPECIAL TOPICS
Semester Hours: 3

Course offered by an instructor in a specialized area of computer science. Must have approval of instructor.

CS 600 - INTERNSHIP IN COMPUTER SCIENCE
Semester Hour: 1

Work experience in Computer Science or a related field in a business or government agency; conducted under the direction of the agency supervisor and approved by a member of the CS faculty. A substantial report must be produced and approved by the supervisor and the faculty member.

CS 603 - FORMAL LANG/AUTOMAT THRY
Semester Hours: 3

CS 613 - COMPUTER ARCHITECTURES
Semester Hours: 3

Organization, operation, and analysis of advanced computer architectures. Topics include advanced pipelining approaches, multi-processor architectures, instruction set architectures, memory hierarchy design, hardware and software-based performance optimization, and system performance measurement. Prerequisite: CS 513.

CS 617 - DES & ANALY OF ALGORITHM
Semester Hours: 3

Strategies of algorithm synthesis and analysis. Classical algorithm categories such as: divide-and-conquer, greedy method, dynamic programming, search and traversal. Computational complexity; theoretical results from lower- and upper-bound studies, NP-hard, and NP-complete problems. Prerequisite: CS 517.

CS 630 - ARTIFICIAL INTELLIGENCE I
Semester Hours: 3

All concepts and methods for problem solving, heuristic search, planning, hypothesis formation, modeling and knowledge representation, knowledge acquisition and learning. Applications of AI in various areas. Background in algorithms and programming languages assumed. CS 530 recommended.

CS 635 - COMPUTAT MODEL COGNITION
Semester Hours: 3

Computational models of human information processing covering topics of current interest to both artificial intelligence and cognitive psychology. Use of computer simulations to test psychological theories. Application of psychological research to building AI systems. Prerequisite: CS 630.
CS 640 - AUTOMATIC PATTERN RECOGN
Semester Hours: 3

Discriminant analysis, maximum likelihood decisions, deterministic and nondeterministic approaches for trainable classifiers, preprocessing and feature extraction, clustering, syntactic pattern recognition. Pattern recognition in image analysis.

CS 641 - DATA MINING
Semester Hours: 3

Data preprocessing, distance measures, classification with decision trees, Bayesian classifiers, neural networks, support vector machines, frequent item set analysis, association rule generation, clustering methods.

CS 642 - COMP PROC/DIGITAL IMAGES
Semester Hours: 3

Introduction to image processing systems; sensing, sampling and quantization; image transforms; image enhancement and restoration; image segmentation, and description; image correlation; image sequence analysis; practical applications of image processing.

CS 643 - MULTIMEDIA SYSTEMS
Semester Hours: 3

Lossless and lossy compression algorithms, Huffman coding, Arithmetic coding, Dictionary-based compression, quantization techniques, differential encoding, transform coding, wavelet-based coding; image compression, video compression, audio compression, applications of compression algorithms to audio, image, and video compression standards. Prerequisite: CS 617.

CS 646 - COMPUTER GEOMETRY MODELING
Semester Hours: 3

CS 650 - SOFT'W ENGINEERING PROC
Semester Hours: 3

The process of developing complex software products. Includes software life cycles, phases of development and disciplines such as CM, QA, V&V, and T&E. Issues of professionalism and the ethical use of computers. Background in algorithms and programming languages assumed.

CS 652 - OBJECT-ORIENTED DESIGN
Semester Hours: 3

A survey of formal and informal techniques and methodologies for software analysis, requirements, architecture and design. Emphasis is on effective development processes. Comparison of different approaches, considering their advantages and disadvantages. Prerequisite: CS 650.

CS 655 - FORMAL METHODS IN SOFTWARE ENG
Semester Hours: 3

Formal mechanisms to specify, validate, and verify software systems. Propositional and predicate calculi. Program verification through Dijkstra's weakest preconditions and Hoare's method. Formal specification via algebraic specifications and abstract model specifications. Prerequisites: CS 617 and CS 650.

CS 656 - SOFTWARE TESTING
Semester Hours: 3

Advanced software testing techniques, including white box, black box, integration testing, and system testing. Other topics may include test data adequacy, test data selection, and output oracle, including functional, structural, and fault-based testing methods. Prerequisite: CS 650.

CS 658 - SOFTWARE PROC & PROD IMPROVEMENT
Semester Hours: 3

Software quality assurance as an umbrella activity. Use of process, project, quality and product metrics to gain insight into the software development activity. Use of metrics to drive incremental process improvement techniques. Examination of CASE tools and how they affect the software process. Prerequisite: CS 650.

CS 666 - SOFTWARE STUDIO I
Semester Hours: 3

Students work in teams on medium-sized software projects to analyze and document software requirements, produce a project plan, design and build a prototype, and present the project for evaluation. The design-evaluation phases are repeated twice to generate a more mature design. Prerequisites: CS 650 and either CS 652, 656, or 658.
CS 668 - SOFTWARE STUDIO II  
Semester Hours: 3  
A continuation of CS 666. Students work in teams to continue the software engineering cycle with emphasis on software management, evolution, maintenance, quality analysis, testing, integration, validation, and security auditing. Prerequisite: CS 666.

CS 670 - COMPUTER NETWORKS  
Semester Hours: 3  
Detailed analysis of the organization and operation of computer networks, focusing on algorithms and organizations for the Transport Layer, Network Layer and Data Link Layer protocols of wired and wireless systems. Prerequisite: CS 570.

CS 685 - COMPUTER SECURITY  
Semester Hours: 3  
Advanced topics in security policies, models and mechanisms applicable to providing security for computer based systems, including operating systems, database management systems, and networks.

CS 687 - DATA BASE SYSTEMS  
Semester Hours: 3  
Basic concepts of database systems. Use of semantic models in database design. Data models with a major focus on the relational and object-oriented models. Relational query languages and normal forms. Database management system design issues. Security and integrity issues.

CS 690 - ADVANCED OPERATING SYSTEMS  
Semester Hours: 3  
Issues related to shared memory multiprocessors, multicore computers, clusters, grids and clouds. Concurrency and distributed process coordination. Introduction to network communication issues and systems such as client-server, peer-to-peer, transaction based. Prerequisite: CS 513.

CS 692 - COMPUTER SECURITY  
Semester Hours: 3

CS 695 - INDEPENDENT STUDY  
Semester Hours: 3  
Individual directed study under the supervision of an instructor. Must have instructor approval.

CS 696 - SELECTED TOPICS IN CS  
Semester Hours: 3  
Course offered by an instructor in a specialized area of computer science. Must have instructor approval.

CS 699 - MASTER'S THESIS  
Semester Hours: 3-6  
Course offered by an instructor in a specialized area of computer science. Must have instructor approval. Required each semester a student is working and receiving direction on master's thesis. Prerequisite: instructor approval.

CS 703 - THEORY OF PROG LANGUAGES  
Semester Hours: 3  
Syntactic analysis and semantic interpretation of programming languages based on research and results in formal languages and associated compiler techniques. Identification of research directions and potential research projects in programming languages.

CS 717 - ADV ALGORITHM DES/ANALYSIS  
Semester Hours: 3  
Parallel algorithms, combinatorial algorithms, approximation algorithms for NP-complete problems, computational complexity. Distribution of algorithms across complex architectures. Prerequisite: CS 617.

CS 730 - ARTIFICIAL INTELLIGENCE II  
Semester Hours: 3  
Rigorous treatment of special topics in artificial intelligence. Topics may include knowledge representation, automated deduction, search control, machine learning, or meta-level architectures. Prerequisite: CS 630.
CS 742 - IMAGE PROC ALGO/ARCHITEC  
Semester Hours: 3

Algorithms and data structures for image enhancement, segmentation, object recognition and image sequence analysis; real-time versus non real-time image processing; computer architectures for fast image processing; cellular logic array processors, distributed, systolic and binary array processors. Prerequisite: CS 613 and CS 642.

CS 790 - OPERATING SYSTEMS SEMINAR  
Semester Hours: 3

Advanced research topics in operating system theory and practice. Students will read and discuss classic and current papers in the literature. Each student will present reports in class and prepare a substantial research paper. Prerequisite: CS 690.

CS 795 - ADVANCED SELECTED TOPICS  
Semester Hours: 3

Individual directed study under the supervision of an instructor. Must have instructor approval.

CS 796 - ADVANCED SELECTED TOPICS  
Semester Hours: 3

Course offered by an instructor in a specialized area of computer science. Must have instructor approval.

CS 799 - DOCTORAL DISSERTATION  
Semester Hours: 3-9

Required each semester student is enrolled and receiving direction on doctoral dissertation. Maximum of 18 hours credit toward degree.

CS ADD - COMPUTER ORG & ARCHITEC/ATHENS  
Semester Hours: 3

Earth System Science (ESS)

ESS 501 - SURVEY ATMOSPHERIC SCIENCE  
Semester Hours: 3

General survey of the field of atmospheric science includes thermodynamics, atmospheric dynamics, cloud physics, and atmospheric radiation. Quantitative examination of atmospheric properties including atmospheric composition, structure and dynamics.

ESS 502 - SCI & SOC ASPTS NATRL DISASTER  
Semester Hours: 3

Examination of the physical causes of major natural geophysical hazards and their impact on the natural and built environment, society and the economy. Evaluation of the ability to forecast events, and develop sound mitigation and recovery measures. Specific case studies are considered.

ESS 507 - ENVRNMTL THRTS PBL PY DEC MKG  
Semester Hours: 3

Researchers, policymakers and environmental campaigners have identified 25 potential future threats to the global environment. This course examines the nature and consequences of these threats and their potential impacts for the survival of the human race.

ESS 508 - PYTHON FOR ID ESS APPLICATIONS  
Semester Hours: 3

Introduction to GIS model building, Python programming, and automation of scripts for ArcGIS. Techniques in Model Builder, Python, and the methods for automation will be taught using data from numerous available data sources across the internet with heavy emphasis on the Earth Sciences.

ESS 509 - APPLI COMPUTERS IN METEOROLOGY  
Semester Hours: 3

Survey of data types and languages commonly used in the meteorological community along with practical application to meteorology. Course is designed to prepare students for graduate work and research in atmospheric science.

ESS 510 - OPERATIONAL WEATHER FORECAST'G  
Semester Hours: 3

Operational Meteorology covers subjective and objective methods of atmospheric prognosis, including techniques for forecasting operationally-important weather elements. Course explores interpretation, use and systematic errors of computer-generated products, human factors within forecasting, and application of meteorological theory in an operational setting. Course instruction is accomplished through analysis of various weather events from beginning to completion.
### ESS 513 - GIS & IMAGE PROCESSING
Semester Hours: 3

Spatial data processing with focus on ESRI ArcGIS and ENVI software. Basic concepts in GIS data management and creation and scientific use of satellite imagery. Topics include image interpretation, classification, transformations, raster and vector data, projections, data query, and cartography.

### ESS 514 - GEOSPATIAL APPLICATIONS
Semester Hours: 3

Advanced concepts in Earth science geospatial applications, primarily using ArcGIS. Topics can include geostatistical analysis, 3D terrain analysis, advanced data sources, raster manipulation, geodatabase design, suitability and network modeling.

### ESS 515 - ADVANCED TOPICS IN GIS
Semester Hours: 3

Advanced concepts in Earth science geospatial applications, primarily using ArcGIS. Topics can include geostatistical analysis, 3D terrain analysis, advanced data sources, raster manipulation, geodatabase design, suitability and network modeling. Prerequisite: ESS 514 or consent of instructor.

### ESS 561 - ATMOSPHERIC RADIATION I
Semester Hours: 3

### ESS 590 - SPECIAL TOPICS IN ESS
Semester Hours: 3

Selected topics of interest not included under other courses.

### ESS 610 - LAND USE APP & SUSTAINABILITY
Semester Hours: 3

Study of land use and sustainability issues using satellite image processing and GIS. International examples of urbanization, agriculture, transportation, water management, and natural resources exploitation. Discussions of current literature and quantitative analyses of satellite and situ data. Prerequisite: ESS 515 or consent of instructor.

### ESS 612 - ADV GIS EARTH ATMOSPHERE PROBL
Semester Hours: 3

Advanced GIS and remote sensing/image processing. Discussion, guided readings, and group labs to interact with student peers and instructor to develop geospatial solutions to problems relevant to their thesis research including appropriate research design, data collection, and analysis. Prerequisites: ESS 515 and ESS 610.

### ESS 625 - AIR POLL APP & DEC MAKG REMOTE
Semester Hours: 3

Course will review principles of air pollution, measurement methods, regulation, national and international standards and how research is used to make decisions regarding air quality. The course will use ground-based, satellite, and numerical modeling information through a case study approach. Prerequisites: ESS/ATS 501.

### ESS 630 - PHYSICAL CLIMATOLOGY
Semester Hours: 3

This course examines the physical aspects of the global climate system, including the global energy balance, surface energy balance, hydrologic cycle, climate classification, ocean circulation, natural and anthropogenic climate change and other selected topics such as climate sensitivity. Prerequisites: ATS 501 or ATS 541.

### ESS 632 - ENERGY, CLIMATE, ENVIRONMENT
Semester Hours: 3

This course focuses on energy and its impact on the environment including climate change and air pollution. Specific energy forms, such as fossil fuels, nuclear energy, solar energy, are discussed.

### ESS 670 - SATELLITE REMOTE SENSING I
Semester Hours: 3

Using a hands on approach, this course covers a broad range of topics concerning digital image processing applied to the remote sensing of atmospheric, cloud and surface properties using various satellite data sets. Prerequisites: ESS 509.

### ESS 680 - NUMERICAL MOD APPL ESS
Semester Hours: 3

This course will provide the physical basis for numerical model applications in the earth-atmosphere system including spatial and temporal scales. Prerequisites: ESS 501 and ESS 509.
ESS 690 - SPECIAL TOPICS IN ESS
Semester Hours: 3

Selected topics of interest not included under other courses.

ESS 699 - MASTER'S THESIS
Semester Hours: 3-6

A minimum of six thesis credit hours is required for MS degree.

ESS 780 - SEMINAR
Semester Hour: 1

Speakers are invited to report on research relevant to the field of Atmospheric and Earth System Science. Students are expected to attend at least twelve seminars and to write short descriptions of the presentations.

ESS 781 - STUDENT SEMINAR
Semester Hour: 1

Guest speakers report on research relevant to the fields of Atmospheric and Earth System Science. Students are expected to attend weekly seminars, submit a paper based on at least ten talks, and make a 15 minute conference-type presentation on a research topic in atmospheric science selected in agreement with their advisor.

ESS 782 - PROFESSIONAL DEVELOPMENT
Semester Hour: 1

Topics concerning professional ethics, writing scientific journal articles, proposals and resumes, preparing budgets, networking, time management, conference presentations, research administration, funding agencies, stress and burnout will be discussed.

Economics (ECN)

ECN 511 - ECONOMICS OF INFORMATION TECH
Semester Hours: 3

Economic theory underlying consumer and firm behavior and strategy in the information technology industry, with an emphasis on developing formal tools of analysis and applying them to real-world examples.

ECN 545 - GAMES & NETWORKS
Semester Hours: 3

An introduction to game theory and economic- and social network analysis. Prerequisites: ECN 600.

ECN 554 - INTERNATIONAL ECONOMICS
Semester Hours: 3

Behavior of foreign-exchange rates under different monetary standards, methods of financing international trade, historical development of international financial institutions, current and proposed methods for fostering international trade, and problems of international liquidity.

ECN 575 - ECON LABOR MARKETS & HUMAN RES
Semester Hours: 3

Economic analysis of labor markets; labor demand and labor supply at the market and individual level. Topics include individual decisions to supply labor, compensating wage differentials, human capital investment, discrimination in labor markets, pay and productivity, and the role of labor unions.

ECN 580 - INTRODUCTION TO ECONOMETRICS
Semester Hours: 3

An introduction to the quantatative measurement and analysis of actual economic and business phenomena.

ECN 590 - SPECIAL PROJECTS
Semester Hours: 3

Faculty guided independent study in an area of interest to the student and faculty member.

ECN 600 - FOUNDATIONS OF ECONOMICS
Semester Hours: 3

This course covers the economic foundations in which businesses operate. Coverage includes output and pricing decisions of firms in various market structures; consumer and producer choice at the micro level; and macroeconomic issues, such as unemployment and inflation and government policy.
ECN 626 - MANAGERIAL ECON & TECH
Semester Hours: 3

The principles of microeconomics are used to formulate and analyze problems and these principles are applied to business decisions. The course includes an introduction to regression analysis and forecasting. Basic international economic concepts and the importance of technology are explicitly introduced. Prerequisites: ECN 600 and MSC 600.

Education (ED)

ED 500 - SPEC TOPICS EDUCATION
Semester Hours: 1-3

Independent study, special projects, and special in-service programs.

ED 501 - INTRO TO EDUCATION
Semester Hour: 1

Initial practicum experience designed to provide the opportunity to explore the role of the classroom teacher in today's diverse school settings. Required for graduate students receiving their initial certification.

ED 510 - FOUNDATIONS OF LITERACY
Semester Hours: 3

This course includes a study of methods, materials, and strategies for reading instruction. Components of the course will include but not be limited to the five pillars of reading instruction identified by the National Reading Panel (2000): phonemic awareness, phonic, fluency, vocabulary, and comprehension. Emphasis is placed on the various stages of and approaches to literacy development, knowledge of which is required for the Alabama Reading Specialist licensure.

ED 513 - LITERATURE FOR CHILDREN & ADOL
Semester Hours: 3

Course content will include the study of various genres of children's and adolescent literature and their relationship to beginning reading, enhancement of reading comprehension, and intervention instruction in the various content areas. (Same as EH 613) Must be admitted to the Teacher Education Program.

ED 520 - COMPUTER BASED INSTRUCT'L TECH
Semester Hours: 3

Introduces prospective teachers to current state of the art in educational technology. Extensive hands-on experiences with microcomputers and other emerging technology. Emphasis on effectively integrating technology into instructional setting for both special and regular students.

ED 521 - TCHNG ENGLISH MID & SEC SCHLS
Semester Hours: 3

This course is designed to provide graduate level English Education majors with the theory, tools and techniques for teaching middle and secondary students. The focus of the course is primarily, though not exclusively, on designing lessons that allow for maximum student participation and control while remaining aligned to Alabama Content Standards. Students will study, discuss, and implement a variety of environments middle and secondary students reside in, special attention will be given to the use of various technologies as a means of content exploration and student evaluation. As this is a graduate level course, students are expected to engage in substantive scholarly research. Admissions to the Teacher Education Program of permission of instructor is required before registering for this class.

ED 522 - TCHNG MATH MID & SEC SCHLS
Semester Hours: 3

This course is designed to provide graduate level Mathematics Education majors with the theory, tools and techniques for teaching middle and secondary students. Students are expected to engage in substantive scholarly research. Admissions to the Teacher Education Program of permission of instructor is required before registering for this class.

ED 523 - TCHNG SCIENCE MID & SEC SCHLS
Semester Hours: 3

This course is designed for students who are pursuing teaching certification in middle and/or secondary science. The course will first focus on how middle and secondary students learn science, and then from this knowledge base, the class context will focus on how to plan, design, and implement inquiry-based science instruction. Assessment development in science, the interpretation, and the use of assessment results to guide student understanding will also be incorporated in teaching methodology.
ED 524 - TCHNG SOC STUD MID & SEC SCH  
Semester Hours: 3  
This course is designed to study effective techniques and strategies employed by social science teachers at the middle and secondary levels. As well as learning theoretical foundations in social studies education, students will learn pedagogic skills, instructional strategies, and modes of reasoning unique to the social studies classroom. Intensive field experience required. Students are required to observe, participate, and teach a lesson in a secondary social studies classroom. Admission to the Teacher Education Program or permission of chair is required for this course.

ED 530 - APPLIED MULTICULTURALISM  
Semester Hours: 3  
Through an examination of constructs such as race, ethnicity, social class, gender, sexual orientation, and religious affiliation, students will develop an understanding of the connections between identity, difference, power, and privilege and the role(s) school (could/should) play in perpetuating or ending discriminatory practices. Furthermore and more importantly, students will develop an understanding of the ways research in both the humanities and social sciences can be used to interpret, analyze, and critique multiculturalism. Students will leave the course with research-based pedagogical practices designed to help all students learn to the best of their abilities.

ED 532 - SPACE ORIENTATION TEACHERS  
Semester Hours: 3  
A weeklong course at the U.S. Space and Rocket Center in Huntsville, Alabama for pre-service and in-service teachers. The inquiry based workshops are taught around the theme of space exploration include activities to be done across the curriculum. All activities are correlated to National Math, Science, Technology, Social Studies, and Reading Standards. Activities based on curriculum developed by NASA, CAP, NSATA, and the USSRC. Topics include moon, Mars, rocketry, propulsion, hydroponics, math, biology, history and literature.

ED 535 - INTRO APPLIED EDUCATIONAL RES  
Semester Hours: 3  
Introduction to the nature of research and its relationship to educational thought and practice. Primary focus will be on planning and executing research activities (i.e. action research, thesis development) in the diverse classroom and analyzing the collected data to improve instruction, educational performance, and adding to the body of knowledge in educational practices.

ED 540 - COGN DEV THEORIES LEARNING  
Semester Hours: 3  
The course is designed to inform students about recent developments in Cognitive Psychology and their implications for teaching and learning. Students will leave the course with a variety of "cognitive understandings" for use in differentiated classrooms.

ED 545 - CURR & INSTR IN SEC SCHOOLS  
Semester Hours: 3  
This course is designed to address various contemporary teaching and learning strategies, as well as related issues, assessments strategies, and applicable theories related to secondary teaching and learning.

ED 560 - CURR/EMERGING INSTR TECH  
Semester Hours: 3  
Designed to build competency in computer technologies appropriate to instructional use. Concepts of authoring and scripting will be used to unify course materials. (Same as CS 560.).

ED 565 - INTRO DIFFERENTIATED INSTRUCTI  
Semester Hours: 3  
The course provides an introduction to the philosophy and practice of differentiation. Students will examine the elements, content, process, product, affect and environment by which instruction can be differentiated to address the complex challenges of meeting the diverse learning needs of all students.

ED 570 - DIFF INSTRUCTION SPEC POP  
Semester Hours: 3  
The course provides practical strategies to maximize learning for all students, particularly those with disabilities, gifted/talented, and English language learners (ELL).

ED 575 - READING PRIMARY GRADES  
Semester Hours: 3  
An introduction to the basic principles of literary instruction in culturally and linguistically diverse primary grade classrooms, including theoretical bases for instruction, methods of instruction and organization, developmentally appropriate strategies and materials, and assessment of children's literacy. Class activities include mini-lessons, discussions, group activities, and presentations. An intensive school-based practicum in grades preK-2 is required.
ED 580 - PROJECT BASED LEARNING  
Semester Hours: 3  
Develop a robust understanding of Project Based Learning (PBL) through critiquing, evaluating, and synthesizing PBL's core theoretical concepts.

ED 593 - ED EXCEPT CHILD & YOUTH  
Semester Hours: 3  
Introduction to the field of exceptional children and youth, including observations. This course, or equivalent, is a prerequisite to certification. Intensive field experience required.

ED 600 - SPEC PROB IN EDUCATION  
Semester Hours: 1-3  
Independent study, special projects, and in-service programs.

ED 604 - CONTRIBUTION PSY TO EDUC  
Semester Hours: 3  
Principles, theory, and practice of psychology for teaching and administrative service in educational institutions. Factors that determine learning and conditions of effective teaching. Administrator and supervisor as organizer of the milieu wherein teaching, learning, and growth occur. Intensive field required.

ED 605 - READING RESEARCH & INSTRUCTION  
Semester Hours: 3  
Elements of effective reading instruction for beginning readers as supported by current research and practice. Topics include balance, language-rich/ print-rich environment, language development, phonemic awareness, print awareness, phonics, writing, spelling, and comprehension. Intensive field experience required.

ED 607 - EDU LEADER AS EVALUATOR  
Semester Hours: 3  
Procedures and techniques of evaluation and research approaches. Emphasis on teachers as evaluators; based on action research in the classroom. Intensive field experience required.

ED 608 - EXPAND RDG ABIL CONT AREA INST  
Semester Hours: 3  
Strategies to enhance reading comprehension when using materials in all subject areas. Teacher-directed, integrated instruction; extensive use of authentic printed materials; discussion at literal and higher levels of understanding, motivation, vocabulary, and writing. Intensive field experience required.

ED 609 - CLASSROOM & BEHAVIOR MGMT  
Semester Hours: 3  
A focus on the variety of instructional management options to meet classroom and individual student needs to ensure success in school is integrated throughout all course activities. A range of management practices, including strategies for diverse and special populations is offered. Theoretical and reflective practices are incorporated during classroom meetings. Students will observe, research, and discuss current classroom approaches. After reflections, effectiveness of observed practices will be assessed. Student will discuss and develop alternative activities that promote successful management techniques. Intensive field experience required. Admission to the Teacher Education program or permission of chair is required for this class.

ED 612 - DIAGNOSIS & ASSMNT OF READING  
Semester Hours: 3  
Focuses on ways to address the needs of students who do not read at grade level. Intervention strategies such as on-going assessment and evaluation, explicit instruction in phonemic awareness and phonics, extensive practice, comprehension strategies, and writing, along with careful examination of standardized state assessment measures. Intensive field experience required.

ED 615 - READING INTERMEDIATE GRD  
Semester Hours: 3  
This course provides an in-depth study in and application of the process of reading and reading instruction, theoretical approaches, instructional strategies, classroom organization, and the formal/informal assessment of reading in intermediate grades. This course is required of all elementary education majors and secondary education candidates who are pursuing a middle school endorsement. Intensive field experience required. Prerequisites: Admission to the Teacher Education Program.
ED 620 - USING TECH REACH SPEC POP  
Semester Hours: 3  
Prepares teachers to plan curriculum integration by using computer technology and software in various curriculum areas for both regular and special students. Students will develop competency in instructional design and production skill techniques and implement instructional events using long-distance technologies.

ED 635 - ASMT GUIDE DIFFRNT INSTRUCTION  
Semester Hours: 3  
The focus of this course would be to use a variety of norm-referenced, criterion-referenced and other assessment data to inform instruction for a diverse classroom within the RTi model. Students would learn to use formative and summative assessments to determine the type of strategies needed to teach content.

ED 640 - DIFD STRGTY RES & TEACH ELL  
Semester Hours: 3  
The course is designed to provide current educators the foundation for informed and effective classroom teaching in diverse classrooms with ELL students. The course includes theoretical underpinnings of historical and contemporary ELL education, instructional methods, analysis and critique of methodologies, and strategies for pedagogically sound classroom instruction and lesson planning within linguistically and culturally diverse classrooms.

ED 650 - DIFFNT ELEM MATH & SCI INSTRUC  
Semester Hours: 3  
This course will focus on guiding the learner to apply the concepts of differentiated instruction within mathematics and science contexts. Participants will learn how to implement effective strategies for managing flexible groups, acquire ideas for providing students with a variety of options to successfully target mathematics and science standards and understand how to plan strategically in order to reach the needs of diverse learners within the classroom through inquiry-based learning.

ED 665 - DIFFNT ELEM LITERACY (R & W)  
Semester Hours: 3  
This course will focus on guiding the learner to apply the concepts of differentiated instruction to elementary literacy concepts. Advanced teacher candidates will develop and implement differentiated instructional plans that utilize individual and flexible grouping strategies and resources to support the growth of strategic, independent readers and writers.

ED 671 - TCHG ELEM LANGUAGE ARTS  
Semester Hours: 3  
Introduction to current practices in language arts instruction with emphasis on the development of an integrated curriculum using children's literature as a foundation. Includes appropriate techniques for teaching of grammar, spelling, and handwriting. Intensive field experience required. Prerequisites: Admission to the Teacher Education Program.

ED 672 - TCHG ELEM SOCIAL STUDIES  
Semester Hours: 3  
Teaching social studies in grades K-6. Helping beginning teachers acquire background skills in organizing and teaching units of work. Intensive field experience required. Prerequisites: Admission to the Teacher Education Program.

ED 673 - TCHG NATURAL/HLTH SCIENCE  
Semester Hours: 3  
Integrates concepts from reflective practice with elementary science teaching. Opportunity to refine teaching skills in the planning, implementation, and evaluation of science lessons and units of instruction. Intensive field experience required. Prerequisites: Admission to the Teacher Education Program.

ED 674 - TCHG ELEM. MATHEMATICS  
Semester Hours: 3  
Overview of the mathematics concepts and skills taught in grades K-6 with an emphasis on the principles, methods, and materials used in the teaching and evaluation of elementary school mathematics. Focuses on the attitudes and behaviors of students and teachers in the actual planning and implementation of mathematics instruction for an elementary school classroom. Intensive field experience required. Prerequisites: admission to the teacher education program.

ED 690 - MASTER'S ACTION RESEARCH PROJ  
Semester Hours: 3  
The capstone course will serve as a mechanism to support the research, methodology, development, and experimental stages of the required action research. The student's work will be approved and supervised by a selected faculty advisor with direct connections to the research area. A symposium in which students present their research report will be culminating activity.
ED 691 - PORTFOLIO SEMINAR & SYMPOSIUM
Semester Hour: 1

The seminar will provide a forum in which the student's culminating portfolio is refined and submitted for faculty review. The seminar will also serve as a mechanism to support the final writing stages of the required action research project or case study report. The student's work will be approved and supervised by the faculty advisor(s). A symposium in which students present their research will be the culminating activity.

ED 693 - ELEMENTARY INTERNSHIP
Semester Hours: 6

Observation, participation and teaching in elementary school (full time, 15 week semesters). Students will also attend campus-based seminars designed to meet specific needs of the interns.

ED 698 - HIGH SCHOOL INTERNSHIP
Semester Hours: 3-6

Observation, participation, and teaching in middle/high school (full-time, 15 week semester). Students will also attend campus based seminars designed to meet specific needs of interns.

ED ADD - FUND OF CHRISTIAN ED/OAKWOOD
Semester Hours: 2

Education Collaborative (EDC)

EDC 625 - ASSISTIVE TECH EDUC INDV W/ASD
Semester Hours: 3

This course provides an overview of assistive technology devices and services that are used in the instruction of students with autism spectrum disorders (ASD) and other communication disabilities.

EDC 636 - INTRO STUD AUTISM SPECTR DISOR
Semester Hours: 3

This course will provide advanced teacher candidates with an introduction to working with students diagnosed with autism spectrum disorders. Candidates will develop an understanding of the range of characteristics and behaviors associated with ASD, the effectiveness of early intervention on behaviors, and the theories regarding the etiology of the disorder.

EDC 645 - ASMT & BEHAVIOR APPLC ASD
Semester Hours: 3

This course focuses on assessment and intervention planning for children with ASD. Candidates will enhance their knowledge of various assessments appropriate to the ASD population and develop skills to administer and interpret assessments. The course will provide candidates with an overview of the Applied Behavioral Analysis approach to assessing and teaching students with ASD.

EDC 655 - COLLAB & TRANSITION PLANNG
Semester Hours: 3

Using case-based instructional strategies, this course is designed to assist advanced teacher candidates in learning to build supportive relationships with families, paraprofessionals, and related service providers, including community agencies, as a foundation for designing differentiated learning experiences for students with disabilities.

EDC 660 - PRCTL APPLC VIS INSTR STRATEGY
Semester Hours: 3

Advanced candidates will participate in an extensive summer clinic for children with ASD. Candidates learn how to create an appropriate learning environment, organize schedules for individual students, develop materials, engage in instruction, respond to behavioral issues, and document student progress.

Electrical Engineering (EE)

EE 500 - RANDOM SIGNALS & NOISE
Semester Hours: 3

EE 501 - DIGITAL SIGNAL PROC ARCHITECTURE
Semester Hours: 3

Introduction to digital signal processor architecture, applications, assembly language programming, and development tools for designing and implementing DSP systems.

EE 503 - COMMUNICATIONS SYSTEM & SIMULATION WITH LAB
Semester Hours: 3

Modern test equipment and computer-based simulation methods are used to conduct experiments in the area of communication systems. Hands-on experiments are conducted using digital oscilloscopes, arbitrary waveform generators, vector impedance meters and other relevant test and measurement equipment. Methods are investigated for signal modulation and demodulation; studies are conducted on AM, FM, PSK, PCM and delta modulation circuits and systems. Several types of filters are investigated, both analytically and experimentally. Properties and behavior of phase-locked loop are studied by using both hardware and numerical simulations.

EE 504 - INTRO DATA COMMUNICATION NETWORKS
Semester Hours: 3

Overview of historic development of modern telephone and data communication system, system architecture, standards, broadband switching systems, modems, protocols, personal and mobile communications, digital modulation techniques.

EE 505 - INTRO CONTROL/ROBOTIC SYSTEM
Semester Hours: 3

The basic theories and analytical techniques for modeling, analysis and control of dynamical systems. Transfer functions, block-diagrams, frequency response, stability criteria, series and feedback controller design, digital control. Introduction to the dynamic analysis and control of robotic systems.

EE 506 - COMMUNICATION THEORY
Semester Hours: 3

EE 507 - SELECTED TOPICS/ECE
Semester Hours: 1-6

EE 510L - SELECTED TOPICS LABORATORY
Semester Hours: 0

EE 514 - ANALOG AND DIGITAL
Semester Hours: 3

Analog filter design via Butterworth, Chebyshev, and elliptical approximation. Active filter design using operational amplifiers. Digital filter design methods.

EE 516 - DIGITAL ELECTRONICS
Semester Hours: 3

EE 519 - DIGITAL ELECTRONICS LAB
Semester Hour: 1

EE 527 - ELECTROMAGNETIC ENGINEERING
Semester Hours: 3

Review of Maxwell's equations, uniform plane waves in different types of media, reflection and transmission of uniform plane waves, transmission lines, microwave and fiber optic waveguides, antennas, wireless applications.

EE 532 - OPTICAL SYSTEMS DESIGN
Semester Hours: 3

Introduction to the geometrical design and analysis of optical systems, and to the design principles of lens systems.

EE 534 - OPTICAL FIBER COMMUNICATIONS
Semester Hours: 3

Introduction to optical fibers and their transmission characteristics, optical fiber measurements, sources and detectors, noise considerations for digital and analog communications, optical fiber systems.
EE 541 - OPTICS I
Semester Hours: 3

EE 542 - PHYSICAL OPTICS
Semester Hours: 3

Scalar and electromagnetic waves, polarization, coherence, reflection and refraction; two beam and multiple beam interference, interferometers, Fabry-Perots, thin films, diffraction, and absorption and dispersion.

EE 543 - OPTICAL COMM SYS & NETWORKS
Semester Hours: 3

EE 553 - LASER SYSTEMS
Semester Hours: 3

Spontaneous and stimulated emission, population inversion, optical resonators, three- and four-level systems, Q-switching and modelocking, semiconductor lasers, integrated optic waveguides and couplers, scanning systems, high power industrial applications. Includes a research project and oral presentation.

EE 570 - OPT & PHOTONIC SYSTEMS DESIGN
Semester Hours: 3

EE 586 - INTRO MODERN CONTROL SYSTEMS
Semester Hours: 3

EE 601 - LINEAR SYSTEMS
Semester Hours: 3

Formulation and solution by transform methods of differential equations of linear electrical and electromechanical systems, state equations, signal-flow graphs, and discrete-time systems.

EE 603 - RANDOM SIGNALS IN COMMUNICATION
Semester Hours: 3

Random processes applied to communication and control. Concepts covered include stationarity, correlation, power spectrum, Brownian motion, thermal noise, Markov processes, and queuing theory. Emphasis on systems with noisy excitation.

EE 604 - DIGITAL IMAGE PROCESSING
Semester Hours: 3

EE 605 - CLASSICAL CONTROL DESIGN
Semester Hours: 3

Design of feedback, feedforward, and minor-loop controllers/compensators using classical control engineering techniques and classical performance criteria. Frequency domain synthesis of lead, lag, lead-lag, etc. compensators; tuning of PD and PID controllers; error budgets; use of commercial CAD software for classical control design and performance evaluation; digital simulation techniques. CAD laboratory sessions.

EE 606 - STATISTICAL COMM THEORY
Semester Hours: 3

EE 607 - ROBOTIC SYSTEMS CONTROL
Semester Hours: 3
In-depth study of information, decision and control problems associated with robotic system design. Sensor systems, recognition and decision algorithms, kinematics and dynamics, trajectory planning, analog and digital controllers, adaptive and optimal control.

EE 609 - ELECTROMAGNETIC FIELD THEORY
Semester Hours: 3

EE 610 - SELECTED TOPICS/ECE
Semester Hours: 1-6

EE 612 - GRADUATE DESIGN PROJECT
Semester Hours: 3
Graduate design project in support of an M.S.E. program.

EE 613 - LASER ELECTRONICS
Semester Hours: 3

EE 615 - ANALOG CIRCUIT DESIGN
Semester Hours: 3
Use of operational amplifiers to synthesize special-purpose filters and circuits for analog signal processing and conditioning; linear and switching power supplies; high-frequency effects; circuits for transmitters and receivers; digital circuits from an analog viewpoint; A/D and D/A converters; selected topics.

EE 616 - MICROELECT DEV/INTE CIRC
Semester Hours: 3

EE 617 - VLS INTEGRATION DEVICES
Semester Hours: 3
Operation and modeling of the MOS transistor. Second-order considerations for a MOSFET, VLSI device fundamentals and scaling laws. Micron-length and submicron-length semiconductor devices. Basic technology and applications of VLSI. Impact of VLSI on computer architecture. VLSI computer aided design.

EE 618 - VLSI CIRCUITS
Semester Hours: 3

EE 619 - INTRO RADAR SYSTEMS
Semester Hours: 3
Topics include radar equation, CW radar, MTI and pulse Doppler radar, tracking radar, major systems components, detection in the presence of noise and clutter, ambiguity, and resolution.

EE 620 - CMOS ANALOG CIRCUIT DESIGN
Semester Hours: 3

EE 629 - ANAL & COMP METH IN ELEC ENG I
Semester Hours: 3
Analytic and numerical solution techniques applicable to problems arising in engineering, utilizing complex variable theory, linear algebra, matrix theory, and transform methods.
EE 630 - ANAL & COMP METHODS ELEC EG II
Semester Hours: 3
Analytical and numerical solution techniques applicable to problems arising in electrical engineering. Partial differential equations, vector differential and integral calculus, special functions, Fourier analysis with applications and integral equations.

EE 632 - FOURIER OPTICS
Semester Hours: 3
Introducing the optical system as an invariant linear system, convolution, Sommerfeld's diffraction integral, Fourier Transform, angular spectrum, coherent and incoherent imaging, optical transfer function.

EE 633 - ELECTRO-OPTICAL ENGINEER
Semester Hours: 3
Propagation of optical beams in homogeneous and guiding media, optical resonators, and spectrum analyzers, theory of laser oscillation, some specific laser systems, parametric oscillators, electro-optical and acousto-optical modulators.

EE 634 - OPTICAL COMMUNICATIONS
Semester Hours: 3
Optical communication systems; counting statistics; the optical detector response process; direct detection; heterodyne detection parameter estimation in optical communications; pointing, spatial acquisition and tracking.

EE 642 - DATA & DIGITAL COMMUNICATION
Semester Hours: 3
Introduction to digital and data communications; transmission channels; modulation and coding; telephone networks; data communication standards; noise and distortion; computer interfacing; protocols.

EE 648 - DIGITAL SIGNAL PROCESSING
Semester Hours: 3
Theory and applications of signal processing by digital techniques. Difference equations, Z-transform theory, digital-filter design, fast Fourier transform, quantization effects, and discrete estimation. Applications in digital filtering, signal processing, data analysis and smoothing, and image processing.

EE 654 - OPTICAL TESTING
Semester Hours: 3

EE 670 - OPTOMECHANICAL DESIGN & MANUF
Semester Hours: 3

EE 672 - DIGITAL PROC RANDOM SIGNALS I
Semester Hours: 3
Discrete signals, linear systems, spectral analysis and probability; and random discrete-time signals. Introduction to statistical interference, time-series analysis and spectral estimation of random discrete-time signals. Cross correlation and cross spectra, multitaper spectrum estimation and multivariable spectral analysis.

EE 673 - DIGITAL PROC RANDOM SIGNALS II
Semester Hours: 3
Parametric models for random signal processing; AR (autoregressive), MA (moving average), ARMA (autoregressive moving average), and Prony method. Two-dimensional spectral estimation; higher-order spectral analysis and multiresolution signal analysis.

EE 690 - UNIFORM GEOM THY DIFFRACT
Semester Hours: 3
Geometrical optics fields, geometrical optics reflected fields, two-dimensional wedge diffraction (GTD and UTD), three-dimensional wedge diffraction and corner diffraction, equivalent currents, diffraction at a smooth convex conducting surface, radar cross section.

EE 693 - ECE CAPSTONE
Semester Hours: 1-3
The purpose of this course is for students to perform research in a subject gained from courses taken at the graduate level. Students will be introduced to rhetorical theory, training in oral and written communication skills. They are required to organize and deliver oral and written technical presentations on individual research, journal articles, or design projects.
EE 696 - GRAD INTERN EE ENGR
Semester Hours: 1-9
Active involvement in an engineering project in an engineering enterprise, professional organization or government agency that has particular interest and relevance to the graduate student. Permission of EE faculty member is required.

EE 699 - MASTER'S THESIS
Semester Hours: 1-9
Required each semester student is working and receiving direction on a master's thesis. Minimum of two semesters and 6 hours required for M.S.E. students. A maximum of nine hours of credit is awarded upon successful completion of master's thesis. The 1 hour option is only available to students who have successfully defended their thesis and submitted it for approval, but do not meet the deadlines for graduation in the semester submitted. Students may only use the 1 hour option once in their career.

EE 700 - SAMPLED DATA CONT SYS
Semester Hours: 3
Classical and modern methods for analysis and design of sampled data-control systems; Ztransforms, transport lags, z and w plane analysis, state variables, and the transition matrix.

EE 701 - ADV LINEAR CONTROL THRY
Semester Hours: 3
Modern techniques for analysis and design of linear control systems. Matrix formulation, multivariable control systems, state variable concepts. Linear transformation, controllability, observability, discrete-time systems.

EE 703 - MODERN CONTROL DESIGN
Semester Hours: 3
Use of modern (state-variable) control concepts and theories to design high-performance controllers for multi-input/multi-output set-point regulation and servo-tracking/pointing problems. Modeling of uncertain disturbances; design of disturbance-accommodating controllers; introduction to adaptive and stochastic control. Use of commercial CAD software for modern control design and performance evaluation. CAD laboratory sessions.

EE 704 - NONLINEAR CONTROL SYSTEM
Semester Hours: 3
Classical and modern methods for analysis and design of nonlinear automatic control systems. State variables, phase plane, limit cycles, stability, describing functions, relay control, stabilization theory.

EE 705 - THEORY OPTIMAL CONTROL
Semester Hours: 3

EE 706 - KALMAN FILT TECH CON & SIG PRO
Semester Hours: 3
Basic concepts of Kalman Filtering Theory with applications to: 1) analysis and design of control systems for dynamic processes with noisy sensors and random-type disturbance inputs, and 2) estimation, smoothing and prediction of information in noisy signals; Optimum Stochastic Control and the Separation Principle. Matrix Riccati Equation, Covariance Matrix, Orthogonal Projection Theorem.

EE 707 - INFORMATION THEORY
Semester Hours: 3
Self-information, entropy, mutual information, and channel capacity, encoding, error detecting and correcting codes. Sampling theorem. Discrete and continuous channels.

EE 709 - DISCR RANDOM SIG/SPEC ES
Semester Hours: 3
Review of linear systems theory, random discrete processes, classical spectral estimation, parametric models of discrete random processes, autoregressive (AR), moving average (MA), autoregressive moving average (ARMA) models.

EE 710 - SELECTED TOPICS/ECE
Semester Hours: 1-6
EE 711 - ANTENNA THEORY  
Semester Hours: 3  
Antennas and antenna arrays. Radiation patterns and impedance characteristics. Spheres, cylinders, horns, slots, microwave lenses, traveling-wave, and frequency independent antennas.

EE 716 - DEVICE MOD INTEG CIR DSG  
Semester Hours: 3  

EE 717 - SPACE APPL/ELECTROMAGNE  
Semester Hours: 3  
Plasma as a dielectric; dielectric functions for cold, warm, isotropic and anisotropic plasmas, body-plasma interaction; space craft electrodynamics, antennas in plasmas; mode of radiation, input impedance and radiation pattern, scattering problems involving plasmas.

EE 718 - MICROWAVE TECHNIQUES  
Semester Hours: 3  

EE 721 - ROBUST AND ADAPTIVE CONTROL  
Semester Hours: 3  
Introduction to fundamental ideas of robust and adaptive control. Effects of parameter and disturbance uncertainties, H-infinity and mu-synthesis ideas; parameter estimation techniques; adaptive control algorithms; stability considerations; model-reference and linear adaptive control techniques.

EE 722 - SLIDING MODE CONTROL  
Semester Hours: 3  
The basic and advanced theories and analytical techniques for modeling and analysis of systems dynamics in sliding manifolds. Traditional and High Order Sliding mode controller design. Discontinuous and equivalent control, robustness. Applications to control of electro-mechanical systems, reusable launch vehicle, air craft, spacecraft, and DC-to-DC power converters.

EE 724 - RADAR WAVEFORMS & SIGNAL PROCE  
Semester Hours: 3  
Stretch Processing. Synthetic Aperture Radar and SAR signal processing, Space-time adaptive processing (STAP). Phase coded waveforms and processing. Frequency hop waveforms.

EE 725 - ADVANCED RADAR TECHNIQUE  
Semester Hours: 3  
Modern radar systems for search and tracking are analyzed with emphasis on signal processing. Modeling and simulation of system and environment. Advanced techniques include CFAR, binary modulation, frequency agility, polarization agility, and synthetic aperture.

EE 726 - DECIS/ESTIMATION THEORY  
Semester Hours: 3  
Classical detection theory, including maximum likelihood, Neyman-Pearson, Bayes and minimax criteria. Estimation theory concepts and criteria, linear estimators, Kalman filters, maximum likelihood and least-squares estimator, matched filters, Cramer-Rao lower bound. Introduction to pattern recognition.

EE 727 - NUMER METH ELECTROMAGNET  
Semester Hours: 3  

EE 733 - NONLINEAR OPTICS APPLICATIONS  
Semester Hours: 3  
Modeling of optical nonlinearities; Kerr, thermal and photorefractive effects; nonlinearity-induced beam distortion; applications of nonlinearities in crystals and fibers; quantum well and SEED devices; soliton-based communication system; nonlinear optical switches, deflectors and limiters; measurements of nonlinearities.
EE 734 - FIBER OPTICS  
Semester Hours: 3  
Propagation in dielectric slab and fibers with step and graded index of refraction; electromagnetic and ray optical methods; eikonal equations; ray trajectory; WKB method; paraxial approximation; weakly guiding structures.

EE 735 - STATISTICAL OPTICS  
Semester Hours: 3  
Introduction to random variables and random processes; first-order properties of light waves; coherence of optical waves, partial coherence and imaging systems, imaging in randomly inhomogeneous media, fundamental limits in photoelectric detection of light.

EE 737 - CHANNEL COMM RAND MEDI  
Semester Hours: 3  
Modeling stationary and not strictly stationary random media; scatter communications channels; line of sight communication channels? weak scattering and strong scattering.

EE 738 - OPT TRANSF/PATTN RECOGNITION  
Semester Hours: 3  
Systems and transforms in diffraction theory; two-dimensional Fourier transform; Hankel transforms; generalized Hankel transforms; optical signals, correlation coherence; filtering; apodization; applications to optical pattern recognition.

EE 742 - WIRELESS COMMUNICATIONS  
Semester Hours: 3  
Design and analysis of wireless transmission systems.

EE 744 - CODING THEORY & SPREAD SPECTRUM  
Semester Hours: 3  
Linear block coding techniques, convolutional codes and the Viterbi decoding algorithm, probability of error bounds, channels with intersymbol interference and additive Gaussian noise. Introduction to spread spectrum direct sequence and frequency hopping methods.

EE 745 - MOD/PHASE LOCK TECH COMM  
Semester Hours: 3  

EE 747 - PATTERN RECOGNITION ALGORITHMS  
Semester Hours: 3  
EE 748 - DIGITAL SIG PROC ALG/APP  
Semester Hours: 3  
Introduction to digital signal processors hardware architecture. Applications of digital signal processing in telecommunications, speech and image processing, radar and sonar. Development and implementation of DSP algorithms; DSP laboratory session.

EE 799 - DOCTORAL DISSERTATION  
Semester Hours: 3-9  
Required each semester student is enrolled and receiving direction on doctoral dissertation.

**Engineering Management (EM)**

EM 660 - ENGR MGMT THEORY  
Semester Hours: 3  
Comparison of classical management principles and theory with the current systems in high technology, research and development, and other scientific-engineering organizations. Use of people systems to accomplish goals in high technology organizations. Cases used to illustrate contemporary problems and environments.

EM 661 - STRATEGIC ENGR MGMT  
Semester Hours: 3  
Analysis of industries; generic, market share, vertical integration, and life-cycle strategies as applied to technology-based organizations. Relationship between buyers and suppliers. Environment and competitor analysis in a global marketplace.
EM 662 - FOUND QUALITY SYSTEMS MGMT
Semester Hours: 3

Basic understanding of Quality Systems such as TQM and ISO 9000 in context of fundamental building blocks of effective management; measurement, problem solving, continuous improvement, teamwork, customer focus, and supportive culture.

EM 664 - TEAMS IN ACTION
Semester Hours: 3

To give students practice in observational data collection in the area of group development and teamwork. This course provides background in group development theory and trains the student in techniques and tools used in observational data collection. The student learns practical research methods and gains an understanding in how theory can be applied to analyze team development.

EM 665 - FINANCIAL METHODS FOR ENGRS
Semester Hours: 3

Financial and managerial accounting for the engineering manager; accounting fundamentals, transaction recording, understanding financial statements, and management applications including costing, budgeting, performance evaluation and control, and ratio analysis.

EM 666 - ENGR PROJECT MANAGEMENT
Semester Hours: 3

Management and control of multifaceted engineering and technological projects. Coordination and interactions between client and various service organizations. Project manager selection. Typical problems associated with various phases of project life cycle. Case studies illustrate theories and concepts.

EM 667 - LABOR RELATIONS/ENGRS
Semester Hours: 3

EM 679 - SELECTED TOPICS IN ENGR MGMT
Semester Hours: 3-9

EM 697 - ENGR MANAGEMENT PROJECT I
Semester Hours: 3-9

Application-oriented student project designed to show competence in engineering management. Continuation of EM 697.

EM 698 - ENGR MANAGEMENT PROJECT II
Semester Hours: 3-9

Application-oriented student project designed to show competence in engineering management. Continuation of EM 697.

EM 699 - MASTER'S THESIS
Semester Hours: 1-9

Required each semester student is working and receiving direction on a master's thesis. Minimum of two semesters and 6 hours required for M.S.E. students. A maximum of 9 hours of credit is awarded upon successful completion of master's thesis. The 1 hour option is only available to students who have successfully defended their thesis and submitted it for approval, but do not meet the deadlines for graduation in the semester submitted. Students may only use the 1 hour option once in their career.

EM 711 - RES METHODS IN SURVEY DEVELOPM
Semester Hours: 3

To immerse the student in research method appropriate at the PhD level. To investigate survey development and to understand requirements necessary in establishing a psychometrically sound survey instrument. To thoroughly understand the research process in collecting appropriate data, using statistical methodologies in analyzing data, and reporting significant findings.

EM 760 - ENGR MGMT STRUCTURES & SYSTEMS
Semester Hours: 3

The capstone course studies the impact of various organization structures in relation to the goals of high technology enterprises. Use and effectiveness of contemporary organizational systems as related to the knowledge worker. Cases used to illustrate contemporary problems and environments.

EM 761 - EVOL THRY ENG MGMT/IND SYS ENG
Semester Hours: 3

Development of applicable engineering management or industrial & systems engineering using classical concepts, contemporary studies, and practices at successful technology-based organizations.
EM 762 - PERFORM MEAS & PRODUC IMPROVMT
Semester Hours: 3

Productivity and performance defined and used to analyze current competitive position of important sectors of US industry with respect to national and international competition. Students will conduct research into current practices and develop a detailed performance measurement system for an organization. Dissemination of knowledge and student publications will be emphasized. Course should be taken late in the student's Program of Study. Instructor approval required.

EM 766 - MANAGING CHG IN HIGH TECH ORG
Semester Hours: 3

Challenges to implementing advanced technology equipment, systems, and methods in engineering organizations. Justifying technology, assimilating change, changing management roles, personnel practices and organizational structure, and dealing with impact of new technologies on business policies and strategic planning.

EM 767 - CONTEMPORARY APPL EM/ISE
Semester Hours: 3

Application of key qualitative and quantitative principles of engineering management or industrial & systems engineering to real-world case problems. Students work both as teams and as individuals to solve multidimensional problems which require an integrative point of view.

EM 779 - SELECTED TOPICS IN ENGR MGMT
Semester Hours: 3-9

EM 799 - DOCTORAL DISSERTATION
Semester Hours: 3-9

Required each semester student is enrolled and receiving direction on doctoral dissertation.

English (EH)

EH 500 - COMPOSITION STUDIES TCHRS
Semester Hours: 3

Introduction to effective strategies for the teaching of writing. Students will report on their own writing pedagogy as a result of reading and analyzing a range of writing research related to strategies of assigning, responding, and assessing writing.

EH 501 - THRY & PRACTICE TECHNICAL COMM
Semester Hours: 3

Explores the relationships between common practices in technical communication and the theories that legitimize those practices. Introduction to research and theories about fundamental issues in technical communication which may then become the basis for further graduate study in technical communication.

EH 502 - PROBS TECHNICAL EDITING
Semester Hours: 3

Advanced study of research and practice in common problems of technical editing, including documentation standards, document design, and management of complex editorial projects. Involves collaborative project with major professional writers in industry.

EH 503 - LITERARY CRITICISM AND THEORY
Semester Hours: 3

Major texts and approaches from Plato to the present. All 500-level courses are crosslisted with 400-level courses.

EH 504 - LITERARY RESEARCH
Semester Hours: 3

Introduction to the method and practice of advanced literary studies with emphasis on the development of literary critical research skills, the building of a critical lexicon, and the application of theory and criticism.

EH 506 - FEMINISM & COMPOSITITION
Semester Hours: 3

Explores issues of gender in writing: postmodern feminism, feminist theories and research, gender and forms of writing, and finally, gender, teaching and identity. Students will investigate and analyze composition scholarship thorough reading, writing, and collaborative inquiry.
EH 508 - HISTORY OF THE ENGLISH LANG
Semester Hours: 3

History of the emergence and development of English from the pre-Anglo-Saxon period to the present. Emphasis on cultural contexts.

EH 510 - ADV FICTION WRITING
Semester Hours: 3

Practice in writing fiction from conception to revision. Students will read and write contemporary literary fiction. Student work will be commented on and critiqued in regular class workshops. The class culminates in a revision portfolio.

EH 510 - POETRY WRITING
Semester Hours: 3

Practice in writing poetry from conception to revision. Students will read and write contemporary poetry. Student work will be commented on and critiqued in regular class workshops. The class culminates in a revision portfolio.

EH 511 - POETRY WRITING
Semester Hours: 3

Practice in writing poetry from conception to revision. Students will read and write contemporary poetry. Student work will be commented on and critiqued in regular class workshops. The class culminates in a revision portfolio.

EH 512 - SP STUDIES IN CREATIVE WRITING
Semester Hours: 3

Topics in creative writing, professional writing, or other advanced writing announced in advance.

EH 513 - CHILDREN'S & ADOLESCENT LIT
Semester Hours: 3

Course content will include the study of various genres of children's and adolescent literature and their relationship to beginning reading, enhancement of reading comprehension, and intervention instruction in the various content areas. Same as ED 513. Limited to students seeking teacher certification.

EH 514 - CREATIVE NONFICTION WRITING
Semester Hours: 3

This composition class introduces students to the genre of creative non-fiction through exploring various approaches to the non-fiction writing; developing expertise in writing strategies such as revising, peer responding, prose modeling, and conferencing; and developing expertise in rhetorical writing concepts.

EH 515 - STUD ANGLOPHONE/POSTCOLONI LIT
Semester Hours: 3

An introduction to major concepts, figures, and works with emphasis upon historical and cultural context. Specific focus will vary.

EH 522 - STUDIES IN THE NOVEL
Semester Hours: 3

Focuses on varying topics in the novel with special attention to form. Texts may be drawn from diverse national and cultural origins.

EH 523 - STUDIES CONTEMPORARY BRIT LIT
Semester Hours: 3

Major works after 1945 with emphasis on historical and cultural contexts. Specific focus will vary.

EH 524 - POETRY AND POETICS
Semester Hours: 3

An attempt to answer (at least provisionally) the questions "What is a poem?" and "What is poetry?". How to read a poem closely and carefully, with attention to theory, history of genres, and especially the technical aspects of poetry.

EH 525 - LITERATURE, SCIENCE, & TECH
Semester Hours: 3

Considers the relationships among literature, scientific theories, and technological practices through a study of texts from ancient times to the present.

EH 529 - STUDIES IN AMERICAN CINEMA
Semester Hours: 3

Focuses on select topics in American cinema with an emphasis on film history, technique, aesthetics, and cultural context.

EH 530 - SPEC STUDIES IN AM LIT
Semester Hours: 3

Topics announced in advance.
EH 533 - WILLIAM FAULKNER
Semester Hours: 3
Critical study of the major novels.

EH 534 - SCIENCE FICTION
Semester Hours: 3
Selected short stories and novels, exploring the thematic and narrative concerns of both classic and contemporary science fiction. In alternate years, the course may focus on a specific problem or concern in science fiction.

EH 535 - SPECIAL STUDIES IN AMER LIT
Semester Hours: 3
Topics announced in advance.

EH 536 - READING THE EARLY REPUBLIC
Semester Hours: 3
This class will investigate cultural expression and literary critical traditions associated with the founding period of the American nation (1776-1828). Writers might include Franklin, Jefferson, Equiano, Sargent, Rowson, Brockden Brown, and Irving.

EH 538 - AFRICAN AMERICAN LITERATURE
Semester Hours: 3
Themes, concepts and imagery in the Black American literary tradition.

EH 540 - SPEC STUDIES IN ENGLISH LIT
Semester Hours: 1-3
Topics announced in advance.

EH 541 - THE CIVIL WAR
Semester Hours: 3
Cultural representations of the Civil War (1861-5) past and present in diaries, poetry, photography, novels, oratory, history writing, and film.

EH 542 - USABILITY STUDIES
Semester Hours: 3
Introduces students to the theory and practices of usability, which involves designing useful, easy-to-use websites, software, and products. The course involves group projects conducting real-world usability testing.

EH 548 - THE BIBLE AS LITERATURE
Semester Hours: 3
An introduction to the major literary forms of the Bible. Material will be approached analytically, involving both socio-historical and literary-critical perspectives.

EH 550 - CHAUCER
Semester Hours: 3
A study of Geoffrey Chaucer's Middle English works including the early dream visions, Troilus and Criseyde, and the Canterbury Tales.

EH 551 - ARTHURIAN ROMANCE
Semester Hours: 3
A study of Arthurian Literature focused on medieval Welsh, Scottish, English, and French poetry and prose, as well as later early modern and modern adaptations of Arthurian stories in poetry, prose, drama, and film.

EH 552 - USER-CENTERED DESIGN
Semester Hours: 3
Introduces students to user-centered design principles that inform the practice of user experience design. Students will use visual thinking as they complete contextual inquiries and mapping exercises.

EH 554 - NEW MEDIA WRITING & RHETORIC
Semester Hours: 3
This course teaches students to consider and implement rhetorical principles across a variety of media and includes an examination of communication strategies used widely in academic and industry settings. The course focuses on new media through an exploration of digital technologies and the way digital culture and new media have dramatically impacted reading, writing and research practices.
EH 565 - DRAMATIC LITERATURE  
Semester Hours: 3  
Studies in Drama and interpretive strategies for reading plays. May be organized nationally, by genre, or by theme/topic.

EH 570 - MILTON  
Semester Hours: 3  
A study of the development of Milton's thought and art as it appears in his early poems, selected prose, and later poetry, with particular attention given to Paradise Lost.

EH 571 - RENAISSANCE DRAMA  
Semester Hours: 3  
Non-Shakespearean drama of the sixteenth and early-seventeenth centuries in social, critical, and performative contexts. Specific focus will vary from term to term.

EH 573 - EARLY MODERN LITERATURE  
Semester Hours: 3  
This course will examine a particular theme, issue, and/or debate within the early modern period, roughly 1500-1700. The historical and geographical scope of the course will vary depending on the term, though the course will emphasize British literature. Within this literature, contructions of subjectivity and community vary greatly due to the influence of the European Renaissance, the Protestant Reformation, the exploration of the New World, as well as the rediscovery of the natural world through scientific investigation. While the course will introduce the complexities of early modern literary constructions of identity, the course will also illumine the ways in which these habits of thought were increasingly contested, sometimes to the point of violence. The course will likely include period-specific as well as modern scholarship.

EH 585 - THE ENLIGHTENMENT  
Semester Hours: 3  
The European Enlightenment was an intellectual and cultural movement in the seventeenth and eighteenth centuries that emphasized the importance of reasoned, open-eyed investigations into nature and human society. Stimulated by the Scientific Revolution, Enlightenment philosophes prized skepticism and decried superstition and unquestioned faith. They are often credited with providing a theoretical basis for the American and French Revolutions. Scholars have also counted among the Enlightenment's important legacies the scientific method, the valuation of universal human rights, and the emergence of such disciplines as economics and anthropology. Authors discussed in the course may include: Bacon, Behn, Hume, Swift, Voltaire, Montagu, Franklin, Jefferson, Equiano, and Wollstonecraft.

EH 596 - ROMANTIC LITERATURE  
Semester Hours: 3  
Poetry and prose, 1780-1832, with a focus on English language traditions. Emphasis may vary with instructor.

EH 601 - ACTION RESCH WRITING STUDIES  
Semester Hours: 3  
Analysis of research on writing in the workplace, the community, and educational settings.

EH 602 - PRACTICUM/TECHNICAL COMM  
Semester Hours: 3  
Designed to give technical communication graduate students on-the-job experience in industry or government, either through an internship or a major research project connected with an industry problem. Requires completion of a substantial internship report.

EH 603 - EDITING FOR PUBLICATION  
Semester Hours: 3  
A comprehensive survey of best practices for editing documents for clarity, correctness, accuracy, style, design, and usability. Course involves working with writers to edit work for publication.

EH 615 - SEMINAR IN CRITICAL THEORY  
Semester Hours: 3  
Intensive study of a specific author or topic in literary or critical theory. Focus will vary.

EH 618 - STUDIES/WOMEN & LITERATURE  
Semester Hours: 3  
Selected authors, genres, and issues.
EH 629 - STUDIES IN 20TH CENT LIT
Semester Hours: 3
Selected poetry and prose with an emphasis on the Anglo-American Modernist tradition.

EH 630 - STUDIES AM LIT TO 1865
Semester Hours: 3
Major movements from Colonial times to 1865; selected major figures or special problems.

EH 631 - STUDY AM LIT SINCE 1865
Semester Hours: 3
Major movements since 1865; selected major figures or special problems.

EH 639 - ETHNIC AMERICAN LITERATURE
Semester Hours: 3
Selected authors, concepts, histories, and cultures.

EH 649 - SPECIAL STUDIES
Semester Hours: 1-3
Study of significant issues in literature, technical communication, or composition studies, announced in advance.

EH 655 - STUDIES IN MEDIEVAL LITERATURE
Semester Hours: 3
Topics in Medieval European and Eastern Literature.

EH 660 - SHAKESPEARE
Semester Hours: 3
Selected Shakespearean plays, with special attention to the major criticism, problems of interpretation, and current issues in Shakespearean study.

EH 662 - INFORMATION ARCHITECTURE
Semester Hours: 3
This class reviews research in technical communication, information science, cognitive science, semiotics, and computer science that helps students understand how communities represent, organize, retrieve, and ultimately use information.

EH 665 - RENAISSANCE LITERATURE
Semester Hours: 3
An in depth study of a major theme, debate or question in 16th and early 17th century literature. Includes Renaissance criticism and modern scholarship.

EH 670 - STUDIES SEVENTEENTH CENTURY LT
Semester Hours: 3
This course investigates one of the most volatile periods in Britain's history through a variety of literary and critical lenses, all geared toward a particular theme, issue, or debate. In this period, received bodies of knowledge and accompanying forms of authority - philosophical, religious, political and scientific - were increasingly called into question.

EH 680 - 18TH CENTURY STUDIES
Semester Hours: 3
Extensive and intensive study of various early modern texts, with attention to interdisciplinary contexts.

EH 695 - STUDIES IN 19TH CENTURY LIT
Semester Hours: 3
This class will investigate Anglophone cultural expression and literary critical traditions associated with long nineteenth century (1789-1919). Specific thematic concern or period of focus is left to the discretion of the instructor.

EH 698 - INDEPENDENT STUDY
Semester Hours: 3
Individual investigation into significant issues in linguistics, literature, technical communication, or composition studies under direct supervision of instructor. Prerequisites: Written approval by the instructor and the department chair of a project prospectus.
EH 699 - MASTER'S THESIS
Semester Hours: 3-6

Required each semester during which a student is working and receiving direction on a masters thesis. No more than 6 hours credit may be applied toward the degree. Prerequisites: approval of instructor.

English Linguistics (EHL)

EHL 505 - SURVEY OF GENERAL LINGUISTICS
Semester Hours: 3

Come to see the strange in familiar as you engage in the study of the system of language through focused analysis of the components of English. Language is usually the lens through which we observe and report on the world. In this course, it becomes the object of observations and discussion.

EHL 506 - CRITICAL ISSUES
Semester Hours: 3

Come to an understanding of the complex of policies, legislation, and practice that impact the progress of English Learners in elementary and secondary schools across the U.S. Understand the impact of federal, state, and local policies on classroom settings and teacher-student interactions.

EHL 507 - ADV ENGLISH GRAMMAR STUDIES
Semester Hours: 3

Through an in-depth analysis of the structure of sentences and discourse in contemporary English, you will understand more clearly the impact of the choices we make in the language we use in day-to-day conversations, instructional settings, political discourse, and beyond.

EHL 509 - SP STUDIES IN APPL LINGUISTICS
Semester Hours: 3

Special topics in linguistics. Focus and emphasis of topics announced in advance. Prerequisite: instructor permission.

EHL 610 - AP EH LI VI:PRACTICUM TESOL
Semester Hours: 3

Current issues, techniques, and materials in teaching English to speakers of other languages (TESOL). Direct and supervised teaching of English to non-native speakers of English.

Finance (FIN)

FIN 500 - INVESTMENT PRACTICUM
Semester Hours: 4

Small number of students work closely with finance faculty in the UAH Capital Management group (CMG) to manage actual investment portfolios. Emphasis is placed on individual stock selection and management of the portfolio to meet objectives. Prerequisite: FIN 560 and permission of instructor.

FIN 531 - ADVANCED CORPORATE FINANCE
Semester Hours: 3

The purpose of the course is to apply advanced corporate finance theories to solve practical corporate finance problems.

FIN 554 - INTERNATIONAL FINANCE
Semester Hours: 3

An introduction to international finance for tomorrow’s global business leaders, with a focus on the financial management dimensions of leading a multinational enterprise.

FIN 560 - INVESTMENTS
Semester Hours: 3

A study of standard investment securities, as well as an overall view of the investment decision process. Securities covered include equities, fixed income, options, futures, and mutual funds. Associated topics include financial markets, valuation models, and fundamental portfolio theory.

FIN 561 - PORTFOLIO MANAGEMENT
Semester Hours: 3

A continuation of FIN 560 with an emphasis on the application of investment portfolio management. An understanding of the functional areas of portfolio management is stressed, including investment policy, investment strategy, portfolio construction, performance evaluation, and portfolio protection. Prerequisite: FIN 560.
FIN 595 - INTERNSHIP IN FINANCE  
Semester Hours: 1-3

With the supervision of a faculty advisor the student serves as an intern in a position that enhances their disciplines educational goals. Subject to College's guidelines on internships.

FIN 601 - FIN DECIS UNDER UNCERTAINTY  
Semester Hours: 3

Introduces students to financial decision-making in uncertain domestic and global markets and provides a set of tools and techniques for use in financial analysis. Topics include financial statement analysis, financial assessment of capital investments, cost of capital, and risk and return. Prerequisites: ACC 600 and ECN 600.

FIN 620 - SEMINAR IN BEHAVIORAL FINANCE  
Semester Hours: 3

A study of the issues and anomalies related to the psychology of financial decision-making and the psychology of financial markets. The course content will consist of readings from the behavioral finance literature with an emphasis on student discussion.

FIN 650 - SELECTED RESEARCH TOPICS  
Semester Hours: 3

Research in a particular topic in finance relevant to administrative science by one student or group of students. The research paper must be an original contribution showing a research design and results that meet the highest standards of social science research.

History (HY)

HY 501 - DAILY LIFE IN ANCIENT ROME  
Semester Hours: 3

This course will re-create the daily lives of the ancient Romans using secondary readings, ancient literature, archaeology, and film. It focuses on the lives of ordinary people, with an eye to their struggles, everyday practices, beliefs, values and mentalities.

HY 510 - SPECIAL TOPICS PUBLIC HISTORY  
Semester Hours: 3

Intensive examination of a particular problem, aspect, or methodology in public history.

HY 513 - THE OLD SOUTH  
Semester Hours: 3

Southern society, economics, politics and culture concentrating on the nineteenth century South through Reconstruction.

HY 514 - THE NEW SOUTH  
Semester Hours: 3

The post-Reconstruction South emphasizing the economic, social, and political readjustments made during the twentieth century.

HY 524 - THE ATLANTIC WORLD  
Semester Hours: 3

Examines interactions across the Atlantic Ocean among Africans, Americans, and Europeans. This course meets the requirements for either American or non-American credit.

HY 526 - COLONIAL AMERICA  
Semester Hours: 3

Explores the founding of New World colonies, including political, social, economic, and religious developments during the colonial period.

HY 527 - AGE OF AMERICAN REVOLUTION  
Semester Hours: 3

Explores the multinational connections and conflicts that led some English colonists to revolt. Considers the political, social, and economic aspect of the time period.

HY 528 - EARLY AMERICAN REPUBLIC  
Semester Hours: 3

Political, social and economic changes between the American Revolution and the nineteenth century that laid the foundation for the United States.
HY 529 - CIVIL WAR & RECONSTRUCTION  
Semester Hours: 3  
This course will examine the major historical events and modern historiographical interpretations of the Civil War and Reconstruction period in American history. Special focus will be given to the following themes: social, economic, military, political, constitutional, and intellectual.

HY 537 - THE RISE OF MODERN AMER  
Semester Hours: 3  
Economic and social changes, imperialism, and the growth of government in the United States from 1877 to the 1920s.

HY 538 - MODERN AMERICA  
Semester Hours: 3  
American society, politics, economics, and foreign affairs from the end of World War I to the origins of the Cold War.

HY 539 - RECENT AMERICAN HISTORY  
Semester Hours: 3  
Contemporary America from the 1950s to the present analyzing both domestic and foreign affairs.

HY 540 - FOREIGN REL U.S. SINCE 1920  
Semester Hours: 3  
The United States as a world power. American involvement in World War II, the Cold War, and in Asia, Latin America, and the Middle East.

HY 545 - COMPTVE MILITARY PLCY & STRAT  
Semester Hours: 3  
A comparative analysis of the military policy and strategy of states and empires in World History.

HY 557 - MODERN AMERICA  
Semester Hours: 3  
The United States armed forces from 1920 to the present. The class will enhance understanding of the development and evolution of American strategy, doctrine, and operational issues.

HY 572 - US MILITARY HISTORY SINCE 1920  
Semester Hours: 3  
This class focuses on the history of political, economic, and cultural interactions between Latin America and the United States from 1800 to the present. Topics include military intervention, trade, cultural exchanges, the Cold War, the drug war, and immigration.

HY 574 - RENAISSANCE & REFORMATION  
Semester Hours: 3  
Selected topics in the Italian Renaissance and European Reformation.

HY 575 - SECTARIANISM ISLAMIC WORLD  
Semester Hours: 3  
This course focuses on sectarianism, the practice and rhetoric surrounding marginalization of certain social-religious groups in the Islamic world. It explores the historical foundations of sectarianism (from early 7th century to today) both within the Islamic world and across the globe.

HY 576 - BEING YOUNG MODERN MIDDLE EAST  
Semester Hours: 3  
This course focuses on the lives of young men and women of the Modern Middle East. It explores how children and youth experienced historical phenomena in the region, the ways in which these experiences affected the foundations of their adulthood, and how their actions shaped historical events.

HY 582 - COMPARTVE SLAVERY & ABOLITION  
Semester Hours: 3  
Explore slavery around the world over time. Topics in the ancient world, Indian Ocean, Africa, the United States, and other locations from ancient times to the present.

HY 583 - WOMEN & GENDER LATIN AMERICA  
Semester Hours: 3  
Studies the history of women and gender relations in Latin America from the colonial period to the present.
HY 584 - LATIN AMERICAN HY THROUGH FILM
Semester Hours: 3

HY 585 - NAZI GERMANY AND THE HOLOCAUST
Semester Hours: 3

Seminar course on the historiography of Nazi Germany and the Holocaust.

HY 586 - COMMUNISM & LEGACY IN RUS/E-EUR
Semester Hours: 3

Overview and analysis of communist states and post-communist legacies in Russia and Eastern Europe.

HY 590 - RESEARCH SEMINAR IN HY
Semester Hours: 3

Research and writing, focusing on primary sources and historiography.

HY 592 - PUBLIC MEMORY & INTERP
Semester Hours: 3

Examines how public memory is created by looking at the social, political, and economic forces that shape public history and considers how historical knowledge is conveyed to the public.

HY 593 - FUNDAMENTALS OF ARCHIVES
Semester Hours: 3

Survey of basic archival theory and practice, with emphasis on the role of the archivist in contemporary society.

HY 594 - DEVELOPING DIGITAL ARCHIVES
Semester Hours: 3

Survey of the theory and practice of developing digital access tools in archives, libraries, and museums.

HY 595 - PUBLIC HISTORY INTERNSHIP
Semester Hours: 3

Students will participate in a semester-long public history internship and be responsible for completing a significant project using historical skills in a professional setting. Students must complete a minimum of 125 hours of work during their internship.

HY 598 - STUDIES IN HISTORY
Semester Hours: 1-3

A readings or research class on a particular problem, period or topic in history. This course may be repeated for credit.

HY 599 - INDEPENDENT STUDY
Semester Hours: 3

In exceptional circumstances, a student and professor may work together on a specialized topic.

HY 605 - RECENT INTERPRETA MOD HY
Semester Hours: 3

Development of the ability to appraise critical historical issues through study and discussion of recent interpretations of key historical problems in modern western history. Required for history graduate students. Fall only.

HY 614 - STUDIES IN SOUTHERN HY
Semester Hours: 3

Research, writing, and critical examination of selected topics in nineteenth- and twentieth-century southern history.

HY 618 - STUDIES EARLY AMER HY
Semester Hours: 3

Research, writing, and critical examination of selected topics in early American history from 1607-1800.

HY 619 - STUDIES 19TH CENT AM HY
Semester Hours: 3

Research, writing, and critical examination of selected topics in nineteenth-century American history.
HY 620 - STUDIES 20TH CENT AM HY  
Semester Hours: 3  
Research, writing, and critical examination of selected topics in twentieth-century American history.

HY 645 - READINGS AMERICAN MILITARY HY  
Semester Hours: 3  
Thematic course that will use readings and discussions to examine key historiographical issues in American military history from the colonial period to the present.

HY 650 - RESEARCH METHODS IN HY  
Semester Hours: 3  
Exploration of contemporary research methods such as archival research, paleography, quantitative methods, and state/local research techniques.

HY 680 - STUDIES/EARLY MOD EUROPE  
Semester Hours: 3  
Research, writing, and critical examination of selected topics in the field of early modern European history.

HY 685 - HISTORY OF SCIENCE  
Semester Hours: 3  
Research, writing and critical examination of selected topics in the history of science.

HY 690 - STUDIES IN MODERN EUROPE  
Semester Hours: 3  
Research, writing, and critical examination of selected topics in the field of modern European history.

HY 695 - STUDIES IN WORLD HISTORY  
Semester Hours: 3  
Research, writing and critical examination of selected topics in the study and teaching of world history.

HY 696 - SPECIAL TOPICS IN HISTORY  
Semester Hours: 3  
A readings or research class on a particular problem, period, region or topic in history. This course may be repeated for credit.

HY 698 - NON-THESIS RESEARCH  
Semester Hours: 3  
Individual research not related to thesis work.

HY 699 - MASTER'S THESIS  
Semester Hours: 1-3  
Required each semester a student is working and receiving direction on a master's thesis. A minimum of two terms is required but no more than six hours credit is allowed for the thesis.

Industrial & Systems Engineering (ISE)

ISE 502 - INDUSTRIAL & ORGANIZA PSY  
Semester Hours: 3  
Application of basic principles of learning, motivation, and perception to typical industrial and organizational problems.

ISE 503 - HUMAN FACTORS PSYCHOLOGY  
Semester Hours: 3  

ISE 523 - INTR STATISTICAL QUALITY CONTR  
Semester Hours: 3  
This course introduces statistical theory and techniques to control quality of manufacturing products. This course will provide a solid foundation in Statistical Quality Control (SQC). The Six Sigma methodology is also introduced in this course. Students can take the certification exam to earn a Green Belt in Six Sigma.
1112 Industrial & Systems Engineering (ISE)

ISE 526 - DESIGN/ANALY OF EXPERIMENT
Semester Hours: 3
Advanced topics in statistical experiments with emphasis on design aspect. Confounding, fractional replication, factorial and nested design.

ISE 530 - MANUF SYS & FACILITIES DESIGN
Semester Hours: 3
Overview of modern manufacturing systems design with emphasis on facility location and plant layout. Includes classical systems, just-in-time systems, basic principles of integrated manufacturing systems design, as well as analysis of process flow, process productivity, and available space to determine plant layout. Includes laboratory exercises.

ISE 533 - PRODUCTION/INVENTORY CONTR SYS
Semester Hours: 3
Inventory models including classical optimal economic order quantity models, manufacturing resource planning (MRP) systems, master production scheduling, material requirements planning, and purchase order control. Emphasis on manufacturing system revision, continuous process improvement, and the implementation of lean principles.

ISE 537 - ELECTRONICS MANUF PROCESSES
Semester Hours: 3
Current concepts, facilities, and technology utilized in the manufacture of electronic components and products. Includes printed wiring board fabrication and component mounting methods, automation, quality and reliability, product testing, and economic issues.

ISE 539 - SELECTED TOPICS/ISE
Semester Hours: 1-3

ISE 547 - INTRO TO SYSTEMS SIMULATION
Semester Hours: 3
Philosophy and elements of digital discrete-event simulation. Emphasis on modeling and analysis of stochastic systems, including probabilistic models, output analysis, and use of simulation software.

ISE 623 - ENGR ECON ANALYSIS
Semester Hours: 3
This course is designed for graduate students in industrial engineering, systems engineering and engineering management. This course involves mathematical models for expenditure analysis under uncertainty; investment decision criteria; capital planning and budgeting; and decisions involving expansion, acquisitions, replacement, and disinvestment.

ISE 624 - HUMAN FACTORS IN SYS DESIGN
Semester Hours: 3
Psychological, physiological, and anthropometric requirements for human beings and the integration of these requirements into the design of tools, machines, and systems.

ISE 626 - INTRO OPERATIONS RESEARCH
Semester Hours: 3
Philosophy and methodology of operations research. Includes linear programming, game theory, sequencing, and networks.

ISE 627 - ENGINEERING SYSTEMS
Semester Hours: 3
Development of a systems-scientific framework for the integration of systems theory, systems thinking, systems engineering, and systems management. Emphasis is on the conception, design, and management of systems to accommodate complex environments.

ISE 630 - COMPUTER INTEGRATED MANUFACT
Semester Hours: 3
In-depth analysis of integrated manufacturing/computer integrated manufacturing. Reviews the tools, concepts, and enabling technologies necessary to integrate the physical, information, and managerial aspects of a manufacturing enterprise.

ISE 635 - LINEAR PROGRAMMING
Semester Hours: 3
Application of linear programming to complex allocation problems. Methods for determining maximum or minimum of objective functions whose variables are subject to constraints. Simplex methods, degeneracy, modified simplex, transportation problems, flows, goal programming, and sensitivity analysis.
ISE 637 - SYSTEMS MODELING & ANALYSIS  
Semester Hours: 3  
System analysis and modeling of large complex systems using systems engineering fundamentals. Life cycle simulations developed as a focus for the multidisciplinary analysis integration using computational systems engineering techniques including probability, statistics, design of experiments, response surfaces, and optimization. State of the art software tools will be used for simulation development.

ISE 638 - ENGINEERING RELIABILITY  
Semester Hours: 3  
Methodology of reliability prediction including application of discrete and continuous distribution models. Reliability estimation, reliability logic diagrams, life testing, and reliability demonstrations.

ISE 639 - SELECTED TOPICS/ISE  
Semester Hours: 1-6

ISE 641 - ADVANCED QUALITY CONTROL  
Semester Hours: 3  
This capstone course uses advanced statistical quality tools such as autocorrelated data, multi-variate quality controls charts, response surface methodology, ridge analysis, and evolutionary operations (EVOP). Advanced Six Sigma concepts will be taught and students will have the opportunity to earn a Black Belt in Six Sigma upon successful completion of the certification exam and an acceptable project.

ISE 647 - ADVANCED SYSTEM SIMULATION  
Semester Hours: 3  
Methods and procedures for simulation of large and complex systems. Discrete increment, continuous time and combined models. Comparison of discrete-event simulation languages. Model verification and validation. Statistical inference. Input data collection and analysis, output analysis, and comparison of alternatives.

ISE 670 - INTEGRATED PRODUCT & PROC DES  
Semester Hours: 3  
This capstone course incorporates curriculum materials to support an integrated products and process design process. Particular attention is devoted to multifunctional teams and their value in promoting the concept of life-cycle engineering. Provides experience with tools and technologies that support the IPPD philosophy.

ISE 690 - STATISTICAL METHODS FOR ENGR  
Semester Hours: 3  
Application of statistics for estimation and inference using parametric and nonparametric methods. Descriptive statistics, sampling distributions, point and interval estimates, tests of hypotheses, ANOVA, and linear regression.

ISE 696 - GRAD INTERN ISE ENGR  
Semester Hours: 1-9  
Active involvement in an engineering project in an engineering enterprise, professional organization, or government agency that has particular interest and relevance to the graduate student. Permission of ISE faculty member required.

ISE 697 - INDUS & SYSTEMS ENGR PROJECT I  
Semester Hours: 3-9  
Application oriented student project designed to show competence in Industrial and Systems Engineering.

ISE 698 - IND & SYSTEMS ENGR PROJECT II  
Semester Hours: 3-9  
Required each semester student is working and receiving direction on a master's thesis. Minimum of two semesters and 6 hours required for M.S.E. students. A maximum of 9 hours of credit is awarded upon successful completion of master's thesis.

ISE 699 - MASTER'S THESIS  
Semester Hours: 1-9  
Required each semester student is working and receiving direction on a master's thesis. Minimum of two semesters and 6 hours required for M.S.E. students. A maximum of 9 hours of credit is awarded upon successful completion of master's thesis. The 1 hour option is only available to students who have successfully defended their thesis and submitted it for approval, but do not meet the deadlines for graduation in the semester submitted. Students may only use the 1 hour option once in their career.
ISE 726 - SYSTEMS MODELING  
Semester Hours: 3

The capstone course for the operations research option studies the philosophy and methodology for modeling probabilistic systems. Includes Markov processes, queueing theory, and inventory theory. Team project required.

ISE 728 - OPTIMIZA METH OPER RES  
Semester Hours: 3

Classical optimization theory with introduction to search techniques, the Jacobian, and Lagrangian methods. Kuhn-Tucker conditions, quadratic programming, geometric and dynamic programming, and several search procedures.

ISE 729 - ADV NONLINEAR PROGRAM  
Semester Hours: 3

Continuation of ISE 728 with emphasis on development and application of nonlinear programming algorithms. SUMT algorithm, Zoutendijk’s method of feasible directions, Rosen’s gradient method, and selected algorithms from current literature.

ISE 730 - MULTI-CRITERIA DEC ANALY  
Semester Hours: 3

Methods for analysis of management-decision problems involving multiple goals and constraints. Linear and nonlinear goal programming; risk programming and decision making in fuzzy environments.

ISE 732 - INDUST FORECASTING/ANALY  
Semester Hours: 3

Industrial forecasting methods. Simple forecasting models, multivariate regression, correlation, and spectral analysis, exponential smoothing, and Box-Jenkins forecasting.

ISE 734 - DECISION ANALYSIS  
Semester Hours: 3

Decision making for systems engineering and engineering management, with an emphasis on applications to complex systems. Builds a rigorous foundation in decision making under uncertainty using expected utility theory. Topics include decision trees, value models, predictive models, preferences and bias.

ISE 735 - DISCRETE OPTIMIZATION  
Semester Hours: 3

Integer programming and network analysis. Zero-one problem formulation and Balas method, cutting plane techniques, branch and bound, out-of-kilter algorithm, and special applications of integer programming.

ISE 738 - RELIAB/AVAILAB/MAINTAINA  
Semester Hours: 3

In-depth application of decision theory and MIL-HDBK-217, and maintenance engineering techniques in order to achieve targeted reliability, availability and maintainability design goals.

ISE 739 - SELECTED TOPICS/ISE  
Semester Hours: 1-6

ISE 741 - QUALITY ENGINEERING  
Semester Hours: 3

Application of quality engineering techniques to the design and improvement of products and processes. Topics include: multivariate analysis, Taguchi methods, mixture experiments, and response surface analysis.

ISE 761 - EVOL THRY ENG MGMT/IND SYS ENG  
Semester Hours: 3

Development of applicable engineering management or industrial and systems engineering theory using classical concepts, contemporary studies and practices at successful technology-based organizations.

ISE 767 - CONTEMPORARY APPL EM/ISE  
Semester Hours: 3

Application of key qualitative and quantitative principles of engineering management or industrial and systems engineering to real-world case problems. Students work both in teams and as individuals to solve multidimensional problems which require an integrative point of view.
ISE 790 - ADV STATISTICAL APPLICATIONS  
Semester Hours: 3  
Continuation of ISE 690 with extension to regression models and nonparametric methods.

ISE 799 - DOCTORAL DISSERTATION  
Semester Hours: 3-9  
Required each semester student is enrolled and receiving direction on doctoral dissertation.

Information Systems (IS)

IS 501 - INTRO TO INFORM SYS ASSURANCE  
Semester Hours: 3  
This course is designed to provide a general overview of the concepts of information security to students, both from a management and a technology perspective. Students will be introduced to the complexity of the security issues facing todays networked organizations. Practices and standards will be presented to assess and plan for risks and the security needs to minimize the risks both technically and managerially. The integration of security concerns within the entire organizational planning and implementation processes and practices will be explored.

IS 512 - MODERN SYSTM ANALYSIS & DESIGN  
Semester Hours: 3  
Identifying, analyzing, developing and acquiring information systems are central to the information systems discipline. The course has to do with identifying, conceptualizing and analyzing business opportunities where information systems applications can add value followed by design, development, and implementation of such applications. Planning for and management of this core IS activity is a critical organizational competence. Prerequisites: IS 600 or passing score on the Information Systems Competency exam.

IS 520 - WEB PORTALS & APPLICATIONS  
Semester Hours: 3  
This course bridges the boundary between consumer of Web applications and the ability of enterprises to derive value from web technologies and platforms by developing portals that integrate disparate organizational silos and databases. The course explores concepts in digital content and communication, technology infrastructure and social media. Utilization of SAP tools to develop an enterprise portal front end to organization' back-end business systems.

IS 522 - SUPPLY CHAIN MANAGEMENT SYS  
Semester Hours: 3  
This course presents the main concepts of supply chain management systems and software including ERP, CRM, and SCM systems as well as the underlying technologies and managerial implications. It provides hands on familiarity with SAP supply chain modules. Cross listed with IS 422.

IS 540 - WEB PROG & DATABASE INTEGRATIO  
Semester Hours: 3

IS 560 - TELECOMMUNICATIONS & NETWRK'G  
Semester Hours: 3  
An overview of the IT infrastructure in modern organizations. The course starts from basic telecommunications networking concepts to digital platforms and ecosystems in the market. The course will cover internet, LAN & WAN protocols.

IS 571 - BUSINESS INTELLIGENCE & ANALYT  
Semester Hours: 3  
This course will change the way you think about the relationship between data and business decision-making. We will examine real-world examples and cases to understand how Business Intelligence and Analytics (BIA) can enhance business competitiveness. We will use many BIA tools, giving students hands-on experience mining data. More importantly, this course will help students to develop data-analytical thinking in the era of "big data.".

IS 577 - NETWORK DEFENSE & OPERATING SY  
Semester Hours: 3  
Provides an introduction to the area of network security. Addresses security issues and practical applications related to Network Address Translation, packet filtering, proxy servers and firewalls, and Virtual Private Networks. This course assumes familiarity with the Internet and basic networking concepts such as TCP/IP, gateways, routers, and Ethernet. Prerequisites: IS 560.
IS 580 - SEMINAR IN MGT INFO SYSTEMS
Semester Hours: 3

Selected topics in Management Information systems. Topics will reflect the contemporary issues and current technological advancements which impact the development, implementation and management of effective information systems in organizations.

IS 595 - INTERNSHIP INFORMATION SYSTEMS
Semester Hours: 1-3

Under the direction of a faculty advisor, student gains experience with information systems and technology professionals in industry.

IS 600 - INFORMATION SYSTEMS MANAGEMENT
Semester Hours: 3

Develops an understanding of how information technology (IT) can enable organizations to conduct business more effectively in a rapidly changing business environment. Includes strategies to manage and leverage the organization's IT capabilities to deploy digital business models and maintain efficient and profitable business operations. Students will use systems and business process thinking to create and analyze strategies for technology enabled organizational transformation. Students will also use Enterprise Systems like SAP and other technologies as part of the course to understand their integrative capabilities to meet the Information needs of an organization.

IS 640 - DATA MGT AND DATA MINING
Semester Hours: 3

Explores the theories, features, and capabilities of relational database management systems in a business environment. Examines how to read and interpret database design documents and how to query database driven business applications. Emphasizes the use of database management systems and data mining tools in real-world business settings and how these technologies can be applied effectively to solve business problems.

IS 650 - SELECTED RESEARCH TOPICS
Semester Hours: 3

Research in a particular topic relevant to management information systems by one student or a group of students. Each student's research paper must be an original contribution showing a research design and results that meet the highest standard of management information systems research.

IS 660 - CYBERSECURITY MANAGEMENT
Semester Hours: 3

Examines the management issues associated with the control and audit of information systems. Specific emphasis is on IT controls and their evaluation, computer-based auditing techniques, encryption, and security policies. Recent developments in IT, such as client-server systems and the Internet and their impact on auditing control, and security, are also considered.

IS 663 - COMPUTER FORENSICS
Semester Hours: 3

This course covers most of the important topics in computer forensics. It examines the problems and concerns related to computer investigations. It introduces systematical problem-solving techniques and applies them to computing investigations. It implements a variety of computer forensic tools in real-life scenarios.

IS 670 - BUSINESS CONTINGENCY PLANNING
Semester Hours: 3

Introduces the theories and concepts of business contingency planning through risk analysis and disaster recovery planning. This course is designed to provide a greater understanding of the assessment and management of risk and disaster recovery within the organization. The course will emphasize the nature of risk, risk assessment, risk management, and disaster recovery and how these concepts can be addressed effectively through businesscontingency planning. Prerequisites: IS 600 or IS 660.

IS 680 - ENTERPRISE RESOURCE PLNG SYS
Semester Hours: 3

This course examines the concepts, design, configuration and implementation of enterprise resource planning (ERP) systems with a view to integrate all aspects of an organization into one information system. Specific attention is given as to how ERP systems facilitate the flow of information supporting core business processes and the organization's supply chain. The course will emphasize the SAP configuration and strategic use of ERP systems to support the organizational structures and business processes of the particular company to efficiently and effectively manage a firm's business. Extensive use of SAP software is made in illustrating the configuration, implementation, and use of ERP systems in business and governmental organizations. Prerequisite: IS 600 or passing grade on Information Systems Competency Exam.
IS 691 - INFORMATION SYS STRATEGY & APP  
Semester Hours: 3

This capstone course emphasizes the integration of various principles, theories, and techniques for developing, implementing and using information systems strategies and applications in organizations. It aims at providing a holistic view of Information Systems and Technology (IS/T) function in an organization with a view to serve an organization's mission and strategy throughout the value and supply chain. These skills will be placed in the context of business processes where they will be applied. Thus, in this course we will explore ways and means to help executives and managers make better decisions in the manufacturing and service sectors through a strategic use of IS/T. Normally taken during student's last semester. Must be completed with a grade of B or better. Prerequisites (with concurrency): IS 512, IS 560, IS 571, IS 640, and IS 680.

IS 692 - CYBERSECURITY PRACTICUM  
Semester Hours: 3

A capstone course emphasizing the integration of various principles, theories, and techniques for developing, implementing and using cybersecurity tools and strategies and applications in organizations. Includes readings, lectures, situation analysis, cases, and the completion of a major practical project. Must be completed with a grade of B or better. Prerequisites: CS 585, CPE 549, IS 660, IS 663.

IS 699 - MASTER'S THESIS  
Semester Hours: 3

Required each semester a student is working and receiving direction on a masters thesis. A minimum of two terms is required but no more than six hours credit is allowed for the thesis. Credit awarded upon successful completion of thesis.

Management (MGT)

MGT 501 - INTRO TO CONTRACT MANAGEMENT  
Semester Hours: 3

General survey in contracting basics, covering procedures as described by Federal Acquisition Regulations, statutes, ethics, policies, and other pertinent authorities.

MGT 502 - CONTRACT EVALUATION & AWARD  
Semester Hours: 3

This course introduces the student to topics related to the evaluation, award and post award portions of the contracting process. Elements of evaluation related to competitive acquisitions and past performance evaluation are reviewed. Steps related to the proposal receipt process such as contractor responsibility, debarred/suspended, and certificate of competency are covered. The award process is also covered by a discussion offeror, and preparation of award. Post award topics such as contract administration functions, contract closeout, contract modifications, remedies, claims, disputes and request for equitable adjustments are covered. Prerequisite: MGT 501.

MGT 503 - CONTRACT PRICING & COST ANALYS  
Semester Hours: 3

Techniques for cost estimating, cost analysis, and price analysis. Sources of data, statutory requirements, rates, factors, and definitions, projection methods, factors affecting profit or fee, weighted guidelines technique, application of statistical analysis including regression analysis, and learning curve theory. Prerequisite: MGT 501 and ACC 540.

MGT 505 - NEW VENTURES STRATEGIES  
Semester Hours: 3

Theory and application of both marketing and management strategies for start-up, operation and control of new ventures. The course also discusses the role of entrepreneurship in the economy. Prerequisite: MGT 600 and MKT 600.

MGT 508 - TEAMWORK & TEAM PROCESSES  
Semester Hours: 3

This course provides an introduction to teams and teamwork processes. The foundation of the course is research-based; topics will be approached from the context of empirical research that has been conducted. The types of research designs that are typically used in team research are addressed. There are hands-on activities, so that students can put the theoretical material into context and into practice. This course is ideal for students who plan to work in business settings or in team-oriented fields (e.g., engineering, the military) or become involved in human resources or team training.

MGT 550 - INTERNATIONAL BUSINESS  
Semester Hours: 3

This course combines theoretical and practical aspects of doing business in the global market. It addresses the complex environment of international business and the need to investigate its various economic, social, political, cultural, and legal dimensions from conceptual, methodological and applications perspectives. It then considers how these environmental factors would affect, and can be integrated into, business programs and strategies.
MGT 560 - EMPLOYEE STAFFING & DEVELOP  
Semester Hours: 3  
Study of the fundamental concepts, issues and tools of employee staffing and development. Topics include forecasting staffing needs, recruitment strategies, development and validation of selection procedures, placement, socialization, and development of employees, and the utilization of contingent workers.

MGT 561 - STRATEGIC COMPENSATION MGMT  
Semester Hours: 3  
Introduction to the management of employees compensation. Provides an overview of compensation practices, behavioral and economic theories of compensation, and research on compensation programs.

MGT 562 - EMPLOYMENT LAW FOR MANAGERS  
Semester Hours: 3  
Analysis of the impact of government regulation on the management of human resources. Examines the implications for employer responsibilities and employee rights of evolving public policies pertaining to separations, discrimination, compensation, occupational safety and health, privacy, union-management relations, and other terms of employment.

MGT 570 - SPEC TOPICS SEM MGT OF TECH  
Semester Hours: 3  
In depth study of a selected special topic relevant to the management of technology. Different sections of this course may address different topics.

MGT 595 - INTERNSHIP IN MANAGEMENT  
Semester Hours: 1-3  
Under the direction of a faculty advisor, student gains experience with an entrepreneur in a small business firm or a manager in a large firm.

MGT 600 - ORGAN THRY, BEHAV & ENVIRONMEN  
Semester Hours: 3  
Provides the conceptual tools to analyze the behavioral and organizational influences on systematic outputs such as quality, profitability, and employee well-being. Focuses both on macro-level issues (e.g. organizational design, culture, power and politics, and strategic leadership) and on micro-level issues (e.g. motivation, decision-making, socialization, and diversity). Covers these topics in the broader social, legal, regulatory, environmental, and ethical context.

MGT 601 - TECH & INNOVATION MGMT  
Semester Hours: 3  
This course covers the principles, theories, and practices to enhance an organization's competitive position through the management of technology and innovation. Topics include the environmental and industry drivers of technological change, organizational issues in the adoption of new technologies, innovation and disruption, development of technical core competencies, and leadership challenges posed by innovation and change. It includes readings, lectures, cases, and the completion of a major research/practical project.

MGT 611 - SUPPLY CHAIN MANAGEMENT  
Semester Hours: 3  
This course discusses the concepts and components of the entire supply chain from a system of systems perspective. Emphasis is on integration, collaboration and planning related to major functional areas required to organize the flow of products from inception through delivery to satisfy final customer needs. Information and communication technology as an enabler of supply chain management strategies is also discussed. Concepts are emphasized utilizing experiential learning and case studies. Prerequisite: MSC 600.

MGT 622 - MGT TECHNI PROFESSIONALS  
Semester Hours: 3  
Differences in the nature of the research task and in the talents and skills required of scientists and engineers create special problems for the manager. Examines special issues in managing engineers, scientists, and technical support personnel. Emphasizes creating an organizational climate for increasing both individual and organizational innovation. Topics include incentive systems and motivation of technical professionals, problems in team decision making, job design, evaluating performance of technical professionals, leadership in the R&D organization, and career development for technical professionals. Prerequisite: MGT 600.

MGT 629 - LEADERSHIP: THRY & PRACTICE  
Semester Hours: 3  
The course explores what is known about leadership with particular emphasis on those attributes and skills that allow leaders to be effective in a variety of organizational situations. The theories of leadership are explored in a framework that includes the relationship of the leader to followers and situations. Frequent appearances by guest speakers who are themselves leaders provide the critical linkage to real world practice and allow for student interaction. Prerequisite: MGT 600.
MGT 631 - HRM & ORGANIZATIONAL BEHAVIOR
Semester Hours: 3

The major functions of human resource management are reviewed including performance management, employment law, staffing, HR planning, compensation, labor relations, and training. Behavioral management topics include motivation, leadership, communication, managing conflict, and managing teams. Prerequisite: MGT 600.

MGT 640 - PRIN OF PROJECT MGMT
Semester Hours: 3

Conceptual foundation and organization of project management. The project life cycle, planning, control, marketing, utilization of human resources, and financial management.

MGT 650 - SELECTED RESEARCH TOPICS
Semester Hours: 3

Research in a particular topic relevant to a business discipline by one student or a group of students. The research paper must be an original contribution showing a research design and results that meet the highest standards of social science research. Permission of instructor required.

MGT 690 - SEMINAR IN TECH MANAGEMENT
Semester Hours: 3

Practical management of technology methods and techniques from current research and successful industrial practice. Examines the state of the art in industrial new product development management. Lectures, cases, readings, and an emphasis on student discussions, presentations and interactions. The course has a strong research orientation while at the same time focusing on management policies and principles.

MGT 693 - SUPPLY CHAIN STRATEGY & PRACT
Semester Hours: 3

This integrative course discusses the strategic role of supply chain management in organizations and develops a working knowledge of the process of formulating and implementing supply chain strategies to gain competitive advantage in a global environment. Topics covered include the linkage of supply chain strategies with corporate strategy, customer relationship and supplier relationship strategies, outsourcing strategies and related infrastructure needs to implement supply chain strategies. A team based practicum project helps students apply concepts and methods to real world problems. Prerequisites: Completion of (or concurrent enrollment in) MGT 611. Normally taken last semester of program. Must be completed with a grade of B or higher.

MGT 694 - MANAGEMENT PRACTICUM
Semester Hours: 3

This course will serve as the capstone for the M.S. in Management degree. Students will work with faculty on either a research or consulting project which will allow the student to explore an area of interest in greater depth or gain additional experience by applying the concepts they have learned in the degree program to a real world challenge faced by an organization. Prerequisites: Completion (or concurrent enrollment in) all other required courses. Normally taken during the last semester of the program. Must be completed with a B grade or higher.

MGT 698 - STRATEGIC MANAGEMENT
Semester Hours: 3

Administrative decision making with emphasis on analyzing a complex business situation, evaluating historical trends, current operational conditions, and environmental settings, in order to establish a unifying strategy; implementation of integrated functional policies; and a plan of action to achieve established objectives. Normally taken during the last semester of a student's program. Prerequisites: MGT 601, ACC 602, ECN 626, FIN 601, MKT 600, and MSC 600.

MGT 699 - MASTER'S THESIS
Semester Hours: 1-3

Required each semester that student is working and receiving direction on a masters thesis. A maximum of 6 hours credit may be applied toward degree.

MGT 770 - ORGANIZATIONAL RESEARCH METHOD
Semester Hours: 3

Theory and practice of research methodology for study of administrative, industrial, and consumer behavior and organizations; questionnaire, field, and laboratory experimentation and statistical analysis of pre-gathered time-series and cross-sectional data; and examples of good and poor research in business disciplines. A completed project of potentially publishable nature is formally presented in class.

Management Science (MSC)
MSC 500 - DEC SUPPORT SYS/EXPT SYS  
Semester Hours: 3  
Analysis of information support systems which aid the manager in the decision making process.

MSC 510 - TRANSPORTATION & LOGISTICS  
Semester Hours: 3  
An analysis of transportation and logistical services to include customer service, distribution operations, purchasing, order processing, facility design and operations, carrier selection, vehicle routing, and transportation costs. Understanding of business statistics is required.

MSC 570 - SPECIAL TOPICS IN MGMT SCI  
Semester Hours: 3  
In depth study of a selected topic relevant to contemporary management science. Different sections of this course may address different topics.

MSC 595 - INTERNSHIP IN MANAGEMENT SCIEN  
Semester Hours: 1-3  
Active involvement in a project in a business enterprise, professional organization or government agency that has particular interest and relevance to the student.

MSC 600 - QUANTITATIVE METHODS  
Semester Hours: 3  
An introduction to and application of several fundamental quantitative methods and business analytics tools in business. Topics include probability distributions, sampling distributions, confidence interval estimation, hypothesis testing, ANOVA, linear regression, linear optimization, and simulation. Basic proficiency in Excel is required.

MSC 605 - OPERATIONS MANAGEMENT  
Semester Hours: 3  
This course discusses the management of the operations function for the creation of goods and services and its relationship with other business functions in service, manufacturing, and government organizations. Topics include operations strategy and infrastructure decisions, merging process technologies, planning and scheduling, inventory management, just-in-time systems, quality management, six sigma and lean operations. Concepts are illustrated using the SAP software. Prerequisite: MSC 600.

MSC 615 - DECISION MODELING  
Semester Hours: 3  
This course focuses on tools and methods for modeling, analyzing and solving problems involving business decision making. Spreadsheet analysis, optimization, and simulation techniques will be covered. Topics include linear and nonlinear optimization, network models, decision analysis and simulation of complex models in a spreadsheet environment as well as using other commercial software packages. Proficiency in Excel is required. Prerequisite: MSC 600.

MSC 641 - ADVANCED ANALYTICS  
Semester Hours: 3  
This course focuses on concepts and methods in business analytics. Topics include data quality and cleaning, predictive modeling, design of experiments, segmentation, forecasting, usage and limitations of models, and interpretation and presentation of results. This course provides a hands-on environment using real data to prepare students to apply these techniques in business environments. Proficiency in Excel is required. Prerequisite: MSC 600.

MSC 650 - SELECTED RESEARCH TOPICS  
Semester Hours: 3  
Research in a particular topic relevant to management science by one student or a group of students. Each students research paper must be an original contribution showing a research design and results that meet the highest standard of management science research.

MSC 692 - BUSINESS ANALYTICS PRACTICUM  
Semester Hours: 3  
A capstone course emphasizing rigorously interpreting the results of analytic models and intuitively communicating the derived business insights to business clients and corporate executives. The majority of this course is devoted to a major practical project in which students apply skills learned from previous analytics courses to a real world business problem, preferably in cooperation with a local organization. Prerequisite: Completion (or concurrent enrollment in) all other required courses. Normally taken during the student's last semester of studies.
MSC 699 - MASTER'S THESIS
Semester Hours: 1-3

Required each semester a student is working and receiving direction on a masters thesis. A minimum of two terms is required, but no more than six hours credit is allowed for the thesis.

**Marine Science (MS)**

**MS 501 - INTRO TO OCEANOGRAPHY**
Semester Hours: 4

Physics, chemistry, biology, and geology of oceans. For graduate students and those preparing for graduate school or intending to enter marine sciences professionally.

**MS 502 - MARINE BOTANY**
Semester Hours: 4

**MS 503 - MAR INVERTERBRATE ZOO I**
Semester Hours: 4

**MS 505 - MARINE VERTEBRATE ZOO**
Semester Hours: 4

**MS 509 - MARINE ECOLOGY**
Semester Hours: 4

Bioenergetics, community structure, population dynamics, predation, competition, and speciation in marine ecosystems. Lecture, laboratory, and fieldwork. Students admitted without previous marine courses. For engineers and other non-biologists interested in marine environment. Individual species as they relate to ecological principles exemplifying taxonomic and ecologic backgrounds.

**MS 510 - MARSH ECOLOGY**
Semester Hours: 4

Basic understanding of ecology of salt marsh. Habitat analysis, natural history studies, and population dynamics of selected vertebrates. Specific field problem terminated by a technical paper assigned to each student. For advanced undergraduates and graduate students.

**MS 515 - COASTAL ORNITHOLOGY**
Semester Hours: 4

Coastal and pelagic birds with emphasis on ecology, taxonomy, and distribution. Food habits, field identification, and population dynamics.

**MS 520 - MARINE GEOLOGY**
Semester Hours: 4

Sampling techniques, laboratory analysis of sediments, application of research process to problems in identifying sedimentary environments, topography, sediments, and history of world oceans. Beneficial for understanding sedimentary substrate on or in which a large percentage of marine organisms live. Lecture, laboratory, and fieldwork.

**MS 525 - MARINE BIOL FOR TEACHERS**
Semester Hours: 6

**MS 599 - RESEARCH ON SPECIAL TOPICS**
Semester Hours: 1-4

Enrollment by special arrangement in any subjects listed.

**MS 691 - SPECIAL TOPICS IN MARINE SCIEN**
Semester Hours: 1-4

**Marketing (MKT)**
MKT 505 - NEW VENTURE STRATEGIES
Semester Hours: 3

Theory and application of both marketing and management strategies for start-up, operation and control of new ventures. The course also discusses the role of entrepreneurship in the economy. Same as MGT 505.

MKT 515 - INTERNATIONAL MARKETING
Semester Hours: 3

Procedures and problems associated with establishing and carrying out marketing operations in or with foreign countries and companies. Institutions, principles, and methods involved in solving these business problems. Effect of national differences in business practices and regulation.

MKT 520 - SERVICES MARKETING
Semester Hours: 3

The course focuses on the unique challenges of managing services and delivering quality service to customers. The course is equally applicable to organizations whose core product is services (e.g., banks, hospitals, aerospace and defense firms, non-profit organizations) and to organizations that depend on service excellence and services for competitive advantage (high technology firms, industrial firms).

MKT 565 - NEW VENTURE CHALLENGE
Semester Hours: 3

It is the intent of this course to create teams of students who will take a technology to the next level with the potential for the creation of a venture team. The course will take students through the process of conceiving and creating a new business. The goal is to provide a solid background with practical applications of important concepts for non-business majors or business majors with limited or no experience in an entrepreneurial environment. Finance, accounting, marketing and management will be addressed from a hands-on, entrepreneurial perspective. The course will rely on Podcast discussion, participation, case analysis, and the creation of a business plan. Prerequisite: MKT 505 and MKT 604.

MKT 575 - ADVANCED MARKETING SEMINAR
Semester Hours: 3

Investigation of advanced marketing topics that are relevant to contemporary marketing practices. The course will focus on current issues related to marketing in a high technology environment, relationship marketing, channel design and strategy, transportation, and logistics. Prerequisite: MKT 600.

MKT 580 - MARKETING MANAGEMENT
Semester Hours: 3

Management of marketing function of the firm: determination of objectives, organization and controls for effective utilization of marketing resources in coordinated effort with other major functional areas. Identification and selection of market opportunities. Competitive strategies and development of marketing policies and programs.

MKT 590 - SPECIAL PROJECTS
Semester Hours: 3

Independent study in an area of interest to the student in the field of marketing.

MKT 595 - INTERNSHIP IN MARKETING
Semester Hours: 3

Active involvement in a project in a business enterprise, professional organization, or in a government agency that has particular interest and relevance to the student.

MKT 600 - SURVEY OF MARKETING MGMT
Semester Hours: 3

Seminar format with case analysis is used to introduce students to the tools and concepts necessary for planning, organizing, and controlling marketing activities. Typical topics include market analysis and segmentation, market planning, market research, and product pricing, promotion, and distribution strategies.

MKT 602 - MARKETING RESEARCH DESIGN
Semester Hours: 3

Application based course exploring the principles and purposes of marketing research. Covers research design, questionnaire development, sample selection, data collection, data analysis, and report generation. Focus is on the gathering and use of information for better decision making.
MKT 604 - NEW PRODUCT DEVELOPMENT
Semester Hours: 3

Practical management of new product development methods and techniques from current research and successfull industrial practice. An in-depth review of concepts, empirical findings, and paradigms that collectively form the foundation for the design and marketing of new products. An overview of emerging concepts, analytical techniques, empirical findings and paradigms that alter the nature, scope, and practice of marketing emerging technologies. Prerequisite: MKT 600 and MGT 601.

MKT 606 - MKT IN HIGH TECH ENVIRON
Semester Hours: 3

Investigation of the many functions, strategies, systems, environmental forces, and competitive activities involved in the marketing of ideas, goods, and services to organizational customers which include businesses, industries, institutions, and governments. These issues will be evaluated within the context of a high technology environment. Using a seminar format, case analysis and class participation will be important dimensions of the course. Prerequisite: MKT 604.

MKT 650 - SELECTED RESEARCH TOPICS
Semester Hours: 3

Research on a particular topic relevant to marketing by one student or a group of students. The research paper must be an original contribution showing a research design and results that meet the highest standards of social science research.

**Materials Science (MTS)**

MTS 601 - NATURE OF MATERIALS
Semester Hours: 3

MTS 602 - PROPERTIES OF MATERIALS
Semester Hours: 3

MTS 603 - STRUC COMP PROP MATLS I
Semester Hours: 3

How structure and composition determine a materials mechanical properties and performance. Topics covered include bonding and crystal structure, disorder, defects, phase diagrams, phase transitions, diffusion and other kinetic processes, deformation, fraction mechanics, strengthening processes as applied to metals, ceramics, semiconductors, polymers and composites.

MTS 604 - STRUC COMP PROP MATLS II
Semester Hours: 3

How reactive, electronic, magnetic, thermal and optical properties of metals, ceramics, semiconductors, and polymers are influenced by their structure and composition. Topics considered include corrosion, oxidation, degradation process, band structure, electrical and optical dielectric constants, magnetic susceptibility, electrical and thermal conductivity and superconductivity.

MTS 607 - MAT PROCESSING IN SPACE
Semester Hours: 3

Extensive review of solidification physics with emphasis on the role of fluid transport and its effects on the process in order to develop rationales for processing materials in space.

MTS 613 - SYNTHESIS & PROC OF MATL
Semester Hours: 3

Metals, semiconductors, polymers, ceramics and composite materials are included.

MTS 646 - THERMODYNAMICS OF MATRLS
Semester Hours: 3

Fundamental thermodynamic review, phase equilibrium, chemical reaction equilibrium, free energy, binary and ternary phase transformations, solution models and selected topics.
MTS 649 - POLYMER SYNTHESIS & CHARACTERIZATION
Semester Hours: 3

Synthesis of commercially relevant and novel polymers. Polymer characterization and discussion of the structural dependence of polymer properties.

MTS 650 - PRINC LIQUID/SOLID INTERFACE
Semester Hours: 3

Applies basic principles in thermodynamics and kinetics to characterize surfaces and surface phenomena. Fundamental properties of gas-liquid, liquid-liquid, solid-liquid, and solid-gas interfaces and phenomena occurring at these interfaces.

MTS 651 - INTRO QUANTUM MECHANICS I
Semester Hours: 3

Waves and particles; Bohr's model of the atom; de Broglie waves, wave-packets and the uncertainty principle; postulates of quantum mechanics; Schrödinger's equation; simple systems in one, two and three dimensions; the hydrogen atom.

MTS 652 - INTRO QUANTUM MECHANICS II
Semester Hours: 3

Angular momentum and spin; atomic structure and spectrum; time-independent perturbation theory, variational methods; time-dependent perturbation theory and interactions of light with matter; scattering theory; electronic structure of solids; relativistic quantum mechanics.

MTS 660 - INTRO SOLID STATE PHYSICS I
Semester Hours: 3

MTS 661 - INTRO SOLID STATE PHYSICS II
Semester Hours: 3

Thermal properties of solids. Electronic properties, optical properties, electronic properties in a magnetic field, semiconductor devices, magnetism, superconductivity, defects and alloys, dislocations and crystal growth, non-crystalline solids, surfaces and interfaces.

MTS 690 - SPECIAL TOPICS/MATERIAL SCIENCE
Semester Hours: 3

Advanced selected topics of interest in such areas as materials processing, properties, analysis and testing.

MTS 699 - MASTER'S THESIS
Semester Hours: 3-6

Required each semester that a student is enrolled and receiving direction on a master's thesis. Minimum of two semesters required.

MTS 701 - FUNDAMENTALS OF SOLID STATE PHYSICS
Semester Hours: 3

Equilibrium concepts and applications. Overview of solid state preparation (crystal growth) techniques. Treats appropriate thermodynamics, chemical equilibrium solid-liquid-vapor phase diagrams and application in materials preparation; segregation and applications (doping, normal freezing, zone refining, macro and micro distributions).

MTS 721 - FUNDAMENTALS OF ELECTRON/X-RAY OPTICS
Semester Hours: 3

Fundamentals of materials characterization using electron and x-ray techniques. Topics include advanced crystallography, electron optics, and interactions of energetic electrons with solids. Some applications of x-ray diffraction (SRD) will be addressed.

MTS 722 - ELECTRON MICROSCOPES/X-RAY DIFFRACTION
Semester Hours: 4

Applications of materials characterization using electron and x-ray techniques. Topics include imaging and x-ray spectroscopy (EDXA) using scanning electron microscopy (SEM); imaging, diffraction, and x-ray spectroscopy using transmission electron microscopy (TEM); and advanced x-ray diffraction (XRD) techniques.

MTS 723 - ELECTRON SPECTROSCOPY SURFACE CHARACTERIZATION
Semester Hours: 4

Principles and operation of electron spectroscopies used in surface characterization. Techniques covered include Auger electron spectroscopy (AES), x-ray photoelectron spectroscopy (XPS), and other photoemission spectroscopies, such as ultraviolet photoelectron spectroscopy (UPS) and the use of synchrotron radiation. Students will carry out analysis of samples, prepare a written report, and present the results orally as part of the laboratory assignment.
MTS 724 - INSTR METH/BIO-MTLS CHARACTERI
Semester Hours: 3

MTS 747 - POLYMER PHYSICAL CHEM
Semester Hours: 3

Introduction to structure, properties and processing of polymers. Structural types, structureproperty relationships, thermodynamics and kinetics of polymerization and depolymerization, polymer characterization, thermodynamics of polymer solutions and blends, and mechanical evaluation of polymers.

MTS 780 - MATERIALS SCIENCE SEMINAR
Semester Hour: 1

Required of doctoral students during each semester of residence. This course may not be used to meet minimum degree requirements.

MTS 790 - SPECIAL TOPICS/MTS
Semester Hours: 3

Offered upon demand. Advanced selected topics of interest in materials science in such areas as materials processing, materials properties and analysis, testing.

MTS 799 - DOCTORAL DISSERTATION
Semester Hours: 3-9

Required each semester student is enrolled and receiving direction on a doctoral dissertation. A minimum of 18 hours is required.

Mathematics (MA)

MA 502 - INTRO TO REAL ANALYSIS
Semester Hours: 3

Individualized special projects in mathematics and its applications for inquisitive and wellprepared senior level undergraduate students. No credit allowed toward a major or minor in mathematics. S/U grading.

MA 503 - INTRO COMPLEX ANALYSIS
Semester Hours: 3

Complex algebra, analytic functions, Cauchy-Riemann equations, exponential, trigonometric, and logarithmic functions, integration, Cauchy integral theorem, Morera's theorem, Liouville's theorem, maximum modulus theorem, residue theory, Taylor and Laurent series, and applications.

MA 506 - METHODS PARTIAL DIFF EQUA
Semester Hours: 3

Survey of theory and methods for solving elementary partial differential equations. Topics include first-order equations and the method of characteristics, second-order equations, reduction to canonical form, the wave equation, the heat equation, Laplace's equation, separation of variables, and Fourier series.

MA 508 - APPLIED LINEAR ALGEBRA
Semester Hours: 3

Fundamental concepts of linear algebra are developed with emphasis on real and complex vector spaces, linear transformations, and matrices. Solving systems of equations, finding inverses of matrices, determinants, vector spaces, linear transformations, eigenvalues and eigenvectors, normal matrices, canonical forms of matrices, applications to systems of linear differential equations, and use of computer software such as MATLAB.

MA 515 - INTRO NUMERICAL ANALYSIS
Semester Hours: 3

Rigorous analysis and derivation of numerical methods for the approximate solution of nonlinear equations; interpolation and integration of functions, and approximating solutions of ordinary differential equations.

MA 520 - INTERM DIFFERENTIAL EQUATIONS
Semester Hours: 3

This is a second course in differential equations. Course topics include series solutions for second order differential equations and the method of Frobenious; eigenvalue and eigenvector methods for solving systems of linear first order equations; the qualitative theory of nonlinear equations; boundary value problems and the Sturm-Liouville theory. No credit given to students who have successfully completed MA 524.
MA 524 - DYNAMICAL SYSTEMS I
Semester Hours: 3
Scalar autonomous equations; existence, uniqueness, stability, elementary bifurcations; planar autonomous equations; general properties and geometry, conservative systems, elementary bifurcations linear systems, reduction to canonical forms, stability and instability from linearization. Liapunov functions, center manifolds, Hopf bifurcation.

MA 526 - PARTIAL DIFF EQUA I
Semester Hours: 3
Introduction to the theory for solving partial differential equations. No graduate credit given to students who have completed MA 506 for graduate credit. Topics include second-order equations, reduction to canonical form, well-posedness, the classical equations (wave, heat, and Laplace's) in one and several dimensions, separation of variables, Fourier series, general eigenfunction expansions, Sturm-Liouville theory, first-order linear and quasilinear equations, and shocks. Prerequisite: MA 502.

MA 538 - METRIC SPACES W/APPLICA
Semester Hours: 3

MA 540 - COMBINATORIAL ENUMERATION
Semester Hours: 3
Counting, pigeonhole principle, permutations and combinations, generating functions, principle of inclusion and exclusion, Polya's theory of counting.

MA 542 - ALGEBRA
Semester Hours: 3
Topics from group theory and ring theory: subgroups, normal subgroups, quotient groups, homomorphisms, isomorphism theorems, ideals, principal ideal domains, Euclidean domains, fields, extension fields, elements of Galois theory.

MA 544 - LINEAR ALGEBRA
Semester Hours: 3
Vector spaces over a field, bases, linear transformations, matrices, determinants, eigenvalues, similarity, Jordan canonical forms, dual spaces, orthogonal and unitary transformations.

MA 561 - INTRO TO FOURIER ANALYSIS
Semester Hours: 3
See MA 460. This course is taught as MA 460/561. Course completion and/or grade requirements for the MA 561 course will differ from those for the MA 460 course.

MA 562 - INTERMEDIATE FOURIER ANALYSIS
Semester Hours: 3
(Formerly MA 560). Brief review of classical Fourier analysis, Parseval's equality, Gaussian test functions. Introduction to generalized functions, the generalized transform, the generalized derivative, sequences and series of generalized functions, regular periodic arrays of delta functions, sampling, the discrete transform, the fast Fourier transform (other topics as time and interest permit).

MA 565 - INTERM MATH MODELING
Semester Hours: 3
Designed for beginning graduate students. No prior experience in formal mathematical modeling is required. In-depth discussion of some types of models from physics, the life sciences, and/or the social sciences, with formulation, analysis, and criticism of the models. Process of and factors involved in formulating a model is of prime importance. Content is divided into approximately one-half deterministic modeling and one-half stochastic modeling.

MA 585 - PROBABILITY
Semester Hours: 3
Course topics include probability spaces, random variables, conditional probability, independence, modes of convergence, and an introduction to sigma-algebras and measurability; distributions, including discrete, continuous, joint and marginal distributions, transformations of random variable, distribution and quantile functions, and convergence in distribution; expected value, including properties of general expected value, mean, variance, covariance, generating functions, and conditional expected value; special models and distributions, including Bernoulli trials and the binomial and negative binomial distributions, the Poisson model and the Poisson and gamma distributions, the normal distribution, finite sampling models and the hypergeometric distribution; the law of large numbers and the central limit theorem.
MA 590 - SELECTED TOPICS IN MATH
Semester Hours: 3
Requested selected topics.

MA 607 - MATHEMATICAL METHODS I
Semester Hours: 3
Review of vector calculus and coordinate systems, introduction to tensors, matrices, infinite series, complex variables with applications to calculus of residues, partial differential equations, and Sturm-Liouville theory. Orthogonal functions, gamma functions, Bessel functions, Legendre functions, special functions, Fourier series, integral transform and equations. (Same as PH 607.).

MA 609 - MATHEMATICAL METHODS II
Semester Hours: 3
Continuation of MA 607. (Same as PH 609.).

MA 614 - NUM METHODS/LINEAR ALGEBRA
Semester Hours: 3
Norms and vector spaces, matrix factorizations and direct solution methods, stability and conditioning, iterative methods for large linear systems, the algebraic eigenvalue problem.

MA 615 - NUM METHODS PARTIAL DIFF EQ
Semester Hours: 3
Finite difference methods for parabolic, elliptic, and hyperbolic partial differential equations, error analysis, stability, and convergence of finite difference methods.

MA 624 - DYNAMICAL SYSTEMS II
Semester Hours: 3
Brief review of linear systems; local theory for nonlinear systems; existence, uniqueness, differentiability, asymptotic behavior, the stable manifold theorem, Hartman-Grobman theorem, Hamiltonian systems; global theory for nonlinear systems; limit sets and attractors, the Poincare map, the Poincare-Bendixson theorem; some aspects of bifurcation theory and chaos; bifurcations at nonhyperbolic fixed points and periodic orbits, homoclinic bifurcations, Melnikov's method, chaos.

MA 626 - PARTIAL DIFF EQUA II
Semester Hours: 3
Continuation of MA 526. Qualitative results for solutions to the classical equations (energy inequalities, propagation of discontinuities, maximum principles, smoothness of solutions, existence and uniqueness, etc.), non-homogeneous equations, Poisson's equation, Green's functions, and the Cauchy-Kowalewski theorem.

MA 633 - GEOMETRY
Semester Hours: 3
Axioms of incidence and order, affine and metric properties, isometries, similarities, transformation groups, projective planes.

MA 638 - GENERAL TOPOLOGY
Semester Hours: 3
Set theory, logic, well-ordering principle, axiom of choice, topological spaces, product spaces, quotient spaces, continuous functions, connectedness, path connectedness, local connectedness, compactness, local compactness, countability and separation, generalized products, Tychonoff theorem.

MA 640 - GRAPH THEORY
Semester Hours: 3
Graphs, subgraphs, trees, connectivity, Euler tours, Hamilton cycles, matchings, edge colorings, independent sets, vertex colorings, planar graphs, Kuratowski's theorem, four color theorem, directed graphs, networks, cycle and bond spaces.

MA 643 - GROUP THEORY
Semester Hours: 3

MA 644 - MATRIX THEORY
Semester Hours: 3
Functions of matrices, invariant polynomials, elementary divisors, similarity of matrices, normal forms of a matrix, matrix equations, generalized inverses, non-negative matrices, localization of eigenvalues.
MA 645 - COMBINATORIAL DESIGN
Semester Hours: 3

Systems of distinct representatives, difference sets, coding theory, block designs, finite geometries, orthogonal Latin squares, and Hadamard matrices.

MA 653 - REAL ANALYSIS I
Semester Hours: 3

MA 654 - REAL ANALYSIS II
Semester Hours: 3

Differentiability of monotone functions, functions of bounded variation, absolute continuity, convex functions, Minkowski and Holder inequalities, Lp spaces, Riesz-Fischer representation theorem, Fubini's theorem and selected topics.

MA 656 - COMPLEX ANALYSIS I
Semester Hours: 3

Topology of the complex plane, analytic functions of one complex variable, elementary functions and their mapping properties, power series, complex integration, Cauchy's theorem and its consequences, isolated singularities, Laurent series, residue theory.

MA 658 - INTRO TO FUNCTIONAL ANALYSIS
Semester Hours: 3

Normed and inner product spaces, finite dimensional spaces, product and quotient spaces, equivalent norms, Hahn-Banach theorem, principle of uniform boundedness, open mapping theorem, Riesz representation theorem, complete orthonormal sets, Bessel's inequality, Parseval's identity, and conjugate spaces.

MA 661 - SPECIAL FUNCTIONS
Semester Hours: 3

MA 662 - ASYMPT/PERTURBATION METHOD
Semester Hours: 3

Asymptotic series, regular and singular perturbation theory, asymptotic matching, Laplace's method, stationary phase, steepest descents, WKB theory.

MA 667 - CALC VAR/OPTIMAL CONTROL
Semester Hours: 3

Euler necessary condition for local extremum, Euler-Lagrange equation, Weierstrass necessary condition, Jacobi's necessary condition, corner conditions, problems of optimal control, Pontryagin maximum principles, transversality conditions, applications.

MA 685 - STOCHASTIC PROC/APPLI I
Semester Hours: 3

Discrete and continuous Markov chains, Poisson processes, counting and renewal processes, and applications.

MA 686 - STOCHASTIC PROC/APPLI II
Semester Hours: 3

Gaussian and Wiener processes, general Markov processes, special types of processes from queueing and risk theory, and selected advanced topics.

MA 690 - SP TOPICS IN MATHEMATICS
Semester Hours: 3

Offered upon demand. Advanced selected topics of interest in areas such as discrete mathematics, numerical analysis, differential equations, and stochastic processes.

MA 695 - GRADUATE SEMINAR
Semester Hour: 1

Selected topics in advanced mathematics, conducted as a research seminar.

MA 699 - MASTER'S THESIS
Semester Hours: 3-9

Required each semester a student is receiving direction on a master's thesis. A minimum of two terms is required. Maximum of nine hours credit awarded upon successful completion of the master's thesis.
MA 715 - NUM METHODS PART DIFF EQ II
Semester Hours: 3
Finite element methods for parabolic, elliptic, and hyperbolic partial differential equations; error analysis stability, and convergence. Prerequisites: MA 538 and MA 615.

MA 726 - THRY PART DIFFERNTL EQUA
Semester Hours: 3
Hilbert space theory of existence, uniqueness, and regularity for partial differential equations.

MA 740 - COMBINATORIAL ALGORITHMS
Semester Hours: 3
Linear, polynomial and exponential graph theoretic algorithms, generating combinatorial objects, and NP-completeness.

MA 756 - COMPLEX ANALYSIS II
Semester Hours: 3
Applications of residue theory, harmonic functions and their applications, Mittag-Leffler theorem, infinite products, Weierstrass product theorem, conformal mapping and Riemann mapping theorem, univalent functions, analytic continuation and Riemann surfaces, Picard's theorems, and selected topics.

MA 785 - ADV PROBABILITY THEORY
Semester Hours: 3
Measure and integration, probability spaces, convergence concepts, law of large numbers, random series, characteristic functions, central limit theorem, random walks, conditioning, Markov properties, conditional expectations, and elements of martingale theory.

MA 790 - SPECIAL TOPICS
Semester Hours: 3
Offered upon demand. Advanced selected topics of interest in areas such as discrete mathematics, numerical analysis, differential equations, and stochastic processes.

MA 795 - GRADUATE SEMINAR
Semester Hour: 1
Selected topics in advanced mathematics, conducted as a research seminar.

MA 799 - DOCTORAL DISSERTATION
Semester Hours: 3-9
Required each semester a student is receiving direction on a Ph.D. dissertation.

**Mechanical & Aerospace Engineering (MAE)**

MAE 520 - COMPRESSIBLE AERODYNAMICS
Semester Hours: 3
Principles of compressible flow including area change, friction, and heat transfer. Fundamentals of acoustic waves, one and two-dimensional shock and expansion waves, shock-expansion theory, and linearized flow with applications to inlets, nozzles, wind tunnels, and supersonic flow over aerodynamic bodies and wings. (Same as MAE 420.)

MAE 530 - FUNDAMENTALS OF AERODYNAMICS
Semester Hours: 3
Application of the principles of fluid mechanics and thermodynamics to the prediction of aerodynamic performance of aircraft, missiles and other flight vehicles. Topics include lift and drag, thrust and power, and the influence of wing loading, power loading, zero-lift drag, wing geometry, high lift devices Mach number, etc., on the performance and design trades of flight vehicles. (Same as MAE 430.).

MAE 531 - INTRO TO PLASMA DYNAMICS
Semester Hours: 3

MAE 540 - ROCKET PROPULSION I
Semester Hours: 3
Introduction to the operation, analysis and design of liquid and solid rockets. The course incorporates an experience in design and realization of a thermal system in which students work in teams to design a rocket motor or component.
MAE 541 - AIRBREATHING PROPULSION
Semester Hours: 3

Survey of airbreathing propulsion systems with special emphasis on gas turbine engines for aircraft and rotorcraft. Thermodynamic power cycles, design of components, and overall engine performance analysis. Discussion of practical design and operations considerations including engine controls, reliability, and durability. The course incorporates an experience in design and realization of a thermal system in which students work in teams to design a turbine engine. Students majoring in Aerospace Engineering must take either MAE 440 or MAE 441 to satisfy the Aerospace propulsion elective.

MAE 544 - INTRO TO ELECTRIC PROPULSION
Semester Hours: 3

Elements of electrically-driven rocket propulsion for applications from low earth orbit to the outer planets. The physics of ionizing and heating gases and plasmas for electrothermal, electrostatic and electromagnetic acceleration. Characteristics of Resistojet, Arcjet, Magnetoplasmadynamic thrusters, Electrothermal, Pulsed plasma, Electrostatic, and Hall thrusters. Review thruster system performance, power requirements, and selection for space missions. Overview of current research efforts, including thruster systems, physics, and performance.

MAE 545 - HEAT DISTRIBUTION SYSTEMS DESIGN
Semester Hours: 3

Design of hydronic and air distribution systems used in heating and air conditioning. Piping design, pump selection, heat coils, room air distribution, ducting design, fan selection, controls, and complete systems.

MAE 548 - ENERGY CONVERSION & POWER GENERATION
Semester Hours: 3

Application of principles of thermodynamics, heat transfer, and fluid mechanics to combustion engines and turbines. Basic engine types, engine components, idealized cycles, combustion, fuels, engine variables, testing, exhaust gas analysis, and air pollution as related to spark-ignition, compression-ignition, and turbine engines.

MAE 552 - COMPRESSIBLE AERODYNAMICS
Semester Hours: 3

Principles of compressible flow including area change, friction, and heat transfer. Fundamentals of acoustic waves, one and two-dimensional shock and expansion waves, shock-expansion theory, and linearized flow with applications to inlets, nozzles, wind tunnels, and supersonic flow over aerodynamic bodies and wings.

MAE 561 - VIBRATIONS, ELASTIC SYSTEMS
Semester Hours: 3

Formulation of the equations of motion of discrete and continuous systems, analytical and numerical methods of solution, eigenvalue problems, and dynamic response. (Same as MAE 461 and CE 461/561.).

MAE 563 - INTERMEDIATE DYNAMICS
Semester Hours: 3

Kinematics and dynamics of particles, system of particles, and rigid-bodies. Variational principles and Lagrangian mechanics.

MAE 568 - ELEMENTS OF SPACECRAFT DESIGN
Semester Hours: 3

Fundamentals of spacecraft engineering and design. Topics include: orbital mechanics, space environment, attitude determination and control, communications, space structures, thermal control, propulsion and power, and systems and mission design. (Same as MAE 468.).

MAE 574 - APP MECHANICS OF SOLIDS
Semester Hours: 3

Stresses and strains at a point, theories of failures, stress concentration factors, thick-walled cylinders, torsion of noncircular members, curved beams, unsymmetrical bending, and shear center. (Same as MAE 474 and CE 474/574.).

MAE 576 - COMP MATLS: FABRIC/DES/ANALY
Semester Hours: 3

Introduction to the mechanics of advanced composite materials. Design and analysis of composite structures. Analysis of orthotropic and transversely isotropic materials and systems. Hands on fabrication of a composite structure. (Same as MAE 476.).

MAE 577 - EXP TECH SOLID MECHANICS
Semester Hours: 3

Experimental methods to determine stress, strain, displacement, velocity, and acceleration in various media. Theory and laboratory applications of electrical resistance strain gages, brittle coatings, and photoelasticity. Application of transducers and experimental analysis of engineering systems. (Same as MAE 477 and CE 477/577.).
MAE 580 - AIRCRAFT STABILITY & CONTROL
Semester Hours: 3
Stability and control of aerodynamic vehicles. Design of aircraft to obtain good flying characteristics. Complete governing equations and analog solutions of linearized equations. (Same as MAE 480.).

MAE 585 - NUM METH & ENGR COMPUTAT III
Semester Hours: 3
Advanced topics in numerical methods and engineering computation including: finite elements and finite differences in solving various engineering problems; Gaussian quadrature; interpolation, integration, and differentiation; and stability and convergence analysis of iterative methods. Numerical applications to fluid mechanics, heat transfer, structural mechanics, and machine design.

MAE 589 - COMPUTER AIDED ENGR
Semester Hours: 3
Application of computer methods in the analysis and design of structural, thermal, and dynamical systems. Use of state-of-the-art finite element and finite difference computer programs. Practical guidelines for discrete modeling; analysis of modeling errors. Comparison of exact and approximate solutions to boundary value problems. Use of microcomputers in engineering design and analysis. (Same as MAE 489.).

MAE 593 - ROCKET DESIGN
Semester Hours: 3
Design, build, test and fly a high-powered rocket with a payload to a specified altitude. Students work on multi-disciplinary teams to design payloads, avionics, recovery systems, structures and other sub-systems and then integrate them into the final vehicle. Course may be used for senior design credit.

MAE 594 - AIRCRAFT DESIGN
Semester Hours: 3
Design and build an unmanned aircraft to meet specified requirements, and then verify design through ground and flight tests. Students work on multi-disciplinary teams to address configuration aerodynamics, avionics, structures, propulsion/power and payloads. Systems engineering aspects including simulation, fabrication, integration, scheduling and cost estimation are also emphasized. Course may be used for senior design credit.

MAE 595 - SELECTED TOPICS MECH & AERO EG
Semester Hours: 1-6

MAE 610 - AERODYNAMICS
Semester Hours: 3
Fundamental concepts in aerodynamics including conservation laws, complex potential theory, thin airfoil theories, finite-wing lifting-line theory, boundary layers and Von Karman momentum integral equations.

MAE 620 - COMPRESSIBLE FLOW
Semester Hours: 3
Study of compressible subsonic, transonic and supersonic flows as described by the Euler equations. Linear and nonlinear theories of shockwaves, expansion waves, and their interactions. Applications to wind tunnels, nozzles, diffusers and aerodynamic bodies.

MAE 623 - COMPUTATIONAL FLUID DYNAMICS I
Semester Hours: 3
Formulations by finite difference, finite element, finite volume, and spectral element methods for incompressible and compressible flows. Explicit and implicit methods, Von Neumann error analysis, consistency, convergence, and accuracy.

MAE 631 - ROTORCRAFT DESIGN I
Semester Hours: 3
Conceptual design of rotorcraft systems with an emphasis on multidisciplinary design. Comprehensive methodologies for vehicle synthesis and sizing including consideration of aerodynamics, propulsion, materials and structures, flight performance and control, and operations. Integration of advanced technologies. Rotorcraft Design I and II are the capstone design courses for the MSE (Aerospace) program of study in Rotorcraft Systems Engineering.

MAE 632 - ROTORCRAFT DESIGN II
Semester Hours: 3
Continuation of Rotorcraft Design I including higher fidelity simulations and trade studies. Consideration of maneuverability, structural dynamics, drive train and hub design, advanced flight control system design, sensors, weapons, component integration, packaging, and life-cycle cost. Rotorcraft Design I and II are the capstone design courses for the MSE (Aerospace) program of study in Rotorcraft Systems Engineering.
MAE 633 - TACTICAL MISSILE DESIGN I
Semester Hours: 3
Conceptual design of missile systems with an emphasis on multi-disciplinary design. Comprehensive methodologies for vehicle synthesis and sizing including consideration of aerodynamics, propulsion, materials and structures, flight performance and control, and operations. Integration of advanced technologies. Tactical Missile Design I and II are the capstone design courses for the MSE (Aerospace) program of study in Missile Systems Engineering.

MAE 634 - TACTICAL MISSILE DESIGN II
Semester Hours: 3
Continuation of Tactical Missile Design I including higher fidelity simulations and trade studies. Consideration of trajectory modeling and simulation, open-loop flight control system design, sensors, component integration and packaging, and life-cycle cost. Tactical Missile Design I and II are the capstone design courses for the MSE (Aerospace) program of study in Missile Systems Engineering.

MAE 635 - AEROSPACE SYSTEMS ENGINEERING
Semester Hours: 3
Introduction to Integrated Product and Process Development (IPPD) and life cycle analysis with application to Aerospace Systems. Systems engineering and quality engineering methods and tools. Top-down design decision support process. Computer integrated environment and robust design simulation will be addressed.

MAE 639 - SYSTEM SAFETY
Semester Hours: 3
The process of system safety—from the creation and management of a safety program on a system under development to the analysis that must be performed as this system is designed and produced to assure acceptable risk in its operation. Full discussion of the management and analysis processes and procedures. Incorporates the safety procedures used by the Department of Defense and NASA. Basic statistical methods and network analysis methods which provide an understanding of the engineering analysis methods that follow are covered.

MAE 640 - ROCKET PROPULSION II
Semester Hours: 3
MAE 641 - ADV THERMODYNAMICS
Semester Hours: 3
Application of classical thermodynamics. Treatment of problems involving nonideal gases and liquids, phase equilibrium, and chemical equilibrium. (Same as CHE 641.).

MAE 643 - ADVANCED HEAT & MASS TRANSFER
Semester Hours: 3
Continuation of MAE 450 in the study of conductive, convective, and radiative heat transfer and mass transfer. Emphasis is placed on heat transfer in turbulent flows and high speed flows, combined mode heat transfer, and mass transfer in reacting flows.

MAE 644 - ADVANCED SOLID ROCKET PROPUL
Semester Hours: 3
Overview of the design, manufacture and testing of solid rocket propulsion systems. Specific topics include propellant ballistics and combustion, grain design, motor case and nozzle design, thermal protection, motor performance, and reliability and failure. Prerequisite: MAE 540.

MAE 645 - COMBUSTION I
Semester Hours: 3
Combustion chemistry, introduction to mass transfer, chemical kinetics, reactors, simplified governing equations for chemically reacting flow, laminar diffusion and premixed flames.

MAE 646 - COMBUSTION I
Semester Hours: 3
Combustion chemistry, introduction to mass transfer, chemical kinetics, reactors, simplified governing equations for chemically reacting flow, laminar diffusion and premixed flames.

MAE 647 - UNCERTAINTY ANAL IN EXPER
Semester Hours: 3
Uncertainty analysis concepts and techniques; application in planning, design, construction, debugging, execution, data analysis and reporting phases of experimental programs. Discussion of national and international standards and current engineering uncertainty analysis literature.
MAE 649 - TRANSPORT PHENOMENA
Semester Hours: 3
Mass, energy, and momentum transport in steady and transient motions in real and rheological substances. (Same as CHE 649.).

MAE 651 - VISCOS FLUID MECHANICS
Semester Hours: 3
Fundamentals of incompressible viscous fluid motion, including development of Navier Stokes equation. Exact and approximate solutions for both large and small Reynolds number. Laminar and turbulent boundary layers.

MAE 657 - HELICOPTER THEORY
Semester Hours: 3
Vertical flight, forward flight, performance, design, mathematics of rotating systems, rotary wing dynamics, rotary wing aerodynamics, helicopter aeroelasticity, stability and control, stall, and noise.

MAE 658 - ROTORDYNAMICS
Semester Hours: 3
Torsional and transverse rotor vibration, critical speed and stability analysis, response to unbalance, rotor balancing. Rotordynamic phenomena including: gyroscopic effects, fluid film bearings, annular seals, stiffness asymmetry.

MAE 660 - STRUCTURAL DYNAMICS
Semester Hours: 3
Application of the theory of vibrations to discrete and continuous models of structures. Numerical methods of analysis for both spatial and temporal variables. Modal synthesis and step-by-step time integration methods. Finite element applications; substructuring techniques. (Same as CE 660.).

MAE 661 - ADVANCED DYNAMICS
Semester Hours: 3
Variational methods, optimization, and dynamic stability. Lagrangian and Hamiltonian formulation for dynamical systems and Hamilton-Jacobi methods to orbital mechanics.

MAE 662 - NONLINEAR DYN & CHAOS
Semester Hours: 3
Nonlinear and chaotic dynamical systems, phase plane, periodic and strange attractors, stability analysis, critical points, Piapunov exponents, bifurcation points, solitons, logistic maps, Poincare and Henon iterative maps, factals, Mandelbrot and Julia sets, chaos in complex dynamical systems.

MAE 663 - ASTRODYNAMICS
Semester Hours: 3
Astronomical coordinates and time systems; the many-body problems and disturbing functions. General perturbation methods, and application of classical mechanics and Hamilton-Jacobi methods to orbital mechanics.

MAE 671 - CONTINUUM MECHANICS
Semester Hours: 3
Kinematics and kinetics, various coordinate systems, constitutive equations for continuous media; governing partial differential equations from first and second laws of thermodynamics; applications to solids, liquids, and gases. (Same as CE 671.).

MAE 672 - ELASTICITY
Semester Hours: 3
Formulation of boundary-value problems of classical elasticity. Application to plane problems, prismatic members, and axisymmetric problems. Introduction to three-dimensional problems. (Same as CE 672.).

MAE 673 - PLASTICITY
Semester Hours: 3
Fundamentals of mechanical behavior of metals and nonmetals for stress states greater than the yield stress state. Deformation and flow theories. Stress-strain relations and yield criteria. Solution of boundary value problems with plastic bodies. Limit analysis of structures. (Same as CE 673.).

MAE 674 - FINITE ELEMENT ANALYSIS I
Semester Hours: 3
Finite element theory, variational methods, weighted residuals; applications to linear partial differential equations in continuous media; solution of boundary-value and initial-value problems. (Same as CE 674.).
MAE 676 - VISCOELASTICITY
Semester Hours: 3

MAE 677 - OPTICAL TECH IN SOLID MECH
Semester Hours: 3
Overview of conventional methods for experimental stress analysis. Introduction to applied optics with emphasis on non-destructive, laser-based testing methods, fiber optic recording systems, photomechanical-numerical data acquisition, and computer aided analysis. (Same as CE 677.)

MAE 678 - MECH COMPOSITE MATERIALS
Semester Hours: 3
Introduction to composite materials, micro- and macro-mechanical behavior of laminae; bending, buckling and vibration of laminated plates. (Same as CE 678.)

MAE 680 - PERFORMANCE FLIGHT TESTING
Semester Hours: 3
Fundamentals of rotorcraft test and evaluation. Topics include: test planning, requirements analysis, helicopter performance evaluation, fundamentals of propulsion testing, aviation safety, use of modeling and simulation in flight testing, Department of Defense and Federal Aviation Administration requirements and procedures.

MAE 681 - MISSILE TRAJECTORY ANALYSIS
Semester Hours: 3
Methods for generating trajectories of missiles and projectiles are studied as well as control mechanisms. Point mass approximations are developed using approximations and exact representations of drag and atmospheric conditions. Full six degree-of-freedoms models are developed and solved numerically. Aerodynamic models are developed for both slowly spinning missiles and spin stabilized projectiles. Projectile linear theory is developed and used to discuss gyroscopic and dynamic stability and introduce rapid trajectory generation.

MAE 683 - GRAD SEMINAR MECH ENGR
Semester Hour: 1
Professional activities designed to promote the skills required to organize and deliver oral technical presentations and to broaden the individual's awareness of technical issues. Required for all students pursuing a graduate degree. Students will be graded 'S' (satisfactory) or 'U' (unsatisfactory) based upon their performance and attendance. Students who do not receive an 'S' grade must register for the course until an 'S' is obtained.

MAE 684 - AEROSPACE SYSTEMS SEMINAR
Semester Hour: 1
Seminar course for students in the MSE (Aerospace) Rotorcraft Systems Engineering and Missile Systems Engineering programs of study. Students participate in seminars on specific aspects of rotorcraft and missile systems engineering including system integration, modeling and simulation, operations, and advanced technologies.

MAE 692 - GRAD ENGR ANALYSIS I
Semester Hours: 3
Ordinary differential equations (ODEs), Bessel functions, Legendre polynomials, Laplace transformations, simultaneous differential equations, application of ODEs to mechanical systems, partial differential equations (PDEs) and boundary-value problems, application of PDEs to mechanical systems.

MAE 693 - GRAD ENGR ANALYSIS II
Semester Hours: 3
Green's functions, Fourier series and integrals, linear algebra, vectors, vector analysis and integral theorems, introduction to tensor analysis, analytical functions of a complex variable, Taylor and Laurent expansions, the residue theorem, stability criteria, and Calculus of Variations.

MAE 695 - SELECTED TOPICS MECH & AERO EG
Semester Hours: 1-9

MAE 696 - GRAD INTERN MECH & AERO ENGR
Semester Hours: 1-9
Active involvement in an engineering project in an engineering enterprise, professional organization, or government agency that has particular interest and relevance to the graduate student. Permission of MAE faculty member required.
The University of Alabama in Huntsville

MAE 698 - PLAN II MASTER'S PAPER
Semester Hours: 3

Required Plan II paper for a Plan II Masters degree. Completion of 18 semester hours of graduate course work required.

MAE 699 - MASTER'S THESIS
Semester Hours: 1-9

Required each semester in which a student is working and receiving direction on a master's thesis. Minimum of two semesters and 6 hours required for M.S.E. students. A maximum of 9 hours of credit is awarded upon successful completion of master's thesis. Requires thesis advisor permission. The 1 hour option is only available to students who have successfully defended their thesis and submitted it for approval, but do not meet the deadlines for graduation in the semester submitted. Students may only use the 1 hour option once in their career.

MAE 723 - COMPUTATIONAL FLUID DYNAMICS II
Semester Hours: 3

Continuation of Computational Fluid Dynamics I, advanced topics in finite difference, finite element, finite volume, and spectral element methods.

MAE 724 - COMPUTATIONAL FLUID DYNAMICS III
Semester Hours: 3

Grid generation techniques with structured and unstructured meshes, adaptive meshes, domain decompositions, and parallel processing. Applications of generated meshes to any one of the following problems: turbulence, combustion, acoustics, radiation, multiphase flows, or magnetohydrodynamics.

MAE 726 - ROTORCRAFT COMPUT FLUID DYNAMICS
Semester Hours: 3

Full potential, Euler, Navier-Stokes approaches, structural and unstructured grids, wake capturing, turbulence, and acoustics.

MAE 740 - AEROTHERMODYNAMICS
Semester Hours: 3

Description of the dynamic and thermal fluid flow environments associated with hypervelocity vehicles and propulsion systems with emphasis on thermochemical nonequilibrium behavior. Topics include thermostatistical basis for internal energies, specific heats and shock strengths in dissociated and ionized gases; formulation of reacting flow conservation equations; and recent experimental advances in aerothetermodynamics.

MAE 741 - STATISTICAL THERMODYNAMICS
Semester Hours: 3

MAE 745 - COMBUSTION II
Semester Hours: 3

Droplet evaporation and burning, introduction to turbulent flow, turbulent diffusion and premixed flames, burning of solids, pollutant emissions, and detonation.

MAE 746 - CONVECTIVE HEAT TRANSFER
Semester Hours: 3

Advanced theory of convective transport processes in fluids, including transport of momentum and energy in laminar flow, boundary layers and turbulent transport in shear flow. Engineering applications include boiling and two phase processes.

MAE 748 - RADIATIVE TRANSFER
Semester Hours: 3

Physics and modeling of radiative transfer. Scattering, remote sensing, and absorption in participating media. Infrared through optical wave lengths. Computational methods in radiative transfer.

MAE 749 - MASS TRANSPORT
Semester Hours: 3

Mass transfer in solid and fluid systems under steady and transient conditions. Integration of momentum, heat and mass transfer equations with application to reactive, rheological and multicomponent systems.

MAE 751 - BOUNDARY LAYER THEORY
Semester Hours: 3

Development of boundary layers using singular perturbation theory. Curvature and compressible effects and the order of their importance. Modern applications and computational approaches.
MAE 752 - MECH OF RARIFIED GASES  
Semester Hours: 3  
Application of kinetic theory to rarefied gas-flow problems. Boltzmann statistical distribution; gas-surface interaction, transport properties, free molecule flow; heat-free molecule flow; procedures for non-equilibrium flows. Offered upon demand.

MAE 753 - MAGNETO-GAS DYNAMICS  
Semester Hours: 3  
Equations of motion for ionized gases with critical analysis of transport properties in steady and varying electric and magnetic fields. MHD shock waves and radiation effects.

MAE 754 - HYPersonic FLOW  
Semester Hours: 3  
Theories for treating the laminar and turbulent boundary layers of reacting fluids, mixtures, related chemical, thermodynamic, and physical phenomena in hypersonic flows. Leading edge bluntness, shock wave interactions, and vorticity effects.

MAE 755 - ADVANCED AERODYNAMICS  
Semester Hours: 3  
Transonic, supersonic, and hypersonic flows. Application of compressible potential theory, similarity rules, slender body theory and Newtonian flow theory to the analysis of aerodynamics of aircraft, missiles, re-entry vehicles, and other flight vehicles.

MAE 756 - NUM SIM OF MAGNETOHYDRODYNAMIC  
Semester Hours: 3  
Finite difference methods for simulation of MHD flows. Methods include explicit scheme, FICE methods, LBL, ADI, artificial damping and projected characteristics for multidimensional timedependent flow.

MAE 757 - OPT TECH/FLUID MECHANICS  
Semester Hours: 3  
Laser sources, molecular interactions with light and diatomic spectroscopy needed fluorescence, Brillouin scattering, four wave mixing, CARS and other applications in optical fluid diagnostics. (Same as CHE 757.).

MAE 758 - TURBULENCE  
Semester Hours: 3  
Turbulence in gases and liquids; boundary layers, atmospheric phenomena.

MAE 760 - ANALY METH NONLIN DYNAM  
Semester Hours: 3  

MAE 762 - WAVE MOT/CONT ELAS BODIES  
Semester Hours: 3  
Elements of stress wave propagation in bounded elastic media. Propagation of elastic waves in infinite and semi-infinite bodies, cylinders, rods and beams. (Same as CE 762.).

MAE 765 - RANDOM VIBR/ELASTIC SYSTEMS  
Semester Hours: 3  

MAE 768 - DYN AEROSPACE VEHICLES  
Semester Hours: 3  
Elements of advanced rotational kinematics of rigid bodies. Attitude motion of space vehicles in circular and elliptic orbits. Methods of gravitation and spin stabilization of gyrostat.

MAE 772 - THEORY STRUCT STABILITY  
Semester Hours: 3

NUR 525 - HUMAN SEXUALITY  
Semester Hours: 3  
Theory and issues related to human sexuality in health and illness. Emphasis on theory and values, clarification of human sexuality needs. Elective, open to all university students. (Cross listed with NUR 425).

NUR 526 - CONS:WKG W/IND & GRP COMM APPR  
Semester Hours: 3  
This course presents consultation as a process of interacting with individuals and groups to resolve issues related to clients and/or the delivery of health care. Students explore the consultation process, group dynamics, application-oriented approaches and strategies, and professional issues. The focus is on communication as the key to developing successful relationships.

NUR 527 - INTRO TO FORENSICS IN NURSING  
Semester Hours: 3  
This course is designed to provide basic theoretical knowledge related to nursing care of the donor/transplantation client and their families. Course content focuses on historical and current issues in donor/transplantation nursing including the impact of legal, ethical, political, economic, and socio-cultural issues. Students will examine the roles of the professional nurse and the interdisciplinary team in the management of care for the donor/transplant client and their families. Topics of future research and critical thinking will be discussed.

NUR 528 - GERONTOLOGICAL NURSING  
Semester Hours: 3  
Nursing care of older adults in multiple settings. Issues and trends are incorporated.

NUR 530 - HLTH CARE WKF:ISS/LDERSH STRAT  
Semester Hours: 3  
Description and analysis of contemporary issues regarding the health care workforce. Particular focus will be placed on the multifaceted nature of health care workforce shortages. Various models for analysis of workforce issues will be used and strategies being used will be examined. An evaluation of the nurse leader role in creating positive work environments and implementing solutions conclude the student experience.

NUR 534 - PALLIATIVE CARE  
Semester Hours: 3  
Palliative care is when there is no longer a medical treatment or cure for a physical problem. This palliative care course includes meeting the physical, emotional, social, cultural, and spiritual needs of individual and their families. A course focus will be on coping, grief, bereavement, pain relief and managing living implications for individuals with life-threatening illnesses. There will be recognition of the importance of individuality, vulnerability, and resilience in the quality of living during the dying process.

NUR 537 - NURSING AS A POLITICAL FORCE  
Semester Hours: 3  
The course explores the historical, current, and future impact of nursing on the political process. Local, state, national, and international aspects of nursing as a political force are analyzed. Emphasis is on political systems, regulatory processes, and organizational issues influencing health care delivery. Elective, open to all university students.

NUR 540 - ONCOLOGY NURSING  
Semester Hours: 3  
This course provides a holistic approach to the nursing care of people with cancer. The nursing process is used as the basis for promoting health and facilitating adaptation in the person with cancer. The course includes clinical experiences in selected agencies.

NUR 550 - ISSUES IN TRANSPLANTATION  
Semester Hours: 3  
This course is designed to provide basic theoretical knowledge related to nursing care of the donor/transplantation client and their families. Course content focuses on historical and current issues in donor/transplantation nursing including the impact of legal, ethical, political, economic, and socio-cultural issues. Students will examine the roles of the professional nurse and the interdisciplinary team in the management of care for the donor/transplant client and their families. Topics of future research and critical thinking will be discussed.

NUR 601 - THEORETICAL PERS ADV NUR PRAC  
Semester Hours: 3
NUR 602 - SCHOLARLY INQ ADV NUR PRAC  
Semester Hours: 3  

Includes discussion of philosophical and theoretical bases of nursing research and the application of research findings to practice. Development of a research problem, including problem identification, evaluation of current knowledge, and the selection of an appropriate research approach. Focuses on research methodologies, both quantitative and qualitative, as they relate to data collection, data analysis including both interpretive and statistical strategies, and discussion of findings. Proposal generation and research funding mechanisms are included.

NUR 604 - HEALTH POLICY  
Semester Hours: 3  

Local, state, and national health care policies, with emphasis on political systems, regulatory processes, and organizational issues influencing health care delivery. Elective; open to university students.

NUR 605 - ADVANCED HLTH ASSESSMENT  
Semester Hours: 3  

This course provides an opportunity for the advanced practice nurse to utilize theoretical and evidence-based clinical practice guidelines to conduct a comprehensive and systematic assessment as a foundation for decision making in caring for clients across the lifespan.

NUR 605L - CLINICAL  
Semester Hours: 0  

NUR 606 - PATHOPHYSIOLOGY  
Semester Hours: 3  

Expands upon previous knowledge of anatomy, physiology, and developmental disease processes. Anticipated physiological alterations are discussed as they affect individuals throughout the lifespan.

NUR 607 - PHARMACOLOGY IN ADV PRAC  
Semester Hours: 3  

This course is designed to provide the advanced practice nursing student with clinical reasoning skills necessary to analyze data obtained from findings of the patient health history, advanced physical and pharmacological assessment of patients across the lifespan. The student will utilize the findings to determine the appropriate treatment regimen based on the individual needs of the patient.

NUR 610 - FAMILY NURSE PRACTITIONER I  
Semester Hours: 6  

This clinical course introduces the roles of the advanced practice nurse in direct and indirect health services for assessment, health promotion, illness prevention, and health management of patients across the lifespan. Prerequisite: NUR 605 and NUR 606 (concurrently).

NUR 610L - CLINICAL EXPERIENCE  
Semester Hours: 0  

NUR 611 - FAM NURS PRACTITIONER II  
Semester Hours: 6  

This course encourages the advanced practice nurse to integrate principles of advanced practice nursing into broad organized, culturally appropriate planning, delivery, management, and evaluation in prevention and services of health through the lifespan/identified populations.

NUR 611L - CLINICAL  
Semester Hours: 0  

NUR 612 - FAMILY NUR PRACTITIONER III  
Semester Hours: 6  

This course encourages the advanced practice nurse to define principles of advanced practice nursing including interventions that influence favorable health outcomes for common conditions through the lifespan/identified populations in collaboration with other health professionals. Prerequisites with concurrency: NUR 606 and NUR 607.

NUR 612L - CLINICAL EXPERIENCE  
Semester Hours: 0  

NUR 613 - FAM NURS PRACTITIONER IV  
Semester Hours: 6  

This is the culminating primary care clinical course in which the advanced practice student initiates and maintains effective working relationships, appraise policy development and systems organization, establishes respectful communication within inter-professional groups with skills and care coordination, delegation and initiation of conflict resolution strategies. Prerequisites: NUR 610, 611, & 612.
NUR 613L - CLINICAL EXPERIENCE  
Semester Hours: 0

NUR 614 - FAMILY NURSE PRACTITIONER V  
Semester Hours: 3
First of two culminating courses/seminar/clinical practicum in the family nurse practitioner certificate program. The clinical practicum will be completed in a primary care setting. Classroom seminar focuses on the role, trends, and health policy issues facing the family nurse practitioner.

NUR 614L - CLINICAL EXPERIENCE  
Semester Hours: 0

NUR 615 - FAMILY NURSE PRACTITIONER VI  
Semester Hours: 3
The culminating course/seminar/clinical practicum in the family nurse practitioner certificate. The clinical practicum will be completed in a primary care setting. Classroom seminar focuses on the role, trends, and issues facing the family nurse practitioner.

NUR 615L - CLINICAL EXPERIENCE  
Semester Hours: 0

NUR 620 - ADLT GER ACUTE CR NUR PRACT I  
Semester Hours: 6
This is the culminating adult gerontology acute care clinical course in which the advanced practice student initiates and maintains effective working relationships, establishes respectful communication within inter-professional groups with skills and care coordination delegation, and initiation of conflict resolution strategies.

NUR 620L - CLINICAL EXPERIENCE  
Semester Hours: 0

NUR 621 - ADLT GER ACUTE CR NUR PRACT II  
Semester Hours: 6
This course allows the advanced practice nurse to refine principles of advanced practice nursing into the delivery of broad, organized, culturally appropriate planning, delivery, management, and evaluation of evidence based care of complex, acute critically and chronically ill diverse patients across the entire spectrum of adulthood. Prerequisites w/ concurrency: NUR 606 or NUR 607 or NUR 620.

NUR 621L - CLINICAL EXPERIENCE  
Semester Hours: 0

NUR 622 - ADLT GER ACUTE CR NUR PRAC III  
Semester Hours: 6
Clinical course in care of adult patients with acute alterations in health in the hospital, home, or clinic setting focusing on the concept of managed care. Within a selected product line, the practitioner will develop protocols, care for and evaluate care for patients and practice consulting with client groups.

NUR 622L - CLINICAL EXPERIENCE  
Semester Hours: 0

NUR 623 - ADLT GER ACUTE CR NUR PRAC IV  
Semester Hours: 6
Culminating course in the acute care nurse practitioner track. Student will complete a clinical residency in a selected acute care area/specialty. Classroom theory will focus on the role and legal trends and issues facing the acute care nurse practitioner.

NUR 623L - CLINICAL EXPERIENCE  
Semester Hours: 0

NUR 630 - THEOR FOUND NUR LDSH HLT CA SY  
Semester Hours: 3
This course focuses on the nurse leader's relationships in a variety of health care systems. Theories of management and organization from the perspective of structure, dynamics, trends, technology, and strategic planning in health care delivery are included.
NUR 631 - LEADERSHIP IN RESOURCE MGMT
Semester Hours: 3

This course focuses on the role of the nurse leader in resource allocation and management in health care systems and related organizations. Content related to human resource management includes workforce development, the healthcare workforce, recruitment, selection, retention, development, and labor relations.

NUR 632 - ECONOMIC AND POLICY IMPLICATIONS FOR LEADERS IN HEALTH CARE SYSTEMS
Semester Hours: 3

This course focuses on economic and policy factors impacting cost, quality and access to health care. The role of the nurse leader in fiscal management and in influencing policy will be emphasized.

NUR 633 - APPLI LEADERSHIP HLTH CARE SYS
Semester Hours: 6

This is a clinical course based upon the application of organizational theory, resource management and basic budgeting in nursing. Clinical experiences focus on nursing leadership functions and roles in a variety of health care systems.

NUR 633L - CLINICAL EXPERIENCE
Semester Hours: 0

NUR 634 - INTERNSHIP IN NURS LEADERSHIP
Semester Hours: 5

This is the culminating course that provides opportunities to synthesize leadership learning, administrative theory, operational skills in budgeting and finance, and resource management. This knowledge is applied through the identified nurse executive competencies in selected health care related organizations.

NUR 634L - CLINICAL EXPERIENCE
Semester Hours: 0

NUR 635 - RESIDENCY IN LEADERSHIP I
Semester Hour: 1

This course focuses on introduction to health care leadership concepts and beginning role development. Introduction of leadership systems in clinical management, administration, education, and research will be completed. Students will explore capabilities of electronic communications as compared to didactic interactions. Emphasis is placed on strategies and communication. Admission to Leadership in Health Care Systems Track required.

NUR 636 - BUDGETING IN HEALTH CARE SYS
Semester Hours: 3

This course is designed to assist nurse leaders in gaining conceptual knowledge regarding budgeting in health systems. The focus is on planning and controlling budgets. Topics include knowledge related to executive level budget management and business planning.

NUR 637 - CASE MGMT IN HEALTH CARE SYS
Semester Hours: 2

This course is designed as an introduction to health care delivery through case management model. The course focuses upon basic foundational information targeting the professional nurse?s role in case management. Various types of case management are discussed and analyzed. The impact of managed care to case management and other care delivery methods is explored for a changing health care delivery system. Fiscal, ethical/legal and clinical implications of case management are considered.

NUR 638 - HEALTH CARE INFORMATICS
Semester Hours: 1-6

This course focuses on information system concepts and technologies used in the structuring and processing of nursing information to arrive at clinical decision-making for healthcare. Analysis of information systems in clinical management, administration, education, and research will be completed. Students will explore capabilities, benefits, barriers, and related information and technologies comprising current state of informatics design and use in health and nursing related systems. Emphasis is placed on strategies, issues and technologies of information collection, analysis and communication.

NUR 639 - RESIDENCY IN LEADERSHIP II
Semester Hour: 1

This course focuses on leadership concepts and application in the clinical decision making arena for health care. Analysis of leadership systems in clinical management, administration, education, and research will be completed. Students will explore capabilities, benefits, barriers, and related information to current states of health care delivery design and functions. Emphasis is placed on strategies and communication.
NUR 640 - CURRICULUM DEV IN NURSING  
Semester Hours: 3

Principles and concepts of curriculum development are examined with respect to their application to development of both the theoretical and clinical components of nursing programs. Includes principle regarding theories of learning, the changing nature of knowledge and societal needs as basic considerations directing curricular planning and revision.

NUR 641 - TEACHING/LEARNING IN NURSING  
Semester Hours: 3

Emphasis is on the development of classroom and clinical laboratory teaching skills and includes a critical appraisal of specific teaching strategies. The student is provided the opportunity to acquire knowledge in the use and design of common and innovative teaching methods including web-based and interactive delivery systems.

NUR 642 - TESTING & EVALUATION IN NURS  
Semester Hours: 3

Major emphasis on the development of classroom and clinical skills in appraisal and evaluation methods of student performance. The student is provided with the opportunity to acquire skills in constructing various types of testing and evaluation (formative and summative) procedures as they relate to nursing education.

NUR 643 - FACULTY ROLE DEV IN NURSING  
Semester Hours: 3

Role theory serves as the basis for the discussion and practice in developing teaching, service and research role of a faculty member in a nursing program. Discussion on legislative and professional agencies issues and policies impinging on the teaching role.

NUR 644 - PRACTICUM IN TEACHING  
Semester Hours: 3

Opportunities to do practice teaching with nursing students in various phases of their basic educational programs. Learning activities will be planned on an individual basis and based on the specific teaching responsibilities of their primary course assignment. Selected baccalaureate degree and/or associate degree programs will be used as practice sites.

NUR 645 - CAPSTONE NURS EDUC CERTIF CRS  
Semester Hours: 3

The major emphasis of this capstone education course is the development of the professional teaching role within an institutional setting. The focus is on the student's ability to function as a professional leader utilizing knowledge gained to promote change, engage in professional actives; promote continuous improvement; and serve as a mentor in an educational environment.

NUR 650 - INDEPENDENT STUDY  
Semester Hours: 2-4

Planning, implementation, and evaluation of related phenomena of special interest observed in nursing practice.

NUR 660 - ADLT GERONT CNS I  
Semester Hours: 6

Primary focus is on nursing care of adults and families with long-term alterations in health. Subroles of the advanced practice nurse are introduced and reinforced. Theory concerning adult development, health promotion, and disease prevention practices, identifying populations at risk, cultural and environmental diversity issues, provides the background knowledge used by the student in giving care to patients/families in a variety of settings. Patient and caregiver needs and care interventions are central as the student practices the role of clinician caring for adults with chronic problems.

NUR 660L - CLINICAL EXPERIENCE  
Semester Hours: 0

NUR 661 - ADLT GERONT CNS II  
Semester Hours: 6

Care management of the adult patient in the hospital or community setting. Rural and other vulnerable populations are of major concern. Health policy, fiscal regulations, and differing health delivery systems serve as points of discussion. Clinical experiences with vulnerable and underserved populations primarily in rural settings.

NUR 661L - CLINICAL EXPERIENCE  
Semester Hours: 0
NUR 662 - ADLT GERONT CNS 111  
Semester Hours: 6

Advanced nursing care of adults of diverse populations in secondary or tertiary settings. Emphasis on special needs and advanced nursing care of adults with acute health alterations. Student clinical experiences are therapeutic nursing interventions with acutely ill patients with complex health problems.

NUR 662L - CLINICAL EXPERIENCE  
Semester Hours: 0

NUR 663 - ADLT GERONT CNS IV  
Semester Hours: 6

Culminating residency course where the student uses the sub-roles of the advanced practice nurse—clinician, teacher, manager, researcher, consultant, in providing direct and indirect care to the adult patient. Legal, ethical, and licensing issues affecting the role of the advanced practice nurse are points of classroom discussion, along with current issues and trends. Theories concerning ethical decision making, consultation, leadership, and methods of research utilization enhance the student’s practice. The clinical placement should strengthen the student’s area of concentration developed with the faculty advisor.

NUR 663L - CLINICAL EXPERIENCE  
Semester Hours: 0

NUR 670 - HUMAN FACTORS HEALTHCARE COMPU  
Semester Hours: 3

Overview of epidemiologic methods with discussion of application to diagnosis and choice of therapy. Concepts and mechanisms related to transmission, acquisition of disease, trends and distribution of patterns of disease discussed. The application of epidemiology to human health problems and rural settings is emphasized.

NUR 671 - USABILITY EVAL HEALTHCARE I.T.  
Semester Hours: 3

This course examines usability methods for the design and testing of healthcare information technology including health information websites, electronic health records, clinical decision support systems, and medical equipment with an emphasis on the user experience. The iterative nature of user-centered design and usability testing of health IT will be emphasized. Prerequisite: NUR 679.

NUR 672 - EBP ADVANCED NURSING PRACTICE  
Semester Hours: 3

This course focuses on developing the advanced practice nurse to critique and synthesize evidence for nursing for the purpose of improving healthcare outcomes. Emphasis is on the critical analysis of evidence to be used in formulating information technology, data from practice, databases and research methods to appropriately generate evidence for advanced nursing practice.

NUR 680 - CLINICAL NURSE LEADER I  
Semester Hours: 6

This course will introduce key concepts that impact today’s healthcare environment and patient population as well as relevant quality management tools that improve patient care delivery and outcomes. In addition, the role of the clinical nurse leader will be explored.

NUR 680L - CLINICAL EXPERIENCE  
Semester Hours: 0

NUR 681 - CLINICAL NURSE LEADER II  
Semester Hours: 6

NUR 681L - CLINICAL EXPERIENCE  
Semester Hours: 0

NUR 682 - CLINICAL NURSE LEADER III  
Semester Hours: 6

Advancing nursing care of adults of diverse populations in secondary or tertiary settings. Emphasis on special needs and advanced nursing care of adults with acute health alterations. Student clinical experiences are therapeutic nursing interventions with acutely ill patients with complex health problems.

NUR 682L - CLINICAL EXPERIENCE  
Semester Hours: 0
NUR 683 - CLINICAL NURSE LEADER IV  
Semester Hours: 6

NUR 683L - CLINICAL EXPERIENCE  
Semester Hours: 0

NUR 698 - PLAN II: OTHER RES ACTIVITIES  
Semester Hours: 1-4

Application of activities appropriate to student program of study. Intended to expand student knowledge and enhance track specific content.

NUR 699 - PLAN I: THESIS  
Semester Hours: 1-4

Independent research investigation related to practice of nursing under faculty guidance. Minimum of six hours required.

NUR 700 - CLINICAL DATA MGT & ANALYSIS  
Semester Hours: 3

This required course provides students with the knowledge base to understand, collect, manage, and measure clinical data. Students will explore data collection and management processes, levels of measurement, basic statistics, and measurement for improvement in order to effectively use clinical data. Data entry exercises employed through analytical tools and statistical software packages will allow the students practice and apply the basic data management and analysis skills needed for the evaluation of clinical data and evidence-based practice.

NUR 701 - WRITING FOR PUBLICATION  
Semester Hours: 3

This course concerns the development of skills in writing, editing, and preparing manuscripts for publication from initial idea to submission of a publishable manuscript. The course emphasizes a writing process that encourages productivity and collegial peer review. Legal and ethical aspects of authorship prepare students for responsible practices expected of scholars. Students should have mastered basic writing skills, e.g. grammar, syntax, and computer skills, prior to enrolling in this course.

NUR 729 - EVID BASED PRACT DESGN & TRANS  
Semester Hours: 3

The purpose of this course is to provide students with models for evidence-based practice (EBP) design and improvement translation. Students learn to formulate clinical questions in answerable format, and search for and identify best research evidence. The focus of the course is to evaluate and critically appraise evidence for rigor and applicability to the clinical problem and is designed to improve clinical outcomes. Students will translate evidence into practice environments for safe, quality care. Students will gain access to information that will support optimal clinical decision-making. Improvement translation sciences will also be introduced.

NUR 731 - PHIL/THEOR/CONC FOUN FOR APN  
Semester Hours: 3

This required core course in the Doctor of Nursing Practice program provides an understanding of the use of theory and conceptual foundation to guide the complexity of specialty nursing practice at the doctoral level. The content is derived from the philosophical and scientific underpinnings of nursing, natural, and psycho-social sciences.

NUR 733 - INFORMATICS FOR APN  
Semester Hours: 3

This required core course in the Doctor of Nursing Practice program focuses on the collection, organization, analysis, and dissemination of information in nursing and health care. Students are introduced to the speciality of nursing informatics, the information system life-cycle telemedicine, and the use of technology to enhance nursing care delivery and patient safety. Also, students learn how to design, use, and manipulate large and small patient databases for the analysis of patient outcomes.

NUR 734 - ADVANCED EXPERIENTIAL CLINICAL  
Semester Hours: 1-7

This course is designed to validate Master's level competencies in clinical and organizational leadership. The course is required for post-master's DNP students who are graduates of programs in nursing with less than 500 clinical hours. The course is a pre-requisite to NUR 739 Scholarly Project.

NUR 735 - POPULATION HEALTH IN APN  
Semester Hours: 3

This required core course in the Doctor of Nursing Practice program prepares the student to implement specialty population-based disease prevention and health promotion activities to achieve national and international goals of improving worldwide health status. The course focuses on a spectrum of issues affecting health which includes emerging infectious diseases, emergency preparedness, disparities in health and healthcare services, and the impact of behavior and lifestyle choices.
NUR 737 - INTDIS LDRSHIP/ROLE DEV PRA EXC  
Semester Hours: 3  
This course is a required core course in the Doctor of Nursing Practice program that focuses on organizational and systems leadership and knowledge and skills critical to role development in independent and inter and intra-disciplinary practice. Content includes communication, conflict resolution, collaboration and negotiation, leadership, and team-functioning to maximize success in the establishment of safe, effective patient-centered care in complex environments.

NUR 738 - SCHOLARLY PROJECT DEVELOPMENT  
Semester Hours: 3  
This course is a 2-hour seminar designed to assist the student in selecting an area of interest within a practice specialization and in demonstrating professional competencies related to that area of interest. The student will document previously acquired abilities and competencies in a professional portfolio. Students will participate in the seminar to obtain guidance and receive peer suggestions about the portfolio and project plans.

NUR 739 - SCHOLARLY PRACTICE PROJECT  
Semester Hours: 1-7  
This is the capstone clinical course in all advanced practice tracks. The student presents evidence of achievements and competencies in a professional portfolio. The practice residency is completed in a specialty area of the student's choice. This course focuses on aspects of the final practice project and interventions that promote health, prevent illness and disability, and alleviate health disparities. The final project selected and planned by the student and advisor is implemented during this course. The student completes the project, evaluates the outcomes, disseminates findings, and makes a formal, scholarly presentation to peers and faculty. Prerequisite: NUR 738.

NUR 740 - HLH POLIC/POLIT:IMPLICATION HC  
Semester Hours: 3  
This course prepares students to assume complex leadership roles in order to advance specialty practice and health. This course focuses on the unique challenges of engaging and influencing health care policy in the U.S. and internationally. It is designed to develop skills, techniques, and approaches to the critical analysis of health policy proposals, health policies and related stakeholder in policy and public forums. The health policy framework is analyzed from a governmental, institutional and organizational perspective.

NUR 742 - PROGRAM EVAL & METHODS  
Semester Hours: 3  
The purpose of this course is to synthesize knowledge related to translation/implementation science models and strategies to improve health outcomes. The emphasis in the course is the use of program evaluation as a strategic planning tool to achieve positive changes in health status, to initiate quality improvement, to engage in risk anticipation, management and to facilitate organizational and system level changes.

NUR 743 - EVID BASED PRACT STRATEGIES  
Semester Hours: 3  
This is a required course in the Doctor of Nursing Practice program, which expands on evidence-based practice concepts to refine a problem statement and derive a searchable and answerable clinical question. Content includes conducting a systematic review of the literature to guide the selection of methods, strategies, tools and metrics needed to complete a successful scholarly project. The course also addresses targeted strategies for disseminating evidence associated with scholarly projects.

**Optical Science Engineering (OSE)**

OSE 506 - COMMUNICATION THEORY  
Semester Hours: 3  

OSE 534 - OPTICAL FIBER COMMUNICATIONS  
Semester Hours: 3  
Introduction to optical fibers and their transmission characteristics, optical fiber measurements, sources and detectors, noise considerations for digital and analog communications, optical fiber systems.
OSE 541 - GEOMETRICAL OPTICS  
Semester Hours: 3

Foundations and physics of geometrical optics, Fermat's principles and Huygen wavelets, refraction and reflection. The many forms of Snell's Law. Optical path lengths, geometrical wavefronts and rays. Ray tracing, ynu-chart and matrix methods. Gaussian imagery and paraxial optics, conjugate elements, cardinal points, and image-object relations. Stops and pupils, chief and marginal rays, vignetting, and the optical or Lagrange invariant. The y-y bar diagram, design of common systems: objectives, magnifiers, microscopes, collimators and detectors. Optical glasses and chromatic aberrations, wavefront and transverse aberrations, spot diagrams and ray fan plots.

OSE 542 - PHYSICAL OPTICS  
Semester Hours: 3

Scalar and electromagnetic waves, polarization, coherence, reflection and refraction; two beam and multiple beam interference, interferometers, Fabry-Perots, thin films, diffraction, and absorption and dispersion. (Same as OSE 542 and EE 542.) Fall, Spring.

OSE 546 - RADIOMETRY, DETECTORS & SOURCE  
Semester Hours: 3

Theory and practice of radiometry and photometry. Blackbody radiation and Lambertian sources. Propagation of radiant energy in free space and through optical systems. Detector classes, responsivity, bandwidth and noise, power spectral density, properties of sources, photon noise.

OSE 555 - INTRO QUANTUM MECHANICS I  
Semester Hours: 3

Waves and particles; Bohr's model of the atom; de Broglie waves, wave packets and the uncertainty principle; postulates of quantum mechanics; Schroedinger's equation; simple systems in one, two and three dimensions; the hydrogen atom.

OSE 570 - OPT & PHOTONIC SYSTEMS DESIGN  
Semester Hours: 3

Review of paraxial optics, ray tracing codes, aberration and diffraction calculations; acousto- and electro-optic modulators, spatial light modulators; fibers, fiber splicers and connectors; gratings and diffractive optical elements; laser and light emitting diodes, photodetectors and CCD arrays; correlator systems; optical communication networks; signal processing systems design.

OSE 632 - FOURIER OPTICS  
Semester Hours: 3

Introducing the optical system as an invariant linear system, convolution, Sommerfield's diffraction integral, Fourier Transform, angular spectrum, coherent & incoherent imaging, optical transfer function.

OSE 634 - OPTICAL COMMUNICATIONS  
Semester Hours: 3

Optical communication systems; counting statistics; the optical detector response process; direct detection; heterodyne detection parameter estimation in optical communications; pointing, spatial acquisition and tracking.

OSE 645 - LASERS  
Semester Hours: 3

OSE 653 - OPTICAL TESTING LAB  
Semester Hour: 1

Provides students with hands-on experience via the in-depth testing of an aerial reconnaissance photographic lens. The main measurement tools are a 168-inch Collimator/T-Bar nodal slide for image plane measurements, and a Fizeau phase shifting interferometer for exit pupil measurements. Measurements include: effective focal length, F-number, axial color, spherical aberration, field curvature, distortion, astigmatism, transmission, relative illumination falloff, resolution, modulation transfer function, on-axis interferometry, fringe analysis.

OSE 654 - OPTICAL TESTING  
Semester Hours: 3

Spherometry; refractive index measurements; optical bench measurements of imaging systems via T-bar nodal slide (effective focal length, f-number, axial color, field curvature and distortion, transverse ray aberrations); illumination falloff; image resolution tests (finite object); modulation transfer function; star image testing; knife edge tests; Hartmann tests; Fizeau interferometer and testing configurations; null lens testing of aspheres; wavefront measurements (point diffraction interferometer, radial shear interferometer).
OSE 655 - APPLIED QUANTUM MECHANICS
Semester Hours: 3

Application of quantum mechanics in solid state, electronics, materials science and optics. Topics to include: Hydrogen atom and molecule, excitons, phonons, Bloch's theorem, periodic boundary conditions, electrons and holes, band structure of simple semiconductors, dipole transitions, optical constants, absorption and emission processes, introduction to device physics.

OSE 656 - LENS DESIGN
Semester Hours: 3

Design of refractive imaging systems. Skills acquired include thin lens pre-design, first and third order analytical methods, and computer-based design using Zemax. Designs include: Wollaston and Chevalier landscape lenses, a 10X microscope objective, the Rapid Rectilinear and Celor lenses, Cooke triplet and Petzval portrait lenses, and a telephoto lens. Prerequisites OSE 541 or EE 541 or PH 541 or Permission of Instructor.

OSE 670 - OPT DESIGN & MANUFACTURING
Semester Hours: 3

Practical aspects of optomechanical design, material selection, fabrication and integration of precision optical components and systems for commercial, space, and military application. Topics include: fixture design, tolerance analysis, machining methods, thermal stabilization, integrated computer-aided design and analysis, diamond machining, finishing and plating techniques.

OSE 690 - SEL TOPICS IN OPT SCI & ENGR
Semester Hours: 1-3

Sample topics include optical thin films and optical instrument systems analysis.

OSE 710 - OPTICAL SYSTEM DESIGN
Semester Hours: 3

Integrated view of what it actually takes to build a real optical system. All the tools of the trade are utilized, including conceptual design and computer modeling (optical and mechanical), control system design, fabrication issues, cost/schedule and system testing. Use of geometric and physical optics, radiometry, sources and detectors, electro-optics controlled positioning and feedback, environmental influences, optical systems architecture, optomechanical design, precision optics fabrication technologies, optical metrology, and operational and survivability testing.

OSE 755 - QUANTUM DEVICES
Semester Hours: 3

Quantum aspects of optical, electronic, and semiconductor devices approached from a phenomenological/physical point of view. Topics will include: Quantum well devices, optical modulators, optical detectors, quantum Stark effects, electrooptic devices, high speed optical devices, frequency chirping in high speed devices and system applications.

OSE 790 - SEL TOPICS IN OPT SCI & ENGR
Semester Hours: 1-3

Sample topics include optical thin films and optical instrument systems analysis.

OSE 792 - OSE SEMINAR
Semester Hours: 0

This "brown bag" monthly seminar series is conducted jointly with the Huntsville Electro-Optical Society which sponsors the speakers. Presentations are given on a diverse range of optics and optics-related topics. All OSE students are expected to attend three of these seminars per semester.

OSE 799 - DOCTORAL DISSERTATION
Semester Hours: 3-9

Required each semester student is enrolled and receiving direction on a doctoral dissertation. The following optics courses are also available to students in the OSE program. See listings under indicated departments.

**Physics (PH)**

PH 531 - INTRO TO PLASMA DYNAMICS
Semester Hours: 3

Single-particle motion in magnetic fields; fluid equations and fluid theory wave modes; MHD theory, stability, and wave modes; introduction to kinetic theory and hot plasma wave modes. (Same as MAE 531).
PH 541 - GEOMETRICAL OPTICS
Semester Hours: 3

Foundations and physics of geometrical optics, Fermat’s principles and Huygen wavelets, refraction and reflection. The many forms of Snell’s Law. Optical path lengths, geometrical wavefronts and rays. Ray tracing, ynu-chart and matrix methods. Gaussian imagery and paraxial optics, conjugate elements, cardinal points, and image-object relations. Stops and pupils, chief and marginal rays, vignetting, and the optical or Lagrange invariant. The y-ybar diagram, design of common systems: objectives, magnifiers, microscopes, collimators and detectors. Optical glasses and chromatic aberrations, wavefront and transverse aberrations, spot diagrams and ray fan plots. (Same as OSE 541 and EE 541.) Fall.

PH 542 - PHYSICAL OPTICS
Semester Hours: 3

Scalar and electromagnetic waves, polarization, coherence, reflection and refraction; two beam and multiple beam interference, interferometers, Fabry-Pérot, thin films, diffraction, and absorption and dispersion. (Same as OSE 542 and EE 542.) Fall, Spring.

PH 544 - OPTOELECTRONICS
Semester Hours: 3

Review of polarized light, the Jones and Mueller calculi. Propagation of light in birefringent material. Modulation of light using electro-optic effect, Kerr effect, acousto-optic effect, and Faraday effect. Elements of photodetection and detectors, signal processing, and signal-to-noise. Design and analysis of beam scanners, optical rf-spectrum analyzer, optical sensors, and optical communication systems. (Same as OPT 444 and OPE 451.) Fall even years.

PH 546 - RADIOMETRY, DETECTORS & SOURCE
Semester Hours: 3

Theory and practice of radiometry and photometry. Blackbody radiation and Lambertian sources. The propagation of radiant energy in free space and through optical systems. Detector classes, responsivity, bandwidth, and noise. Power spectral density, properties of sources, photon noise. (Same as OPT 446, OSE 546.) Spring even years.

PH 551 - QUANTUM MECHANICS I
Semester Hours: 3

Waves and particles; wave packets and the uncertainty principle; Schrödinger’s equation and wave mechanics; postulates of quantum mechanics; simple systems in one, two and three dimensions; the hydrogen atom; angular momentum and spin; numerical solutions of the Schrödinger equation. Prerequisites require undergraduate quantum mechanics course(s).

PH 553 - INTRO TO PARTICLE PHYSICS
Semester Hours: 3

PH 560 - INTRO TO SOLID STATE PHYSICS I
Semester Hours: 3

Crystal binding and crystal structure. Crystal structure determination. Phonons and lattice vibrations. Free electron gas. Electronic energy band theory. Prerequisite with concurrency: PH 551. (Same as MTS 660.) Fall, even years.

PH 561 - INTRO TO SOLID STATE PHYSICS II
Semester Hours: 3

Thermal properties of solids. Electronic properties, optical properties, electronic properties in a magnetic field, semiconductor devices, magnetism, superconductivity, defects and alloys, dislocations and crystal growth, non-crystalline solids, surfaces and interfaces. (Same as MTS 661.) Spring, odd years.

PH 570 - OPT & PHOTONIC SYSTEMS DESIGN
Semester Hours: 3

Review of paraxial optics, ray tracing codes, aberration and diffraction calculations; acousto- and electro-optic modulators, spatial light modulators; fibers, fiber splicers and connectors; gratings and diffractive optical elements; laser and light emitting diodes, photodetectors and CCD arrays; correlator systems; optical communication networks; signal processing systems design. Fall, even years.

PH 571 - STELLAR ASTROPHYSICS
Semester Hours: 3

Structure and physical processes of stars from the interior to the atmosphere: energy production and transfer, atmospheric properties, and observed spectral features. Models for stellar structure. Star formation and evolution, including the effects of a companion. Prerequisites: upper level undergraduate astrophysics course, and upper level undergraduate E&M course.
PH 572 - GALAXIES & COSMOLOGY  
Semester Hours: 3

Galactic structure; Oort's constants; rotation curves; galaxy types; structure formation and evolution; Hubble expansion; Friedmann equation; cosmic microwave background; radiation and matter eras; primordial nucleosynthesis; dark matter/energy issues; development of structure in the early universe; horizon & flatness problems; inflation. Prerequisite: PH 571 or advanced undergraduate Astrophysics course, suggested PH 553, PH 621. Spring, odd years.

PH 574 - INTRO TO GENERAL RELATIVITY  
Semester Hours: 3

An introductory course on general relativity and gravitational physics. General relativistic phenomena as inferred from the behavior of particles and light rays for a selection of spacetimes. Major properties of such objects as black holes, wormholes, gravitational waves, and the universe as a whole. Prerequisites: Undergraduate level special relativity and classical mechanics.

PH 579 - OBSERVATIONAL ASTROPHYSICS  
Semester Hours: 3

Astronomical coordinate systems and time; spherical astronomy; telescope designs; basic optics; CCDs; infrared arrays; observational calibration and noise; high resolution imaging techniques (e.g., adaptive optics); spectroscopy; and high and low energy observational techniques (e.g., X-ray telescopes, radio interferometry). Students will also conceive their own projects, write observing proposals, and convene as a Time Allocation Committee to review proposals and schedule telescope time. Students will acquire, reduce, analyze and interpret data from one of the allocated projects, and present the results in a short paper. Prerequisites: upper-level undergraduate astrophysics courses.

PH 589 - SELECTED TOPICS  
Semester Hours: 3

PH 601 - CLASSICAL DYNAMICS I  
Semester Hours: 3

Variational principles and Lagrangian mechanics, rigid body motion, Hamilton's equations, and theory of small oscillations. Aspects related to modern physics. Fall.

PH 607 - MATHEMATICAL METHODS I  
Semester Hours: 3

Review of vector calculus and coordinate systems, introduction to tensors, matrices, infinite series, complex variables with applications to calculus of residues, partial differential equations, and Sturm-Liouville theory. Orthogonal functions, gamma functions, Bessel functions, Legendre functions, special functions, Fourier series, integral transforms and equations. Prerequisite: upper level undergraduate differential equations courses (s). (Same as MA 607.) Fall.

PH 609 - MATHEMATICAL METHODS II  
Semester Hours: 3

Continuation of PH 607. (Same as MA 609.) Spring.

PH 615 - INTRO TO RADIOLOGICAL PHYSICS  
Semester Hours: 3

PH 621 - STAT MECH KINETIC THRY I  
Semester Hours: 3

Statistical methods, systems of particles, statistical thermodynamics, applications of thermodynamics, methods of statistical mechanics, applications of statistical mechanics, equilibrium between phases of chemical species. Summer.
PH 622 - STAT MECH KINETC THRY II
Semester Hours: 3

Addresses the statistical description of collective processes in gases, plasmas, and fields based on the use of transport theory. The course provides the basis for the mathematical description of the basic kinetic and continuum models used in all fields of solar, space and astrophysics. Addresses specifically the transport of gases and Chapman-Enskog theory, agnetohydrodynamics in a collisional description, energetic particle transport in collisionless plasma, the transport of low-frequency turbulence, and if time permits, the transport of radiation.

PH 631 - ELECTROMAGNETIC THEORY I
Semester Hours: 3

Electrostatic and magnetostatic fields in vacuum and materials, Maxwell's equations, electromagnetic waves. Prerequisites: upper level undergraduate E&M course(s), PH 607. Fall.

PH 632 - FOURIER OPTICS
Semester Hours: 3

Introducing the optical system as an invariant linear system, convolution, Sommerfield's diffraction integral, Fourier Transform, angular spectrum, coherent and incoherent imaging, optical transfer function. Prerequisite PH 542 (Same as OSE 632 and EE 632.) Spring.

PH 636 - INTRO TO SPACE PLASMA PHYSICS
Semester Hours: 3

Electromagnetic fields and particles in space; solar wind and solar energetic particles; currents and plasma waves in space; shocks and particle acceleration mechanisms; solar flares and coronal mass ejections. Spring, even years.

PH 642 - OPTICAL PHYSICS
Semester Hours: 3

Fundamental physics of optics and optical phenomena, Electromagnetic fields, sources and propagation. Coherence, interference, polarization, scattering, reflection, refraction, and diffraction. Optical properties of conductors and insulators. Introduction to quantum optics, lasers, and optical device physics. Offered Spring, even years.

PH 645 - LASERS I
Semester Hours: 3

Incoherent light sources; atomic and molecular energy levels; equation or motion for probability amplitudes using first-order time dependent perturbation theory; electric dipole interaction. Einstein rate equations and the Planck radiation law; induced dipole moments and frequency-dependent susceptibility. Homogeneous and inhomogeneous line broadening mechanisms; laser cavities and modes, elementary laser theory, practical lasers. Prerequisite: upper level undergraduate E&M courses. (This course may be substituted for OSE 645.) Summer.

PH 651 - QUANTUM MECHANICS I
Semester Hours: 3

Free particle motion. Principles of wave mechanics. The Schrodinger equation and one-dimensional potentials. Approximation techniques: WKB, variational method, perturbation theory. Numerical methods. Prerequisites: undergraduate quantum mechanics or modern physics, some high-level programming (e.g., C++, Fortran, Mathematica) experience. Prerequisite with concurrency: PH 607.

PH 652 - QUANTUM MECHANICS II
Semester Hours: 3

PH 654 - OPTICAL TESTING
Semester Hours: 3

Spherometry; refractive index measurements; optical bench measurements of imaging systems via T-bar nodal slide (effective focal length, f-number, axial color, field curvature and distortion, transverse ray aberrations); illumination falloff; image resolution tests (finite object); modulation transfer function; star image testing; knife edge tests; Hartmann tests; Fizeau interferometer and testing configurations; null lens testing of aspheres; wavefront measurements (point diffraction interferometer, radial shear interferometer); (Same as OSE 654.) Spring.

PH 655 - APPLIED QUANTUM MECHANICS
Semester Hours: 3

Application of quantum mechanics in solid state, electronics, materials science, and optics. Topics to include: Hydrogen atom and molecule, excitons, phonons, Bloch's theorem, periodic boundary conditions, electrons and holes, band structure of simple semiconductors, dipole transitions, optical constants, absorption and emission processes. Introduction to device physics. (Same as OSE 655).
PH 661 - DATA ANAL/STAT METH PH/ASTROPH
Semester Hours: 3
Moments of a distribution, linear and non-parametric correlation, central limit theorem, error estimation, least squares modeling, estimating model parameters, Monte Carlo techniques. Bayes' theorem and likelihood methods. Energy and temporal spectral analyses. Power density spectra; periodic and quasi-periodic systems. Prerequisite: upper level undergraduate mathematics courses. Fall, even years.

PH 670 - OPTOMECHANICAL DESIGN & MANUF
Semester Hours: 3
Practical aspects of optomechanical design, material selection, fabrication and integration of precision optical components and systems for commercial, space, and military applications. Topics include: fixture design, tolerance analysis, machining methods, thermal stabilization, integrated computer-aided design and analysis, diamond machining, finishing and plating techniques. (Same as OSE 670.) Fall, even years.

PH 671 - OPTICAL FABRIC & TESTING
Semester Hours: 3
Fabrication and testing techniques of optical components and systems. Component measurements: refractive index, curvature, focal lengths, cardinal points and field curvature. Wavefront aberration and transverse aberration function measurements: geometric tests, interferometric tests, null tests. Basics of grinding, figuring, polishing and optical coating. Laboratory experience in manufacturing, polishing, testing, and coating reflective or transmissive optics. Offered on demand.

PH 673 - HIGH ENERGY ASTROPHYSICS
Semester Hours: 3
Radiative Transfer: Blackbody, scattering and diffusion, bremsstrahlung, synchrotron emission, Compton scattering. Relativistic electromagnetism. Plasma effects and introduction to magnetohydrodynamics. Observational aspects of white dwarves, neutron stars and black holes. Accretion and astrophysical jets. Active galactic nuclei and gamma-ray bursts. Offered Fall of odd years.

PH 674 - GEN RELATIVITY & GRAVITATION I
Semester Hours: 3
Special and general relativity: vector and tensor calculus; curved manifolds; elements of differential geometry; physics in curved spacetime; the Einstein equations; simple solutions of the Einstein equations; Schwarzschild geometry and the Kerr spacetime; black holes; sources, propagation, and detection of gravitational waves; a variational approach to general relativity; special topics.

PH 679 - EDUCATION CAPSTONE COURSE
Semester Hours: 3
Capstone experience for student pursuing secondary education certification option for MS degree. Student develops 1 credit, 100 level physics course on instructor-approved topic. Development includes syllabus, textbook evaluation, representative homework assignments, midterm, final, lecture outline, and lecture notes.

PH 680 - SELECTED TOPICS
Semester Hours: 3
Offered upon demand. Topics include: optical surface characterization, superconductivity, aeronomy, properties of solids, laser propagation, collision theory, magnetohydrodynamics. Fall, Spring, Summer.

PH 681 - SELECTED TOPICS
Semester Hours: 3
Offered upon demand. Topics include: optical surface characterization, superconductivity, aeronomy, properties of solids, laser propagation, collision theory, magnetohydrodynamics. Fall, Spring, Summer.

PH 682 - SELECTED TOPICS
Semester Hours: 3
Offered upon demand. Topics include: optical surface characterization, superconductivity, aeronomy, properties of solids, laser propagation, collision theory, magnetohydrodynamics. Fall, Spring, Summer.

PH 683 - SELECTED TOPICS
Semester Hours: 3
Offered upon demand. Topics include: optical surface characterization, superconductivity, aeronomy, properties of solids, laser propagation, collision theory, magnetohydrodynamics. Fall, Spring, Summer.

PH 792 - PHYSICS SEMINAR
Semester Hour: 1

Students attend seminars by invited speakers. Two semesters are required for all M.S. students and three semesters for Ph.D. students. Does not count toward minimum degree requirements. Fall, Spring.

PH 795 - ADV PHYSICS PROJECT LAB
Semester Hours: 3-6

Advanced laboratory research in one of the departmental research groups. Student works on an independent or group project. Completion of the course requires a written report that becomes part of the student’s record. Fall, Spring, Summer.

PH 799 - DOCTORAL DISSERTATION
Semester Hours: 3-9

Prerequisites: Students must have passed the comprehensive examination at Ph.D. level and have Ph.D. advisor’s approval. No more than 9 hours may be taken prior to passing the qualifying examination. Fall, Spring, Summer.

PH ADD - GEN PHYSICS II & LAB/AL A&M
Semester Hours: 4

Political Science (PSC)

PSC 520 - FEDERALISM & INTERGOV RELATION
Semester Hours: 3

Designed to help students navigate complex relationships among the 90,000+ government in the U.S., this course examines the framework of federalism and the tools available to governments to influence public policy outcomes. Students will investigate the impacts of these relationships on policy.

PSC 540 - REGIONAL STUDIES
Semester Hours: 3

An examination of the politics of Asia, Latin America, the Middle East, or Africa, depending on the term. We focus on select countries or themes within each region as part of our study of political structures, history, and culture, for a deeper understanding of each area.

PSC 551 - LAW, COURTS & PUBLIC POLICY
Semester Hours: 3

Examines the role of the courts in the making of public policy in the United States, with an emphasis on the use of the courts by interest groups seeking to achieve specific policy goals.

PSC 562 - DECISION-MAKING FORGN & SEC PLY
Semester Hours: 3

An examination of the history, culture, policies, and structures shaping the development of U.S. foreign and national security policies. Special attention will be placed on the roles of Congress, the National Security Council, Defense Department, State Department, and the intelligence community.

PSC 564 - AMERICAN FOREIGN POLICY
Semester Hours: 3

An examination of the substance of the contemporary U.S. foreign policies and the goals the country seeks to achieve around the world. Students will attempt to evaluate the effectiveness of those policies and examine why it is often difficult for the country to achieve its goals.

PSC 566 - NATIONAL SECURITY STRGY & PLY
Semester Hours: 3

An examination of current U.S. national security strategy and policy. The course will review current strategy and policy documents, examine specific responses to the variety of threats facing the United States, and evaluate whether those policies are effective at achieving their goals.

PSC 570 - ISSUES IN SECURITY POLICY
Semester Hours: 3

Examination of select security-related policy issues. The content of this course will vary during different terms, and students may take the course multiple times so long as the content differs.

PSC 580 - SPECIAL TOPICS IN POLITICAL SC
Semester Hours: 1-3

Selected topics in local, state, national and world politics. This course may be repeated for credit as long as content of course has changed.
PSC 600 - THE AMERICAN POLITY
Semester Hours: 3

Comprehensive and intensive review of the philosophical foundations; formal institutions; and social, economic, and political dynamics of the American polity, with particular emphasis on their relationship to the making of public policy.

PSC 601 - THE PUBLIC POLICY PROCESS
Semester Hours: 3

This course offers an analytical framework for critical thinking about public policy in the U.S.: the inputs, processes, and outputs of governmental activity. Also considers factors that influence policy processes, as well as impacts of decisions by different governments and actors.

PSC 610 - PUBLIC MANAGEMENT PROFESSIONS
Semester Hours: 3

Introduction to public management as a field of study and practice. Review of basic literature. Emphasis on ethics in public service.

PSC 611 - PUBLIC PERSONNEL ADMINISTRATION
Semester Hours: 3

Purposes, functions, and processes of personnel management at the national, state, and local levels.

PSC 612 - BUDGETARY PROCESS
Semester Hours: 3

Governmental revenue and expenditure policies. Budget as a method of administrative and fiscal control.

PSC 615 - SPEC TOPICS IN PUBLIC AFFAIRS
Semester Hours: 3

Special and advanced topics in public affairs and public policy. Students must have complete 12 hours in the Public Affairs program. Instructor permission required. This course may be repeated for credit as long as content of this course has changed.

PSC 630 - PUBL VALUES/PUBL POLICY
Semester Hours: 3

Critical examination of the value assumptions of social theoretical paradigms that influence the formation, implementation, and evaluation of public policies. Major themes include ideological biases, ethics of social policies, and moral problems of economic distribution and redistribution.

PSC 635 - PROGRAM EVALUATION AND METHODS
Semester Hours: 3

This course focuses on program evaluation and methods of social science research. By learning the logic and practice of research design and methods, students will be equipped with the necessary skills and techniques to evaluate critically public policy programs and to design and execute research projects.

PSC 690 - CAPSTONE
Semester Hours: 3

Capstone projects - on-the-job learning - give students the opportunity to integrate classroom learning with relevant problem solving they might face in a professional work situation. Students will conduct independent research on a policy question and formulate recommendations based on their findings. Prerequisite: Instructor Permission.

PSC 695 - INTERNSHIP IN GOVERNMENT
Semester Hours: 1-6

Students may receive academic credit for an internship with a local, state, or federal governmental agency, or with a political, legal, or public policy related organization. Students must have completed 12 hours in the Public Affairs program. Prerequisite: Instructor Permission.

PSC 698 - DIRECTED READINGS & RESEARCH
Semester Hours: 3

Supervised in-depth readings and/or individual research in an area of specialized interest to both student and instructor.

PSC 699 - MASTER'S THESIS
Semester Hours: 1-3

Required every semester a student is writing and receiving direction on a master's thesis. A minimum of two terms and six thesis hours is required for the thesis option. No more than six hours credit may be applied toward the degree.

Psychology (PY)
PY 502 - INDUSTRIAL & ORGANIZATIONAL PSYCH
Semester Hours: 3
Application of basic principles of learning, motivation, and perception to typical industrial and organizational problems. Same as ISE 502.

PY 503 - HUMAN FACTORS PSYCHOLOGY
Semester Hours: 3

PY 505 - PSYCHOPHARMACOLOGY
Semester Hours: 3
Introduction to drug classification and action with emphasis on physiological and psychological interactions. Same as BYS 505.

PY 506 - PSYCHOLOGY OF WOMEN
Semester Hours: 3
Examines theory and research in the psychological functioning of women, both in the United States and other nations. Topics include achievement and education, mental and physical health issues, biological influences on women's behavior, and victimization of women.

PY 507 - CROSS-CULTURAL PSYCHOLOGY
Semester Hours: 3
Examines psychological similarities and differences between members of industrialized and non-industrialized cultures. Comparisons will include development, social interaction, personality, cognition, psychological health and treatment, work, and acculturation.

PY 508 - TEAMWORK & TEAM PROCESSES
Semester Hours: 3
This course provides a basic introduction to teams and teamwork processes. The foundation of the course is research-based; topics will be approached from the context of empirical research that has been conducted. The types of research designs that are typically used in team research are addressed.

PY 520 - SPECIAL TOPICS
Semester Hours: 3
Pre-announced special areas in seminar discussion, laboratory work, or practicum. May be taken twice for credit.

PY 530 - PSYCHOMETRICS
Semester Hours: 3
History and development of psychological testing with special emphasis given to both theory and process of effective evaluation.

PY 534 - PSYCHOLOGY AND LAW
Semester Hours: 3
This seminar is a survey of the major topics represented in the field of Psychology and Law. We will focus on how psychological research can contribute to a better understanding of issues related to law.

PY 535 - THEORIES OF ABNORMAL PSYCHOLOGY
Semester Hours: 3
Selected disorders such as depression, anxiety disorders, and personality disorders from different theoretical orientations with emphasis on cognitive behavioral theory.

PY 537 - PSYCHOBIOLOGY OF STRESS/IllNESS
Semester Hours: 3
Overview of physiological stress responses and their influence on health behavior and illness. Same as BYS 537.

PY 601 - ADVANCED DEVELOPMENTAL PSYCHOLOGY I
Semester Hours: 3
Overview of major models of developmental theory and of theorists representing these models. Examination of issues, problems, and research relevant to these theories.

PY 602 - PROSEMINAR: COGNITIVE
Semester Hours: 3
Critical examination of the cognitive approach to areas of study within psychology. Students are responsible for library research, writings, and presentation of selected topics.
PY 607 - PROFESSIONAL DEV IN RES & TCHG  
Semester Hour: 1  
Focus on developing knowledge and skills relevant to future goals, such as career exploration, internship opportunities, resume writing, and graduate program exploration. Required of first year students.

PY 608 - GRAD PRACT TCHG & CAREER EXPLO  
Semester Hour: 1  
Focus on developing knowledge and skills relevant to future goals, such as career exploration, internship opportunities, resume writing, and graduate program exploration. Required of first year students.

PY 610 - EXPERIMENTAL DESIGN  
Semester Hours: 3  
Design and use of the experiment as an inferential tool. Issues pertaining to reliability, validity, manipulation of independent variables and sampling will be examined. Statistical techniques for analysis of data generated by experimental designs.

PY 611 - STAT FOR EXPERI METHODS  
Semester Hours: 4  
Statistical techniques for analysis of data generated by experimental designs.

PY 615 - GRADUATE SEMINAR  
Semester Hours: 3  
Intensive analysis of selected theoretical or applied topics relating to psychological development. May be taken more than once for credit.

PY 624 - HUMAN FACTORS IN SYSTEM DESIGN  
Semester Hours: 3  
Introduces basic principles of methods analysis and ergonomics. Methods analysis topics include: work measurement tools, work sampling, job analysis, job evaluation, and development and use of flow and activity charts for methods improvement. Same as ISE 624.

PY 641 - CONC READ/RES SPECIALIZ AREA  
Semester Hours: 3  
Independent readings and/or experiments in an area within the student's field of specialization. One requirement is a research proposal, which will be reviewed by the faculty advisor. May be taken more than once for credit. Prerequisite: PY 650 or PY 699.

PY 650 - SUPERVISED RESEARCH  
Semester Hours: 3-6  
Laboratory or applied research concerning a particular topic, approved and supervised by a PY faculty member. The student may work on an independent or group project. May be taken more than once for credit.

PY 675 - INTERNSHIP IN APPLD PSYCHOLOGY  
Semester Hours: 1-3  
Students are placed in a field setting under the supervision of a faculty member and a site supervisor. Students receive site-specific training, experience, and individual supervision.

PY 699 - MASTER'S THESIS  
Semester Hours: 1-6  
Required each semester a student is working and receiving faculty direction on a master's thesis. Prerequisites: PY 641, a minimum of two terms is expected. Credit awarded upon successful completion of the thesis.

PY 762 - PERFORM MEASUR/PRODU IMPROVEMT  
Semester Hours: 3  
Productivity and performance defined and used to analyze current competitive position of important sectors of US industry with respect to national and international competition.

Space Science (SPA)
SPA 522 - INTRODUCTION TO PLASMA PHYSICS  
Semester Hours: 3  
Provides students with an introduction to the basic physical processes associated with plasmas, which permeate all space environments. Both particle and fluid approaches are introduced, and a variety of elementary drift and wave phenomena are derived. Applications of the theory to various plasma instabilities are explored, along with specific examples of where these may occur in space science. While the goal of this course is to prepare students for more advanced topics in space physics, many of the fundamentals covered are equally relevant for students interested in plasma confinement and its associated engineering challenges.

SPA 526 - SPACE WEATHER  
Semester Hours: 3  
Physics of solar active regions, physics of solar flares and coronal mass ejections (CMEs), the propagation of CMEs, the acceleration and propagation of solar energetic particles, CME interaction with earth’s magnetosphere.

SPA 532 - SPACE ORIENTATION EDUCATORS  
Semester Hours: 3  
A weeklong course at the U.S. Space and Rocket Center in Huntsville, Alabama for pre-service and in-service teachers. The inquiry based workshops are taught around the theme of space exploration include activities to be done across the curriculum. All activities are correlated to National Math, Science, Technology, Social Studies, and Reading Standards. Activities based on curriculum developed by NASA, CAP, NSATA, and the USSRC. Topics include moon, mars, rocketry, propulsion, hydroponics, math, biology, history and literature.

SPA 582 - SCIENCE CAREER PREP  
Semester Hour: 1  
This course will review many of the soft skills necessary to function as a successful scientist, whether in an academic career, in a federal laboratory, a for-profit research career in a company, or even a commercial career. Your career begins with graduate school, and learning the skills for a successful graduate career will carry over to your professional career. The goal of the course is impart wisdom from successful graduate students and career scientists, providing both a basis for a successful graduate career and your subsequent career. The course will help students reduce the learning things “the hard way” approach by providing guidance for your career path. Each week will focus on a different skill that a career scientist requires.

SPA 610 - ADV MATH METHODS FOR SPA SCI  
Semester Hours: 3  
This course will focus on analytical methods for a series of advanced topics with an emphasis on practical applications to space science, such as Vector and Fourier Analysis, ODEs/PDEs in space science, and Green's functions, Spherical Harmonics, Spectral Analysis, Wavelet Transforms, Fractals and Complexity, and Inverse Problems.

SPA 622 - CLASSICAL & QUANTUM STATISTICS  
Semester Hours: 3  

SPA 623 - TRANSPORT PROCESSES IN SPACE  
Semester Hours: 3  
Course presents a systematic treatment of classical and anomalous transport theory for gases, plasmas, energetic particles, and low frequency turbulence. The Chapman-Enskog approach is used to derive transport coefficients for neutral gases and collisional plasmas. The relationship between multi-fluid and MHD models is presented. Weak solutions and shock waves are discussed. The transport of energetic particles that experience scattering by magnetic field fluctuations is presented, together with basic models of the turbulence responsible for scattering turbulence transport in expanding flows such as the solar wind.

SPA 624 - SPACE PHYSICS I  
Semester Hours: 3  
A broad introduction to particle, MHD, and kinetic phenomena in space. This course is intended for all students interested in space, astro-, and plasma physics. Course covers fusion processes inside the Sun, solar neutrinos, solar atmosphere, coronal magnetic fields, physical mechanisms of magnetic field line reconnection and magnetic dynamo, the interaction between the solar wind with planets and the interstellar medium, corotating and merged interaction regions, collisional and collisionless shock waves in space. Includes an introduction to charged particle acceleration in the heliosphere. Examines differences between planetary magnetospheres, solar-terrestrial relationships, solar activity, climate, and culture. Prerequisite: SPA 522, SPA 631 (w/concurrency).
SPA 625 - SPACE PHYSICS II
Semester Hours: 3

The course develops a deeper understanding and knowledge of plasma instabilities, kinetic dispersion relations, microinstabilities, electrostatic and electromagnetic instabilities; advanced magnetohydrodynamics including MHD turbulence, reconnection; wave-particle interactions, including basic quasi-linear theory; weak and strong wave turbulence; nonlinear waves; collisionless shock waves. Prerequisite: SPA 624.

SPA 627 - HIGH ENERGY RADIATION DETECTION
Semester Hours: 3

This course will provide students with basic understanding of radiation detection for space-based missions. This course will cover the basic nuclear processes in radioactive sources and the interaction of radiation with matter. The statistical treatment of experimental data will be reviewed. General characteristics common to all types of detectors will be given. We will then cover specific classes of detectors focusing on ionization, scintillation and semiconductor detectors. Light collection and detection techniques will follow. The student will then be introduced to basic signal processing and timing techniques important to a successful instrument design. This course will be taught from a physicist point of view emphasizing the physical processes and interactions that make detection of radiation possible. This course is suitable for those students interested in detector development or astrophysical data analysis using state-of-the-art technology.

SPA 628 - SOLAR PHYSICS
Semester Hours: 3

The workings of the sun, from its interior to the outer reaches of the corona with emphasis on the observations. Energy release in core of the Sun and its transport to the solar atmosphere. Dynamo process and the 11 year solar activity cycle. Formation of active regions and structure of sunspots. The structure of corona, with particular details on the active region corona and its heating to several million kelvin. Energy release processes including solar flares and coronal mass ejections.

SPA 629 - ASTROPHYSICAL FLUID DYNAMICS
Semester Hours: 3

Covers astrophysical phenomena occurring outside the boundaries of the solar system. Subjects include stellar structure and rotation, waves and instabilities in astrophysical plasmas, the physics of spherical and disk accretion, supernova blast waves, and charged particle transport and acceleration in cosmic plasmas. Introduction to the principles of stellar formation, helioseismology, stellar dynamos, coronal heating, and astrophysical turbulence. Prerequisite: SPA 522.

SPA 630 - WAVES IN FLUIDS
Semester Hours: 3

Comprehensive introduction to the science of wave motions in fluids. Waves and first-order (hyperbolic) equations, wave hierarchies; gas dynamics and fluid equations; acoustics, nonlinear plane waves, simple waves, shock waves and structure, shock reflection, similarity solutions, supersonic flows in gas dynamics; the wave equation, including plane, spherical and cylindrical waves, geometrical optics, including far-field approximation, caustics, nonhomogeneous media, anisotropy; water waves, including shallow water theory; group velocity, dispersion; nonlinear waves, including Korteweg-de Vries, sine-Gordon, and nonlinear Schrödinger equations, solitons. Prerequisite: SPA 610.

SPA 631 - WAVES AND FIELDS
Semester Hours: 3

SPA 636 - ADVANCED SPACE WEATHER
Semester Hours: 3

Advanced topics in Space Weather with emphasis on practical effects and impacts on human technology and society: interaction of solar disturbances with Earth's magnetosphere, Solar Energetic Particles, and their effects; Forecasting and Nowcasting of Space Weather; Space Weather at Mars and other planets. Prerequisite: SPA 522.

SPA 662 - COMPUTATIONAL PHYSICS
Semester Hours: 3

SPA 663 - COMPUTATIONAL FLUID DYNAMICS & MHD
Semester Hours: 3

Numerical simulations of various problems in space physics, astrophysics, engineering, and plasma dynamics. Finite-volume and finite-difference, shock-capturing and shock-fitting methods for hyperbolic equations, including gas dynamics, MHD, and shallow water equations. The hierarchy of numerical methods is introduced in a systematic way, starting from standard linear schemes and arriving at modern discontinuity-capturing non-linear methods. Exact and approximate Riemann solvers, characteristic analysis of underlying equations. Different implementations of boundary conditions are introduced in relation with the mathematical properties of quasilinear hyperbolic systems. Prerequisite: SPA 624, SPA 662.

SPA 689 - SELECTED TOPICS
Semester Hours: 3

Selected Topics in Space Science not covered in other courses.

SPA 699 - MASTER'S THESIS
Semester Hours: 1-6

SPA 741 - PHYSICS OF COSMIC RAYS
Semester Hours: 3

Covers two principal areas of cosmic ray physics: (i) cosmic ray origin and acceleration, and (ii) cosmic ray transport and detection. Includes galactic cosmic rays, anomalous cosmic rays, and solar energetic particles. Transport theory, acceleration mechanisms and observational signatures. Prerequisite: SPA 623.

SPA 742 - GAMMA-RAY BURSTS AND JETS
Semester Hours: 3

SPA 771 - COMPETITIVE GRANT WRITING WKSP
Semester Hour: 1

This course is designed for senior level graduate students who are about to graduate and start their professional career. It will introduce students to the real and complete process of competing for grant support. It is comprised of a series of lectures (workshops), case studies, and ends with a formal proposal from each participant and a mock review process.

SPA 789 - SELECTED TOPICS
Semester Hours: 3

Selected Topics in Space Science not covered in other courses.

SPA 796 - JOURNAL CLUB
Semester Hour: 1

This course requires graduate students to read, interpret and present literature critically to fellow students, researchers, and faculty. Students stay abreast of current knowledge in the field, develop presentation skills and promote department unity. Faculty instructor will lead, assign, and provide students feedback on their presentations.

SPA 799 - DOCTORAL DISSERTATION
Semester Hours: 1-9

Students must have passed the Comprehensive Examination at PhD level and have PhD advisor's approval. No more than 9 hours may be taken prior to passing the Qualifying Examination.

Statistics (ST)

ST 687 - THEORY OF STATISTICS I
Semester Hours: 3

ST 787 - THEORY OF STATISTICS II
Semester Hours: 3

Continuation of hypothesis testing, likelihood ratio and unbiased tests, uniformly most powerful tests, power function, nonparametric tests, statistical decision theory, distribution and linear models.
Faculty

(Date refers to original appointment to the university.)

Faculty

A

Adams, Ellise, Associate Professor, Nursing, 2006, PhD, Texas Women’s University.

Adams, Marsha, Professor, Nursing, 2014, PhD, University of Alabama at Birmingham.

Adcock, Lawana, Lecturer, Biological Sciences, 2016, PhD, Alabama AM University.

Ai, Shangbing, Associate Professor, Math, 2002, PhD, University of Pittsburgh.

Al-Hamdan, Ashraf, Clinical Assistant Professor, Civil and Environmental Engineering, 2007, PhD, University of Illinois at Chicago.

Alewine, Henry, Associate Professor, Accounting, 2010, PhD, University of Kentucky.

Alexander, Susan, Clinical Associate Professor, Nursing, 2009, DNP, University of Alabama in Huntsville.

Allen, David, Professor, Economics, 1994, PhD, University of Arkansas.

Allen, Mary Beth, Lecturer, Computer Science, 2017, M.S., Auburn University.

Allport, Christopher, Associate Professor, Accounting, 2005, PhD, Virginia Tech.

Altenkirch, Robert, President, Professor, Mechanical and Aerospace Engineering, 2011, PhD, Purdue.

Amiri, Azita, Assistant Professor, Nursing, 2012, MS, Iran.

Anderson, Michael, Associate Professor, Civil and Environmental Engineering, 1998, PhD, Iowa State University.

Argentina, Vincent, Assistant Professor, Art, Art History Design, 2014, MFA, University of Georgia.

Armentrout, Daniel, Lecturer, Mechanical and Aerospace Engineering, 2012, PhD, University of Denver.

Aygun, Ramazan, Associate Professor, Computer Science, 2003, PhD, New York State University.

B

Baginski, Melissa, Clinical Assistant Professor, Nursing, 2009, MSN, University of Virginia.

Baird, James, Professor, Chemistry, 1982, PhD, Harvard.

Baldwin, Katie, Assistant Professor, Art, Art History Design, 2013, MFA, University of the Arts, Pennsylvania.

Balla, Angela, Associate Professor, English, 2006, PhD, University of Michigan-Ann Arbor.

Banish, R. Michael, Associate Professor, Chemical and Materials Engineering, 1999, PhD, University of Utah.

Bao, Yeqing, Associate Dean, Professor, Marketing, 2001, PhD, Virginia Polytechnic Institute and State University.

Bao, Yongchuan, Associate Professor, Marketing, 2014, PhD, University of Southern California.

Barnby, Elizabeth, Clinical Assistant Professor, Nursing, 2009, DNP, University of Alabama in Huntsville.

Baun, Dylan, Assistant Professor, History, 2016, PhD, The University of Arizona.

Beck, Monica, Clinical Assistant Professor, Nursing, 2009, MSN, University of Alabama in Huntsville.

Benton, Anna, Clinical Instructor, Nursing, 2008, MSN, University of Alabama in Huntsville.

Berbrier, Mitchell, Professor, Sociology, 1996, PhD, Marquette University.

Betancourt, José, Associate Professor, Art, Art History Design, 2006, MFA, Hunter College.

Bianchi, Ann, Associate Professor, Nursing, 2007, MSN, University of Alabama in Huntsville.
Bitzer, Phillip, Associate Professor, Atmospheric Science, 2011, PhD, University of Alabama in Huntsville.

Blackmon, James, Research Professor, Mechanical and Aerospace Engineering, 2001, PhD, University of California.

Bollinger, Laurel, Professor, English, 1993, PhD, Princeton.

Bonamente, Massimiliano, Professor, Physics, 2002, PhD, University of Alabama in Huntsville.

Bonilla, Mary, Clinical Assistant Professor, Nursing, 1998, MSN, University of Alabama in Huntsville.

Bowman, Elizabeth, Lecturer, Math, 2001, MA, University of Alabama in Huntsville.

Bowman, Ronald, Lecturer, Electrical and Computer Engineering, 2005, MSEE, Clemson University.

Boyette, Maria, Lecturer, Foreign Language, 2015, M.A., Mississippi State University.

Boykin, Timothy, Professor, Electrical and Computer Engineering, 1992, PhD, Stanford University.

Bridges, Lindsay, Clinical Instructor, Nursing, 2003, MSN, Jacksonville State University.

Buksa, Irena, Associate Professor, Foreign Language, 1990, DA, Syracuse.

Burel, Joshua, Assistant Professor, Music, 2017, PhD, Florida State University.

Burnett, John, Associate Professor, Economics, 1992, PhD, University of Alabama.

Burns, Laird, Associate Professor, Management Science, 2009, PhD, Michigan State.

Bushman, Karissa, Lecturer, Art, Art History Design, 2015, PhD, University of Iowa.

Caires, Angela, Clinical Assistant Professor, Nursing, 2012, MSN, University of Alabama in Huntsville.

Carey, Lawrence, Associate Professor, Atmospheric Science, 2012, PhD, Colorado State University.

Carey, Matthew, Assistant Professor, Music, 2016, DMA, Texas Tech University.

Carmen, Christina, Clinical Associate Professor, Mechanical and Aerospace Engineering, 2006, PhD, University of Alabama in Huntsville.

Carpenter, Sandra, Professor, Physics, 1989, PhD, University of California Santa Barbara.

Cassibry, Jason, Associate Professor, Mechanical and Aerospace Engineering, 2004, PhD, University of Alabama in Huntsville.

Chittur, Krishnan, Professor, Chemical and Materials Engineering, 1991, PhD, Rice.

Choup, Anne Marie, Associate Professor, Political Science, 2007, PhD, University of North Carolina at Chapel Hill.

Christopher, Sundar, Professor, Atmospheric Science, 1997, PhD, Colorado State.

Christy, John, Distinguished Professor, Atmospheric Science, 1991, PhD, Illinois.

Clemmons, Tammy, Clinical Instructor, Nursing, 2006, MSN, University of Alabama in Huntsville.

Cling, Andrew, Professor, Philosophy, 1988, PhD, Vanderbilt.

Coby, Jim, Lecturer, English, 2016, PhD, University of Louisiana.

Coe, David, Associate Professor, Electrical and Computer Engineering, 2002, PhD, Georgia Institute of Technology.

Coffey, Sharon, Clinical Assistant Professor, Nursing, 2016, DNP, University of Alabama in Huntsville.

Coleman, Richard, Lecturer, Computer Science, 2013, PhD, University of Florida.

Collopy, Paul, Professor, Industrial Systems Engineering, 2013, PhD, Stanford University.

Connors, Ryan T., Assistant Professor, Kinesiology, 2015, PhD, Middle Tennessee State University.

Conway, Joseph, Associate Professor, English, 2011, PhD, Washington University in St. Louis.
Cooper, Judy, Lecturer, Biological Sciences, 2015, M.S., University of Alabama in Huntsville.

Cornelius, Sandy, Clinical Assistant Professor, Nursing, 2011, MSN, Jacksonville State University.

Crook, Genevieve, Lecturer, Math, 1989, MA, University of Alabama in Huntsville.

Cross, Heather, Lecturer, English, 2007, MA, University of Alabama in Huntsville.

Cruz-Vera, Luis, Associate Professor, Biological Sciences, 2007, PhD, CINVESTAV-IPN, Mexico.

Cseke, Leland, Associate Professor, Biological Sciences, 2002, PhD, University of Michigan.

Curtis, Christine, Provost, Professor, Chemical and Materials Engineering, 2014, PhD, Florida State University.

D

Davis, Rebecca, Clinical Assistant Professor, Nursing, 2009, MSN, University of Alabama in Huntsville.

Delugach, Harry, Associate Professor, Computer Science, 1990, PhD, University of Virginia.

Deverapalli, Chakri, Director IT, Lecturer, Information Systems, 2008, MBA, University of Alabama in Huntsville.

Devlin, Anna, Assistant Professor, Management Science, 2014, PhD, University of Maryland.

Dillard, Anne, Clinical Instructor, Nursing, 2014, MSN, University of Alabama in Huntsville.

Dillihunt, Monica, Associate Professor, Education, 2004, PhD, Howard University.

Doty, Johnna, Lecturer, Music, 2012, MFA, Boston University.

Doty, Johnna, Lecturer, Communication Arts, 2012, MFA, Boston University.

Duan, Lingze, Associate Professor, Physics, 2007, PhD, University of Maryland.

Durm, Tracy, Clinical Assistant Professor, Nursing, 2013, MSN, University of Alabama in Huntsville.

E

Elliott, Jeremy M., Assistant Professor, Kinesiology, 2015, PhD, University of Georgia.

Elsamadicy, Abdalla, Lecturer, Physics, 2002, PhD, Alabama AM University.

Emich, Cheryl, Clinical Assistant Professor, Nursing, 2013, MSN, University of Alabama.

English, Jennifer, Associate Professor, Electrical and Computer Engineering, 2000, PhD, Georgia Institute of Technology.

Etzkorn, Letha, Professor, Computer Science, 1993, PhD, University of Alabama in Huntsville.

Ewere, Felix, Lecturer, Mechanical and Aerospace Engineering, 2016, PhD, University of Alabama in Huntsville.

F

Fahimi, Farbod, Associate Professor, Mechanical and Aerospace Engineering, 2010, PhD, Sharif U Tech, Tehran.

Farrington, Phillip, Professor, Industrial Systems Engineering, 1991, PhD, Oklahoma State University.

Ferguson, Rita, Clinical Assistant Professor, Nursing, 2006, MSN, University of Alabama in Huntsville.

Fikes, David, Lecturer, Mechanical and Aerospace Engineering, 2016, MS, University of Tennessee - Knoxville.

Fischer, Jeremy, Assistant Professor, Philosophy, 2014, PhD, University of Washington.

Florinski, Vladimir, Associate Professor, Space Science, 2008, PhD, University of Arizona.

Fong, Eric, Associate Professor, Management, 2004, PhD, University of Florida.

Foy, Anna, Assistant Professor, English, 2012, PhD, University of Pennsylvania.

Frederick, Robert, Professor, Mechanical and Aerospace Engineering, 1991, PhD, Purdue.
Freindi, Kader, Professor, Mechanical and Aerospace Engineering, 1999, PhD, Brown University.

Friedman, Susan, Lecturer, English, 2008, PhD, University of South Florida.

Frith, Karen, Professor, Nursing, 2007, PhD, Georgia State University.

Frost, Alanna, Associate Professor, English, 2008, PhD, University of Louisville.

Gaede, Rhonda, Associate Professor, Electrical and Computer Engineering, 1992, PhD, University of Texas-Austin.

Gandila, Andrei, Assistant Professor, History, 2013, PhD, University of Florida.

George, Michael, Associate Professor, Chemistry, 1997, PhD, Arizona State University.

Gholston, Sampson, Associate Professor, Industrial Systems Engineering, 1997, PhD, University of Alabama in Huntsville.

Gilchrist-Petty, Eletra, Associate Professor, Communication Arts, 2008, PhD, University of Memphis.

Goebel, Rolf, Professor, Foreign Language, 1985, PhD, University of Maryland.

Graves, Sara, Professor, Computer Science, 1978, PhD, University of Alabama in Huntsville.

Greene, Michelle, Lecturer, Chemistry, 2016, PhD, Indiana University.

Gregory, Don, Distinguished Professor, Physics, 1992, PhD, University of Alabama in Huntsville.

Gregory, John, Professor, Chemistry, 1983, PhD, Imperial College.

Griffin, Robert, Assistant Professor, Atmospheric Science, 2012, PhD, Penn State University.

Guerin, Amy, Assistant Professor, Theatre, 2016, MFA, University of Houston.Email: agg0008@uah.edu

Guerin, Amy, Assistant Professor, Theatre, 2016, MFA, University of Houston.Email: agg0008@uah.edu

Gunn, Sinceree, Lecturer, English, 2003, MA, University of Alabama in Huntsville.

Guo, Junpeng, Professor, Electrical and Computer Engineering, 2005, PhD, University of Illinois.

Gupta, Jatinder, Professor and Eminent Scholar, Information Systems, 2002, PhD, Texas Tech University.

Gyasi, Kwaku, Associate Professor, Foreign Language, 1999, PhD, Ohio State University.

Haleem, Kirolos, Lecturer, Civil and Environmental Engineering, 2016, PhD, University of Central Florida.

Hamilton, Frances, Assistant Professor, Education, 2014, PhD, Tennessee State University.

Han, Qingyuan, Associate Professor, Atmospheric Science, 1997, PhD, Columbia University.

Harwell, David, Associate Professor, Theatre, 2005, MFA, University of Illinois.

Hawk, Kathleen, Associate Professor, Political Science, 1998, PhD, University of Alabama.

Hazeli, Kavan, Assistant Professor, Mechanical and Aerospace Engineering, 2016, PhD, Drexel University.

Heerikhuisen, Jacob, Associate Professor, Space Science, 2008, PhD, University of Waikaet, New Zealand.

Heikes, Deborah, Professor, Philosophy, 1998, PhD, University of Illinois.

Herrin, Kristen, Clinical Assistant Professor, Nursing, 2004, DNP, University of Alabama in Huntsville.

Hile, Kimberly, Assistant Professor, Education, 2017, PhD, University of Illinois.

Hite, Dennis, Lecturer, Electrical and Computer Engineering, 2005, M.S.E., University of Alabama in Huntsville.

Ho, Fat, Professor, Electrical and Computer Engineering, 1980, PhD, South Illinois University.
Hobson, Kay, Clinical Assistant Professor, Nursing, 2007, MSN, Medical College of Georgia.

Hollingsworth, Angela, Clinical Assistant Professor, Nursing, 2016, DNP, University of South Alabama.

Hollingsworth, Donald (Keith), Professor, Mechanical and Aerospace Engineering, 2011, PhD, Stanford University.

Hoy, Haley, Associate Professor, Nursing, 2006, PhD, Vanderbilt University.

Hsu, Liwu, Assistant Professor, Marketing, 2012, PhD, Boston University.

Hu, Leiqiu, Assistant Professor, Atmospheric Science, 2017, PhD, University of Kansas, Lawrence.

Hu, Qiang, Assistant Professor, Space Science, 2012, PhD, Dartmouth.

Huang, Wenzhang, Professor, Math, 1994, PhD, Claremont Graduate School.

Hubbell, Gaines, Assistant Professor, English, 2015, PhD, Rensselaer Polytechnic Institute.

Hunter, Amy, Clinical Instructor, Nursing, 2014, MSN, University of Alabama in Huntsville.

J

Jayawardena, Surangi, Assistant Professor, Chemistry, 2017, PhD, University of Massachusetts-Lowell.

Johnson, David, Associate Professor, History, 2005, PhD, Washington University in St. Louis.

Johnson, Kathryn, Professor, Art, Art History Design, 2003, MFA, University of Georgia.

Johnson, Molly, Associate Professor, History, 2003, PhD, University of Illinois.

Johnson, Terri, Lecturer, Math, 2011, PhD, University of Alabama in Huntsville.

Joiner, Laurie, Associate Professor, Electrical and Computer Engineering, 1998, PhD, Clemson University.

Jones, Holly, Associate Professor, English, 2006, PhD, Penn State University.

Jones, Keith, Associate Professor, Art, Art History Design, 1996, MFA, Louisiana Tech University.

Jones, Nicholas, Professor, Philosophy, 2007, PhD, Ohio State University.

Jovanov, Emil, Associate Professor, Electrical and Computer Engineering, 1998, PhD, University of Belgrade.

Joyce, Lillian, Associate Professor, Art, Art History Design, 1997, PhD, University of California, Los Angeles.

K

Kaiura, Leslie, Assistant Professor, Foreign Language, 2007, MA, University of Virginia.

Kang, Chang-kwon, Assistant Professor, Mechanical and Aerospace Engineering, 2013, PhD, University of Michigan.

Kansakar, Siroj, Professor, Math, 2012, PhD, University of Alabama in Huntsville.

Kaukler, William, Associate Research Professor, Chemistry, 1987, PhD, Toronto.

Keller, Karl, Lecturer, Foreign Language, 2007, MA, University of Alabama.

Knight, Kyle, Assistant Professor, Sociology, 2012, PhD, Washington State University.

Knupp, Kevin, Professor, Atmospheric Science, 1991, PhD, Colorado State University.

Kulick, Jeffrey, Professor, Electrical and Computer Engineering, 1990, PhD, University of Pennsylvania.

Kunin, Boris, Associate Professor, Math, 1992, PhD, University of Illinois - Chicago.

Kvach, John, Associate Professor, History, 2008, PhD, University of Tennessee at Knoxville.

LaFontaine, Yalitza, Lecturer, Intensive Language Center, 2011, MA, University of Alabama in Huntsville.

Lampley, Sandra, Assistant Professor, Education, 2016, PhD, Middle Tennessee State.

Landrum, David, Associate Professor, Mechanical and Aerospace Engineering, 1992, PhD, North Carolina State University.

Landry, Timothy, Associate Professor, Marketing, 2008, PhD, University of Missouri.

Lang, Joshua, Lecturer, Chemistry, 2016, PhD, University of Alabama in Huntsville.

Lanius, Candice, Lecturer, Communication Arts, 2016, Rensselaer Polytechnic Institute.

Lanz, Amelia, Clinical Assistant Professor, Nursing, 2012, MSN, University of Alabama in Huntsville.

Le Roux, Jakobus, Associate Professor, Space Science, 2008, PhD, Potchefstroom.

Leahy, Joseph, Associate Professor, Biological Sciences, 1997, PhD, University of Maryland.

Lee, Eunseok, Stanford University, Mechanical and Aerospace Engineering, 2016, PhD, Assistant Professor.

Lee, Shanhu, Associate Professor, Atmospheric Science, 2015, PhD, University of Tokyo.

Lee, Yeolan, Assistant Professor, Management, 2013, PhD, Ohio State University.

Le, Yu, Assistant Professor, Chemical and Materials Engineering, 2013, PhD, U of Ill, Chicago (UIC).

Lenahan, Shelley, Lecturer, Math, 2004, MA, Texas AM.

Li, Gang, Associate Professor, Space Science, 2008, PhD, Indiana University-Bloomington.

Li, Wei, Associate Professor, Computer Science, 1996, PhD, Virginia Polytechnic Institute State University.

Li, Xiaotong, Professor, Information Systems, 2001, PhD, University of Mississippi.

Lieu, Richard, Distinguished Professor, Physics, 1995, PhD, Imperial College - London.

Ligrani, Phillip, Professor, Mechanical and Aerospace Engineering, 2014, PhD, Stanford University.

Lin, Mark, Associate Professor, Mechanical and Aerospace Engineering, 2000, PhD, Virginia Polytechnic Institute.

Lioce, Bonnie (Lori), Clinical Associate Professor, Nursing, 2014, PhD, University of Alabama in Huntsville.

Lonnergan, Melissa, Clinical Instructor, Nursing, 2012, MSN, Jacksonville State University.

Love-Rutledge, Sharifa, Assistant Professor, Chemistry, 2017, PhD, The University of Alabama.

Lynch, Thuy, Assistant Professor, Nursing, 2017, PhD, University of Alabama.

MacGregor, Gordon, Assistant Professor, Biological Sciences, 2010, PhD, University of Dundee, Scotland.

MacKenzie, William (Ivey), Associate Dean and Associate Professor, Management, 2010, PhD, University South Carolina.

Magnuson, Roy, Associate Professor, Biological Sciences, 1999, PhD, Massachusetts Institute of Technology.

Mahafza, Hamsa, Lecturer, Education, 2017, PhD, University of Texas at San Antonio.

Mahalingam, Brinda, Lecturer, Economics, 2012, PhD, University of Colorado.

Mahalingam, Shankar, Professor, Mechanical and Aerospace Engineering, 2010, PhD, Stanford University.

Maier, Linda, Professor, Foreign Language, 1993, PhD, University of Virginia.

Marinova, Sophia, Associate Professor, Management, 2014, PhD, University of Maryland.

Marschalk, Lacy, Lecturer, English, 2014, PhD, Auburn University.
Mathis, Shannon L., Assistant Professor, Kinesiology, 2011, PhD, Middle Tennessee State University.

McClellan, Lynn, Clinical Associate Professor, Nursing, 2017, DNP, University of Alabama at Birmingham.

McDavid, Nicole, Lecturer, Communication Arts, 2015, MA, Auburn University.

McFeeters, Robert, Associate Professor, Chemistry, 2008, PhD, Cornell.

McGinnis, Michael, Lecturer, English, 2015, PhD, Wayne State University.

Meade, Whitney, Clinical Assistant Professor, Education, 2011, PhD, Auburn University.

Mcikalski, John, Professor, Atmospheric Science, 2004, PhD, University of Wisconsin-Milwaukee.

Mendelson, Tobias, Clinical Assistant Professor, Accounting, 2017, JD, Samford University.

Mendenhall, Eric, Assistant Professor, Biological Sciences, 2013, PhD, University of Minnesota.

Menon, Vineetha, Assistant Professor, Computer Science, 2017, PhD, Mississippi State University.

Mesmer, Bryan, Assistant Professor, Industrial Systems Engineering, 2014, PhD, University of Buffalo.

Messimer, Sherrill, Associate Professor, Industrial Systems Engineering, 1989, PhD, Texas AM.

Milinkovic, Aleksander, Professor, Electrical and Computer Engineering, 2001, PhD, University of Belgrade.

Miller, James, Professor, Physics, 1994, PhD, Maryland.

Miller, Richard, Professor, Physics, 2003, PhD, University of New Hampshire.

Mok, Wai Yin, Professor, Information Systems, 2001, PhD, Brigham Young University.

Moore, David, Lecturer, Library, 2002, MLS, University of Alabama.

Morales, Claudio, Professor, Math, 1982, PhD, University of Iowa.

Morgan, Tracie, Clinical Assistant Professor, Nursing, 2016, MSN, University of Alabama in Huntsville.

Moriarity, Debra, Professor, Biological Sciences, 1984, PhD, Temple University.

Morris, Tommy, Associate Professor, Electrical and Computer Engineering, 2015, PhD, Southern Methodist.

Mukherjee, Anusree, Assistant Professor, Chemistry, 2013, PhD, University of Minnesota.

Mullins, Frank, Associate Professor, Management, 2017, PhD, Syracuse University.

N

Nair, Udaysankar, Associate Professor, Atmospheric Science, 2011, PhD, Colorado State University.

Nale, John, Assistant Professor, Philosophy, 2014, PhD, Penn State University.

Naviaux, Julie, Lecturer, English, 2016, PhD, University of Kentucky.

Nelson, George, Associate Professor, Mechanical and Aerospace Engineering, 2012, PhD, Georgia Tech.

Nelson, Jeffrey, Associate Professor, English, 1990, PhD, Chicago.

Neuschatz, Jeffrey, Professor, Psychology, 2000, PhD, Binghamton University.

Newchurch, Michael, Professor, Atmospheric Science, 1994, PhD, Georgia Institute of Technology.

Newman, Kathy, Associate Professor, Nursing, 1991, PhD, University of Alabama at Birmingham.

Newman, Timothy, Professor, Computer Science, 1994, PhD, Michigan State.

Ng, Joseph, Professor, Biological Sciences, 1998, PhD, University of California, Riverside.

Ng, Ka Man (Melody), Assistant Professor, Music, 2013, PhD, University of Wisconsin.
Ng, Yeow Chye, Assistant Professor, Nursing, 2013, PhD, University of Alabama at Birmingham.

Niemiller, Matthew, Assistant Professor, Biological Sciences, 2017, PhD, University of Tennessee.

Nishikawa, Ken-Ichi, Associate Research Professor, Physics, 2013, PhD, Nagoya University.

Norris, Casey, Clinical Assistant Professor, Nursing, 2014, MSN, Clemson University.

O'Briem, Jason, Associate Professor, Education, 2008, PhD, University of South Florida.

O'Keefe, Louise, Assistant Professor, Nursing, 2006, PhD, University of Alabama at Birmingham.

Olson, Charlotte, Lecturer, Library, 2007, MFA, University of Florida.

O'Neal, Pamela, Associate Professor, Nursing, 2005, PhD, Virginia Commonwealth University.

Ong, Belinda, Lecturer, Library, 2004, PhD, University of Kentucky.

Orman, Wafa, Associate Dean and Associate Professor, Economics, 2008, PhD, University of Arizona.

Pacino, Nicole, Assistant Professor, History, 2013, PhD, University of California, Santa Barbara.

Pan, David, Associate Professor, Electrical and Computer Engineering, 2002, PhD, University of Southern California.

Park, Jae, Associate Professor, Information Systems, 2015, PhD, George Mason University.

Patterson, LaToya, Clinical Instructor, Nursing, 2014, MSN, University of Alabama in Huntsville.

Pekker, Mark, Professor, Math, 1987, PhD, Cornell.

Peng, Chao, Assistant Professor, Computer Science, 2014, PhD, Virginia Tech.

Petnga, Leonard, Assistant Professor, Industrial Systems Engineering, 2017, PhD, University of Maryland.

Petty, Mikel, Associate Professor, Computer Science, 2005, PhD, University of Central Florida.

Pogorelov, Nickolai, Professor, Space Science, 2008, PhD, Russian Academy of Sciences.

Popp, Katie, Lecturer, Math, 2016, MA, University of Alabama at Birmingham.

Pottenger, John, Professor, Political Science, 1986, PhD, University of Maryland.

Pour, Maria, Assistant Professor, Electrical and Computer Engineering, 2015, PhD, University of Manitoba.

Preece, Robert, Associate Professor, Space Science, 2001, PhD, University of Maryland at College Park.

Price, Jodi, Associate Professor, Psychology, 2008, PhD, Georgia Institute of Technology.

Primeau, Mariena, Clinical Associate Professor, Nursing, 2004, MSN, University of Alabama in Huntsville.

Puckett, Christopher, Assistant Professor, Music, 2017, PhD, University of Missouri - Kansas City.

Que, Tingting, Assistant Professor, Finance, 2014, PhD, University of Iowa.

Ragsdale, Christopher, Associate Professor, Music, 2006, DMA, University of Miami, Florida.

Rahman, Tauhidur, Assistant Professor, Electrical and Computer Engineering, 2017, PhD, University of Florida.
Ramachandran, Kerrin, Lecturer, Intensive Language Center, 2011, MA, University of Alabama in Huntsville.

Ranganath, Heggere, Professor, Computer Science, 1982, PhD, Auburn University.

Rani, Sarma, Associate Professor, Mechanical and Aerospace Engineering, 2011, PhD, U of Illinois-Urbana-Champaign.

Ravindran, Sivaguru, Professor, Math, 1999, PhD, Simon Fraser University, British Columbia.

Ray, Biswajit, Assistant Professor, Electrical and Computer Engineering, 2016, PhD, Purdue University.

Reardon, Patrick, Assistant Professor, Electrical and Computer Engineering, 2013, PhD, University of Alabama in Huntsville.

Reeves, Andree, Associate Professor, Political Science, 1992, PhD, Rice University.

Reynolds, Mark, Clinical Assistant Professor, Nursing, 2009, MSN, University of Alabama in Huntsville.

Robinson, Joy, Assistant Professor, English, 2014, PhD, Illinois Institute of Technology.

Rochowiak, Daniel, Associate Professor, Computer Science, 1984, PhD, Notre Dame.

Roh, Kyung-Ho, Assistant Professor, Chemical and Materials Engineering, 2016, PhD, University of Michigan.

Roller, Sarah, Assistant Professor, Education, 2016, PhD, Michigan State.

Rose-Green, Ena, Associate Professor, Accounting, 2008, PhD, Florida State University.

Rountree, J. Clarke, Professor, Communication Arts, 1993, PhD, University of Iowa.

Sadeghi, Seyed, Associate Professor, Physics, 2007, PhD, University of British Columbia.

Sanders, Carolyn, Professor, Music, 1990, DMA, Florida State University.

Schneider, Judith, Professor, Mechanical and Aerospace Engineering, 2015, PhD, University of California-Davis.

Scholz, Carmen, Professor, Chemistry, 1998, PhD, University of Technology, Dresden Germany.

Schwertfeger, Ron, Lecturer, Library, 2014, MA, University of Alabama.

Scroggin, Kristin, Lecturer, Communication Arts, 2007, MA, University of Alabama.

Sears, Christine, Associate Professor, History, 2007, PhD, University of Delaware.

Seemann, Eric, Associate Professor, Physics, 2003, PhD, Louisiana Tech University.

Setzer, Mary, Lecturer, Chemistry, 2005, MS, University of Alabama in Huntsville.

Sever, Thomas, Professor, Atmospheric Science, 2008, PhD, University of Colorado-Boulder.

Sheldon, Pavica, Associate Professor, Communication Arts, 2011, PhD, Louisiana State University.

Shen, Milton, Associate Professor, Accounting, 2011, PhD, University of Kentucky.

Shotorban, Babak, Associate Professor, Mechanical and Aerospace Engineering, 2008, PhD, University Illinois-Chicago.

Showalter, Darlene, Clinical Associate Professor, Nursing, 1998, DNP, University of Alabama in Huntsville.

Shtessel, Yuri, Professor, Electrical and Computer Engineering, 1993, PhD, Chelyabinsk/Russia.

Simon, Richard, Assistant Professor, Sociology, 2013, PhD, Penn State University.

Sims, Jennifer, Assistant Professor, Sociology, 2017, PhD, University of Wisconsin - Madison.

Singer, Diane, Lecturer, English, 1987, MA, Wichita State University.

Sitaraman, Bhavani, Associate Professor, Sociology, 1993, PhD, University of Massachusetts.

Smeal, Mary Alice, Professor, Math, 2015, PhD, Auburn University.
Smith, Derrick, Associate Professor and Department Chair, Education, 2008, EdD, Texas Tech University.

Smith, Eric, Professor, English, 2006, PhD, University of Florida.

Smith, Lenora, Clinical Assistant Professor, Nursing, 2013, MSN, University of Alabama at Birmingham.

Spencer, Sharon, Clinical Assistant Professor, Nursing, 2012, MSN, University of New Orleans.

St. John, Caron, Professor, Management, 2010, PhD, Georgia State University.

Stallsmith, Bruce, Associate Professor, Biological Sciences, 1999, PhD, University of Massachusetts.

Steidl, Christina, Assistant Professor, Sociology, 2012, PhD, Emory University.

Stewart, Ashley, Clinical Instructor, Nursing, 2013, MSN, Frontier Nursing University.

Stewart, David, Associate Professor, Art, Art History Design, 1989, PhD, Boston University.

Storer, Sallyann, Clinical Assistant Professor, Nursing, 2017, DNP, University of Alabama in Huntsville.

Strong, Carol, Lecturer, Physics, 1993, PhD, University of Alabama in Huntsville.

Sun, Ming, Assistant Professor, Physics, 2014, PhD, Harvard.

Swain, James, Professor, Industrial Systems Engineering, 1992, PhD, Purdue.

T

Talley, Brenda, Associate Professor, Nursing, 2010, PhD, Medical College of Georgia.

Tantaris, Richard, Lecturer, Mechanical and Aerospace Engineering, 2017, PhD, Vanderbilt University.

Taylor, Chris, Assistant Professor, Art, Art History Design, 2014, MFA, Alfred University.

Taylor, W. Joseph, Associate Professor, English, 2010, PhD, University of Texas.

Thomas, Chad, Associate Professor, English, 2011, PhD, University of Michigan.

Thomas, Chad, Associate Professor, Theatre, 2011, PhD, University of Michigan.

Thomas, Dale, Professor, Industrial Systems Engineering, 2015, PhD, University of Alabama in Huntsville.

Torres, Aurora, Assistant Professor, Psychology, 1995, PhD, University of Oklahoma.

Tseng, Fan, Department Chair, Professor, Management Science, 1984, PhD, University of Texas.

Twigg, Pamela, Lecturer, Chemistry, 2014, PhD, Florida State University.

Utley, Dawn, Associate Professor, Industrial Systems Engineering, 1992, PhD, University of Alabama in Huntsville.

V

Vadrevu, Anuradha, MA, Math, 2017, MA, Mississippi State University.

Vaughn, Rayford, Distinguished Professor, Computer Science, 2013, PhD, Kansas State University.

Veasey, Roxie, Lecturer, Art, Art History Design, 2005, MFA, University of Georgia.

Verlaan, Wolfram, Assistant Professor, Education, 2012, ABD, Texas AM.

Vogler, Bernhard, Associate Professor, Chemistry, 2001, PhD, University of Tuebingen.

W

Waddell, Emanuel, Associate Professor, Chemistry, 2004, PhD, Lousiana State University.

Wade, Ryan, Lecturer, Atmospheric Science, 2014, MS, University of Alabama in Huntsville.
Wang, Gang, Associate Professor, Mechanical and Aerospace Engineering, 2010, PhD, University of Maryland.

Warboys, Ina, Clinical Associate Professor, Nursing, 2002, MSN, College of St. Francis.

Waring, Stephen, Professor, History, 1988, PhD, University of Iowa.

Weber, Ryan, Associate Professor, English, 2011, PhD, Purdue.

Weger, Kristin, Visiting Assistant Professor, Psychology, 2017, PhD, Otto-Friedrich-University.

Weimer, Jeffrey, Associate Professor, Chemistry, 1990, PhD, Massachusetts Institute of Technology.

Weir, Colleen, Lecturer, English, 2016, PhD, Catholic University of America.

Weisskopf, Mary Ellen, Assistant Professor, Computer Science, 1983, PhD, University of Alabama in Huntsville.

Wells, Earl, Professor, Electrical and Computer Engineering, 1992, PhD, University of Alabama.

Wessling, Francis, Professor, Mechanical and Aerospace Engineering, 1988, PhD, University of Minnesota.

Whitehead, Paul N., Assistant Professor, Kinesiology, 2017, PhD, University of Pittsburgh.

Wilhite, Allen, Department Chair and Professor, Economics, 1988, PhD, University of Illinois-Urbana.

Wilkerson, William, Dean, Philosophy, 1997, PhD, Purdue.

Wu, Dongsheng, Associate Professor, Math, 2006, PhD, Michigan State University.

Wu, Tingting, Assistant Professor, Civil and Environmental Engineering, 2014, PhD, University of Florida.

X

Xing, Xuejing, Associate Professor, Finance, 2007, PhD, University of Missouri-Columbia.

Xu, Gabe, Assistant Professor, Mechanical and Aerospace Engineering, 2012, PhD, Georgia Tech.

Y

Yoo, Seong-Moo, Associate Professor, Electrical and Computer Engineering, 2001, PhD, Texas University.

Young, Karen, Lecturer, Music, 2016, MA, Birmingham-Southern College.

Z

Zank, Gary, Distinguished Professor, Space Science, 2008, PhD, University of Kwazulu Natal.

Zhang, Guo-Hui, Associate Professor, Math, 1993, PhD, Southern Illinois University.

Zhang, Huaming, Associate Professor, Computer Science, 2005, PhD, State University of New York at Buffalo.

Zhang, Jing, Assistant Professor, Accounting, 2014, PhD, McGill University.

Zhao, Shuang, Assistant Professor, Political Science, 2015, PhD, Indiana University, Bloomington.

Zhao, Shuang, Assistant Professor, Atmospheric Science, 2015, PhD, Indiana University, Bloomington.

Zhou, Hongyu, Assistant Professor, Civil and Environmental Engineering, 2014, PhD, Arizona State University.

Zhu, Feng, Associate Professor, Computer Science, 2005, PhD, Michigan State University.

Financial Information

In the following section you will find information pertaining to financial aspects of attending UAH including how you will be billed, how to pay your bill, estimated cost of tuition and other fees, and information regarding financial aid options. The cost of attendance for students at The University of Alabama in Huntsville will vary by their course of study, personal needs, and place of residence. Please note that all fees, charges, and costs detailed
in this catalog are subject to change without notice. Financial obligations must be satisfied by the established deadlines. For additional information or questions please contact the Bursar’s Office (www.uah.edu/bursar).

# Billing and Payment Procedures

Tuition, fees and all associated charges are to be paid in full by the first official day of the semester (click here (p. 1186) to find first official day of semester). Acceptable forms of payment are:

- Cash
- Personal Checks
- Money Orders
- Cashier’s Checks
- Traveler’s Checks
- Electronic Checks
- Credit Cards/Debit Cards (VISA, MasterCard, American Express, or Discover - 2.75% service fee applies)

Payments may be made online through the student account, in person at the Bursar's Office (SSB 123), or by phone at 256.824.2732. Students who do not pay their bill in full by the first day of the semester are assessed a $50.00 late fee. Students who do not pay their bill in full by the end of the second week of classes may be dropped from class rolls and their enrollment canceled. The University assumes no responsibility for students who attend classes without official enrollment. For summer sessions, please check dates in the Academic Calendar (p. 1186) and on the UAH website (http://www.uah.edu/registrar/calendars).

Mail payments to:

The University of Alabama in Huntsville
Bursar’s Office
Student Services Building, Room 123
Huntsville, AL 35899-5050

# Installment Plan

Installment plans are available to students fall and spring semesters for the management of that semester’s costs. UAH partners with Tuition Management Systems (TMS) to offer student installment plan accounts. A student may set up a plan or give access to others so they may establish a plan on the student’s behalf. Two plans are available - a 4 payment plan or a 5 payment plan. There is a $50.00 fee to establish a plan and the fee is due at the time the plan is initiated. Once a plan is established, all payments are to be made to TMS. Should you need to adjust your plan, contact TMS at 800-336-0528. For more information, or to set up an installment plan, click here (http://www.uah.edu/bursar/installment-plans).

# Balances

Past due balances are a debt owed the State of Alabama and appropriate action will be taken to collect all balances. Holds will be placed on all student accounts that have past due balances. This hold prevents students from receiving grades and transcripts and from registering for another semester at UAH. To the extent permitted by the laws of the State of Alabama, any costs to collect a past due account, to include collection agency charges and attorney fees, will be charged back to the student who shall be liable for payment of those charges.

# Refunds

Students may drop a class through the second week of classes (fall and spring) and receive a 100% tuition refund. Please check the UAH website (http://www.uah.edu/registrar/calendars) for summer dates. A student desiring to drop one or more classes may do so on the UAH online registration site or by submitting a drop request form to the Records and Registration Office, SSB 120. The date of the drop request is the date the written request is received at the Records and Registration Office.

# Financial Aid

Students who apply for financial aid are responsible for completing the necessary paperwork far enough in advance to assure aid is received in a timely manner. For further information, please check with the Office of Financial Aid, Student Services Building, Suite 124.

# Graduate Student Aid

UAH has several programs to assist students in financing their college education. Comprehensive, updated information on all financial aid offered through the Office of Financial Aid is available online at www.uah.edu/financialaid. It includes detailed information about types of aid, eligibility guidelines, application procedures, criteria for awards, disbursement methods and regulations, and institutional policy followed in administration of aid. Additional information and necessary forms are available online and in the Office of Financial Aid.
Students of academic promise who can demonstrate financial need are encouraged to apply for assistance. Realistic financial planning is an essential part of college preparation. UAH helps qualified students find employment, scholarships, and loans as resources permit.

Students should make financial plans well in advance of entering the University. There are two important priority dates for student aid—December 1 for scholarships and April 1 for federal aid (apply online at https://fafsa.ed.gov/). The priority dates are the dates by which completed scholarship applications are certain to be included in the first round of review and by which the Free Application for Federal Student Aid (FAFSA) can be processed in a timely manner. A new FAFSA application must be submitted each year aid is requested.

Types of Financial Aid

Scholarships
(See the Financial Aid (http://www.uah.edu/admissions/undergraduate/financial-aid/scholarships) website for Scholarship listings)

Loans
UAH participates in the William D. Ford Federal Direct Stafford Loan program. Student loan funds are made available directly from the U.S. Department of Education. Although it is sometimes necessary to borrow money to finance an education, caution is advised. Generally, a student should not rely primarily on loans and is advised not to borrow more than what is needed to meet expenses. Additional information regarding eligibility amounts, loan limits, application procedures and suggested application timelines may be found online at uah.edu/financialaid. This and other valuable information regarding the financial aid process are available in the Office of Financial Aid.

Federal Work-Study Program
The Federal Work-Study Program provides employment for students who need financial assistance. A participating student works part-time on campus or in a non-profit agency while attending the University. In determining eligibility, preference will be given to students with the greatest financial need.

Return of Federal Financial Aid
Federally funded financial aid awarded to a student who withdraws from all classes after registration but before the end of the refund period, or who earns no passing grades for a specific term, must be repaid to the respective program source. When withdrawal or reduction of class load occurs after the end of the refund period, all tuition charges will be paid from the awarded aid and any remaining aid must be repaid to the respective aid source. Specific regulations governing this policy may be found online at uah.edu/financialaid.

Meal Plan Rates

Graduate students are not required to purchase meal plans, but options are available if you would like to purchase a package. Please contact the charger card office for a list of meal plans. http://www.uah.edu/chargercard/accounts/charger-card

Tuition and Fees

The University reserves the right to change its tuition, fees, charges, rules and regulations at the beginning of any semester and without prior notice. Generally, the Board of Trustees of the University of Alabama System considers proposals for changes in fees at the June meeting. These fees do not apply to any short term, off-campus, or noncredit offering. For additional information on these courses, see section on College of Professional and Continuing Studies. Current fees are available on the web at www.uah.edu.

**Policies and Procedures**

The University of Alabama in Huntsville has various policies and procedures that guide our faculty, staff, and students. This section of the catalog provides detailed information on these policies, with which you should be familiar. Failure to read and comply with the policies listed here will not exempt a student from being held accountable to them. Additional policies are listed in the Student Handbook (http://www.uah.edu/student-support/student-conduct/handbook). Please note that the policies identified in this catalog do not represent an entire repository of university policies, as colleges and departments may implement policies that are not listed here. In addition, policies may be amended throughout the year.

**Academic Probationary Status**

Any time a student's overall grade point average on graduate courses drops below a 3.0, the student will be placed on academic probation. A student on academic probation is not a candidate for a degree and may not register for classes without approval from the graduate dean, nor may they schedule a masters or doctoral defense.

For unconditionally admitted students, probationary status is removed by raising the overall grade point average to 3.0 or better on all graduate work attempted in all terms up to and including the semester in which 12 semester hours of graduate work are completed following the semester the student is placed on probation.

Conditionally admitted students must maintain a B (3.0) average through the semester in which the first 12 semester hours is completed, or they are subject to dismissal from the graduate school. Conditionally admitted students whose GPA falls below a 3.0 may petition to be allowed to continue in the graduate program if their advisor and department chair are in support of this. Such students must submit a written, signed petition indicating the reason for the poor academic performance, and a plan for raising the GPA to at least a 3.0. Such a plan must give specific details of courses to be taken, course repeats to be used, etc. and must be signed by the advisor and the department chair before being submitted to the graduate dean. If approved, the graduate dean may stipulate other conditions to the plan in order to allow the student to remain in the graduate program.

Failure to remove probation in the manners described may result in dismissal from the Graduate School. In exceptional cases students may petition for readmission to their graduate program upon recommendation of the faculty in the major department and approval by the graduate dean.

**Academic Responsibilities**

Students at the University of Alabama in Huntsville have the following academic responsibilities:

1. To enroll in only those courses for which the stated prerequisite(s) (if any) have been satisfactorily completed. Failure to comply with this procedure may result in administrative withdrawal;
2. To attend all meetings of each class in which they are enrolled. Instructors will announce at the beginning of the semester if they consider attendance in computing final grades;
3. To observe all regulations of their college and select courses according to the requirements of that college;
4. To consult their advisors on all matters pertaining to their academic careers, including changes in their programs;
5. To answer promptly all written notices from advisors, faculty, deans, and other university officers;
6. To maintain the integrity of the classroom by practicing academic honesty. Students should refer to the Graduate Student Handbook for details regarding academic misconduct;
7. To file an “Application for Advanced Degree” or “Application for Graduate Certificate,” as appropriate, through the Office of the Registrar to the Graduate School at least 3 months before the expected date of completion of requirements;
8. To be personally responsible for fulfilling all requirements for graduation and observing all regulations at UAH.

**Academic Honesty**

Plagiarism and other forms of cheating are subject to penalties as outlined in the Graduate Student Handbook. A graduate student found guilty of plagiarism or falsification of research data/results is subject to dismissal from the University.
Confidentiality of Student Records

The Family Educational Rights and Privacy Act of 1974 (FERPA) is a federal law that protects the confidentiality of student education records. To implement FERPA, the University has formulated and adopted a written institutional policy governing the handling of these records.

The term "education records" under FERPA includes generally any record, whether in a printed, handwritten, audio, video, or computer media format, maintained by the University and containing information related to a student in his/her role as a student. Certain records are, however, excluded by FERPA from this broad definition, such as those made by instructional, supervisory, and administrative personnel and kept in their sole possession, those made by campus police, and those made by a physician or other professional medical personnel in connection with treatment of the student.

Under FERPA and University policy, a student has a right of access to his/her education records and may inspect and review the information contained in them. To exercise this right, the student should present a request to the University office where the record is located, and a response will be made no later than 45 days later. In certain cases, a copy of the record may be provided, with a copying fee, as an alternative to actual inspection. Some records are not within this right of review, such as financial information from the student's parents and confidential letters or statements of recommendation where the student has waived the right of access.

A student who believes his/her education records contain information that is inaccurate, misleading, or in violation of his/her privacy rights may bring the matter to the attention of the appropriate records official. If by informal discussion with this official the student does not obtain the corrective action desired, the student will then be entitled to a hearing at which he/she may challenge the objectionable item. Additional information about hearing procedures will be given to the student at that time. The decision of the hearing official or panel shall be final. If the decision is adverse to the student, he/she may insert in the education record an explanatory statement about the disputed item.

A student's privacy interest in the education record is further protected by the rule against unauthorized disclosure. Generally, the University may not, without the student's consent, release the education record or personally identifiable information in it to other individuals or entities.

Disclosure in certain circumstances, however, is specifically excepted by FERPA from the foregoing rule. These circumstances include disclosure to certain parties–University personnel who have a legitimate educational interest in the information, officials of institutions where the student is seeking to enroll, parties to which the student is applying for financial aid, the parent of a dependent student, etc.; disclosure to comply with a judicial order or lawfully issued subpoena; or disclosure in connection with a health or safety emergency. Under the first exception, "University personnel" includes any UAH employee, and a "legitimate educational interest" means that the employee has a need for access to the record to perform appropriate tasks clearly within the area of responsibility of the employee, to perform a task related to the education or discipline of the student, or to provide a benefit or service relating to the student. Personally identifiable information will be transmitted by the University under these exceptions only upon the condition that the recipient not permit any other party to have access to it without the student's consent.

The University may also release what is called "directory information" without obtaining the student's consent. Directory information is limited to the following: the student's name, address (local and permanent), telephone number, e-mail address, date and place of birth, enrollment status (full-time or part time), major field of study, participation in officially recognized activities and sports, dates of attendance, degrees and awards received, the previous educational institution most recently attended, and a photograph of the student. However, a student may prevent the release of even this information, if he/she wishes, by completing a form provided for this purpose in the Office of Student Records.

Any student who believes that his/her rights under FERPA have been violated by the University may notify and request assistance from the Provost and Executive Vice President for Academic Affairs. The student may also file a complaint with the Family Policy Compliance Office, U.S. Department of Education, 400 Maryland Avenue, SW, Washington, DC 20202-5920.
Course Repeat Policy

Students should be aware that course repeats, for any reason, may not be looked upon favorably by some employers and by professional schools; hence, they should avoid the need for repeats.

Students may repeat any course an unlimited number of times in order to achieve a passing grade or an improved understanding of the course material.

One course may be repeated with the previous grade excluded from the calculation of the student's grade-point average. The student must declare such a course repeat before the end of the regular registration period for the semester in which the course will be repeated. Only a course for which the student has received a grade of C, D, or F may be repeated under this option. When withdrawing from a course that has been declared as a course repeat, the previous grade will still be used in the computation of the GPA, and the course will not count toward the maximum of one repeat. Until a grade other than W is reported, the previous grade will be used for the GPA. The transcript will show both the original grades and the course repeat grades, but only the grade points and semester hours earned in the repeated course will count toward graduation and will be averaged into the student's GPA. Concurrent registration for multiple sections of a course is not allowed.

For all other courses repeated at UAH, both the original grade and the course repeat grade will show on the transcript and will be calculated in the student's GPA.

A student wishing to exercise the option of repeating a course with grade replacement must file the intent to do so in the Office of Student Records before the end of regular registration using a Graduate Course Repeat form.

Graduate Dean's List

In order to be considered eligible for the Graduate Dean's List, a graduate student must:

* have completed at least 12 hours of graduate coursework at UAH during the last 12 months; and
* have maintained a GPA on graduate-level coursework at UAH of 3.85 overall and 4.0 for the past 12 hours.

The Graduate Dean's List is compiled by the Graduate School each spring prior to Honor's Day. Qualifying students will be recognized on the Graduate School's website.

1 Spring to fall semester of the previous year

Graduate Degree Requirements

The following scholastic requirements are those of the Graduate School. Individual colleges and/or departments may list additional requirements.

1. Overall grade average must be B (3.0) or better on all graduate credit hours at UAH. In addition, the grade average must be B (3.0) or better on courses taken in the current graduate degree program;
2. No grade lower than a C may be counted toward a graduate degree;
3. At least 30 percent of the hours required for a graduate degree must be completed in courses numbered 600 or above;
4. A majority of the credit hours (including dissertation credits) toward a doctoral degree must have been earned at UAH (or, in the case of joint/shared programs, at the participating institutions).
5. In the case of joint/shared programs, at least 33% of all hours earned for a degree must be earned at UAH.

The Master's Degree as First Graduate Degree

Students may follow one of two plans for the master's degree, except where modified by individual departments. To avoid delay, students are encouraged to submit a Program of Study with the help of a faculty advisor before the completion of 12 semester hours of graduate coursework, in order to assure that courses taken will apply to the degree.

Thesis Plan

Degree requirements under this plan include completion of at least 24 semester hours of graduate course work and at least 6 credit hours of coursework (699) toward the writing of an acceptable thesis. Students working on a thesis must register for thesis credit each term in which they receive supervision or during which they are engaged in the formal preparation and/or defense of the thesis. The thesis should show evidence of the student's capability for research, independent thought, and analysis. Furthermore, the thesis should be written in fluent, acceptable English. The subject must be in the major field. All theses must be accessible to the general public. The thesis is supervised and approved by a faculty committee composed of at least three members of the graduate faculty and appointed by the chair of the department, with approval of the graduate dean. A majority of the committee must be from the major department/program. The chair and at least half of the committee must 1) be full-time UAH faculty members and 2) have full membership in the graduate faculty. If the committee chair is different from the advisor, the advisor must also be a full member of the graduate faculty.

A completed copy of the thesis must be submitted to the major department and the thesis defended according to the dates set by the Graduate School, typically at least eight weeks before the end of the semester in which degree requirements are expected to be completed. The specific dates and
detailed procedures for submission of theses can be found at http://uah.edu (http://grad.uah.edu)/graduate (http://uah.edu/graduate). After the student has passed his/her thesis defense a copy of the thesis signed by the committee, department chair and college dean must be submitted to the Graduate School for final proofreading and approval by the graduate dean. Theses must comply with the regulations set forth in the Graduate School's Thesis and Dissertation Manual, available online at uah.edu/graduate/resources/thesis-manual or in paper copy from the Graduate School. Students must be in good academic standing (3.0 or better) to schedule a thesis defense.

In exceptional cases, theses may be written in absentia. Before leaving the University, students must 1) select a thesis subject, 2) submit to the chair of the major department a satisfactory outline of the thesis, and 3) submit satisfactory evidence that adequate facilities are available where research is to be done. The student's advisor, the department chair, and the graduate dean must then approve such a plan.

Non-Thesis Plan
Degree requirements for the master's degree under this plan include the completion of a minimum of 30 semester hours of graduate coursework. Individual colleges and/or departments may have specific or additional requirements. A thesis is not required; however, a candidate working under this option may be required to participate successfully in a seminar or other courses for acquaintance with research methods and appreciation of the place and function of original investigation in the field.

Transfer Credit
With permission of the major department, students may transfer up to twelve (12) semester hours of acceptable graduate credit earned in an approved institution and may count it toward a master's degree. No transferred credit may be more than ten years old at the time of a student's graduation from UAH. Such credit may be transferred with the approval of the major department if completed with a grade of B or better.

In some circumstances a student may need to take a graduate course at another institution while enrolled in a UAH degree program. The transfer of such credit back to UAH must be approved by the department and by the graduate dean prior to the student enrolling at the other institution. (This does not apply to joint or shared programs with other schools).

Time Limit
All requirements toward the master's degree, including transfer credit, must have been earned during the six years (18 fall, spring, and summer semesters) immediately preceding the date on which the master's degree is to be awarded. Credit for individual graduate courses at UAH completed more than 18 semesters but less than 30 semesters before the completion of all requirements for the degree must be validated by the department that offered the course through the administering of a written or oral examination. Once a course is validated, it is considered valid through the tenth year only. Credit for courses more than ten years old cannot be validated. Up to six hours of transfer courses that are more than 18 semesters but less than 30 semesters may be validated by a committee of at least three members of the graduate faculty appointed by the department or program chair, with the results reported to the graduate dean.

Application for Degree
All candidates for a master's degree must apply for the degree by submitting the Application for Advanced Degree and fee to the Registrar's Office at least three months before the degree is to be conferred. Consult the graduate school website for specific deadline dates.

Final Examination
A final comprehensive examination, or satisfactory performance (B or better) in a capstone course, is required of all candidates for a master's degree. Capstone courses must be designated as such by the department/program during the course approval process and be approved by the College Dean, the Graduate Council Curriculum Committee, the Graduate Dean, and the Provost.

Final examinations for non-thesis candidates may be written, oral, or both. Thesis option candidates must pass a final examination that includes an oral presentation of the thesis in the form of a seminar before the student's supervisory committee; the oral presentation is open to the members of the University community. The examination must be given according to the dates set by the School of Graduate Studies, usually at least six weeks before the end of the semester in which degree requirements are expected to be completed, and the results reported within two working days to the graduate dean. A written notice of the time and place of examination is sent to the graduate dean at least two weeks before the examination date. The graduate dean appoints an additional member of the graduate faculty to act as observer for all thesis defenses. Once set the examination becomes an official Graduate School matter; the date cannot be changed without prior arrangement amongst the supervisory committee members and the student and without approval of the graduate dean. For more details, consult the Graduate School Handbook.

After approval by the graduate dean, the department sends a copy of the written notice to the candidate and each member of the committee. A student may take the final examination no more than twice.

Thesis Submission
After the student has passed their thesis defense and at least six weeks before the end of the semester in which degree requirements are expected to be completed, a final draft of the thesis with supervisory committee, department/program chair, and college dean signatures must be submitted to the School of Graduate Studies, with personal contact information. Theses must comply with the regulations set forth in the Graduate School's Thesis and Dissertation Manual, available online at uah.edu/graduate/resources/thesis-manual. Student not in compliance will be notified. Upon acceptance by the Graduate School of a student's thesis, the Graduate Dean will forward a signed copy to the student who will then upload it to Proquest. All theses must be accessible to the general public. Detailed procedures for submission can be obtained by calling (256)824-6002.
Second Master’s Degree
A student is permitted to apply no more than six semester hours of credit earned for one graduate degree toward an additional master's degree. Such permission is granted at the discretion of the major department and approved by the graduate dean.

Summary of Checkpoints toward Completion of all Master's Degree Requirements
The following checkpoints have been established to assist a student in proceeding from admission to graduation. Timely completion of these forms, in sequence, will help to insure that a student's degree program is in order.

Program of Study: This form must be filed as early as possible and definitely before the completion of 18 semester hours. If a supervisory committee develops the program, the student should be invited to the committee meeting. Once approved, changes in the Program of Study must be submitted on a Change of Program form and approved by the committee chair, department chair and graduate dean. A valid reason must be given for the change.

Application for Advanced Degree: This is to be filed at least three months before the end of the semester in which degree requirements are expected to be completed. It is available in the Registrar's Office.

Notification of Thesis Defense/Final Examination: Notification of the examination date must be turned in to the Graduate Studies Office at least two weeks in advance of the examination. The final examination must be taken at least six weeks before the end of the semester in which degree requirements are expected to be completed, and according to the dates set by the Office of Graduate Studies and not earlier than the semester in which the student will complete all required coursework. A member of the committee will be appointed to be the graduate observer.

Report of Thesis Defense/Final Exam: Following the thesis defense/final exam the committee shall submit a signed report to the Graduate Studies Office.

Doctoral Degrees
UAH offers doctoral level programs in the Colleges of Engineering, Science and Nursing. For specific information about the Doctor of Nursing Practice (DNP) program please see the College of Nursing section of the catalog.

The Doctor of Philosophy Degree
The doctor of philosophy degree is a research oriented degree awarded upon the demonstration of scholarly competence. The degree program at UAH is based on the successful completion of a program of study designed by the student and a faculty committee. The program may include mastery of certain research skills (e.g., languages, computer programming, statistics, and others approved by the Graduate Council), and must include an independent research project, the results of which are presented in the form of a dissertation.

Degree Requirements
The following specific degree requirements are applicable to all Ph.D. degree programs within the University. Additional requirements may be specified by individual colleges and/or departments as shown in this catalog under the appropriate section.

Course Requirements
Course requirements, including at least 48 hours of graduate coursework (excluding dissertation research), are defined in the Program of Study and are determined by the appropriate department. Usually the student will take a majority of the courses in a given field with the remainder in a cognate field. This, however, is not a requirement. A maximum of nine semester hours credit in thesis/research work from the master's degree may be allowed to count toward the 48 hour requirement. Students must also satisfactorily complete a minimum of 18 semester hours of dissertation research (799). Students must register for dissertation research each semester in which they receive faculty supervision. The approval of the Program of Study should be accomplished as early as possible, but no later than one year after admission to the Ph.D. program. Once approved, the program may be amended only with the approval of the supervisory committee upon submission of the Change of Program form and approval of the graduate dean.

Continuous Registration Requirement
All students who have completed the minimum coursework requirements for the doctoral degree they are pursuing (excluding dissertation hours) must register for a minimum of 3 semester hours of graduate credit (to include dissertation credit) each fall and spring semester until all degree requirements are complete.

Transfer Credit
All credit toward the Ph.D. which has not been earned at UAH must be acceptable graduate credit from an approved institution. Such credit may be transferred with the approval of the major department if completed with a grade of B or better. A majority of the credit hours (including dissertation credits) toward a doctoral degree must have been earned at UAH (or, in the case of joint/shared programs, at the participating institutions).

Academic Residence Requirement
Residence at UAH as a doctoral student is required for evaluation of the student's investigative abilities, independent thought, and scholastic progress by faculty members other than the major advisor. Residence may be established through either (1) being enrolled as a full-time student (at least 9 graduate semester hours) either for one continuous academic year, or for Spring and Fall semesters in the same calendar year, or (2) being enrolled in at least 6 hours of graduate course work in at least three of four consecutive semesters. Colleges and/or departments may have more stringent
requirements and students should refer to the appropriate section of the catalog for details. All research effort presented for residence credit toward the Ph.D. degree must be performed under the direction of a full member of the graduate faculty.

Supervisory Committee
A supervisory committee is appointed for each student working toward the Ph.D., usually after satisfactory completion of a preliminary examination administered by the major department. The supervisory committee is appointed by the department chair with approval of the graduate dean as part of the Program of Study approval. The supervisory committee is composed of at least five members of the graduate faculty, with at least half being from the major department/program. The chair and at least half of the committee must 1) be full-time UAH faculty members and 2) have full membership in the graduate faculty. If the committee chair is different from the advisor, the advisor must also be a full member of the graduate faculty.

Qualifying Examination
The Qualifying Examination is given under the auspices of the School of Graduate Studies and must be administered by the Supervisory Committee within one year of the date the student completes the formal coursework on the Program of Study. It is conducted in two distinct stages which may be separated by a length of time deemed appropriate by the supervisory committee. The first stage is a demonstration through written and oral examination that the student is proficient in the subject matter in the Program of Study. The final stage is the dissertation proposal review in which the student prepares a written report and makes a subsequent oral presentation describing the proposed dissertation research. Both the dissertation topic and expected approach(es) must be clearly delineated to the committee's satisfaction in order for a pass to be granted. The presentation of the oral dissertation research proposal must be scheduled through the School of Graduate Studies at least two weeks in advance. Once this review is complete, the results of the Qualifying Examination are reported to the School of Graduate Studies within two working days on the prescribed form. The presentation of the oral dissertation proposal may be given no more than twice.

Time Limit
All requirements for the doctoral degree must be completed no more than five years after the student has passed the qualifying examination. Failure to meet this time requirement requires the student to take and pass another qualifying examination.

Application for Degree
All candidates for a Ph.D. degree must apply for the degree by submitting the Application for Advanced Degree and fee to the Registrar's Office at least three months before the end of the semester in which degree requirements are expected to be completed.

Dissertation
The dissertation is evidence that the student can independently identify a problem of contemporary significance through familiarity with the current literature in the major field, organize and execute a program of research, recognize and analyze the results, and present them in cogent, well-written exposition. Furthermore, the dissertation should be written in fluent, acceptable English. Dissertation results are expected to be submitted for refereed scholarly publication. All dissertations must be accessible to the general public. A completed copy of the dissertation must be submitted to the major department at least eight weeks before the end of the semester in which degree requirements are expected to be completed. See the graduate school website for specific deadlines. Dissertations must comply with the regulations set forth in the Graduate School's Thesis and Dissertation Manual, which is available online at uah.edu/graduate/resources/thesis-manual.

Final Examination
The final examination must include an oral presentation of the dissertation in the form of a seminar before the student's committee; this presentation is open to the members of the University community. The examination must be given at least six weeks before the end of the semester in which degree requirements are expected to be completed, and the results reported within two working days to the graduate dean. The committee appoints a member of the graduate faculty to act as observer for all dissertation defenses. Once set, the examination becomes an official Graduate School matter; the date cannot be changed without prior arrangement amongst the supervisory committee members and the student and without approval of the graduate dean. A student may take the final examination no more than twice. Students must be in good academic standing to schedule a dissertation defense.

Summary of Checkpoints toward Completion of Degree Requirements
The following checkpoints have been established to assist a student in proceeding from admission to graduation. Timely completion of the forms, in sequence, will help to insure that a student's degree program is in order.

Program of Study: The supervisory committee and the student should meet to develop a complete program for the student. Once approved, changes in the Program of Study must be submitted on a Change of Program form and approved by the committee chair, department chair and graduate dean. A valid reason must be given for the change.

Notification of Qualifying Examination: Notification of the qualifying examination must be turned in to the Graduate Studies Office at least two weeks before the examination date.

Report of Qualifying Examination: Following the examination the committee shall submit a signed report to the Graduate Studies Office.

Application for Advanced Degree: This should be filed three months before the end of the semester in which degree requirements are expected to be completed. (Available from the Registrar's Office, SSB 120.)
Notification of Dissertation Defense: Notification of the defense must be turned in to the Graduate Studies Office at least two weeks before the examination date. This examination must be taken at least six weeks before the end of the semester in which degree requirements are expected to be completed. A member of the committee will be appointed to be the graduate observer.

Report of Dissertation Defense: Following the defense the committee shall submit a signed report to the Graduate Studies Office.

Dissertation Submission
After the student has passed his/her dissertation defense and at least six weeks before the end of the semester in which degree requirements are expected to be completed, a final draft of the dissertation with supervisory committee, department/program chair, and college dean signatures must be submitted to the School of Graduate Studies, with personal contact information. Dissertations must comply with the regulations set forth in the Graduate School's Thesis and Dissertation Manual, available online at uah.edu/graduate/resources/thesis-manual. Student not in compliance will be notified. Upon acceptance by the Graduate School of a student's dissertation, the Graduate Dean will forward a signed copy to the student who will then upload it to Proquest. All dissertations must be accessible to the general public. Detailed procedures for submission can be obtained by calling (256)824-6002.

Enrollment Status

Seniors Taking Graduate Courses
A student (other than a senior taking graduate courses with appropriate authorization; see “Seniors Taking Graduate Courses”, or a student in a combined undergraduate/graduate program) must be admitted to the Graduate School to receive graduate credit for courses taken or to take courses at the 500 level or above.

Course Load
A full-time graduate student is one enrolled in courses totaling 9 (GTA or GRA) to 12 semester hours for fall and spring semesters and 6 semester hours for summer. The maximum course load for a graduate student is 13 semester hours. A student employed full-time (40 or more clock hours a week) may schedule no more than 6 hours of graduate work a semester without permission of the faculty advisor or the department chair if the student does not have an advisor. A full-time teacher working toward certification is limited to two courses a semester and a maximum of four three-semester-hour courses an academic year (nine months).

Thesis/Dissertation Requirements
Students working on a thesis or dissertation must register for thesis or dissertation credit each term in which they receive supervision or during which they are engaged in the formal preparation of the thesis/dissertation. **Students must register for 3 credit hours of either 699 or 799 in the semester that they defend.** Thesis and dissertation supervision courses are graded on satisfactory/unsatisfactory basis.

Continuous Registration Requirement
Students pursuing a doctoral degree must register for a minimum of 3 semester hours of graduate credit (to include dissertation credit) each fall and spring semester until all degree requirements are complete and the dissertation is complete and defended.

Credit to Audit
A student is permitted to change a course from credit to audit only during the first four weeks of classes. For students whose tuition is paid by the University through graduate assistantships or tuition scholarships, changing a course from credit to audit will require the student to reimburse the University for that course’s tuition.

Examinations
During each semester, one or more announced examinations of class period length may be held. At the end of each semester, a final examination period is scheduled for each course. Absences from a scheduled final examination without previous arrangement with the course instructor (except in extenuating circumstances) will be classified unexcused and a failing grade in the course will be assigned.

Any student whose final examination schedule is such that he or she is scheduled to take three or more examinations during a single day shall have the right to have the middle examination rescheduled. The date and time of the rescheduled examination shall be by mutual agreement between the student and the affected faculty member and must be agreed upon prior to the final week of the semester. It is the student’s responsibility to notify the instructor of this type of conflict, and it is the instructor’s responsibility to verify that the conflict actually exists. If a student is scheduled to take four examinations during a single day, then the same procedure applies except that the student shall now have the right to have both the second and fourth examinations rescheduled.

Registration
Dates, times, procedures, and eligibility conditions for registration are published in the Schedule of Classes on the UAH website at http://www.uah.edu/cgi-bin/schedule.pl. After the published deadline, registration requires approval from the Dean of the Graduate School. A student must submit a written petition with appropriate documentation to substantiate extenuating circumstances to the Graduate School. The petition must include signatures from the instructor and the chair of the department that offers the course. All financial obligations to the University must be cleared before a student may
register for courses. Students should consult with their academic advisor prior to registration. Non-degree students have a lower registration priority for full classes.

Concurrent registration for multiple sections of a course is not allowed. A student who schedules courses during registration makes a financial commitment to the University. Schedule adjustments, drops, and withdrawals must be officially transacted either via UAH web registration or in writing on a Registration/Schedule Adjustment form and recorded by the Office of Student Records by the published deadlines. Adjustments in fees, if any, will be made by the Office of the Bursar. The University assumes no responsibility for students who attend classes without proper registration.

A semester hour is an academic unit of credit awarded for the completion of educational activities. The amount of credit awarded depends on the expected amount of time required to complete in-class and out-of-class work during a semester for a course that is passed. For example, each semester hour awarded for a lecture course at UAH requires at least one hour of classroom or direct faculty instruction and a minimum of two hours out of class student work each week for approximately fifteen weeks for one semester. At least three hours of work per week is required for each semester hour awarded for practica, internships, activity courses, laboratory experiences, and distance learning courses, although there will be variations in the amount and type of instruction and the minimum amounts of outside student work to accommodate differences among academic disciplines and the natures of particular subject matters and courses. The institution reserves the right to make semester hour assignments that exceed the minimum time requirements stated. Time expectations for work outside of class are minimums and may be higher depending on the nature and level of the course as well as the ability, commitment, and learning style of the student.

Schedule Adjustments

After the beginning of an academic term, students seeking to change their course schedules must follow the Schedule Adjustment Process. Schedule adjustments fall into seven categories: Drop/Add, Late Addition, Credit/Audit, Withdrawal, Late Withdrawal, Retroactive Withdrawal, and Medical Withdrawal. The following definitions and procedures will govern the Schedule Adjustment Process.

Drop/Add

After classes have begun, students should consult with their academic advisor and other university officials for advice and approval before making any schedule changes. Students are advised to check the impact of dropping courses on things like financial aid, athletics eligibility, visa status, etc.

Through the fifth day of a ten-week or fifteen-week semester, the third day of a seven-week semester, or second day of a six-week or shorter semester, a student may Add a course through the web-registration process, by meeting with their advisor, or by submitting a Registration/Schedule Adjustment form to the Registrar’s Office.

Through the tenth day of classes for a ten- or fifteen-week semester, seventh day of a seven-week semester, fifth day of a five-week semester, or third day of a three- or four-week semester, students may Drop any or all courses from their schedule and receive a refund of tuition and fees associated with the dropped courses.

Late Addition

In rare circumstances a student may have a legitimate and substantial need to register, add a class or change a class section after the deadline (i.e., Last Day to Add a Class). In these instances the student must complete the Registration/Schedule Adjustment form, with recommendations (approval/ non-approval) from the instructor and the chair of the department that offers the course. The Office of the Registrar will process the request once approvals are obtained.

New international students who want to register after the deadline must obtain approval from the International Student Advisor, and in the case of graduate students, the Graduate Dean. Approvals for late registration for new international students will include the respective academic units.

Credit to Audit

A student is permitted to change a course from credit to audit through the fourth week of a fifteen-week semester, the third week of a seven- or ten-week semester, and the second week of a five-week or shorter semester. The instructor is not required to grade any written assignments that may be submitted by an auditing student. A student who elects to audit a course may not at any point after electing to audit, change to “for-credit”, i.e., graded status. Any student failing to follow established procedure for change to audit will continue to be enrolled in the class for credit and may receive a failing grade in that course.

Withdrawal

After the Drop/Add period a student may Withdraw from any course and receive a grade of W. The deadline for Withdrawal is the end of the tenth week of a fifteen-semester, end of the seventh-week of a ten-week session, the end of the fifth week of a seven-week session, the end of the third week of a five-week semester, or the end of the second week of a semester shorter than five weeks.

Withdrawal is accomplished by either 1) executing a withdrawal on the registration website or 2) by submitting a Registration/Schedule Adjustment form to the Registrar’s Office. No signatures or approvals are required for a Withdrawal, but students should consult with appropriate officials to determine the impact that withdrawing from a course may have on financial aid, athletics eligibility, visa status, etc.
The University of Alabama in Huntsville

Class non-attendance does not constitute withdrawal nor does notification to the instructor. Any student failing to follow the established procedure for withdrawal will continue to be enrolled in the class and may receive a failing grade in that course.

**Late Withdrawal**

After the Withdrawal period, a student may request a Late Withdrawal from a course under extenuating circumstances and with the approval of the dean of the college in which the student is enrolled. Avoidance of an undesirable grade does not justify withdrawal.

Students requesting a Late Withdrawal must submit the Late Withdrawal Form, along a written explanation of the extenuating circumstances and any appropriate documentation, to the Dean of Students for review. If the Dean of Students believes sufficient evidence exists to warrant a Late Withdrawal, the withdrawal request is forwarded to the Dean of the college in which the student is enrolled (minus personal documentation) for consideration.

Class non-attendance does not constitute withdrawal nor does notification to the instructor. Any student failing to follow the established procedure for withdrawal will continue to be enrolled in the class and may receive a failing grade in that course.

**Retroactive Withdrawal**

Undergraduate students may at times experience extraordinary problems during an academic semester. Within two years of having completed such a semester, a student may petition the Dean of Students to withdraw retroactively from ALL classes taken during that semester. A retroactive withdrawal is granted only under exceptional circumstances, such as extraordinary medical or personal problems. The petition should use the Retroactive Withdrawal form, and include clear and documented evidence whenever possible. The Dean of Students verifies the documentation and forwards the petition to the Associate Provost, who approves or denies the request. If the Associate Provost grants a retroactive withdrawal, the grades for ALL courses taken during the semester in question will be changed to W's. Petitions for Retroactive Withdrawals are considered after final grades are posted. Students should be aware that retroactive withdrawals may have an impact on their ability to receive or retain financial aid and timely completion of their degree.

**Medical Withdrawal**

Students may at times experience medical hardships that prevent them from attending class and necessitate a withdrawal. Decisions on whether to award a Drop, Withdrawal, Refund, etc. must include sufficient documentation to justify the request. In such cases the student should contact the Dean of Students office for assistance.

**Recording of Withdrawals**

If the withdrawal process is completed during the first two weeks of the semester, the withdrawing student's name does not appear on the final rolls of the class from which the student withdrew, and that course does not appear on the student's permanent record. If the withdrawal process is completed after the first two weeks, then the withdrawing student's name will be on the final roll of the class from which the student withdrew, and that course will be recorded on the student's permanent record with a final grade of W.

**Counseling**

Students need to be aware that many potential employers, as well as graduate and professional schools, view an excessive number of W's on a transcript as a flag that the student cannot be counted on to complete demanding projects. Advisors should be informed of this fact and students should be encouraged to discuss with their advisors any plans to withdraw from a course, especially after the first two weeks of the semester.

**Course Repeat Policy**

**Undergraduate**

Students should be aware that course repeats, for any reason, may not be looked upon favorably by some employers and by professional schools, and hence they should avoid the need for repeats.

Students may repeat a course in order to achieve a passing grade or an improved understanding. Students may not repeat a course for which they have higher level credit. For example, a student cannot repeat MA 112 (http://catalog.uah.edu/search/?P=MA%20112) after he/she has credit for Calculus. For other courses, the course repeat policy is as follows. For the first five courses repeated, the original grade will not be calculated into the student's grade point average. Only courses for which the student has received a grade of C, D, or F may be repeated for this purpose. Each course repeat counts against the maximum of five that can replace the previous grade. For instance, a student may use all five repeats in a single course or in five separate courses or any combination of separate courses and multiple repeats of single courses. The transcript will show both the original grades and the course repeat grades, but only the grade points and semester hours earned in the repeated courses count toward graduation and are averaged into the student's GPA. After five course repeats, all other courses repeated at UAH will result in both the original grade and the course repeat grade being calculated into the student's GPA. This course repeat policy will automatically be applied unless the student files for an exemption in the Office of the Registrar upon registration.

**Graduate**

Students should be aware that course repeats, for any reason, may not be looked upon favorably by some employers and by professional schools; hence, they should avoid the need for repeats.
Students may repeat any course an unlimited number of times in order to achieve a passing grade or an improved understanding of the course material.

One course may be repeated with the previous grade excluded from the calculation of the student’s grade-point average. The student must declare such a course repeat before the end of the regular registration period for the semester in which the course will be repeated. Only a course for which the student has received a grade of C, D, or F may be repeated under this option. When withdrawing from a course that has been declared as a course repeat, the previous grade will still be used in the computation of the GPA, and the course will not count toward the maximum of one repeat. Until a grade other than W is reported, the previous grade will be used for the GPA. The transcript will show both the original grades and the course repeat grades, but only the grade points and semester hours earned in the repeated course will count toward graduation and will be averaged into the student’s GPA. Concurrent registration for multiple sections of a course is not allowed.

For all other courses repeated at UAH, both the original grade and the course repeat grade will show on the transcript and will be calculated in the student’s GPA.

A student wishing to exercise the option of repeating a course with grade replacement must file the intent to do so in the Office of Student Records before the end of regular registration using a Graduate Course Repeat form.

**Academic Bankruptcy Policy**

An undergraduate student may petition the Office of the Provost to declare academic bankruptcy. These requests are reviewed by the Scholastic Affairs Committee, which will make a recommendation to support or deny petition. After reviewing the petition and recommendation from the committee, the Associate Provost will decide whether to grant the student academic bankruptcy. Under this policy, all college-level work completed at UAH prior to a date specified by the student is eliminated from computation of grade point averages and will not be applied toward a degree at UAH. Such work will not be expunged from the student’s scholastic records and transcripts, although it will be designated as work not included in the computation of grade point averages or applied toward degree requirements. There must be a minimum of two calendar years between the date of petition and the date specified by the student in the bankruptcy petition. Academic bankruptcy will only be granted once during a student’s academic career at UAH.

**Grading System**

The University of Alabama in Huntsville’s grading system includes grades of A, B, C, D, F, I, X, W, U, N, and NC. Instructors have the option of augmenting the course grades of A, B, C, and D with symbols “+” and “-” signifying, respectively, high and low achievement within the assigned grade. These augmented letter grades become part of the student’s permanent record and appear on transcripts, but augmentation of a letter grade does not affect its value for the purposes of the GPA computation.

Graduate, Ph.D. level

**Change of Grade**

When it is believed that a grading error may have occurred, a student is permitted a maximum of one semester from the date a grade is assigned to request a change of course grade. Grades submitted to the Office of Student Records can normally be changed only by submission by the instructor on a Change of Grade form containing a written explanation of the error. The Change of Grade form must be approved by the department chair and received in the Office of Student Records no later than two semesters from the date the original grade was assigned.

**Transcripts**

There are two ways to request an official UAH transcript.

1. Fill out the transcript request form (http://www.uah.edu/images/admissions/Registrar/Charger%20Central/Forms/offtran071116.pdf). The completed form and payment information can be sent via fax to 256.824.7780 (http://catalog.uah.edu/grad/academics/transcripts/tel:(256)%20824-7780), scanned and emailed to registrar@uah.edu, mailed to our office, or dropped off in-person.

2. You can also request electronic or paper official transcripts through the National Student Clearinghouse (https://www.studentclearinghouse.org/secure_area/Transcript/login.asp?FICEcode=00105500).

   o In order to send PDF transcripts, you must request them through the link above.

**Please note**: effective August 1, 2016, a 3% convenience fee will be added to all credit/debit card payments. However, if you use the National Student Clearinghouse (https://www.studentclearinghouse.org/secure_area/Transcript/login.asp?FICEcode=00105500) to request transcripts, you will not be charged the convenience fee.
General Information

Mission of the University of Alabama in Huntsville

The University of Alabama in Huntsville is a research-intensive, internationally recognized technological university serving Alabama and beyond. Our mission is to explore, discover, create, and communicate knowledge, while educating individuals in leadership, innovation, critical thinking, and civic responsibility and inspiring a passion for learning.

History

The University of Alabama in Huntsville (UAH) is a part of the University of Alabama System. In June 1969, the University of Alabama Board of Trustees established the University of Alabama System with three independent, autonomous campuses at Huntsville, Birmingham, and Tuscaloosa. Each campus has a separate president who reports to the Board of Trustees through the chancellor of the system.

Academic programs were initiated in Huntsville in 1950; in 1963 degree opportunities at the master’s level were provided and in 1964, at the baccalaureate level. The first master's degree based on work begun and completed in Huntsville was awarded in 1964 and the first undergraduate degrees in 1968. Doctoral programs were initiated in physics and engineering in 1971, and the School of Nursing was established the same year. In 1974, in a component of the Alabama School of Medicine, the first full-time medical students began their core clinical experience in Huntsville. (These programs were transferred to direct UAB management in 1995). In the two decades of the 1970s and 1980s, UAH implemented a broad range of undergraduate degree programs; established master's programs in the liberal arts, nursing, and business administration; initiated professional degree programs at both the graduate and undergraduate levels; and inaugurated selected Ph.D. programs in high-technology fields in the sciences and engineering.

UAH is focused to meet the specific needs of scientific and technological enterprises and the cultural and intellectual needs of a rapidly expanding region. It is UAH’s intention to be innovative, even experimental, to explore what is new, to evaluate existing programs continually, to develop and establish curricula and pedagogical techniques calculated to help students live and perform well in a complicated environment.

Accreditation

UAH is accredited by the Southern Association of Colleges and Schools Commission on Colleges (SACSCOC) to award bachelor’s, master’s, specialist, and doctoral degrees. Contact the Commission on Colleges at 1866 Southern Lane, Decatur, Georgia 30033-4097 or call 404-679-4500 for questions about the accreditation of UAH.

Several UAH programs are accredited by their respective accrediting agencies. Academic programs in chemistry are accredited by the American Chemical Society. Eight undergraduate engineering programs (aerospace engineering option in mechanical, chemical, civil, computer, electrical, industrial and systems, optical, and mechanical) are accredited by the ABET, Inc. Both undergraduate and graduate programs in nursing are accredited by the Commission on Collegiate Nursing Education. Computer science holds accreditation from the Computing Accreditation Commission of ABET, Inc. All programs, both undergraduate and graduate, in the College of Business are accredited by the American Assembly of Collegiate Schools of Business (AACSB). In addition, the University of Alabama in Huntsville is an accredited institutional member of the National Association of Schools of Art and Design (NASAD) and the National Association of Schools of Music (NASM). Teacher education programs are approved by the Alabama State Board of Education, according to standards of the National Association of the State Directors of Teacher Education and Certification (NASDTEC), for the issuance of appropriate professional certificates for service in public schools, and the College of Education at The University of Alabama in Huntsville is accredited by the National Council for Accreditation of Teacher Education (NCATE).
