Industrial and Systems Engineering and Engineering Management

N143 Technology Hall
Telephone: 256.824.6256
Email: isegrad@uah.edu

Chair: James J. Swain, Professor

Mission
To provide integrated, applications-oriented education and research programs in the areas of Industrial Engineering, Systems Engineering, and Engineering Management to support the needs of students and organizations in the Huntsville area and beyond.

Degrees
Master of Science in Engineering (Engineering Management, Industrial Engineering, Systems Engineering concentrations)
Master of Science in Operations Research

The Department of Industrial and Systems Engineering and Engineering Management offers major options and associated minors in the subject areas of Operations Research, Industrial Engineering, Systems Engineering, and Engineering Management. All students are encouraged to tailor their graduate programs with a blend of theory and applications. ISEEM faculty are actively involved in research programs, which affords graduate students opportunities for coursework and research inquiry in the areas described above. Please contact the ISEEM Department (256.824.6256) or visit the ISEEM homepage at http://www.uah.edu/iseem for further details.

Industrial and Systems Engineering, MSE & MSOR

Additional Admission Requirements
The requirements for admission for graduate study in an ISEEM program conform to the policies of the School of Graduate Studies and the College of Engineering. In addition, the MSE Engineering Management and Systems Engineering Options require two years of engineering work experience.

General Requirements
Students pursuing an MSE option or the MSOR under ISEEM must follow the requirements for either Plan I (Thesis Option) or Plan II (Non-Thesis Option). Both plans require 24 semester hours of approved graduate coursework. Plan I requires a minimum of 6 semester hours of thesis work and the successful completion of the thesis as approved by the supervisory committee. Plan II requires an additional 6 semester hours of approved graduate coursework.

MSE Concentrations
The MSE-Engineering Management Concentration was developed to meet the needs of practicing engineers who find themselves performing engineering management functions without the benefit of formal management education. The Engineering Management Concentration is designed to build upon the mathematical and analytical expertise gained from both a formal engineering education and professional experience. The Engineering Management curriculum emphasizes the application of the management function in the technological setting, while recognizing the basic and applied sciences in engineering systems. To learn more, visit our Engineering Management page and request more information (https://www.uah.edu/admissions/learn-more-mseem/).

The MSE-Industrial Engineering Concentration is offered for engineers who possess a bachelor’s degree in a traditional engineering discipline and who have the desire to broaden their engineering problem-solving skills. This is accomplished by providing them with a better understanding of traditional and contemporary problem-solving skills in the areas of operation research, quality control, computer integrated manufacturing, and simulation. The program is applications-oriented and can be tailored to fit the individual needs of the student.

The MSE-Systems Engineering Concentration is offered for engineers with a bachelor’s degree in a traditional engineering area who desire to broaden their background into systems oriented aspects of engineering. Methods of systems design, cost-benefit analysis, decision making and trade studies, and systems modeling provide students with knowledge and skills to supplement their baccalaureate engineering program.

MS Operations Research
The MS in Operations Research Option is for individuals who desire to broaden their background into operations research. Courses in the curriculum include linear programming, optimization, queueing, Markov processes, and systems modeling.
Industrial and Systems Engineering, PhD.

The PhD in Industrial Engineering offers majors in Engineering Management, Industrial Engineering, or Systems Engineering. The content of these programs can vary to suit the needs and goals of the student.

Additional Admission Requirements

The requirements for admission for graduate study in an ISEEM program conform to the policies of the School of Graduate Studies and the College of Engineering. In addition, the PhD in Industrial Engineering majors of Engineering Management and Systems Engineering Options require five years of engineering work experience.

General Requirements and Exams

Students pursuing a PhD option under ISEEM must complete 48 semester hours of approved graduate coursework beyond the bachelor’s degree. A maximum of six hours of Master’s Thesis credit may be included in the 48 semester hour requirement. A Program of Study must be submitted to the student’s supervisory committee for review and approval.

The PhD program in the ISEEM Department has a Preliminary Examination requirement under which students must achieve a 4.0 GPA in their four principal core courses. If courses fail to meet the GPA requirement, they may be retaken until the requirement is met.

After completing the coursework on the Program of Study, students will complete a Comprehensive Exam that either contains both written and oral portions, or, at the option of the student’s committee, is based on writing a journal article.

After passing the Comprehensive exam, students will prepare a dissertation proposal to satisfy the Qualifying Examination requirement. Starting in the Fall semester of 2020, all newly admitted PhD students will be required to complete their degree within 10 calendar years. If a student does not complete the degree within the 10 year limit, the student will automatically be withdrawn from the PhD program and from the College of Engineering. Students may reapply to UAH after the 10 year limit.

Foundation Courses

Outstanding students (3.5 GPA) from other technical fields may gain admittance to the College of Engineering MSE and PhD graduate programs by completing the following courses, or equivalents as approved by the ISEEM Faculty. Applicants who have passed the Fundamental of Engineering Exam (FE) may substitute the exam for the courses.

Total Semester Hours 45

Master’s Programs in Industrial and Systems Engineering and Engineering Management

- Industrial and Systems Engineering, MSE (http://catalog.uah.edu/grad/colleges-departments/engineering/industrial-systems-engineering-and-engineering-management/industrial-systems-engineering-mse/)
• Engineering Management (https://www.uah.edu/admissions/learn-more-mseem/)

**Doctoral Program in Industrial Engineering**

ISE 502 - INDUSTRIAL & ORGANIZA PSY
Semester Hours: 3
Application of basic principles of learning, motivation, and perception to typical industrial and organizational problems.

ISE 503 - HUMAN FACTORS PSYCHOLOGY
Semester Hours: 3

ISE 523 - INTR STATISTICAL QUALITY CONTR
Semester Hours: 3
This course introduces statistical theory and techniques to control quality of manufacturing products. This course will provide a solid foundation in Statistical Quality Control (SQC). The Six Sigma methodology is also introduced in this course. Students can take the certification exam to earn a Green Belt in Six Sigma. Prerequisites: ISE 690.

ISE 526 - DESIGN/ANALY OF EXPERIMENT
Semester Hours: 3
Advanced topics in statistical experiments with emphasis on design aspect. Confounding, fractional replication, factorial and nested design.

ISE 530 - MANUF SYS & FACILITIES DESIGN
Semester Hours: 3
Overview of modern manufacturing systems design with emphasis on facility location and plant layout. Includes classical systems, just-in-time systems, basic principles of integrated manufacturing systems design, as well as analysis of process flow, process productivity, and available space to determine plant layout. Includes laboratory exercises.

ISE 533 - PRODUCTION/INVENTORY CONTR SYS
Semester Hours: 3
Inventory models including classical optimal economic order quantity models, manufacturing resource planning (MRP) systems, master production scheduling, material requirements planning, and purchase order control. Emphasis on manufacturing system revision, continuous process improvement, and the implementation of lean principles. Prerequisite: ISE 690.

ISE 537 - ELECTRONICS MANUF PROCESSES
Semester Hours: 3
Current concepts, facilities, and technology utilized in the manufacture of electronic components and products. Includes printed wiring board fabrication and component mounting methods, automation, quality and reliability, product testing, and economic issues.

ISE 539 - SELECTED TOPICS/ISE
Semester Hours: 1-3

ISE 547 - INTRO TO SYSTEMS SIMULATION
Semester Hours: 3
Philosophy and elements of digital discrete-event simulation. Emphasis on modeling and analysis of stochastic systems, including probabilistic models, output analysis, and use of simulation software. Prerequisite: ISE 690.

ISE 623 - ENGR ECON ANALYSIS
Semester Hours: 3
This course is designed for graduate students in industrial engineering, systems engineering and engineering management. This course involves mathematical models for expenditure analysis under uncertainty; investment decision criteria; capital planning and budgeting; and decisions involving expansion, acquisitions, replacement, and disinvestment. Prerequisite: ISE 690.
ISE 626 - INTRO OPERATIONS RESEARCH  
Semester Hours: 3  
Philosophy and methodology of operations research. Includes linear programming, game theory, sequencing, and networks.

ISE 627 - ENGINEERING SYSTEMS  
Semester Hours: 3

Development of a systems-scientific framework for the integration of systems theory, systems thinking, systems engineering, and systems management. Emphasis is on the conception, design, and management of systems to accommodate complex environments.

ISE 637 - SYSTEMS MODELING & ANALYSIS  
Semester Hours: 3  
System analysis and modeling of large complex systems using systems engineering fundamentals. Life cycle simulations developed as a focus for the multidisciplinary analysis integration using computational systems engineering techniques including probability, statistics, design of experiments, response surfaces, and optimization. State of the art software tools will be used for simulation development.

ISE 638 - ENGINEERING RELIABILITY  
Semester Hours: 3  
Methodology of reliability prediction including application of discrete and continuous distribution models. Reliability estimation, reliability logic diagrams, life testing, and reliability demonstrations.

ISE 639 - SELECTED TOPICS/ISE  
Semester Hours: 1-6

ISE 641 - ADVANCED QUALITY CONTROL  
Semester Hours: 3

This capstone course uses advanced statistical quality tools such as autocorrelated data, multi-variate quality controls charts, response surface methodology, ridge analysis, and evolutionary operations (EVOP). Advanced Six Sigma concepts will be taught and students will have the opportunity to earn a Black Belt in Six Sigma upon successful completion of the certification exam and an acceptable project.

ISE 690 - STATISTICAL METHODS FOR ENGR  
Semester Hours: 3  
Application of statistics for estimation and inference using parametric and nonparametric methods. Descriptive statistics, sampling distributions, point and interval estimates, tests of hypotheses, ANOVA, and linear regression.

ISE 696 - GRAD INTERN ISE ENGR  
Semester Hours: 1-9

Active involvement in an engineering project in an engineering enterprise, professional organization, or government agency that has particular interest and relevance to the graduate student. Permission of ISE faculty member required.

ISE 697 - INDUS & SYSTEMS ENGR PROJECT I  
Semester Hours: 3-9

Application oriented student project designed to show competence in Industrial and Systems Engineering.

ISE 698 - IND & SYSTEMS ENGR PROJECT II  
Semester Hours: 3-9

Required each semester student is working and receiving direction on a master's thesis. Minimum of two semesters and 6 hours required for M.S.E. students. A maximum of 9 hours of credit is awarded upon successful completion of master's thesis. Prerequisite: ISE 697.

ISE 699 - MASTER'S THESIS  
Semester Hours: 1-9

Required each semester student is working and receiving direction on a master's thesis. Minimum of two semesters and 6 hours required for M.S.E. students. A maximum of 9 hours of credit is awarded upon successful completion of master's thesis. The 1 hour option is only available to students who have successfully defended their thesis and submitted it for approval, but do not meet the deadlines for graduation in the semester submitted. Students may only use the 1 hour option once in their career.

ISE 726 - SYSTEMS MODELING  
Semester Hours: 3

The capstone course for the operations research option studies the philosophy and methodology for modeling probabilistic systems. Includes Markov processes, queueing theory, and inventory theory. Team project required. Prerequisite: ISE 690 and (ISE 626 or ISE 627).
ISE 734 - DECISION ANALYSIS
Semester Hours: 3

Decision making for systems engineering and engineering management, with an emphasis on applications to complex systems. Builds a rigorous foundation in decision making under uncertainty using expected utility theory. Topics include decision trees, value models, predictive models, preferences and bias. Prerequisite: ISE 690.

ISE 739 - SELECTED TOPICS/ISE
Semester Hours: 1-6

ISE 761 - EVOL THRY ENG MGMT/IND SYS ENG
Semester Hours: 3

Development of applicable engineering management or industrial and systems engineering theory using classical concepts, contemporary studies and practices at successful technology-based organizations.

ISE 790 - ADV STATISTICAL APPLICATIONS
Semester Hours: 3

Continuation of ISE 690 with extension to regression models and nonparametric methods. Prerequisite: ISE 690.

ISE 799 - DOCTORAL DISSERTATION
Semester Hours: 3-9

Required each semester student is enrolled and receiving direction on doctoral dissertation.
